¹ As of Jan. 1, 1955. ² As of June 1955. ³ In the council the UDSR and the Radical Socialists are combined as the Gauche Démocratique et Rassemblement des Gauches Républicaines (RGR). ⁴ In the council the Independent Republicans, Independent Peasants, Peasants, and ARS are combined as the Modérés. ⁵ ARS and the Social Republicans formerly constituted the Rally of the French People (RPF), the Gaullists. In the council the Social Republicans include 8 Overseas Rally (ROM). ⁶ One seat held by former French territories in India is vacant in each chamber.

with the following results (gains or losses in comparison with the 1949 elections in parentheses): Communist, 44 (+7); Socialist, 287 (+11); left-wing parties, 87 (+19); Radicals, 896 (+10) Popular Republicans, 106 (+12); right-wing parties, 519 (+22); Social Republicans (Gaullists), 72 (-79).

Education.—Compulsory education exists for all children between the ages of 6 and 14. In 1952-53 there were 3,929 state and 210 private infant schools with a total enrollment of 590,621. State elementary schools numbered 70,214, and private elementary schools 10,823, with a total enrollment of 5,074,969.

Secondary schools consist of the *lycées* run by the state, the colleges run by the communes, and the free schools (*écoles libres*) run mostly by religious associations or by private individuals. The secondary schools with their 7-year course of study are not coeducational, and since 1934 the state institutions have been free. In 1952-53, 429,784 boys and 426,337 girls attended secondary schools.

France has 17 universities, which on June 30, 1953, had a combined enrollment of 147,844.

In May 1955, a committee appointed by the minister of education under the chairmanship of Jean Sarraillh, rector of the University of Paris, submitted a broad program for reorganizing French education, but the government has not taken any action. Support of 2-year continuation schools maintained in certain centers aroused much debate in Parliament during the year, since it involved the question of granting financial aid to private schools. Henceforth such classes maintained at private schools will obtain subsidies from the national treasury in proportion to the number of their pupils.

Religion.—France is predominantly Roman Catholic, and the French hierarchy numbers 17 archbishops, 68 bishops, and 51,000 clergy of various grades. Religious affiliation is not tabulated in the French census, but the number of Protestants is estimated at about 1 million. Protestants of the Augsburg Confession are governed by a General Consistory, while the Reformed Church is under a Council of Administration.

National Defense.—On Jan. 3, 1955, France proposed to other members of the future reorganized Western European Union (WEU) the formation of a European arms pool that would have a degree of supranationality. These proposals were considered at a conference held in Paris from January 17 to May 7. Although it refused to accept the French plan, the conference did establish a standing committee to be connected with NATO. This committee is to study the

standardization and production of arms within the WEU.

Plans for a complete reorganization of the French military establishment proved too costly, and Parliament compromised on a maintenance defense budget of 991 billion francs² for 1955 and 997 billion for 1956. This will permit placing some long-range industrial orders for heavy equipment.

The French expeditionary force in Indochina has been cut from a peak figure of 180,000 men in 1954 to 30,000 by November 1955. Divisions which had been part of NATO forces were shifted to North Africa in 1955 (French forces there were estimated at 150,000 in July). These were to some extent replaced by reservists recalled for duty. Resistance by some reservists against being sent to North Africa aroused attention in October. (See also NAVAL AFFAIRS.)

Finance.—On Jan. 31, 1955, Premier Mendès-France suffered a parliamentary defeat on a request for credit with regard to civil estimates, and budgetary considerations played a part in his overthrow on February 5. Popular protests against taxes—in which Pierre Poujade, the rural bookseller who had organized a nationwide anti-tax group, again played a part—plagued the government. In submitting his fiscal powers bill, Premier Faure agreed to abrogate the clauses of the law providing severe penalties for shopkeepers who interfered with the work of tax inspectors. Then, on March 30, Parliament gave the government special powers to enact by decree tax reforms and other economic and financial measures.

Wage increases were an issue in the National Assembly, and on April 4 the government enacted a decree raising the minimum hourly wage from 121.50 to 126 francs. This rate applied to the Paris region, and the reduction rate for other areas, which had ranged between 3.75 and 13.50%, was revised to between 3.33 and 12%. (See also COST OF LIVING.)

Cabinet agreement on the defense budget was reached at the end of June, and it was voted by the assembly on July 24 (see above, *National Defense*). On July 27, the final collective budget was adopted, which added 45 billion francs to the total. The 1955 regular budget (excluding such items as government advances to nationalized and private industries) provided for expenditures of 3,550 billion francs and an estimated revenue of 2,990 billion. United States aid was estimated at 90 billion francs, leaving a deficit of 470 billion. The same budget was voted for 1956, but expenditures already planned will necessitate increased appropriations. Pay increases to civil servants alone will amount to an increase of 81 billion francs. The assembly limited 1956 budgetary expenditures to 3,720 billion francs, with revenue estimated at 3,030 billion. Residual United States aid was estimated at 40 billion. It is hoped that increased industrial production will reduce materially the estimated deficit of 650 billion francs.

On July 20, the United States announced the conclusion of about \$42 million worth of new offshore procurement contracts with French firms. This brought the total of such contracts made since 1952 to nearly \$1.5 billion.

Agriculture.—After severe floods in January and a cold, wet spring, the weather improved in June and July, and the 1955 harvest turned out better than expected. Production of the chief cereals is shown in the accompanying table.

In 1954 an estimated 15,890,000 metric tons

² 349.95 francs = U.S.\$1.

CEREAL PRODUCTION IN FRANCE

Cereal	Cultivated area (in hectares ¹)	Average yield (in quintals ² per hectare)		Production (in thousands of quintals)

¹ 1 hectare = 2.471 acres. ² 1 quintal = 220.46 pounds.

³ Estimate as of August 1.

of potatoes and 11,453,600 metric tons of sugar beets were produced. The 1955 output of wine was estimated at 58,573,500 hectoliters (1 hectoliter = 26.418 gallons), as compared with 60,858,100 hectoliters in 1954. So as to clear the cellars for the new harvest, the government bought 2.6 million gallons of wine in August 1955 for distillation into alcohol. It also decided to purchase 72 million gallons from the 1955 crop, although it already had about 430 million gallons of alcohol on hand. To cut future surpluses the government has inaugurated a policy of paying farmers to destroy vineyards producing inferior wines and transfer the land to other crops.

In 1955, France had 220,000 holdings of less than 1 hectare, 1,120,000 of 1 to 10 hectares, 540,000 of 10 to 20, 325,000 of 20 to 40, 55,000 of 40 to 50, 77,500 of 50 to 100, and 26,100 of over 100. These holdings are cultivated by 2,350,000 farmers, aided by 3,700,000 family members, and 1,200,000 hired employees. In 1941 a law was voted encouraging with governmental assistance the consolidation of scattered holdings. By Oct. 1, 1954, 2,267 consolidations involving 1,641,086 hectares had been completed, 989 consolidations involving 695,070 hectares were in process, and 1,654 applications involving 1,264,823 hectares were pending.

Industry.—The index of employment (including salaried employees) in manufacturing (1948 = 100) was 105 in 1954, as compared with 104 in 1953. The 1954 index of general industrial production (1948 = 100; 1953 figures in parentheses) was 139 (127); that of mining, 143 (137); manufacturing, 137 (126); gas and electricity, 147 (135); and construction, 114 (110). By June 1955 the index of general industrial production had risen to 159, the highest level ever reached. Production of major industrial products in 1953 and 1954 is shown in the accompanying table.

Commodity	1953	1954
	(Metric tons)	
Coal (exclusive of Saar).....	52,577,000	54,405,000
Lignite.....	1,949,000	1,910,000
Iron ore.....	42,443,000	43,824,000
Crude steel (exclusive of Saar).....	9,999,744	10,627,000
Pig iron (exclusive of Saar).....	8,666,232	8,833,000
Aluminum.....	136,224	150,300
Cement.....	9,100,000	9,553,000
Cotton yarn.....	270,228	295,300
Wool yarn.....	119,714	128,400
Rayon filament yarn.....	46,848	53,340

Production of electricity (1953 figures in parentheses) amounted to 45,600 (41,512) million kw.-hr. in 1954, of which 24,250 (21,091) million were produced by hydraulic stations. Petroleum production was raised from an average monthly total in metropolitan France of 42,300 metric tons in 1954 to 78,035 tons by July 1955. Production of natural gas reached a total of 268 million cubic meters in 1954, as compared with

249 million in 1953. In 1954 (figures for 1953 in parentheses), 437,098 (368,388) passenger cars and 162,295 (129,468) commercial vehicles were manufactured; 24% of this output was exported.

A three-year program for the development of atomic energy, involving an expenditure of 100 billion francs, was approved on April 29, 1955.

There were some strikes in 1955, notably in the shipyards of Nantes in August and on the railways in September. On the whole, however, French industry was not beset by labor difficulties during the year.

Foreign Trade.—French imports for 1954 (1953 figures in parentheses) totaled 1,477,207 million francs (1,379,625 million), and exports 1,466,124 million (1,323,824 million), leaving an unfavorable balance of 11,083 million, as against 55,801 million in 1953. The figures in millions of francs for the first six months of 1955, as compared with the same period of 1954, are as follows: imports, 822,884 (763,351); exports, 830,856 (718,320). There was therefore a favorable trade balance of 7,972 million francs, as against an unfavorable balance of 45,031 million in 1954.

In March 1955, France signed a trade agreement with East Germany. Of far greater importance was the agreement signed with West Germany on August 5. It is to extend from April 1, 1955, to Oct. 1, 1958, and involves an exchange of about \$1 billion a year.

In 1953 only 18% of French trade with members of the Organization for European Economic Cooperation (OEEC) was free of quota restrictions. Since then this trade has been progressively liberalized, to 52% on April 26, 1954, 57% on Sept. 30, 1954, 62.5% on Oct. 20, 1954, 65% on Nov. 8, 1954, 73% on Jan. 11, 1955, 75% on April 1, 1955, and 77.5% on Sept. 2, 1955. France regularly had a monthly surplus with the European Payments Union (EPU) from October 1954 to October 1955.

Transportation and Communications.—The French railways are run by an autonomous corporation, the Société Nationale des Chemins de Fer Français, in which the government holds 51% of the stock. There are 25,656 miles of track, of which 2,852 were electrified by Dec. 31, 1954; projects planned for 1955 were expected to increase this figure to 3,085 miles. Electrification of the Paris-Rome line was completed during 1955. On March 28, an engine pulled a three-car train at 200 miles per hour, and on the following day an engine pulled one at 207 miles an hour, breaking all records. France has joined with 13 other European countries to establish a European corporation (Aurofima) for financing the purchase of railway equipment.

France has 49,853 miles of national, 163,607 miles of departmental, and 213,252 miles of local and urban roads. Navigable waterways, including 3,056 miles of canals, total 5,105 miles.

As of January 1955, France had a merchant fleet of 728 ships with a total tonnage of 3,587,226, including 90 passenger vessels, 117 tankers, and 521 cargo ships. There were then being built in French yards 1 passenger liner, 23 tankers, and 37 cargo boats.

Air transportation continues to expand. The Paris airports (Orly and Le Bourget) showed a 13% increase in passenger traffic in 1954 over 1953, 11.2% in freight, and 17% in mail. Figures for the first six months of 1955 (with the same period of 1954 in parentheses) are: flights, 43,371 (42,078); passengers, 903,790 (769,303); freight, 16,645.9 tons (14,335.4); and mail, 4,866.7 tons (4,322.5).

Principal Events, 1955.—Unrest and armed uprisings in Morocco, Algeria, and Tunisia (qq.v.) overshadowed all other events during the year. These problems had marked repercussions on political developments.

The Political Scene.—Ratification by the National Assembly on Dec. 30, 1954, of the Paris agreements of October 1954 on the restoration of sovereignty to West Germany and the rearmament of that country seemed to usher in the new year on a positive note. The 1955 budget was also well on the road to enactment. Indications of political unrest, however, were not lacking.

On January 11, Pierre Schneider (MRP) defeated André Le Troquer (Socialist) for election as president of the assembly. The Socialists had steadily refused to share in cabinet responsibility but had often supported Premier Mendès-France, and Schneider's victory was considered a setback to the premier. On January 20, the premier revamped his cabinet for the fourth time. There were several shifts in cabinet posts, the most significant being the transfer of Edgar Faure from the Ministry of Finance to that of Foreign Affairs, where he took over from Mendès-France himself.

The new cabinet was hardly more united than the old, and difficulties in Parliament soon arose. On January 31 and February 1, the government suffered defeats on minor budgetary proposals. Debate on the cabinet's North African policy followed, Mendès-France stating that there were only two choices: (1) a policy of entente and reform or (2) repression of unrest with all its consequences. He had undertaken to follow the first alternative, and he asked for a vote of confidence. Party spokesmen made it clear that other than North African issues influenced their decision to vote against him. On February 5, a combination of Communists, MRP, Independent Republicans, 20 Radical Socialists, and 25 Social Republicans were able to engineer a vote of 319 to 273 (with 22 abstentions) against the government.

President Coty in turn asked Antoine Pinay (Independent Republican) and Pierre Pflimlin (MRP) to form a cabinet, but both were unsuccessful. On February 19, the assembly refused (312-268) to approve a left-wing cabinet led by Christian Pineau (Socialist). President Coty then called a meeting of all the party leaders, and Edgar Faure (Radical Socialist) undertook to form a broad coalition. His right-wing cabinet, composed of representatives of all parties except the Communists, Socialists, and Overseas Independents, was approved on February 23 by a vote of 369 to 210. In internal affairs, Faure pledged his cabinet to raise the index of industrial production (1938 = 100) from 153 to 180

by June 30, 1956, to raise the standard of living and agricultural income by at least 7%, to increase wages, and to introduce tax reforms. In foreign affairs, final ratification of the Paris agreements by the Council of the Republic was to be pushed, and a policy of close cooperation with NATO followed. With regard to North Africa, Faure promised to follow essentially the policies of his predecessor.

Negotiations with Tunisian nationalist groups proceeded rapidly, and a protocol was signed on April 22 embodying the main principles of a settlement. On May 29, agreements granting home rule to Tunisia were initiated at Paris, and the assembly ratified them on July 9 (538-44, with 29 abstentions). The council gave its approval on August 4 (254-25). This was a rather astonishing victory for the policy of conciliation and negotiation inaugurated by Mendès-France about a year earlier, and often sharply attacked in both chambers.

All Frenchmen were, however, glad to have achieved a settlement in Tunisia, for difficulties in Morocco and Algeria were increasing. Ever since the outbreak of rebellion in Algeria on Oct. 31, 1954, France had been sending more troops to this area. On June 29, 1955, a parliamentary committee presented to the assembly a critical report on French policy in Algeria. Algeria is considered an integral part of France, but actually it has never been integrated into France. To give equal rights, privileges, and representation to 8.5 million Algerians would radically change, if not disrupt completely, French economic, social, and political patterns. Whether France should move toward further integration or toward a policy of regional federation is a problem far more serious than the problems in Tunisia or Morocco. When the U.N. General Assembly on September 30 voted (28-27, with 5 abstentions) to place the question of Algeria on its agenda for debate, France withdrew its delegation from the assembly and several of the United Nations organs. The French maintained that the troubles in Algeria were an internal French problem and under the terms of the U.N. Charter could not be brought before the United Nations. The withdrawal was approved by the French Parliament. On October 24, French representatives resumed their places on the U.N. Trusteeship Council, but delayed a return to the assembly. There was a general desire to have France participate in the coming debates on disarmament and membership, and, thanks to extensive work behind the scenes by V. K. Krishna Menon of India, the assembly unanimously agreed on November 25 not to consider further the question of Algeria. With this item removed from the agenda, France resumed its seat in the assembly on November 29.

In dealing with Morocco, the French government, despite severe attacks by some parties at home and by French residents in Morocco, has steadily pursued a policy directed toward reaching an agreement with the nationalist groups through negotiation. Because of their opposition to his policy of conciliation in Morocco, Premier Faure on October 6 forced four Gaullist ministers to resign their cabinet posts, among them General Koenig, who was replaced as minister of defense by Maj. Gen. Pierre Billotte. The government pressed for the abdication of Sultan Sidi Mohammed ben Moulay Arafat (October 30) and agreed (November 5) to the return of Sultan Sidi Mohammed ben Youssef, who had been forced into exile by French authorities in 1953.

Meeting at Aix-les-Bains, France, Aug. 22, 1955, to discuss Moroccan problem are Moroccan Grand Vizier El-Mokri and Premier Faure (at right), with Foreign Minister Pinay and Minister of Justice Schuman (at left).

WIDE WORLD

Faure's policy involved the establishment of a responsible Moroccan Cabinet, which should direct the government of the protectorate. In implementing his North African policy, Faure was forced on October 9 and 18 to ask for votes of confidence, which he received.

On October 21, Premier Faure announced that he would ask Parliament to authorize new elections in December. A fresh popular mandate seemed necessary in order to give continuity to French policy on the many grave issues which faced France in the coming months. His proposal was not popular among the deputies, many holding that a new electoral law should be passed before the date for elections was set. Faure preferred to decide the question of elections first. If Parliament could not agree on a new electoral law, the 1951 law³ should be used. Various proposed changes in the electoral law were debated, but no agreement could be reached. On November 3, Faure staked the life of his cabinet on the question of early elections and won by a vote of 330 to 211, 88 Communists giving him their support. The assembly voted to end its mandate on Jan. 2, 1956.

Mendès-France who, at a party conference in May, had won the leadership of the Radical Socialists, opposed Premier Faure (also a Radical Socialist) on the question of early elections. The party favored a return to single-member districts, a policy which the premier could not support since the MRP and other parties of his coalition were unequivocally opposed. Another Radical Socialist Party conference, held on November 3-6, demanded that Faure enact a single-district electoral law. The question of electoral reform was brought up in the debate on new elections in the second chamber, and the council, in passing (227-60) the election bill on November 9, added a rider calling for the single-district system. Although Faure won (November 12) a vote of confidence from the assembly, which approved an electoral law calling for competition between party lists (but not allied lists) on the departmental level, he would have been defeated without the 94 votes of the Communists and their allies. The council again rejected (November 15) the assembly's plan and reapproved the single-district system. Opposition to early elections mounted, and on November 17 the assembly, after sending the council's bill to committee, gave the premier the almost impossible assignment of drawing up new election districts.

The premier's proposals for new electoral districts bogged down in the National Assembly Elections Committee, and, as a further delaying action, the assembly started to debate a motion indicting the government for its vacillating policy. Faure, determined to obtain early elections, cut short this debate by demanding a vote of confidence, which he lost on November 29 by a vote of 319 to 219. This was the second time within 18 months that a government had been defeated on a confidence vote by an absolute majority, and under Article 51 of the constitution the premier now had the power to dissolve the assembly. The cabinet decided on dissolution, the decree signed by President Coty becoming effective on December 2.

³ Under this law parties may form alliances on a departmental level. An allied list obtaining 50% of the vote receives all the assembly seats for the department.

⁴ These differences in the center enabled the extremists to gain. Of the 594 seats filled on Jan. 2, 1956 (30 Algerian and 3 overseas seats were still to be filled), Communists and their allies received 150 (98 in the old assembly), and followers of Pierre Poujade, 52.

French Premier Edgar Faure sits alone in the National Assembly, Oct. 6, 1955, after forcing the resignation of four ministers who disagreed with his Moroccan policy.

Thus the defeat of Faure made possible the early elections without electoral reform that had been his objective. New elections to be held in accordance with the 1951 electoral law were set for Jan. 2, 1956. The dissolution was bitterly opposed by Mendès-France, who controlled the machinery of the Radical Socialist Party. Faure and seven other prominent Radicals who supported him were purged from the party. They, with other Radicals, combined with certain small kindred groups in the Rally of the Republican Left (Rassemblement des Gauches Républicaines) and entered into electoral alliances with Popular Republicans, Independent Republicans, Peasants, and dissident Gaullists. The Mendès-France Radicals formed alliances with Socialists, some Gaullists, and minor left-wing parties.⁴

Foreign Affairs.—On Jan. 10-12, 1955, Mendès-France paid the first official visit by a French premier to Rome since World War II. Conversations dealt mostly with European armament problems. A conference with Chancellor Konrad Adenauer in Baden-Baden followed on January 15. Again the arms pool plan was discussed, and it was agreed to recommend to the members of the reorganized WEU that the Saar plebiscite be held under international supervision. The problem of the Saar was often raised in Parliament, notably by Gaullist deputies. On March 21, a Franco-Saar protocol was signed covering points to be taken up later in more detail. These were formulated in a Franco-Saar convention, signed on May 3, which reinforced the existing customs and currency union. The unfavorable result of

Foreign Minister Pinay leads French delegation from U.N. General Assembly, Sept. 30, 1955, following assembly's decision to discuss France's policy in Algeria.

the Saar plebiscite on October 23 was on the whole received quietly in Paris. On November 13, Adenauer and Foreign Minister Pinay decided to take no action until after elections had been held in the territory on December 18.

Ratification of the Paris agreements by the Council of the Republic on March 27 led the Soviet government, by a decree of the Presidium of the Supreme Soviet, to annul the 1944 Soviet-French alliance on May 7. On the same day, the first meeting of the Council of the WEU was held in Paris. A few days later, at the meeting of the North Atlantic Council (May 9-11), the foreign ministers of the three Western powers conferred, and then proceeded to Vienna, where, on May 15, they signed the Austrian State Treaty.

The three foreign ministers met in Paris again on July 15, and agreed on the policy to be followed at the forthcoming Geneva Conference (q.v.) of July 18-23. Premier Faure and Foreign Minister Pinay represented France at this meeting. The French delegation advanced a plan for reduction in armaments and allocation of the savings to an international fund for aid to underdeveloped countries.

At the unsuccessful foreign ministers conference held at Geneva from October 27 to November 16, Pinay again represented France. Here French policy remained closely aligned with that of Great Britain and the United States.

FRENCH CAMEROONS. See CAMEROONS.

FRENCH EQUATORIAL AFRICA. A federation of four French overseas territories in central Africa. About 90% of the population consists of Pahouin-Fang, Bantu, Ubangi, Shari-Ouaddian, and Nilo-Chadian tribes, and the remainder chiefly of nomads of Hamitic and Semitic origin. Europeans numbered about 23,000 in 1954, mostly French. Brazzaville (85,500) is the capital.

Territory	Area (sq. mi.)	Population (est. 1954)	Territorial capital
Gabon.....	103,100	403,500	Libreville (19,650)
Middle Congo....	132,000	683,100	Poindiché (31,000)
Ubangi-Shari....	238,200	1,092,500	Bangui (67,100)
Chad.....	495,800	2,238,600	Fort-Lamy (20,700)
Total.....	969,100	4,417,700	

Government.—The French governor general, appointed in Paris, is aided by an appointive government council and an advisory grand council of 20 members elected by the territorial assemblies. Each of the territories has a governor and a territorial assembly elected on the basis of two colleges. The federation sends 7 deputies and 8 senators to the French Parliament at Paris, and 7 delegates to the Assembly of the French Union.

Education and Religion.—About 21% of the school-age population attended school in 1955. As of Jan. 1, 1955, there were 1,021 schools with a total of 141,145 African pupils. The 7 high schools, 5 normal schools, and 24 teacher-training centers had 1,942 pupils; the 136 technical schools, 3,892. Many of the schools are conducted by Christian (mainly Roman Catholic) missions. The Moslem minority is concentrated in the north. Animism prevails among many of the remote Negro tribes.

Finance.—The general budget for 1954 totaled 8,902.5 million francs CFA. The territorial budgets, which are separate, aggregated 5,700.3 million francs CFA. One franc CFA equals 2 metropolitan francs.

Production.—The federation is rich in resources as yet largely undeveloped. Agriculture is the principal occupation. Chief subsistence crops are millet, tapioca, bananas, and corn. Livestock is important in Chad. Cash crops, ani-

mal products, and forest products provide the bulk of exports. Output of principal minerals in 1954 was: diamonds, 152,529 carats; gold, 1,409 kilograms; and lead ore, 6,572 metric tons. Manufactures, mainly for local consumption, include oils (palm, sesame, and peanut) and other foodstuffs, textiles, sawmill products, soap, and leather products. African wage earners, including seasonal workers, numbered 152,397 in December 1953.

Foreign Trade.—Exports in 1954 totaled 12.795 million francs CFA; imports, 16,682 million. Chief exports were: cotton, 31,689 metric tons; timber (mainly *okoumé*), 511,374; coffee, 4,591; and diamonds, 150,676 carats. Imports were mainly cotton piece goods, foodstuffs, fuels and lubricants, motor vehicles, and other manufactures. France took 67% of 1954 exports and provided 59% of imports.

Transportation and Communications.—The federation's only railroad, the government-owned Congo-Ocean Railway, extends 320 miles from Brazzaville to Poindiché. The road network approximates 25,000 miles. The federation's chief airport is at Brazzaville. Motor vehicles in 1955 numbered 13,312, including 4,061 passenger cars; telephones, 4,470 (1955). Radio Brazzaville is the most powerful broadcasting station in Africa.

FRENCH GUIANA. An overseas department of France, situated on the northern coast of South America. Estimated area (including the Inini hinterland), 35,100; pop. (July 1, 1954), 27,863, chiefly of mixed Indian, European, and African descent. Cayenne (13,346) is the capital. The department is ruled by a prefect aided by an elected General Council of 15 members. In 1953-54, primary schools had 3,475 pupils; secondary, technical, and church schools, 1,902. Sugarcane, bananas, rice, coffee, and manioc are grown. Rum is an important manufacture. Gold mining yields a small fraction of pre-World War II output. Imports in 1954 totaled 3,550 million francs; exports, 175 million, of which rum provided 83 million. Trade is mostly with France. Coastal steamers are an important means of transport. Roads total about 162 miles. Planes of international airlines land at Cayenne. Motor vehicles numbered 1,077 in 1955; telephones, 370.

FRENCH GUINEA. See FRENCH WEST AFRICA.

FRENCH INDIA. Four former French enclaves on the Indian coast. Area, 193 square miles; pop. (est. 1952), 323,000. Pondichéry (largest of the four), Yanaon (Yanam), and Karikal are on the east coast; Mahé is on the west coast. (Chander-nagor, another former French enclave, was merged with India in 1950.) Under a Franco-Indian agreement concluded at New Delhi on Oct. 21, 1954, India assumed *de facto* control of the four territories on Nov. 1, 1954. Transfer of formal sovereignty awaits ratification by the French and Indian governments. (See also INDIA.)

FRENCH INDOCHINA. See INDOCHINA.

FRENCH LITERATURE. A very great loss was felt by French letters in 1955 when Paul Claudel (q.v.) died, at the age of 87, a few days after he had directed the last rehearsals of the new version of his famous play, *L'Annonce faite à Marie*. A well-known diplomat and a powerful poet, dramatist, and essayist, Claudel had attained a unique position among his countrymen. The last representative of a generation which

numbered, among other great writers, Paul Valéry, André Gide, and Colette, he was the most inspired Catholic poet of the 20th century, and, with Jean Giraudoux, the most talented and best-loved dramatist of the period between the two world wars.

Poetry.—Another poet, Jean Cocteau, was very much in the news in 1955. He published an important volume of verse, *Clair-Obscur*, in which one can see, much more than a swan song, a reaffirmation of his nostalgia for the impossible, for the magic of the *merveilleux*, and for the *angélisme*. Cocteau was also elected to the French Academy, after having been chosen by the Belgian Academy. Twenty years ago these elections would have seemed inconceivable. Cocteau was then considered much more as a "clown" than as an "angel." But today, the "angelism" of Cocteau has overcome the eccentricities of his youth. As the novelist of *Les Enfants Terribles*, the dramatist of *La Machine Infernale*, and the poet of *Plain-Chant*, he has almost achieved classic stature.

Journals and Personal Records.—In 1955, many important journals and personal records were published. There appeared the first two volumes of a new, almost integral version of Henri Frédéric Amiel's *Journal intime*. They confirm the already-great reputation of this French-Swiss poet and critic as one of the great observers, analysts, and describers of the human heart. Valéry Larbaud gave interesting material on his works in the two volumes of his *Journal*. The most discussed journals, however, were those of Paul Leautaud and Julien Green. Paul Leautaud's *Journal Littéraire* thus far covers the years 1894-1909. The writer is, in some ways, the Saint-Simon and the Goncourt of his time. Poor and timid, this secretary and drama critic of the *Mercure de France* devoted his entire life to literature, and in his journals noted with perfect frankness everything he learned about the writers of the day from his observation post on the *Mercure*.

The sixth volume of Julien Green's *Journal* is quite different. Whereas Leautaud writes unimaginatively about real people and events, Green is at his best when he tells of the "unseen." Whereas Leautaud is a disciple of the 18th century rationalists and libertines and is a great admirer of Stendhal, Green, who has been a convert to Catholicism since his 15th year, and who is a mystic, believes in God and in the supernatural, and finds Stendhal too cerebral. Green's book like its predecessors, is deeply spiritual and wonderfully written.

The Novel.—The Prix Goncourt was awarded, late in 1954, to Simone de Beauvoir for her enormous novel, *Les Mandarins*, a book much criticized by the right-wing critics for its alleged pro-Communist tendencies.*

There are, in fact, two novels contained in *Les Mandarins*. On one hand, it is a political novel, centered about characters inspired by Jean-Paul Sartre and his Existentialist group, which analyzes the reactions of the intellectual, socialist, anti-Nazi, and pro-Russian French idealistic writers immediately after World War II.

The content of this part of *Les Mandarins* is highly debatable. But the romantic story of Anne, the psychiatrist-wife of an aging Existentialist, is the most interesting and best part of *Les Mandarins*. Its drama of the conflict between intelli-

gence and emotion is brilliantly depicted, and the character of Anne is much more lively and strikingly delineated than that of any political character in the book.

Totally unlike *Les Mandarins* was the other passionately discussed novel of 1955, *Les Clefs de Saint-Pierre*, by Roger Peyrefitte. The author of *Les Amitiés Particulières* and *Les Ambassades* has given us, in his new book, a well-written, endlessly documented satire against what he considers the materialistic, worldly aspects of the church of Rome.

Other novels of 1955 worth mentioning are: Marc Chadourne's *Le Mal de Colleen*, a moving, philosophical tale about the "soul" and love of a dog; *La Femme Infidèle*, by Jules Roy (hailed more and more as the spiritual successor of Saint Exupéry), a noble tale of men who, seeking greatness in abnegation and sacrifice, are alien to the world of the flesh; Roger Vaillant's *Beau Masque*, Marxist, erotic, and well-written; and Françoise Mallet-Joris' *La Chambre Rouge*, a psychological novel (by a precocious writer) of destructive pride, in the tradition of Laclos' *Liaisons Dangereuses*. Another novel, *Les Compères de Miséricorde*, a study of poor people trying to save a person from suicide and attempting to communicate with him in spite of the barrier of language, was awarded the Prix Populiste. The ingenious and original *Le Voyeur*, by Alain Robbe-Grillet, which received the Prix des Critiques, is an "objective" novel aimed at establishing man's place in a mineral world. Goncourt-laureate Pierre Gascar published *Femmes*, a book of tales, the four parts of which are as tragic and Kafkaian as his prize-winning *Les Bêtes*.

The Theater.—The theatrical season of 1955 was not among the most successful of recent years. Among the best plays that were presented were many adaptations, such as *Les Sorcières de Salem*, by Marcel Aymé (a French version of the American play, *The Crucible*, by Arthur Miller), and *La Condition Humaine*, by Thierry Maulnier, cleverly adapted from the great novel of the 1930's by André Malraux.

The most-discussed play was Jean-Paul Sartre's *Nekrassov*, a satirical farce about anti-communism and the failings of the French press. French critics almost unanimously condemned the play, mostly for personal or political reasons. The play, however, was a great success. It makes good reading, and some of its scenes, if not taken too seriously, are hilariously funny.

Essays and Biography.—Numerous essays and biographies were published in 1955. Among those of major importance are André Siegfried's *Aspects du Vingtième Siècle*, which raises the question of whether man has become a slave of the machine; René Sédillot's *Survol de l'Histoire de France*; André Maurois' *Portraits* (of Robert and Elizabeth Browning, Emily Dickinson, Gogol, and others); and the excellent biography of *Van Gogh*, by Henri Perruchot.

FRENCH NORTH AFRICA. See ALGERIA; MOROCCO; TUNISIA.

FRENCH OCEANIA. A French overseas territory in the central Pacific, comprising some 125 islands in five main groups: (1) Society Islands (Windward and Leeward); (2) Tuamotu Archipelago; (3) Gambier Archipelago; (4) Marquesas Islands; and (5) Tubuai (Austral) Islands. Clip-

* The 1955 Prix Goncourt, announced in December, went to Roger Ikor for his novel, *Les Eaux Mées*.

perton Island, 2,800 miles northwest of Tahiti (in the Society group), is administered as part of French Oceania. Total area, 1,544 square miles; pop. (1951 census), 62,678, chiefly Polynesians, with French and Chinese minorities. Papeete, the capital (15,081), is on Tahiti, the main island (area, 402 square miles; pop., 30,500).

The French governor, appointed in Paris, is aided by a privy council. A Representative Assembly of 20 members is elected every 5 years. The 1954 budget totaled 376 million francs CFP (the Pacific franc equals 5.5 metropolitan francs). In 1954 there were 114 public and private primary schools (13,608 pupils), 5 secondary schools (608), and two technicals (75 pupils in 1952).

Chief crops are sugarcane, coconuts, tropical fruits, and vegetables. The few industries consist mainly of the preparation of copra, sugar, and rum. Exports in 1954 totaled 664 million francs CFP; imports, 709 million. Chief exports and quantities (in metric tons) were: copra, 21,570; phosphates (mined on Makatēa, in the Tuamotu group), 228,895; vanilla, 130; and mother of pearl, 872. Imports are mainly foodstuffs, petroleum products, wood and wood products, and other manufactures. France took 59% of 1954 exports and provided 33% of imports. Shipping services connect Papeete with New York, San Francisco, New Zealand, and Australia. A French airline services Papeete.

FRENCH SOMALILAND. A French overseas territory on the Gulf of Aden in northeastern Africa. Area, about 8,500 square miles; pop. (est. 1954), 63,000, including 2,170 nonindigenous persons (1951). The natives are chiefly Danakils and Issa Somalis. Djibouti (est. pop. 1953, 31,855) is the capital. The French-appointed governor is aided by a privy council and a representative council of 25 elected members. The 1954 budget totaled 1,221.6 million Djibouti francs. (The Djibouti franc equals 1.64 metropolitan francs.) In 1953 there were 14 primary schools (1,501 pupils), 4 secondary schools (88), and 5 technical schools (196).

The indigenous peoples are chiefly shepherds and hunters of jungle game. A few tribes cultivate dates, tobacco, cotton, and rubber, and gather wax and gum. Fishing exists along the coast. Salt mining is the only industry of any size; the territory's single mine employs about 450 workers, with output in 1954 amounting to 59,100 metric tons. Animal hides are also produced. Exports in 1954 totaled 2,653 million Djibouti francs; imports, 2,231 million. Foreign trade consists largely of naval supplies for vessels using the free port of Djibouti. Sixty-one miles of the Djibouti-Addis Ababa (Ethiopia) railway is in French Somaliland. The territory's road network approximates 1,115 miles, with about 500 miles passable in all seasons. Djibouti has a first-class airport. The 833 motor vehicles in 1955 included 624 passenger cars. Telephones numbered 592.

FRENCH SUDAN. See FRENCH WEST AFRICA.
FRENCH TOGOLAND. See TOGOLAND.

FRENCH WEST AFRICA. A federation of eight overseas territories in western Africa. The population, consisting mainly of Negro tribes, includes about 27 large ethnic groups; over 100 different languages are spoken. In the north there are about a million Berber and Arab nomads (Moors and Tuaregs) and some two million Islamized peoples of mixed stock (Fulah). The nonindige-

nous population numbered 62,236 in 1954, mainly French. Dakar, the capital and chief seaport, has a population of about 300,000 (including dependencies).

FRENCH WEST AFRICA

Territory	Area (sq. mi.)	Population (est. 1954)	Territorial capital
Senegal ¹	80,620	2,092,800	Saint-Louis (60,000)

Total.....	1,831,080	17,361,700	

¹ Including Dakar and dependencies. ² 1951.

Government.—The French governor general, appointed in Paris, is aided by a government council of the chiefs of the civil and military services, and a deliberative grand council of 40 members elected by the territorial assemblies (5 from each territory). Each of the 8 territories is under a governor aided by a privy council and a territorial assembly of European and African members. The people elect 21 deputies and 20 senators to the French Parliament in Paris, and the territorial assemblies elect 27 councilors to the Assembly of the French Union.

Education and Religion.—About 8% of the school-age population attends school. Data for 1954 on public and private schools were: 1,562 elementary schools (239,847 pupils); 70 secondary schools (11,718); 98 technical schools (4,363); and 28 teacher-training schools (2,489). The Institute for Higher Studies at Dakar had 373 students. A relatively small part of the population has been converted to Christianity. Moslems number about 6 million. The remainder of the natives retain animistic beliefs.

Finance.—The general budget for 1954 included an ordinary budget of 26,349 million francs CFA, and an extraordinary budget of 10,295 million. The territories, which exercise financial and administrative autonomy, have separate territorial budgets. The franc CFA (*Colonies Françaises d'Afrique*) equals 2 metropolitan francs.

Production.—The economy is predominantly agricultural and pastoral. Chief subsistence crops are sorghum, millet, corn, manioc, sweet potatoes, yams, and rice. Cash crops, timber (mainly mahogany), oilseed and cake, and gums are produced for export. The large livestock herds yield milk and meat products, leather, hides, and skins. Considerable expansion has taken place recently in mineral production, particularly of bauxite and iron ore. Chief minerals and 1954 output were: diamonds, 217,600 carats; bauxite, 433,500 metric tons; iron ore, 592,000 metric tons; aluminum phosphate, 90,200 metric tons; and ilmenite, 12,500 metric tons. Manufacturing is on a small scale and largely for local consumption; chief products are peanut oil, palm oil, shea butter, sisal, soap, wood products, paper, textiles, bricks, cement, chocolate, canned fruits, canned fish, and beverages. Output of electric power (predominantly thermal) totaled 80.8 million kw.-hr. in 1954, a 45% rise over 1953.

Foreign Trade.—Exports in 1954 totaled 58,264 million francs CFA; imports, 66,445 million. Chief exports in 1954 are shown in the accompanying table.

Export	Quantity (in metric tons)	Value (in millions of francs CFA)
Coffee.....	94,909	17,730
Shelled groundnuts.....	237,000	9,938
Cacao.....	52,704	8,833
Groundnut oil.....	94,000	7,977
Palm nuts and kernels.....	81,257	2,064
Oilseed cake.....	131,035	1,910
French bananas.....	104,190	1,581
Unshelled groundnuts.....	38,093	1,259
Tropical woods.....	132,000	1,028

Imports are mainly textiles and clothing, foodstuffs, automobiles and vehicles, petroleum prod-

ucts, metals and metal products, and machinery and equipment. France took 67% of French West Africa's 1954 exports and provided 68% of imports. The United States led non-French Union countries, taking 7.8% of exports and providing 3.5% of imports.

Transportation and Communications.—The federation's 4 railroad systems and route mileages in 1954 were: Dakar-Niger, 1,041; Conakry-Niger, 411; Abidjan-Niger, 673; and Benin-Niger, 359. The road network approximates 49,600 miles, including about 10,540 miles of all-weather roads. The federation is serviced by 12 international airlines; Dakar has the chief airport. Motor vehicles in 1955 included 18,109 passenger cars and 27,313 trucks. Telephones numbered 19,380 in 1955. There were 10 daily newspapers in 1952, with a total circulation of 28,000.

FRENCH WEST INDIES. See GUADELOUPE; MARTINIQUE.

FRIENDS, Religious Society of. Friends, commonly called Quakers, began their society in England about 1650. In 1955 there were fewer than 200,000 Friends in the world, and well over half of them were in the United States. Their form of organization is called the "yearly meeting." Most of the 53 yearly meetings in the world keep in close touch through an unofficial World Committee and personal intervisitation, but there is no overall organization.

The traditional personal individualism of Friends has extended to their yearly meetings; and during its history, the society has suffered a number of separations. One of the most lasting of these took place in 1828 when some meetings split into "Hicksite" (after Elias Hicks of New York) and "Orthodox" groups. Another split occurred during the 1840's, when conservative and evangelical Friends separated.

A decade ago the conservative and evangelical yearly meetings of New England combined into one yearly meeting. In March 1955 the Hicksite and Orthodox yearly meetings of Philadelphia united. This union climaxed 20 years of increasing cooperation between them. Their century-old journals, *Friends Intelligencer* and *The Friend*, were merged to make the new *Friends Journal*. A few months later the Hicksite and Orthodox yearly meetings of New York also united, as did the three yearly meetings in Canada. The 128-year-old Hicksite separation thus came to an end.

Six American Friends paid what they called a "simple and informal visit of goodwill" to the Soviet Union in June 1955. Besides ordinary sightseeing and visiting, one of the group presented to Andrei Gromyko, acting foreign secretary, a plan for international disarmament inspection that would utilize the International Labor Office inspection system.

In June the Fund for the Republic, a non-profit organization established by the Ford Foundation for the protection of civil liberties, granted a \$5,000 award to Plymouth Friends Meeting, Plymouth Meeting, Pa., in recognition of the meeting's refusal to discharge its librarian, who was under attack in the community for refusing to sign the state loyalty oath.

Agriculture Marketing Service, U.S. Department of Agriculture.

FRUITS. A record tonnage of citrus fruit and increased production of noncitrus fruit marked the 1955 season in the United States. Although severe cold in the spring virtually wiped out the peach crop and damaged other fruits in Southern states, and poor weather curtailed production of prunes, figs, and olives in California, total production of noncitrus fruits in 1955 was 4% above 1954, although 2.6% below average. The crops of sour and sweet cherries, cranberries, apricots, and dates were unusually large. Good crops of grapes and plums also were harvested. The apple and pear crops were slightly below average, while output of peaches, prunes, figs, and olives declined. Citrus fruit production is continuing to expand, largely as the result of increased orange production. Total citrus tonnage is now almost as large as that of noncitrus fruits.

The bearing acreage for the four citrus fruits

FRUITS

in 1955 totaled 833,900 acres in 1955. It has fluctuated around this level during most of the postwar period. The bearing acreage of eight major deciduous fruits—commercial apples, peaches, plums, pears, grapes, cherries, prunes, and apricots—continued to decline. The total of 1,982,000 acres was nearly 800,000 less than in 1940. Acreage in the six minor fruits—figs, olives, avocados, dates, persimmons, and pomegranates—was 85,000, the highest in more than 15 years.

Consumption per person of all fresh and processed fruits has declined moderately since the end of World War II, although total consumption has not changed greatly because of the increase in population. Consumption of all fruits dropped from 225 pounds (fresh equivalent basis) in 1946 to 193 pounds in 1954. The 1954 total was made up as follows: fresh, 53%; canned, 24%; frozen, 16%; and dried, 7%. During the decade, consumption of frozen fruits and fruit juices and canned fruits increased, while that of fresh fruit, canned fruit juices, and dried fruits declined. (See also CANNING INDUSTRY; FROZEN FOODS.)

COMMERCIAL APPLE PRODUCTION, BY LEADING STATES*

(1,000 bushels)

Oregon.....	2,734	2,710	2,900

* Estimates of the commercial crop refer to the total production of apples in the commercial apple areas of each state. (Source: Agricultural Marketing Service, U.S. Department of Agriculture.)

Apples.—A commercial crop of 105,293,000 bushels was produced in the United States in 1955, 4% less than in 1954 and 1% less than the 1944-53 average. About 2½ million bushels were left unharvested, most of them in New England and New York where production was considerably above average. The Eastern states produced a total of 46,637,000 bushels, 3% more than average, although the crop in the Appalachian area was severely damaged by freezing weather in the spring. The Central states had a total of 15,019,000 bushels, 20% less than average; but the crop of 44,637,000 in the Western states was the largest since 1950.

The total apple crop for selected countries in the Northern Hemisphere dropped almost one fourth from 1954 to a total of 356,351,000 bushels in 1955. Much of the decrease was in the northern European (including the Scandinavian) countries.

Peaches.—Spring freezes caused a near failure of crops in the Southern states in 1955, and the total United States crop of 51,291,000 bushels was 16% less than in 1954 and a fourth less than average. However, output of California clingstones, which are used primarily for canning, totaled 22,585,000 bushels, 17% above 1954 and 5% above average.

Pears.—Production in 1955 was 30,511,000 bushels, a little larger than the 1954 crop but a little below average. Bartlett production on the Pacific coast, at 20,751,000 bushels, was slightly larger than in 1954 and 9% above average.

(Source: Agricultural Marketing Service, U.S. Department of Agriculture.)

Grapes.—A large crop was produced in 1955. The 3,173,700-ton total was 24% above 1954 and 9% above average. It included 607,000 tons of wine varieties, 650,000 tons of table varieties, and 1,690,000 tons of raisin varieties. Production of raisins in California was estimated at 220,000 tons (dried basis), a third above 1954 but a tenth below average. California produced nearly 3 million tons of grapes of all varieties.

Plums and Prunes.—California's plum crop of 88,000 tons was 22% above 1954. About 2,000 tons were culled under a marketing agreement. Michigan's plum crop of 4,400 tons was down one third from 1954. Production of dried prunes in California in 1955 was 135,000 tons (dry basis), 25% below the large 1954 crop. Production of prunes for all purposes in Idaho, Washington, and Oregon totaled 96,800 tons (fresh basis), up 43% from 1954 but 9% below average.

Cherries.—A large United States crop of 150,-350 tons of sour cherries was produced in 1955. This was 40% larger than in 1954 and 28% above average. The sweet cherry crop, at 117,280 tons, also was large—20% above 1954 and 25% above average.

Cranberries.—The crop of 1,035,400 barrels in 1955 was slightly more than in 1954 and a fourth above average. Massachusetts produced about half the total.

Apricots.—The 267,000 tons produced in 1955 was 72% above 1954 and 14% above average. California produced 242,000 tons, the state's largest crop since 1946.

Avocados.—The rapid expansion in production of this crop was interrupted in 1955-56 because of a sharp drop in output in California. Output in Florida continued to climb. The total for the two states was 34,000 tons, 39% less than in 1954-55.

Figs and Dates.—Date production in California in 1955 was 16,500 tons, 7% below 1954 but 15% above average. Production of dried figs in California was estimated at 23,300 tons (dry weight), 9% below 1954 and 24% below average. Output of figs for other uses (fresh weight) was 12,000 tons, 9% above 1954 but 12% below average.

Olives.—California's 1955 crop was 39,000 tons, down 22% from 1954 and 12% from average.

Pineapples.—Florida produced 8,000 crates in 1955, far less than the 25,000 crates in 1954.

Strawberries.—The 1955 crop in the United States amounted to 12,821,000 crates, as compared with 11,692,000 in 1954 and the 1949-53 average of 11,064,000. The 1955 total included 5,385,000 crates for fresh market sale and 7,436,000 for processing.

* Based on reported prospects Dec. 1, 1955. Season begins with the bloom of the year shown and ends with completion of harvest the following year. (Source: Agricultural Marketing Service, U.S. Department of Agriculture.)

States continued to gain in 1955-56, according to preliminary estimates of the Agricultural Marketing Service. The crop was estimated at 132,015,000 boxes, 2% more than in 1954-55 and 12% above the 1944-53 average. The 1955-56 crop included 66,965,000 boxes of early and midseason oranges, and 65,050,000 boxes of valencias. Grapefruit production also increased with the 1955-56 crop of 45,200,000 boxes—3,030,000 above 1954, but still below the average of 49,262,000. The crops of tangerines, lemons and limes were down from 1954-55.

An increasing proportion of the expanding citrus production is being processed for consumption rather than used fresh. In the 1954-55 season, for example, 51% of the citrus crop was processed, as compared with only 37% 10 years earlier. The rapid growth in production of frozen orange concentrated juice is mainly responsible for this trend; 67 million gallons of this product were made in 1954-55.

* Preliminary. Production estimates relate to the crop from bloom of year shown. Harvesting in Northern Hemisphere countries begins about November, and in Southern Hemisphere countries about February of the following year. (Source: Foreign Agricultural Service, U.S. Department of Agriculture.)

The upward trend in world production of oranges was halted in the 1954-55 season. Output in the Mediterranean area dropped 11%, with most of the decrease in Spain where trees were severely damaged by frost in 1954. Production in North America continued to increase. New plantings are being made in most areas of the world, and it is likely that the upward trend in production will be resumed in the next several years.

Reduced production in the United States dropped the 1954-55 world grapefruit crop 11% below a year earlier. The United States produces about 90% of the world crop. World lemon pro-

duction also was down, with most major producing areas showing declines. Lime production, however, is continuing upward. Mexico, the United States, and Egypt produce most of the world's limes. (See also AGRICULTURE.)

FUR INDUSTRY. The forward movement in the fur industry which began in 1954 continued in 1955 with ever-increasing momentum. Fur consciousness on the part of the consuming public, triggered by the public relations campaign inaugurated in 1954 by the manufacturing branch of the industry, in turn stimulated the efforts of the industry to satisfy consumer demand for small pieces and a high color note.

In addition to the stoles and capelets of 1954, the Industry in 1955 produced a complete line of small lightweight fur pieces, including stoles with sleeves, jackets, capes, and tunics.

The same was true of colors. Where 1954 brought pastel pinks and blues, 1955 brought such new shades as flamingo red, capri blue, caramel, honey, burgandy, and bottle green. Beaver alone was available in a dozen colors. There were ten new shades in Persian lamb, and nutria acquired new glamour in iridescent oyster. The charcoal browns and grays of the men's wear field found their way into women's apparel and appeared in river otter, sheared raccoon, and even mouton processed lamb.

In the field of style, "tube-slim" and the "A" line keynoted the fashion trend, along with ensembles consisting of tapered short coats and matching wool suits or dresses. A 1955 innovation was the functional short, soft fur coat for sportswomen and suburbanites, with slits and pleats to provide free action and sleeves and cuffs that are pared down to eliminate driving hazards at the wheel.

Management and labor relations in the industry took a notable stride forward in 1955. The collective labor agreement under which the fur manufacturing industry functions, expired in February 1955. Negotiations between the Associated Fur Manufacturers, Inc., which is the outstanding manufacturers' organization in the industry, and the Furriers Joint Council, with which all the production workers' unions are affiliated, resulted in a new agreement embodying radical innovations and new ventures in cooperative undertakings between employers and employees, and this result was achieved without interruption of factory production.

Contributing to this result in no small measure, was the fact that the Furriers Joint Council unseated its leaders and turned to the American Federation of Labor (AFL). After a probationary period, they were accepted by this body and became an affiliate of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL.

J. GEORGE GREENBERG,
Executive Manager, Associated Fur Manufacturers, Inc.

FURNITURE INDUSTRY. Production.—In 1954 over 3,000 household furniture factories in the United States shipped \$1,130 million in products. Shipments were down over 7% from the 1953 production peak. Wood household furniture made up 50% of the total; upholstered furniture, 32%;

and metal furniture, 18%. The industry employed 244,000 production workers, whose weekly wages were \$60.25 and whose hourly earnings averaged \$1.51.

Prices.—Wholesale prices averaged 113.3% of the 1947-49 level, as compared with 114.5% for all prices other than farm products and foods.

Furniture Store Sales.—Retail furniture stores in 1954 sold \$3,960 million in merchandise, or 3% under the 1953 volume. Much furniture was sold through other outlets. Eighty-five per cent of this furniture was sold on credit. Stores made about 2% profit on sales. For the first 9 months of 1955, sales ran 18% over those of the previous year. Sales were sustained in 1955 by high national income, record home construction, full employment, and a high number of marriages.

Materials.—Mahogany is still the king of furniture woods, accounting for 30% of all wood used in dining room and bedroom suites. Oak and walnut are next in importance. Maple, birch, and cherry are also used extensively. Brass, the long-dominant furniture metal, is meeting more and more competition from wrought iron, chrome, and aluminum. Metals are often finished in color. Latex foam, now available to the industry in all sizes, shapes, colors, and degrees of softness, is being widely accepted because of its comfort, beauty, and durability in both the high-priced and medium-priced lines. Fabrics are showing a different appearance from those of a few years ago. The trend is to sleek, streamlined weaves in contrast to the nobby weaves of a few years back. Small-figured patterns outnumber large-figured ones by three to one. More and more stain and cigarette-proof fabrics are in evidence, and nylon is growing steadily in popularity because of its twin virtues of easy cleaning and durability.

Color.—Never before has there been the use of so much color as there is today in home decoration and furniture design. There is a trend toward pastel shades with a high preference being

shown toward light, soft tones. Stain-resistant fabrics have aided this trend because they permit hard, daily usage. Shades ranking high in popularity range from such tones as soft green, blue, mauve, lavender, charcoal, muted tans, gray, pink, turquoise, beige, brown, caramel, honey, and butternut to fire engine red.

Styling.—Seldom in the history of furniture manufacturing has there been so much attention given to styling as there is today. Modern styles are in the lead, accounting for 60% of all pieces being presented at the furniture shows. Early American, 18th century and other traditional styles, Provincial, and unstyled lines follow in popularity. Modern styles are moving away from the extreme, the harsh lines, the machinelike contours, and the monotonous designs which were dominant a few years ago. Lines are getting softer and contours rounder. Modern styles are moving toward the traditional to a considerable extent, while traditional is taking on certain features of the modern.

Traditional styles, which reached their peak about 1940, have declined in recent years, but still have many devoted followers, especially among the older and wealthier segments of the population. Furniture is being designed more and more for casual living, but much attention is being given to design which indicates quality and elegance. The weighty, overstuffed look so characteristic of furniture a few years ago is rapidly dying out. Today's furniture is light and easy to move about. Kitchen furniture continues to follow the chrome leg and plastic top pattern established so firmly a few years back. (See also INTERIOR DECORATION.)

8,396,916 million in 1953. In the first half of 1955 marketed production reached 4,702,500 million cubic feet, compared with 4,344,100 million during the same period of 1954. Of the natural gas marketed in 1954, 22% was consumed in residential use, and 47%, in industrial requirements.

The American Gas Association now reports manufactured gas in therms rather than in cubic feet. (A therm equals 100,000 British thermal units.) Production in 1954 was 1148.1 million therms, compared with 1,315.4 million in 1953. Production in the first 6 months of 1955 reached 272 million therms, compared with 328 million during the same period of 1954. A large part of the manufactured gas is derived as a byproduct from coke ovens. (See also MINING; PETROLEUM; PUBLIC UTILITIES.)

BERENICE B. MITCHELL, *Foreign Minerals Staff, U.S. Bureau of Mines*.

GASOLINE. See Index entry.

GEM STONES. Precious stones (diamond, emerald, ruby, and sapphire) are not produced in the United States, but there is a domestic output of a variety of semiprecious and ornamental stones, the value of which in crude form totaled between \$600,000 and \$700,000 in 1954. The principal semiprecious stones produced in 1954 were, in order of importance, agate, kunzite, jade, and turquoise.

Imports of gem stones into the United States, valued at \$130,194,343 in 1953 and \$143,593,877 in 1954, consisted chiefly of diamonds. The 1954 imports included 887,275 carats of rough or uncut diamonds valued at \$59,428,768, and 594,772 carats of cut (but unset) diamonds, valued at \$62,758,349. These figures do not include industrial diamonds (see ABRASIVES).

The diamond is the world's foremost gem stone, although select specimens of emerald or ruby may have a higher value per carat. World output of diamonds in 1954 was 20,440,000 carats, but only about 3,700,000 carats were of gem quality. (See MINERAL PRODUCTION for output of major countries.)

The sales organization of the diamond industry reported total sales value of \$176,000,000 (gem, \$129,600,000; industrial, \$46,400,000) in 1954, compared with a total of \$171,000,000 in 1953.

GENERAL ASSEMBLY (U.N.). See UNITED NATIONS.

GENERAL SERVICES ADMINISTRATION. This agency, created in 1949, is charged with bringing efficiency and economy to the major housekeeping tasks of the federal government. Its principal

duties are concerned with the provision of office and general-purpose working space for federal agencies, procurement of their common-use supplies, and control and preservation of federal records. GSA also buys strategic and critical materials for the national stockpile—of which it is custodian—and manages the National Industrial Reserve, a pool of surplus war plants and machine tools held for use in an emergency.

Public Buildings Service.—This service manages, operates, and maintains 110 million square feet of government-owned and -leased space. Its other duties include construction of new buildings and responsibility for the disposal of excess and surplus real property.

Federal Supply Service.—This agency is responsible for: (1) procuring supplies of equipment of desirable quality, at the lowest possible price, for the various government agencies; (2) obtaining the best use of such supplies and equipment; and (3) securing the most advantageous sales price for property no longer of use to the government. GSA buys \$450 million worth of supplies a year through: (1) federal scheduled contracts; (2) stores depots; and (3) its open-market and consolidated purchase programs for direct delivery to federal agencies.

National Archives and Records Service.—The National Archives and Records Service (q.v.) is responsible for federal records, and has 4.2 million cubic feet of records in its possession in the National Archives and 11 records centers.

Emergency Procurement Service.—This agency carries out the highly specialized job of buying for and safeguarding the national stockpile. In all, 76 items classified as strategic and critical are stockpiled. The stockpile is valued at \$4.7 billion; the estimated goal is \$6.8 billion.

Transportation and Public Utilities Service.—This service is GSA's traffic manager. It negotiates rates for public utilities services, and also assists other executive agencies in improving their transportation practices.

EDMUND F. MANSURE,
Administrator of General Services.

GENETICS. A pair of pseudoalleles in *Drosophila melanogaster*, which have been demonstrated to be physiologically different, have each been shown to be physiologically indistinguishable from one of two nonallelic genes in *Drosophila virilis*. This is further evidence that pseudoalleles may be initial steps in the evolution of genes.

Much progress has been made in the analysis of the chemical and physical nature of nucleic acids. This is of extraordinary importance, because genetic material (the genes) appears to be composed of nucleic acids. As the result of chemical and physical analyses, English workers have proposed a structure for deoxyribonucleic acids (DNA) which may be described as follows: DNA is composed of two helical phosphate sugar chains winding around the same axis, the chains running in opposite directions. The chains are linked together by hydrogen bonds between their bases, a base from one chain being paired off with the opposite base in the other chain. It is postulated that specific pairing occurs, and that the only pairs that will normally fit into the structure are adenine with thymine and guanine with cytosine (or its derivatives). This ingenious model provides for chromosomal (gene) reduplication and gene action. A method of reduplication has been proposed by an American investigator which can be extended to define minimum units of re-

combination, that is, the minimum size of the physical gene.

Investigations on a bacteriophage have led to an estimate that the unit of recombination is not larger than the order of 12 nucleotide pairs, and that mutations may involve various lengths of chromosome which may extend over hundreds of nucleotide pairs. Hence, the physiological gene is estimated to be much larger than the physical gene. This is in accord with hypotheses advanced, on other grounds, over 20 years ago by Serebrovsky and Dubinin in Russia and Goldschmidt in the United States.

Some of the smaller components (ribosides) of ribonucleic acid (RNA) have been synthesized. We may confidently expect that both DNA and RNA will be synthesized in time.

It has been found that, in the cell, protein synthesis is greatest in the microsomes and mitochondria. Neither of these structures contains DNA, but both contain RNA. This has led to the suggestion that the DNA of the nucleus (chromosomes, genes) controls the production of RNA, which in turn controls the production of proteins.

Chemical studies of chromosomes have led to the supposition that the chromosome is composed of units linked in linear fashion through the chelation of calcium by terminal phosphate groups in DNA molecules. In light of this, it is most intriguing that the addition of excess calcium to the food medium reduces crossing over in *Drosophila melanogaster*, while the addition of a chelating agent increases crossing over.

The introduction of nuclear weapons has spurred investigations of the relative effectiveness of various types of radiation (X-ray, neutrons, gamma rays) on genetic material. Two broad types of effects may be distinguished: those involving breakage and rearrangement of chromosomes (chromosomal mutations), and those not involving detectable chromosomal breakage (gene changes or point mutations). The ionizing radiations from nuclear detonations which are of most concern for living organisms are gamma rays and fast neutrons. The major difference between radiations from a detonation and from cyclotrons or other laboratory sources of neutrons and gamma rays is the intensity with which the radiation is delivered. The total dose of radiation is delivered almost instantaneously by a detonation, whereas it may be spread over a considerable period of time when delivered by laboratory sources. Thus far, no differences have been found between the effects or effectiveness of neutrons or gamma rays from detonations and those from other sources on either type of mutation.

All experiments agree that fast neutrons are more effective than X-rays or gamma rays in inducing chromosomal changes. The greater effectiveness of neutrons over X-rays is a function of the total amount of energy received; at low dosages, neutrons appear to be at least eight times as effective as X-rays; at higher dosages, the effectiveness of X-rays approaches that of neutrons. This may mean only that at higher dosages the maximum ability of the cell to respond is approached. It is a sobering thought that protection against neutrons is more difficult than against any other type of radiation.

Additional evidence of position effect among the genes determining the Rh antigens has appeared. The antigenicity of the Rh antigen D (Rh₀) is reduced, in some cases at least, when the opposite chromosome has antigens Cde (Rh'). It now seems certain that position effects occur

in man as they do in other animals and plants.

ARTHUR G. STEINBERG,

Geneticist, Children's Cancer Research Foundation, Children's Medical Center, Boston.

GENEVA CONFERENCE (BIG FOUR, 1955). In a long-delayed response to Sir Winston Churchill's urgent appeal for a meeting of the major powers "at the summit," the heads of government of the Big Four powers (President Dwight D. Eisenhower, United States; Premier Nikolai A. Bulganin, Soviet Union;* Prime Minister Anthony Eden, United Kingdom; and Premier Edgar Faure, France) met July 18-23, 1955, at the Palace of Nations in Geneva, Switzerland, to "exchange views" on the problems threatening world peace. The conference, called for by the Western powers on May 10, 1955, and agreed to by the Soviet Union on May 26, was designed to be carried out in two phases. The heads of government were to formulate the major issues to be discussed and the methods to be employed by the foreign ministers, who would meet for the second-phase discussions in October 1955.

MEETING AT THE SUMMIT

Initial Statements.—In the opening addresses of the conference (July 18), the Big Four were united in their appeal for the creation of a sincere and cooperative spirit in East-West diplomacy, thus setting the tone of the ensuing discussions. Enumerating the issues he believed to be the most vital, President Eisenhower, the first speaker, gave priority to reunification of Germany, followed by questions of European security, communication and human contacts among the peoples of the East and West, international communism, and disarmament. He insisted on a united Germany's right to join military alliances for purposes of defense, and by the same token acknowledged the necessity of taking into account the security interests of the Soviet Union in a discussion of German reunification.

In accord with President Eisenhower, both French Premier Faure and British Prime Minister Eden were of the opinion that the reunification of Germany and its integration into the Western European Union and the North Atlantic Treaty Organization (in accordance with the Paris agreements of Oct. 23, 1954) were essential to the harmonization of East-West relations. Declaring that a reunified Germany should not be neutralized, Faure maintained that Soviet security could be insured by: (1) limiting the forces of a united Germany to the number provided by the Western European Union to West Germany; (2) framing and abiding by a mutual security pact between the Western powers and the Soviet Union similar to the Paris agreements; and (3) establishing an all-European security organization, including a united Germany, "to superimpose new defensive commitments on those that already exist." He hoped that eventually the two security systems and the East European bloc might be fused into one. On the question of disarmament, he proposed a plan calling for budgetary control of armaments whereby the resulting savings from present armament costs would be given over to an international organization for use in underdeveloped countries.

Prime Minister Eden's aims were less broad in scope than those of his Western colleagues. He offered three suggestions designed to provide the

* The USSR was also represented by Nikita S. Khrushchev, first secretary of the Central Committee of the Communist Party of the USSR, who was generally thought to be the real head of the Soviet government.

GENEVA CONFERENCE

(Top) Delegations at the opening session are (clockwise, beginning at upper left): U.S., French, British, Soviet. (Above) Chief Soviet delegates Molotov, Bulganin, Khrushchev. (Right) President Eisenhower and Secretary of State Dulles. (Below) The Big Four: Bulganin (USSR), Eisenhower (U.S.), Faure (France), Eden (Britain).

(TOP AND RIGHT) WIDE WORLD; (OTHERS) UNITED PRESS

Soviet Union with real security against a unified and rearmed Germany. These were: (1) establishment of a mutual security pact comprising the Big Four and a unified Germany; (2) limitation of the total forces on each side in Germany and neighboring countries, and the establishment of a system of reciprocal supervision and control of armaments in that area; and (3) examination of the possibility of a demilitarized area between the East and West.

Discarding the customary Soviet language of

POINIER IN THE DETROIT NEWS

"A VERY DEAD PIGEON"

recrimination, Premier Bulganin, the last speaker of the day, set forth the Soviet Union's views of the problems confronting the East and West in an unusual spirit of friendliness and candor. In opposition to the stand taken by the Western delegates, he maintained that European security should precede German reunification, since the remilitarization of West Germany and its integration into Western military groupings was the primary obstacle to reunification. Thus he proposed a new version of the Soviet security plan introduced in 1954 at the Berlin Conference, providing for the replacement of existing military alignments by an all-European system, including participation by the United States, to be carried out in two stages. During the first stage the Eastern and Western blocs would bind themselves against the use of armed force and would refrain from increasing their military strength in foreign territory. In the second stage the North Atlantic Treaty, the Paris agreements, and the Warsaw mutual defense treaty (signed by the USSR and seven Soviet satellite countries at Warsaw on May 14, 1955) would be abolished in favor of an all-European security system, the eventual aim of which would be the withdrawal of all foreign troops from European soil.

Premier Bulganin also announced the Soviet Union's decision to contribute fissionable material to an atomic pool as soon as an international atomic energy agency had been established. He called for the limitation of armed forces levels

and the prohibition of atomic weapons, and agreed with the other conferees that there should be a removal of trade, cultural, and scientific barriers among the Big Four powers.

Agenda.—On the second day of the conference (July 19), the foreign ministers agreed on a four-point agenda for the ensuing "summit" discussions: (1) German reunification; (2) European security; (3) disarmament; and (4) improvement of East-West relations.

German Reunification and European Security.—To allay Soviet fears of a rearmed Germany, Eden, on July 19, revised his 5-power security plan to include other European nations. Although no direct reply was forthcoming from Bulganin, the latter repeated his proposal for an all-European security system and rejected the West's bid for an immediate settlement of the German question, maintaining that reunification was impossible so long as West Germany was committed to NATO. In a personal appeal to Marshal Georgi Zhukov, Eisenhower tried to convince the Soviet delegation that Germany must not be permitted to "become again a military vacuum . . . again a fertile ground for the propagation of a Hitler"; that NATO was a purely defensive alignment; and that the United States would never be a party to an aggressive war.

The split between East and West was crystallized on the third day (July 20), when Bulganin republished in draft-treaty form his two-phased plan for European security which envisaged an indefinitely divided Germany. To save the conference from a deadlock, the heads of government agreed to request their foreign ministers to draw up a directive calling for a future conference at which the questions of German reunification and European security would be discussed. Eden expanded the request to include the consideration of limitation and inspection of forces in Germany and neighboring countries, and a demilitarized area in central Europe.

Disarmament.—On July 21 the subject of disarmament was taken up, and again agreement could not be reached. Premier Faure returned to his original plan for disarmament by budgetary control. Eden again proposed the establishment of a supervised security zone in central Europe pending the demilitarization of an area on both sides of the Iron Curtain. Bulganin proposed a temporary nonaggression pact between Eastern and Western military blocs and a plan identical to that presented by the Soviet Union on May 10, 1955, before the U.N. Disarmament Subcommittee in London, which called for the abandonment of the use of nuclear weapons. These were dramatically overshadowed by President Eisenhower's direct proposal to Bulganin calling for an immediate system of inspection and disarmament whereby East and West would give each other complete blueprints of their military establishments and provide within their countries facilities for unlimited aerial inspection.

East-West Relations.—On the fifth day (July 22) the heads of government took up the question of East-West relations. The Western leaders were united in their appeal to the Soviet Union to remove the economic and cultural barriers in the way of international understanding. On the following day Bulganin echoed Western sentiment when he declared that the Soviet Union was "ready by all means to facilitate" development and strengthening of East-West economic and cultural relations.

The Directive.—In the meantime the Big Four foreign ministers, meeting to arrange an agenda

for the October phase of the conference, came to a deadlock in the drafting of their directive. These differences over procedural questions were compromised in the directive issued by the heads of government on July 23, the last day of the conference. The foreign ministers were instructed by implication to discuss the reunification of Germany and European security simultaneously. On the question of European security, the ministers were instructed to consider: (1) a security pact for Europe or for part of Europe; (2) limitation, control, and inspection of armed forces and armaments; and (3) establishment between East and West of a zone in which disposition of armed forces would be subject to mutual agreement. It was agreed that the Big Four cooperate to develop a system of disarmament through the U.N. Disarmament Commission, and the foreign ministers were asked to study measures to bring about the eventual elimination of trade and cultural barriers between the peoples of both sides.

MEETING OF THE FOREIGN MINISTERS

On October 27 the foreign ministers of the Big Four powers—John Foster Dulles (United States), Vyacheslav Molotov (USSR), Harold Macmillan (United Kingdom), and Antoine Pinay (France)—met at the Palace of Nations in Geneva to implement the 3-point directive—European security and reunification of Germany, disarmament, and economic and cultural contacts—evolved by the heads of government in July. The discussions of the following 21 days, characterized by an increasingly adamant divergence of interests, proved to be largely fruitless. By the end of the conference, negotiation had degenerated to propaganda, and the “spirit of cooperation and mutual trust” engendered during the Summit Conference had suffered a serious reversal.

European Security and German Reunification.—In accordance with their belief that the problems of German reunification and European security are inseparable, the Western powers repropounded the Eden plan for unification of East and West Germany on the basis of free elections. To weaken the Soviet Union's demand that European security take precedence over German reunification, the West added a 9-point “treaty of assurance” (contingent on a united Germany's decision to join the North Atlantic Treaty Organization) providing security guarantees for the Soviet Union, including provisions for a mutually inspected zone of limited forces and armaments on both sides of the frontier dividing a united Germany and the eastern European countries. As was anticipated by the West, the Soviet Union answered that it would not submit to the resurrection of German militarism. Instead, Foreign Minister Molotov repropounded the draft of a 50-year all-European security treaty introduced at the Berlin Conference in 1954 and reiterated by Premier Bulganin in the Summit Conference, which envisaged the eventual dissolution of NATO and made only a vague reference to the reunification of Germany. Each side invoked the ambiguous wording of the directive to justify its respective position, and charged the other with a breach of faith in carrying out the instructions of the heads of government.

To avoid a propaganda loss, and to break down Western resistance to a discussion of security first, the Soviet Union presented a revised security pact which incorporated a suggestion made by Anthony Eden at the Summit Confer-

ence (but since written out of the West's position) calling for a demilitarized zone on both sides of the frontier between East and West Germany. This too was rejected by the West on the grounds that it was predicated on an indefinitely divided Germany. Pressed closely by the West for a clarification of its stand on reunification, the Soviet Union presented its version of an East German proposal calling for postponement of reunification until an all-German Council, composed of the representatives of the parliaments of East and West Germany, had established economic and cultural ties and military defense plans and had considered questions pertaining to unification. The plan was termed “totally unacceptable” by the West on the particular grounds that such a council would be unrepresentative of the German people and on the general grounds that the plan's purpose was the eventual communization of Germany.

To force the Soviet Union's hand, the West abruptly proposed that free elections to reunite Germany be held in September 1956. The anticipated Soviet rejection, which emphasized the necessity of “full cognizance of the fact that there exist on the territory of Germany two different states and that reunification of Germany cannot be brought about other than by mutual agreement of these states,” made it clear to the West that the principal objective of Soviet foreign policy was not the realization of security against a remilitarized Germany, but rather the perpetuation of division as second best to the communization of both areas. The discussion on the first item on the agenda was then suspended on the insistence of the West.

Disarmament.—Proceeding to the second item, the conferees again failed to arrive at common ground. Insisting on the necessity of a limited agreement which could provide a realistic basis for future negotiations on general disarmament, the Western powers proposed a plan, the purpose of which was the prevention of surprise attack, and the principal tenet of which was President Eisenhower's proposal of a system of mutual aerial inspection and exchange of military blueprints between the United States and the Soviet Union. Maintaining that the Western plan, in and by itself, failed to guarantee any practical step for the reduction of armaments, and that, on the contrary, it was an attempt to “legalize” the use of atomic weapons, the Soviet Union counterproposed a comprehensive plan, which, although not excluding consideration of inspection and control, emphasized reduction of armed forces and conventional arms and the prohibition of nuclear weapons. The West refused to accept the plan, declaring that moral pledges had little value where distrust was prevalent.

To minimize the Soviet Union's criticism of the Western point of view—and at the same time to place the onus of failure to arrive at an agreement on that power—the United States offered to extend the Eisenhower plan to all its overseas bases. With the Soviet rejection of this concession, the impossibility of further negotiation became apparent, and the question of disarmament was shelved by the conference.

East-West Contacts.—Little more was achieved by the foreign ministers in their discussions of economic and cultural contacts, despite the apparently sympathetic attitude toward such contacts manifested by the Soviet Union in the Summit Conference. Following Secretary of State Dulles' announcement to the conference that the United States had lifted restrictions on travel by

Mt. Makalu, 27,790-foot Himalayan peak in Nepal, first climbed by French party led by Jean Franco in May 1955.

United States citizens to the Soviet Union and those satellite countries with which the United States maintained diplomatic relations (Poland, Czechoslovakia, Hungary, and Rumania), the West proposed, in effect, that the Communist Party of the Soviet Union relinquish its monopoly on communications in that country. The memorandum presented by the West called for the eventual elimination of Soviet censorship and radio-jamming, opening of information centers in the Soviet Union, exchanges and open sale of books, periodicals, and newspapers, monthly uncensored broadcasts on world developments, increase of private tourism by abolition of the artificial Soviet rate of exchange, and reduction of trade barriers.

The Soviet Union's memorandum, on the other hand, was limited to cultural exchanges on the official level alone, and elimination of Western restrictions in the trade of strategic materials with Communist countries. After Molotov charged that the Western plan was an attempt to interfere in the internal affairs of the Soviet Union, the effort to reach agreement on the third item on the agenda broke down. On November 16 the conference came to an unsuccessful close.

Communiqué and Statements.—Reflecting the barren results of the conference, the short communiqué issued by the foreign ministers on the final day noted that they "had a frank and comprehensive discussion" of the three items in the directive and agreed to report the results to their respective heads of government. No date was set for another conference.

Despite the Soviet Union's refusal to accept it, a draft statement on disarmament was issued by the Western powers, in which the second item on the agenda was turned over to the subcommittee of the U.N. Disarmament Commission. The Western powers also issued a declaration on Germany, in which it was stated that the failure of the conference to further the possibility of German unification was the result of the Soviet

Union's desire to maintain "the continued division of Germany" as well as to bring about "the eventual dissolution of the Western security system."

GEODETIC SURVEY. See COAST AND GEODETIC SURVEY.

GEOGRAPHY AND EXPLORATION. Many new achievements in the field of geography and exploration were recorded in 1955. Among the highlights were the conquest of Kanchenjunga, the world's highest unclimbed peak; significant contributions to our knowledge of early man; further developments in the polar regions; and the blueprinting of extensive plans for the forthcoming International Geophysical Year, 1957-58. Some of the current expeditions, notably Operation Deepfreeze, were laying groundwork for further investigations to be carried out on an international scale in Antarctica during the next three years.

Early Man.—Major discoveries which have shed substantial light on migration and settlement patterns of early man were made during 1955. Theories of the Asiatic origin of Alaskan and Canadian Eskimos were considerably strengthened when, on the banks of the Firth River, east of Alaska, traces of nine civilizations, four heretofore unknown on this continent, were found in permafrost by a National Museum of Canada group. The relics were similar to cultures of Eastern Siberia of 3,000 to 5,000 years ago.

In Nevada, bones tested by radiocarbon methods indicate man's presence in that area 23,000 years ago, predating previously known cultures by 13,000 years.

In the Middle East, Robert Braidwood, of the Oriental Institute of the University of Chicago, completed further excavations at Jarmo (4,700 B.C.) and M'Leffat (founded before 5,000 B.C.) which reveal them to be the oldest known villages with permanent agriculture and domesticated livestock.

Findings in caves at Makapan in the South African veldt by the Wenner-Gren Foundation proved the Australopithecines to be early stone-age humans who used tools and fire. This oldest and most primitive stone culture known in South Africa is about 150,000 years old.

United States.—In the State of Washington, substantial glacier advances over a large area were reported for the first time since observations were begun. Richard Hubley, leader of a group working in the Olympics and the Cascades, claims that ground studies of the Blue Glacier and aerial surveys of 48 other glaciers reveal advances at an annual rate of 10 to 350 feet. Cooler, wetter weather in the last decade is believed to be the cause. During the year the existence of a glacier on Wheeler Peak in eastern Nevada was reported by Weldon Heald.

Mexico and the Caribbean Area.—In Mexico a new volcano may be in the making. A newly opened fissure south of Mexicali was reported emitting gases and debris. Sharat K. Roy is conducting a survey of Central American volcanoes, which will be the most detailed to date. Off Haiti an old anchor believed to be from the *Santa Maria* was found by Edward Link and was examined by the Smithsonian Institution.

South America.—An Academy of Natural Sciences of Philadelphia expedition to the Amazon left in September 1955 to observe aquatic life in the Iquitos and Tingo Maria areas of Peru. The

party, led by Dr. Ruth Patrick, will attempt to establish whether tropical or temperate rivers have the greater diversity, and also to analyze the effects of pollution. The New York Botanical Garden Plant Exploration Program had four teams in the field during the year. One group, led by Steyermark and Murdoch, explored the "Lost World" area of Venezuela, studied Indian life, collected 1,500 rare plants, and found uncharted falls on the Caroní River. Victor Von Hagen completed his two-year survey of the Incan Highway system, which proved to be an excellent network of stone roads some 5,000 miles in extent.

In the Andes of Argentina, Ojo del Salado (22,566 feet) was climbed by an Argentine party under Prof. Orlando Reney. A University of Colorado expedition to the Cordillera Blanca of Peru climbed four peaks, three of them first ascents, including the North Peak of Nevado Pucahirca (about 20,000 feet).

Europe.—The major work done in Europe during 1955 was in the field of archaeology. In Italy, Grecian ruins of Elea, a magnificent city dating from the 5th century B.C., were excavated. In Crete, the Minoan culture was found to have cultural links with the Nile Valley. An interesting combination of detective work and microgeography by Sir Gavin de Beer of the London Museum of Natural History indicated the probable route followed by Hannibal across the Alps.

Under the aegis of Arthur W. Baker, the Italian Navy has recovered over 2,000 objects from the Sicilian harbor of Syracuse, where it is believed Athenian warships were sunk between 415 and 413 B.C.

Asia.—Dr. Seton Lloyd of the British Institute of Archaeology continued working in the Arzawa ruins of Anatolia; the most important discovery, however, a 3,000-year-old centrally heated and beautifully decorated palace, was found to pre-date the Arzawa culture and is still anonymous. Traces of the Hittite civilization unearthed in the Anti-Taurus area by an American-German party prove the survival of that culture, at least until the time of Christ. The Negev Archeological Survey, under the guidance of Dr. Nelson Glueck, conducted its fourth season of work on Nabatean culture. Sites of 300 ancient villages dating back 4,000 years were discovered.

In addition to the important archaeological discoveries in the Middle East, and various developments in Siberia and China, world attention was focused on mountaineering news from the Himalayas. For the third successive year the highest unclimbed peak was scaled—in 1953, Mt. Everest; in 1954, Mt. Godwin Austen (K^2); and in 1955, Kanchenjunga. A British expedition led by Dr. Charles Evans stopped just short of the summit of the latter (28,146 feet) on May 25 to avoid offending the Sikkimese, who believe their gods dwell there. Another of the 8,000-meter peaks, Mt. Makalu (27,790 feet), was climbed in May by a French group under Jean Franco. Kong Guru (23,000 feet) was assaulted successfully by the Bauer Mountaineering School group led by Heinz Steinmetz. The second highest summit ever reached by Americans, Mt. Istoró Nal (24,242 feet) in the Hindu Kush, was scaled on June 8 by Thomas A. Mutch and Joseph E. Murphy, Jr., of the Princeton Mountaineering Club. New Zealanders climbed Pethangtse (22,080 feet) and Baruntse (23,570 feet).

Other expeditions in the Himalayan area made extensive geographic investigations in addition to mountaineering efforts. The Harvard

U.S. NAVY

U.S.S. Atka, which accompanied U.S. Navy's 1954-55 Antarctic expedition, moves through ice-filled polar waters.

Mountaineering Club Karakoram Expedition, led by Henry Francis, visited the Hushe Valley of northeastern Pakistan, studying zoology, plant taxonomy, geology, glaciology, and physical effects of high altitudes. An Austrian-Swiss effort in the Lhotse area undertook studies of local culture and further research on the Yeti ("abominable snowman").

On May 31, 1955, the Royal Geographical Society and the Alpine Club announced establishment of the Mount Everest Foundation, which will promote and give financial support to the further exploration of mountain areas. Initial funds were secured from royalties of Sir John Hunt's book, *Conquest of Everest* (1954), and proceeds from motion pictures and lectures on the Everest expedition.

In Central Asia, Stalin Peak (24,500 feet) in the Tadzhik SSR was again climbed, and the Georgian Alpine Club scaled Molotov Peak (22,477 feet). A 62-man Chinese expedition claimed to have located the source of the Yellow River in the Yalolodoz Mountains of the Bayan Kara Mountains in Chinghai after a four-month search.

Arctic.—There has been much interest centered in the Arctic regions by both governmental and private agencies. During the summer, 19 teams sponsored by the Arctic Institute of North America and the Office of Naval Research investigated various phases of Arctic geography. Specific efforts included seven projects of the Arctic Research Laboratory at Point Barrow, as well as studies of flora, fauna, radio waves, and geology. The highest unclimbed mountain in North America, University Peak (15,030 feet), near the Alaska-Yukon border, was scaled on June 19 by the John McCall Memorial Expedition.

A U.S. Navy polar expedition on an eight-year study of cosmic rays and weather phenomena near the North Magnetic Pole launched numerous balloons and rockets for collecting upper-air data. The U.S. Army announced that troops were installing 50 radar stations from Alaska to Greenland as part of an air raid warning system. The distant early warning (DEW) line project is one of the largest operations ever undertaken in the Arctic, with some 117 ships involved in transporting equipment and personnel. Several hundred tons were also carried in a remarkable overland winter trek of over 400 miles each way from Fairbanks, Alaska, northward to the Arctic coast by trailer trucks and a new type of vehicle called a Sno-Freighter.

The Soviet Union has revealed extensive plans for both Arctic and Antarctic exploration. In 1955 an expedition led by N. A. Volkov set up a new station on pack ice in the Arctic Ocean. North Pole 5, as it is called, will be the collection center for oceanographical, magnetic, and mete-

orological observations. Another floating station near Franz Josef Land was also established. (See also ARCTIC EXPLORATION.)

Antarctica.—Plans of tremendous scope are materializing for the forthcoming International Geophysical Year, 1957–58. At least 45 stations are projected by some 12 nations in various sectors of Antarctica within the next three years. Groundwork for the United States effort was started by the navy icebreaker *Atka*, which visited various parts of the coast of western Antarctica during 1954–55. The second phase of the work (Operation Deepfreeze) got under way in October 1955, and involves the transporting of equipment and the establishing of five scientific and two logistical bases for the International Geophysical Year program.

The most intensive land operations of 1955 were carried out by the Australian National Antarctic Research Expedition at Mac-Robertson Coast. From its base at Mawson Station it made forays along the coast, on Magnetic Island, Kemp Coast, King Edward VIII Gulf, and the Vestfold Hills. Across the continent in Vahsel Bay, Argentina established the only other station currently in operation on the main part of the continent of Antarctica. (See also ANTARCTICA.)

Oceanography.—Deep-sea studies of five nations were in the news during 1955. The Lamont Geological Observatory reported the finding of a submarine mountain peak (the Toro Seamount) in the Atlantic, which reaches to within 5,800 feet of the surface. The National Geographic Society (q.v.) and a French group led by Jacques Yves-Cousteau, conducted undersea explorations in the Mediterranean, Red Sea, and Indian Ocean. The British Gravity Expedition is obtaining ocean-floor gravity measurements in a large-scale operation from England to Ceylon via the Cape of Good Hope; another group will trace undersea currents with newly-devised special equipment. A Russian group carrying out studies in the Aleutian area reported the discovery of submarine mountain ranges believed to be continuous with those off Hawaii. They have also observed salmon distribution and have analyzed the formation of the Aleutian, Japanese, Kuril, and Kamchatka depressions.

ARLINE R. HOLDEN,

WILLIAM O. FIELD, JR.,

Department of Exploration and Field Research, American Geographical Society.

GEOLOGICAL SURVEY. The U.S. Geological Survey continues to be the focal point of government activity in the discovery, evaluation, and conservation of mineral raw materials and water resources. Its major responsibilities are centered around compiling the *National Topographic Atlas*; gathering basic data concerning the nation's mineral, mineral fuel, and water resources; continued geologic mapping; and classifying and administering public lands in accordance with existing mineral leasing laws.

Geologic Investigations.—Emphasis was continued in 1955 on the development of new and improved methods of exploration for mineral resources, and on acceleration of geologic mapping—both supported by a program of basic research. Among advances in mapping during the year were the printing of the new geologic maps of Montana, New Hampshire, Oklahoma, and Wyoming, prepared in cooperation with those states;

completion in manuscript of the Jurassic paleotectonic map; and continued refinement of photo-geologic techniques as an aid to more rapid and economic mapping of some types of geologic terranes.

Field work on 84 projects in 23 states continued to produce basic data on the geologic setting, distribution, and factors causing localization of ore bodies. Extension of the limits of a major zinc deposit in Tennessee by a Defense Minerals Exploration Administration drilling program was based in part on Geological Survey mapping and geologic interpretation. Definition of what appears to be a favorable zone of metalization in the Globe-Miami, Ariz., area has stimulated prospecting in the area. New uranium deposits were disclosed and the reserves of previously known deposits were extended on the Colorado Plateau through work done on behalf of the U.S. Atomic Energy Commission.

Laboratory work in support of the search for deposits of mineral resources resulted in the adaptation of gamma-ray logging to the search for potash deposits, and construction of three devices to aid in bore-hole exploration for radioactive materials: (1) a jeep-mounted scintillation well logger; (2) a hand-portable scintillation well logger; and (3) a liquid-scintillator core scanner. About 90,000 rock and mineral samples were studied in the analytical laboratories.

Fundamental research and development of methods pertaining to geochemical exploration for ores were continued. Neutron bombardment was used as a research tool on zircons to study their change with age, on samples of natural copper to measure their isotopic ratios, and on coal to study the process of coal formation.

Investigation of areas that are actual or potential producers of mineral fuels was carried on in 22 states. Publications related to oil and gas investigations included one chart, 4 professional papers, 7 bulletins, 9 circulars, and 37 papers on fundamental paleontologic and stratigraphic studies. Publications related to coal investigations included 15 coal maps, 2 professional papers, 5 bulletins, and 2 circulars.

Geologic investigations designed to provide basic data for use in civil engineering works and other land-use programs were carried on through 25 field projects in 11 states. Detailed studies of urban areas and of landslide problems involving reservoirs were continued. Smaller-scale geologic mapping was continued, and 13 geologic quadrangle maps with accompanying reports were published.

About 70,000 traverse miles of airborne radiometric and magnetic surveys were flown; regional geophysical studies in the Mojave Desert, in Salt Lake and Utah valleys, on the Colorado Plateau, and in the Lake Superior region were under way; detailed gravity surveys were begun in Cuba; and studies of radiowave frequency propagation, induced polarization, and electromagnetic methods were undertaken.

Topographic Surveys.—One of the Geological Survey's primary objectives is to complete an atlas of large-scale topographic maps of the United States and its possessions, and to maintain the usefulness of these maps by periodic revision. Since 1879 the survey has published 17,000 topographic maps covering about 73% of continental United States. Many of these are now in need of revision or resurvey, so that about 37% of the country is covered by maps of good quality. During the past year a total of 2,266 maps were sent to the printer, including new maps

covering 4% of the country. Twenty-seven more chapters of the *Topographic Manual* were completed and 47 are in preparation, making the project about 75% complete. (See also ARCTIC EXPLORATION.)

Especially significant is the completion of the 5-year cooperative mapping project in Kentucky. It represents the largest concentration of topographic mapping operations, with the greatest overall accomplishment in the shortest period of time, ever achieved by the Geological Survey. Over 40,000 square miles of uniform mapping at 1:24,000 scale (2,000 feet to the inch) covering the state, was performed at a total cost of about \$7 million.

Water Resources.—In 1955, records of surface-water supplies were obtained at more than 6,800 sites throughout the United States and in Alaska, Hawaii, and Guam. The work of compiling all stream flow records in the United States, for the period 1888–1950, started in 1952, is now 57% complete. During the year, completed compilation volumes were published for the New England basins and the Colorado River basin.

Ground-water investigations during the year included more than 500 projects and embraced the following principal types of activity: (1) describing the occurrence, quantity, and quality of ground-water resources, including delineation of ground-water reservoirs and opportunities for their recharge; (2) studying in detail the hydrology of mining and oilfield areas, as an aid to both location and economical development of these resources; (3) determining the loss of water through consumption by water-loving nonbeneficial vegetation, as a preliminary to salvaging a part of the water; and (4) describing the nature and extent of salt-water encroachment in coastal areas, as a guide to combating its effects.

During the year the chemical quality of about 64,000 samples of water from streams, lakes, springs, and wells was determined. The program included chemical-quality studies of the streams in the Colorado River, Pecos River, and Columbia River basins, in the New York–New England states, and in Alaska. Also a network of sampling stations was maintained on western streams to determine trends in mineral content and thus help to insure successful continued operation of irrigation projects.

The investigation of sediment in streams and rivers was continued during 1955, including sampling at 158 sediment stations. Comprehensive sediment programs were continued in the Missouri, Rio Grande, and Colorado River basins.

During 1955 notable progress was made on the inventory of the occurrence and quality of saline water resources of the United States. A nationwide reconnaissance study was completed, a more extensive study of saline waters in Texas was completed, and a study of saline waters of North Dakota neared completion.

Conservation.—The Geological Survey classified federal land as to mineral and water power resources, and supervises development and producing operations for oil, gas, and minerals under leases, permits, and licenses on federal, Indian, outer continental shelf, and naval petroleum reserve lands. In 1955, 24,137 cases involving mineral classification of federal lands were handled. Water and power investigations on public lands involved mapping 242 miles of stream channels and 13 dam sites; 59,810 acres were removed from power site reserves, reducing the outstanding reserves to a net total of 7,103,000 acres. The supervisory function involved all phases of ex-

ploration, development, and production. The minerals produced in 1955 were valued at more than \$530 million, with royalties amounting to about \$55 million.

HERBERT B. NICHOLS,
Information Officer.

GEOLOGY. One of the most newsworthy geologic events of 1954–55 was the discovery of a fragmentary human skeleton near Midland, Texas, in a sandy stratum of Pleistocene, or glacial, age. S. N. Davis also described camp sites of Pleistocene man in Platte County, Missouri. W. F. Libby found that camp sites near Las Vegas, Nev., were occupied at least 23,800 years ago and therefore are almost 4,000 years older than those of Sandia Man in New Mexico.

Non-Human Fossils.—In the past, paleontologists have been content with the two traditional kingdoms of plants and animals, but R. C. Moore advocates a third, the protists, for classifying bacteria and other organisms which seem to be neither animals nor plants.

Most fossils described during 1954–55 belong to familiar groups. M. N. Bramlette and W. R. Riedel, however, discussed the problematic dicoasters, planktonic organisms that apparently were plants related to coccoliths.

D. F. Toomey assembled a bibliography of the fusulinids, a group of protists or protozoans much used in correlation of strata. Z. M. Arnold outlined simple methods for growing living foraminifers in order to investigate their variation, evolution, and ecology. W. R. Evitt described a Devonian foraminifer whose fossil shell behaves like a single calcite crystal, and E. L. White and J. S. Brown decided that “fingers” in the Bonnetterre formation of southern Missouri are algal deposits of the type called *Collenia*. *Micropaleontology*, a new journal published by the American Museum of Natural History, made its appearance in January 1955. W. L. Stokes described tracks of a Jurassic pterosaur from the Carrizo Mountains of Arizona; it walked on all four feet, hundreds of miles from the nearest sea.

Ancient Geography.—The geography of ancient ages is largely determined from their sedimentary deposits. J. D. Edwards found that conglomerates near Guanajuato, Mexico, record a highland northeast of that city during late Eocene to early Oligocene times. W. A. Oliver, Jr., reported that Onondaga deposits of New York reflect a variety of conditions in a sea that advanced across the central and western parts of the state, but merely deepened in the eastern portion. W. C. Ball traced ancient deposits of volcanic ash (bentonite) which indicate widespread vulcanism in the Mississippi Valley during middle Ordovician times.

J. C. Crowell described current marks and other structures which indicate that the Flysch (Paleocene) deposits of Switzerland contain sediments from a vanished island or larger land mass to the northwest. W. B. R. King found that the English Channel is the result of many depressions during the past 200 million years, although nearby areas of more ancient rock have been relatively stable. W. P. Woodring traced changes in the Caribbean Sea, which began as a depression in what now is Central America and spread eastward. During the Cretaceous period, great thicknesses of volcanic material settled in the Caribbean Basin, forming lands that are now submerged.

Submarine Geology.—R. L. Fisher and others reported that the Scripps Institution's transpacific

expedition of 1953 had found a ridge 600 miles long in the northern Pacific, capped by flat-topped, terraced mountains called guyots. The Ramapo Deep, in the southern Japanese Trench, was found to have depths much less than the 34,800 feet often given for it.

B. C. Heezen, Maurice Ewing, and D. B. Ericson found evidence that abyssal plains are almost level because sediment has filled their one-time valleys, allowing only isolated hills and seamounts to project. C. B. Officer and Professor Ewing found that the "crystalline basement" of metamorphic and granitic rocks thins under the margins of continents, and that sediments as much as 20,000 feet thick accumulate on gentle inclines at the bottom of continental slopes. A. J. Carsola reported that mud covers much of the continental shelf of North America, under the Arctic Ocean. Since most of the organic material in the sea water is oxidized before it can settle to the bottom, these muds contain very little carbon.

Mineralogy and Petrography.—H. W. Fairburn described a superior method of concentrating heavy minerals from crushed samples of rock. Clifford Frondell and L. H. Bauer restored kutnahorite to its position as a distinct mineral related to dolomite but containing manganese. G. W. Brindley and F. H. Gillery showed that a variety of chlorite minerals can be identified by X-rays, and R. J. Arnett used X-rays to determine the size of mineral particles in clays. The method is specially valuable in measuring montmorillonite and illite, two important clay minerals that have not been measured successfully by means of the electron microscope. A. F. Frederickson described tiny rods which lie side by side, forming sheets in natural quartz crystals.

S. R. Nockolds determined the average chemical composition of the common plutonic rocks, which hardened deep underground, and their volcanic equivalents. J. E. Armstrong and J. A. Roddick found that plutonic rocks of the Coast Ranges, in British Columbia, form five intergrading types which cannot be grouped according to conventional classifications. J. M. Carr reported that crystals which accumulated at the bottom of molten masses of gabbro in Scotland slumped and slid over older layers. J. Hospers found that igneous rocks become magnetized as they harden, and remain so for ages. They show that if polar wandering has taken place at all, it had not exceeded 5 to 10 degrees since the Eocene epoch, some 40 million years ago.

Other Fields.—As always, extensive work has been done in such fields as petroleum geology, glacial geology, sedimentation, and geochronology. The first of these is treated most extensively in the *Bulletin* of the American Association of Petroleum Geologists, which for some years has been the world's largest geologic society. In geochronology, W. R. Eckelman and J. L. Kulp announced seven new dates secured by the uranium-lead method, ranging from 50 or 60 to 1,670 million years. Wallace Broecker and Professor Kulp, at the Lamont Geological Observatory, Columbia University, extended the utility of the carbon-14 method of determining age to 45,000 years. They also found that the Mississippi Delta has been rising about 12 inches per century, that ice last melted from the region of James Bay about 3,000 years ago, and that a supposedly Norse ship from Follins Pond, Massachusetts, really is a colonial vessel.

SURVEY; MINERALOGY; OCEANOGRAPHY.)

CARROLL LANE FENTON,
Author and Geologist; Associate Editor,
"American Midland Naturalist."

GEORGE, Walter Franklin, United States senator; b. near Preston, Ga., Jan. 29, 1878. A Democratic Party conservative and states' rights advocate, he is dean of the U. S. Senate, having served continuously since his first election to that body (from Georgia) on Nov. 7, 1922. From 1941 to 1947, and again from 1949 to 1952, he served as chairman of the important Senate Finance Committee, becoming the upper house's acknowledged authority on taxation. After the Democratic Party recaptured Congress in the elections of 1954, he became president pro tempore of the Senate and chairman of the Senate Foreign Relations Committee, of which he had been a member (chairman in 1940-41) since 1928.

A strong advocate of bipartisanship on foreign policy matters and a trusted adviser of Secretary of State John Foster Dulles, Senator George has become an influential spokesman on international affairs. On Jan. 24, 1955, at the time of the crisis over Formosa, he introduced the resolution which gave President Eisenhower the unlimited authority he had asked from Congress to use United States armed forces for meeting Communist China's threatened invasion of that island and the Pescadores.

His proposal on a television program on March 20, calling for a meeting of the heads of the Big Four powers, was widely commented on and was credited with having helped to bring about the Geneva Conference (q.v.) of July. In talks on April 23 and July 24 he urged that discussions be held between high-ranking American and Communist Chinese diplomats to seek a solution of Far Eastern problems. On December 20, Senator George announced that he would in 1956 be a candidate, for the seventh time, for the Democratic nomination for senator.

GEORGIA. South Atlantic state, United States; one of the original 13 states. The "Cracker State" ranks 20th in area and 14th in population (1955) among the 48 states.

Area and Population.—Area: 58,876 square miles (land, 58,483; inland water, 393), divided into 159 counties. Population: (1950) 3,444,578; (est., July 1, 1955) 3,539,000. Urban places with 1950 populations above 10,000 are as follows:

Albany.....	31,155	Gainesville.....	11,936
Americus.....	11,389	Griffin.....	13,982
Athens.....	28,180	La Grange.....	25,025
Atlanta (capital).....	331,314	Macon.....	70,252
Augusta.....	71,508	Marietta.....	20,687
Brunswick.....	17,954	Midway-Hardwick.....	14,774
College Park.....	14,535	Moultrie.....	11,639
Columbus.....	79,611	Rome.....	29,615
Dalton.....	15,968	Savannah.....	119,638
Decatur.....	21,635	Thomasville.....	14,424
Dublin.....	10,232	Valdosta.....	20,046
East Point.....	21,080	Waycross.....	18,899

Executive.—Chief state officers in 1955:

Governor: Marvin Griffin (Democrat)
Lieutenant Governor: S. Ernest Vandiver
Secretary of State: Ben W. Fortson, Jr.
Treasurer: George B. Hamilton
Attorney General: Eugene M. Cook
Supt. of Public Instruction: M. D. Collins

Constitution and Judiciary.—The present constitution went into effect in 1945. The Supreme Court comprises seven justices; chief justice in 1955, W. H. Duckworth.

Legislature.—The General Assembly (Senate, 54 members; House of Representatives, 205) convenes annually commencing the second Monday in January.

In its 1955 regular session the General Assembly passed more than 100 bills of statewide application. The more important of these created a Rural Roads Authority empowered to pave or hard-surface up to \$100 million worth of farm-to-market roads; dissolved the Georgia Turnpike Authority; increased workmen's compensation benefits by approximately 20%; authorized the sale

of automobile tags at county court-houses, allowing counties to collect a 25-cent fee; created a committee to study state finances; tightened school segregation laws by making it a felony to spend tax money on mixed or nonsegregated schools; and provided for a \$2.25 hunting license and a \$1.25 fishing license, or a combination license for \$3.25.

In a special session called in June to provide additional revenue, the assembly increased taxes on gasoline to 6½ cents a gallon, on cigarettes to 4 cents a pack, on beer to 4 cents a can, and on wine made from products grown outside Georgia, to \$1 per gallon. Rates were increased 100% on auto tags and 10% on truck tags, and one fourth of 1% on insurance premiums. New levies included those on small-loan charges and an annual \$1 fee for driver's licenses.

These and a few other minor tax measures were expected to yield an additional \$30 million toward a grand total revenue of \$265 million in the 1955-56 fiscal year, derived percentage-wise from the following tax sources: general sales, 40%; motor fuels, 26%; income, 13%; alcoholic beverages, 7%; cigars and cigarettes, 5%; auto tags, 4%; and miscellaneous, 5%. Anticipated spending was to be distributed as follows: schools, 51%; roads, 24%; public welfare, 12%; public health, 5%; and other, 8%.

Finances.—State treasury receipts (1954-55 fiscal year), \$243,899,802.25; expenditures, \$250,809,164.16; treasury balance, \$52,149,693.87. The state has no long-term indebtedness.

Taxation.—State tax revenue (1954-55 fiscal year): \$230,186,329.30, including \$191,412,638.47 from a 3% general sales tax and selective sales taxes; \$7,928,336.16 from licensing; \$15,247,096.79 from individual income taxes; and \$12,495,737.34 from corporate income taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 51 national banks had \$1,288,134,000 in assets, \$993,567,000 in demand deposits, and \$187,088,000 in time deposits; the state's 301 other banks and 17 branches had \$1,064,342,920.96 in assets, \$548,667,092.55 in demand deposits, and \$245,580,626.90 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Estimated operating expenditures for public elementary and secondary education in the 1954-55 fiscal year totaled \$120,000,000 (\$160 per pupil). Teachers' salaries averaged \$2,875.

In the 1954-55 school year there were 19,348 public elementary school teachers and 663,800 elementary school pupils; 9,036 public secondary school teachers and 221,200 secondary school pupils; 5 public junior colleges with 88 teachers and 1,876 students; one state teachers college with 40 teachers and 583 students; and 10 public colleges and universities with 1,885 teachers and 24,834 students.

School segregation remained an active issue in Georgia throughout 1955. Supporting the governor's pledge on January 11 to maintain segregation, the legislature banned the use of tax money for the support of non-segregated schools. By late 1955, no public elementary or secondary schools in the state were known to have been desegregated.

The governor's move to prohibit Georgia Tech from playing in the Sugar Bowl game at New Orleans on Jan. 2, 1956, against a University of Pittsburgh team with a Negro player, attracted nationwide attention late in the year. Georgia Tech students stormed the state capital in protest against the governor on December 2-3. Over the governor's objections, the state Board of Regents on December 5 approved Georgia Tech's participation in the game, but issued a directive barring any state college from staging home games against racially mixed teams, and requiring that in games outside the state, such institutions must "respect the laws, customs and traditions of the host state."

Social Welfare.—Public welfare expenditures in the 1954-55 fiscal year from state and federal funds totaled \$62,247,685.98, including \$43,860,294.98 for old-age assistance, \$12,562,369 for dependent children, \$1,694,545 for the needy blind, and \$4,130,477 for the disabled. Monthly welfare assistance averaged \$35.15 per person.

State institutions included a hospital for the mentally deficient and epileptic, with 13,887 patients; a hospital for the mentally ill, 10,970 (Nov. 11, 1955); a sanatorium for the tubercular, 1,780 (Nov. 11, 1955); and a home for the widows of Confederate veterans.

Labor Force.—Nonagricultural employees in July 1955 numbered 923,000, and for the 12 months ending June 1955 averaged 905,700. There were 16,500 insured unemployed workers on Aug. 31, 1955, and \$20,394,904 was paid in unemployment compensation benefits during the year ending June 30, 1955.

Manufacturing.—Establishments numbering 7,100 had 312,000 employees who received \$848,075,000 in salaries and wages in 1954. Value added by manufacture in 1953 totaled \$1,545,467,000, and the overall value of production was \$4,019,000,000; investment in new plant and equipment amounted to \$143,866,000. Earnings of production workers in manufacturing averaged \$49.66 for an average work week of 39.1 hours in 1954 and \$52.93 for 40.1 hours in the first six months of 1955.

MAJOR GEORGIA MANUFACTURES, 1954

	Persons engaged	Payroll & profit income (millions of dollars)	Value of output (millions of dollars)
<i>All manufactures</i>	312,000	\$1,090	\$3,737
Textiles.....	106,000	301	1,106
Food products.....	35,000	139	851
Transportation equipment.....	24,000	156	373

Other minerals.....	...	6,812,898
Total.....	...	51,394,830

*Excluding that used in making cement and lime. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income in the first half of 1955 totaled \$196,914,000, and for the full year 1954 comprised \$279,399,000 from livestock and livestock products, \$315,726,000 from crops, and \$6,640,000 from government payments. Receipts from principal crops and livestock in 1954 included: cotton lint, \$113,957,000; broilers, \$101,951,000; hogs, \$68,835,000; tobacco, \$58,769,000; and dairy products, \$44,157,000.

The state's 165,524 farms (24,022,973 acres; harvested cropland, 6,118,583) in 1954 had an average of 145.1 acres and \$7,926 in value of land and buildings per farm. There were 152,361 farms with electricity and 36,501 with telephones. Livestock on farms (Jan. 1, 1955) included 1,439,000 cattle, 1,661,000 hogs, and 8,558,000 chickens (not including commercial broilers). During the week of October 24-30, 1954, 265,036 family and hired workers were engaged in farming.

GEORGIA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Corn (1,000 bu.)	46,217	33,876	62,888
Cotton lint (1,000 bales)	695	612	705
Cottonseed (1,000 tons)	281	255	291
Hay (1,000 tons)	676	474	597
Oats (1,000 bu.)	14,416	21,235	16,744
Peanuts (1,000 lb.)	657,004	276,750	546,000
Pecans (1,000 lb.)	36,981	20,000	4,000
Soybeans (1,000 bu.)	206	203	684
Sugarcane sirup (1,000 gal.)	2,773	600	760
Sweet potatoes (1,000 bu.)	4,080	966	1,672
Tobacco (1,000 lb.)	114,536	124,220	149,375
Wheat (1,000 bu.)	2,216	2,072	1,520

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$65,755,641, and in 1954, newly completed construction and reconstruction aggregated 2,721 miles.

Highways and roads on July 1, 1955, totaled 87,455 miles (18,772 surfaced). Registered *motor vehicles* numbered 1,267,814 on Oct. 20, 1955, including 939,692 passenger cars. There were 37 *railroads* operating 655 line miles and in 1954, 5 regularly scheduled *airlines* and 123 *airports and airfields* (98 commercial and municipal, 10 military, and 15 private).

Communications media (1954) included 95 AM and 11 FM *radio stations* and 16 operating *television outlets* (13 VHF and 3 UHF); 30 daily *newspapers* (circulation, 823,417) and 199 other newspapers (circulation, 290,613); and (Jan. 1, 1955) 235,216 business and 531,815 residential *telephones*.

Principal Events, 1955.—The opening of the Georgia 4-H Club Center at Rock Eagle on May 31 was an achievement climaxing 50 years of 4-H growth in the state. The \$2,500,000 center, the largest of its kind in the United States, has a 110-acre lake surrounded by 1,452 acres of land. It includes 54 cottages, an air-conditioned auditorium, chapel, dining hall, demonstration buildings, assembly building, and other auxiliary buildings.

On March 27 a devastating freeze occurred throughout the state. The peach crop, which grossed \$10 million in 1954, was a complete loss, the apple crop was a 90% loss, and the major portion of the pecan crop was destroyed. Small grain yields were drastically cut, and ornamental shrubs suffered heavy damage. Total damage to agriculture ran into many millions of dollars. However, in 1955 Georgia had high yields of cotton, corn, tobacco, and peanuts.

The Atlanta Division of The University of Georgia was made an independent college in 1955, under the name of The Georgia State College of Business Administration. There are now 16 independent institutions of higher learning receiving state support which are under the control of The Board of Regents of The University System of Georgia. These institutions include 11 senior colleges.

Almost every major segment of the state's economy showed a substantial improvement in 1955 over that for 1954. In some instances, advances were as high as 20%. Notable gains were recorded in deposits in Federal Reserve banks, wholesale and retail trade, the number of new businesses incorporated, the number of non-agricultural workers employed, the number of construction permits, transportation activities on both railroads and airlines, electric energy output, and foreign commerce.

(See also DAMS; HIGHWAYS.)

Legislature and Principal Events by:

J. C. MEADOWS,

Professor of Sociology, The University of Georgia.

GERMAN LITERATURE. The postwar reconstruction in German literature continued to progress slowly in 1955. The creation of a new literature is the task which has fallen to a generation of Germans who were sent to the wars when they were very young. They returned to an enigmatic and uncertain world, in which no one showed them the way, gave them new ideas, or established new values for them. Man was circling around the "zero point" (Ernst Jünger); West German literature is slowly moving beyond the "zero point." The search for a new reality is discernible. "Man struggling with the reality of life as it is today" is the dominating figure in all significant contemporary works. The crisis in modern German literature is thoughtfully discussed in Hanns W. Eppelsheimer's "Der Schild des Aeneas," in *Die neue Rundschau* (1955, pp. 339-368).

Drama.—The sesquicentennial of Friedrich Schiller's death (May 9, 1805) was observed at Weimar and Jena from May 9 to 15, 1955. One of the speakers was Thomas Mann (q.v.), who died three months later on August 12, and who published *Versuch über Schiller* in 1955.

The 1955-56 repertoires of over 150 West German theaters revealed their cosmopolitan character. There were productions of the works of the German classic and prewar dramatists, as well as of contemporary German playwrights, most of whom are literary descendants of Ibsen and Hauptmann. Foreign authors were abundantly represented. John Patrick's *The Tea House of the August Moon* (*Das kleine Teehaus*) had been performed over 1,000 times in West Germany by the end of October 1955. Carl Zuckmayer's *The Cold Light*, inspired by the Fuchs atom treason case, was presented on over 30 stages in both East and West Germany.

In the Soviet sector of Berlin, the Volksbühne am Luxemburgplatz (formerly the Volksbühne am Bülowplatz) was rebuilt and reopened on April 21, 1954, with an "adapted" performance of Schiller's *Wilhelm Tell*. East and West German critics regretted the choice and the violence done to Schiller. Theater attendance in East Germany was falling off in 1955. New plays by the Austrians, Richard Flatter, Richard Billinger, and Josef Mühlberger, and by the Swiss, Arnold Schwengeler, Herbert Meier, and Eckart Peterich were performed.

Poetry.—The Nestor of nature lyricism, Wilhelm Lehmann, published *Überlebender Tag* (poems, 1951-54) and a critical essay on poetry. His contemporaries, Georg Britting and Georg von der Vring, also issued collections. Ina Seidel published selections from her poems (1905-55) on her 70th birthday (Sept. 15, 1955). Of Hans Egon Holthusen's generation, Karl Krolow, Karl Schwedhelm, and Rudolf Hagelstange wrote volumes of poetry. Hagelstange received an award of 5,000 marks from the Deutsche Friedrich-Schiller-Stiftung at the Schiller sesquicentennial. Austria was represented in German-language poetry by Wilhelm Szabo, Maria Zittrauer, and Gerhard Fritsch; and Switzerland, by Walter Hauser.

Novels.—Frank Thiess completed Gerhart Hauptmann's novel, *Winckelmann*, which was the "book of the month" in January 1955. Kasimir Edschmid wrote *Der Marschall und die Gnade* on Simón Bolívar, a South American odyssey; Albrecht Goes, *Das Brandopfer*; and Ina Seidel published a new edition of *Das unverwesliche Erbe*.

The flood of fiction and reportorial literature

reflecting postwar trends continued in 1955. Over 500,000 copies were sold of Hans Hellmut Kirst's three-volume *Null-acht Fünfzehn*, which has been translated into 17 languages.

It is highly significant that half of what the West German public reads consists of translations from the literatures of all lands, particularly Great Britain, the United States, and France. Many young German authors consider Proust, James Joyce, Virginia Woolf, Graham Greene, and, above all, Hemingway, as their models. Translations of American works were not, however, being restricted to fiction, dramas, and best-sellers. First novels, such as Foster Fitz-Simons' *Bright Leaf* and Max Steele's *Debbie*, were included. Reviews were largely favorable, and German readers continued to learn with astonishment of the diversity of the American scene.

Miscellany.—Reinhold Schneider wrote *Verhüllter Tag*, an autobiography. Gerhard Ritter's *Carl Goerdeler und die deutsche Widerstandsbewegung* bespeaks a revolt of conscience in Hitler's Germany against the triumph of power and evil. Theodor Plievier, author of *Stalingrad, Moscow, Berlin*, and other works, died at Avenigo, Switzerland, on March 12, 1955.

Hermann Hesse received the peace prize of the German Book Trade at the Frankfurt Book Fair in October 1955. Bert Brecht received the Stalin Peace Prize in Moscow.

In the first half of 1954, West German book production was second only to that of England. In 1953, 15,738 titles had appeared in West Germany, 13% more than in 1952. Belles-lettres took first place, accounting for 17.7% of the total.

F. E. COENEN,

*Professor of Germanic Languages and
Literatures, University of North Carolina.*

GERMANY. After Germany's unconditional surrender on May 7, 1945, the United States, Great Britain, France, and the Soviet Union established on June 5, 1945, an Allied Control Council in Berlin to assume the functions of a German government. The authority of the council never extended, however, to all of Germany as it had existed in 1937 before Hitler began his conquests, for the Russians annexed the north-eastern part of East Prussia and turned over all of the German lands east of the Oder and Neisse rivers to Polish administration (total area of both territories: 44,700 square miles).

The failure of the Allies of World War II to develop a common policy in Germany resulted in the emergence of two separate states from the military occupation zones of the Western powers and the Soviet Union: the German Federal Republic in the west (Sept. 21, 1949) and the German Democratic Republic in the east (Oct. 11, 1949). The city of Berlin, established in 1945 as an inter-Allied zone and the seat of the Allied Control Council, is, at least in its western sectors, not an integral part of either state.

The reunification of Germany has remained not only the wish of the East and West German populations, but also the actively pursued aim of the Bonn (capital of the Federal Republic) and Pankow (suburb of East Berlin and capital of the Democratic Republic) governments. The Western insistence on free elections in East and West Germany as the only method for the creation of a single German government was rejected by the USSR, which demanded the withdrawal

U.S. EMBASSY, BERLIN

Dr. Hajo Holborn (at left), the author, meets Dr. Otto Suhr, elected lord mayor of West Berlin, Jan. 11, 1955.

of the North Atlantic Treaty Organization (NATO) forces from Germany and the neutralization of the country. The "Summit Conference" of the Big Four heads of government at Geneva (July 18-23, 1955) recognized that the problem of German unity, together with that of European security, constituted one of the chief issues to be resolved in the interest of general peace; but the later efforts at Geneva of the Big Four foreign ministers (October 27 to November 16) resulted in a deadlock on all major issues. (See GENEVA CONFERENCE.)

Area and Population.—That part of Germany occupied by the Big Four powers in 1945, excluding the Saar (see below, *Foreign Affairs*), has a total area of 136,692 square miles, as compared with a pre-World War II Germany (1937) of 181,392 square miles. Owing to the influx of 12 million Germans from eastern European countries and from the German provinces east of the Oder-Neisse line, the present area has a larger population than that of prewar Germany. According to an official West German estimate published on Jan. 4, 1955, the population of Germany is 70,621,600, with 49,652,000 in the Federal Republic (94,719 square miles), 17,600,000 in the Democratic Republic (41,631 square miles), 2,194,600 in West Berlin (186 square miles), and 1,175,000 in East Berlin (156 square miles). Official figures from West German sources indicate that in August 1955 the population of the Federal Republic exceeded 50 million. The population of East Germany, however, has shown little or no growth since the official census of Aug. 31, 1950, because of the large exodus of people from the eastern to the western zones.

According to the population estimate of Dec. 31, 1953, eight West German cities had more than half a million inhabitants: Hamburg (1,722,819), Munich (906,497), Cologne (670,291), Essen (660,934), Frankfurt (601,747), Düsseldorf (594,481), Dortmund (580,892), and Stuttgart (566,009). The largest cities in the Democratic Republic (census of Oct. 29, 1946) are Leipzig (607,655) and Dresden (510,068).

Religion.—The census of Sept. 13, 1950, showed that in the Federal Republic 51.1% of the population was Protestant; 45.2%, Roman Catholic; and 3.7%, unaffiliated. No religious statistics have been published by the Democratic Republic since 1946, but it may be assumed that little change has taken place in religious affiliations. At that time more than 80% of the population was Protestant; 12%, Roman Catholic; and 6% unaffiliated. As a result of the large immigration of East Germans, the relative number of

Protestants in the Federal Republic must have been slightly higher in 1955 than in 1950.

GERMAN FEDERAL REPUBLIC (WEST GERMANY)

Government.—The German Federal Republic is a federal state composed of nine *länder* (states): Baden-Württemberg, Bavaria, Bremen, Hamburg, Hesse, Lower Saxony, North Rhineland-Westphalia, Rhineland-Palatinate, and Schleswig-Holstein. The constitution of May 23, 1949, divided governmental functions between the federal and *land* (state) authorities. Most of the public administration rests in the hands of the state governments, while legislative power is divided between federal and state governments.

The Federal Republic is headed by a president (Dr. Theodor Heuss, elected in 1949, re-elected in 1954) elected for five years by the federal parliament and representatives of the state parliaments. The chief organ of popular representation is the Bundestag, or Federal Diet, of 487 members elected by all West German citizens above the age of 21. The Bundesrat, or Federal Council, of 38 members serves as the consultative body of the nine states represented by members of their governments, which have, according to their populations, 3 to 5 votes each.

The federal government has been led since Sept. 15, 1949, by Dr. Konrad Adenauer (q.v.), the leader of the Christian Democratic Party (CDU). After his first four years in office, Chancellor Adenauer gained an overwhelming popular endorsement of his policies in the federal elections of Sept. 6, 1953, with the CDU winning 50.1% of the vote. His cabinet, which includes members from the smaller parties of the right, commanded until 1955 a two-thirds majority in the Bundestag and Bundesrat.

The Bundestag, as elected in 1953, has 244 members of the CDU, 48 Free Democrats, 15 members of the German Party, 27 of the Refugee Party (All-German Bloc), 2 of the Center Party, and, in the opposition, 151 Social Democrats (SPD). Among the members of the cabinet, Dr. Fritz Schäfer, minister of finance, and Dr. Ludwig Erhard, minister of economic affairs, have proved particularly influential. The chancellor gave up the portfolio of the foreign ministry after West Germany gained full sovereignty, and on June 6, 1955, Dr. Heinrich von Brentano was appointed foreign minister. Simultaneously, Theodor Blank became minister of defense.

Foreign Affairs. Role in Western European Security.—After the defeat (Aug. 30, 1954) by the French parliament of the Paris treaties of May 27, 1952, which had envisaged the creation of a European Defense Community (EDC), Great Britain, France, Italy, the Benelux countries, and West Germany concluded, with the assent of the United States, a new group of agreements in Paris on Oct. 23, 1954. West Germany was to become a member of the Western European Union (WEU), formed by Great Britain, France, and the Benelux countries in 1947 for their common defense. The WEU, which was made responsible for supervising the rearmament of West Germany, serves as the agency through which the military forces of the seven countries are to be integrated. In addition, West Germany was to become a member of NATO. For her own part, the Federal Republic had to authorize the Western powers to continue to station troops in West Germany. The French government of Pierre Mendès-France made its approval of the general treaties dependent on a Franco-German accord on the Europeanization of the Saar.

The West German debate over the treaties began in an atmosphere of great excitement. The Social Democratic opposition contended that West German acceptance of the treaties would establish the permanent division of West and East Germany. In its opinion, another attempt at negotiation with the Soviet Union should have been undertaken before rearmament was launched. The Social Democrats also took exception to the Saar agreement, and in this regard

they found allies among the chancellor's coalition partners, particularly the Free Democrats, but on Feb. 27, 1955, the Bundestag passed all the treaties and agreements over the dissenting votes of the Social Democrats. Only in the case of the Saar agreement did 53 members of the government coalition join the opposing minority. Bundesrat ratification took place on March 18, and on March 24 the president completed the West German ratification procedure. On April 28, 1955, the last signatory nation, the Netherlands, ratified the treaties; and on May 5, Great Britain and France presented their instruments of ratification in Bonn, whereby the Federal Republic became a sovereign state. On that day the Allied High Commission was dissolved, and on May 9, West Germany became the 15th member of NATO.

The impending Big Four "Summit Conference" in Geneva, the new Russian policy in respect to Austria, and finally the USSR's direct invitation to Dr. Adenauer to visit Moscow gave the parliamentary opposition fresh grounds upon which to argue against the implementation of Germany's pledge to arm. With great determination, Chancellor Adenauer tried to rush through parliament blanket powers for the start of West German rearmament before the Geneva Conference. Never before did the Bundestag and the Bundesrat assert their independence of Dr. Adenauer so strongly as in the case of this first piece of domestic legislation in military affairs. On July 22, however, after extended debate, the coalition parties passed their own two compromise bills. (See below, *Armed Forces*.)

The government's policy of close ties with the West and its rejection of direct negotiations with the USSR on reunification was approved by the Bundestag on December 2, following a two-day debate on foreign policy.

Relations with the Soviet Union.—On June 7, 1955, the Soviet government issued an invitation to the West German chancellor to visit Moscow in order to discuss the establishment of "diplomatic, trade, and cultural relations" between the two countries. After consultations with the Western powers, for which the chancellor went to the United States (June 13-18) and Great Britain (June 19), the Soviet invitation was accepted in principle, and agenda proposals, preparatory to negotiations, were made.

At the conference, held from September 9 to 13, the problems of German reunification and the return of war prisoners still held by the Soviet Union were discussed. The only major agreement reached, however, concerned the establishment of diplomatic relations between Bonn and Moscow. Dr. Adenauer also received a personal promise from Soviet Premier Bulganin that 9,626 prisoners would be returned to Germany.^{*} Before leaving Moscow, the West German chancellor stated in a letter to Premier Bulganin that acceptance of the agreement on the establishment of diplomatic relations did not imply the surrender of the Bonn government's claim to speak for all the German people, nor the recognition of the present frontiers of Germany. Three days later the Soviet government issued an official statement asserting that it considered the German frontiers to have been fixed by the Potsdam Conference of 1945, and that the East German government was legitimate. Although the Mos-

^{*} The return of prisoners began on September 9. On September 28 the Presidium of the Supreme Soviet announced that it was releasing all of the 9,626 German prisoners held in the Soviet Union.

cow agreement was received with disappointment in Germany, it was accorded the unanimous approval of the Bundestag on September 23.

Saar.—The Saar (q.v.), with an area of 991 square miles and a population of 959,649 (Jan. 4, 1955, est.) was separated from Germany after World War II and economically united with France under a semi-independent political regime. The coal-rich Saar depends for its food and for iron ore for its major industry, steelmaking, on neighboring French Lorraine. France, for her own part, would like to see the Saar's coal and steel capacity added to her own in order to counterbalance the great coal and steel potential of Germany. The people of the Saar are, however, German; and, though they have not shown any strong dissatisfaction with the post-World War II regime, they do wish to maintain their ties with Germany. French Premier Mendès-France hoped for a solution of the Saar problem by a Europeanization of the Saar—a proposal to which Chancellor Adenauer reluctantly agreed on the condition that the new regime be limited to the period prior to a final German peace treaty and that it be approved by the Saar population.

The Saar statute, signed by West Germany and France on Oct. 23, 1954, envisaged the creation of a Saar district as a semiautonomous European territory under the WEU. The area was to be attached to the French customs and monetary zones, but given liberal economic intercourse with Germany. In addition, the approval of the Saar people was to be secured by a referendum held under the supervision of a neutral commission selected by the WEU.

Three months prior to the balloting, parties which favored the outright return of the Saar to West Germany and which had been banned until then by the premier of the Saar, Johannes Hoffmann, were to be admitted. Late in July pro-German Social Democratic and Christian Democratic parties, as well as a Democratic Party, appeared in the ring. The shrill nationalistic tone of their agitation, in which neutral observers heard unfortunate echoes of the Hitler period, was largely set by the leader of the Democratic Party, Heinrich Schneider, a former Nazi, who depicted the statute as a clever device for the complete separation of the Saar from Germany. As a result, the majority of the Saar electorate believed that their vote was one for or against Germany.

After some early riots, the referendum campaign was conducted in an orderly fashion, and the vote was taken on October 23 with 96.5% of the eligible voters participating. Of 640,742 valid ballots cast, 67.7% were counted against and 32.3% were counted for the proposed statute. The vote not only killed the plans for a "Europeanized" Saar, but also brought about the resignation on October 24 of Premier Johannes Hoffmann, who was succeeded by Heinrich Welsch. It was announced on November 14 that any further discussions of the status of the Saar would await the elections of a new Saar parliament, which took place on December 18. The three pro-German parties polled 63.9% of the vote, but fell short of the 75% majority by which alone they could erase constitutional restrictions on union with Germany.

Armed Forces.—With the passage of the rearmament law on July 23, 1955, the West German government was authorized to recruit 6,000 volunteers (3,000 officers, 1,500 noncommissioned officers, and 1,500 enlisted men) to begin

West German Chancellor Adenauer (right) shakes hands with Soviet Premier Bulganin, Sept. 13, 1955, following signing of agreement to establish diplomatic relations.

preparations for the organization of an army of 12 divisions, a tactical air force, and light naval forces. The initial induction of 101 members into the armed forces, which are to reach full strength of 500,000 by Jan. 1, 1960, was held on Nov. 12, 1955.

The rearmament law provided for a committee of 38 members, selected by the government and approved by the parliament, to pass on all officers' commissions of the rank of colonel and above. On July 26, Lieut. Gen. Hans Speidel, Field Marshal Rommel's chief of staff in World War II, was appointed West German representative to Supreme Headquarters, Allied Powers, Europe (SHAPE) in Paris; and Lieut. Gen. Adolf Heusinger, wartime chief of operations in the German High Command, became head of the planning division of the Ministry of Defense. On October 6 the Civilian Defense Council, chosen from the cabinet and headed by Chancellor Adenauer, was established to supervise the rearmament program.

Political Developments.—There has been a recent trend toward the growth of the two major parties, the CDU and the SPD, at the expense of smaller parties. Both the Communist and extreme rightist parties have lost a large proportion of their following. State elections were held in Lower Saxony on April 24, 1955, in Rhineland-Palatinate on May 15, and in Bremen on October

East German Premier Grotewohl (r.), here greeting Soviet Foreign Minister Molotov, arrives in Moscow, Sept. 16, 1955, for talks establishing East German sovereignty.

9. In the first two, the SPD lost slightly as compared with previous elections in 1951 and 1953, whereas the CDU strengthened its vote. In the Bremen elections both the CDU and the SPD gained considerably, the latter gain being due largely to the popularity of the SPD's moderate local leader, Mayor Wilhelm Kaisen.

The Free Democrats, among the parties to the right of the CDU, have shown declining strength in elections, and the continued existence of the Refugee Party has been threatened. The latter party was founded to represent the claims and interests of the 12 million German refugees in the Federal Republic, but it never succeeded in attracting all or even the majority of them. In addition, it has been torn in its policies by the conflict between the aims of nationalism and social improvement. The latter aim has made participation in CDU governments desirable, and the Refugee Party is represented both in federal and state coalitions. The integration of the refugees into the normal economic and social life of the country has weakened the party and brought about a conflict in its policies. On July 11, 1955, the majority of the party refused to support the legislation aimed at the early beginning of German rearmament, and two Refugee Party cabinet members tendered their resignations. A party convention in October proclaimed the official withdrawal of the party from the CDU coalition in Bonn, and about 19 of the 27 Refugee members of the Bundestag have terminated their cooperation with the government, thereby, presumably, depriving Dr. Adenauer of his two-thirds Bundestag majority.

On December 12, Dr. Otto John, former head of the state security office, who had deserted to East Germany in 1954, returned and put himself in the hands of the security branch of the criminal police.

Education.—The West German educational system is based in all states on the *Volksschule* (public school) of 8 grades. After passing through the first four grades, about 20% of the children change either to "middle" schools, which prepare in a six-year course for practical occupations, or the "higher" schools, which in a nine-year course prepare for study at higher academic institutions. In the school year 1953-54, 5,240,567 children attended 29,990 public schools and were taught by 131,780 teachers (Hamburg and Bremen excluded). There were 731 "middle" schools with a school population of 290,267 pupils and 9,346 teachers, and 1,541 "higher" schools with 728,098 pupils and 32,706 teachers. In Hamburg and Bremen, following the American model, the various schools are more closely integrated (479 schools, 9,387 teachers, and 299,153 pupils). West Germany has 8,329 vocational schools with 31,045 instructors and 1,284,613 students, and 80 teacher-training colleges with 770 professors and 11,837 students. There are also 15 universities, 7 institutes of technology, 25 specialized academic institutions (church, commercial, agricultural, veterinary, mining, and labor academies), and 17 academies of fine arts and music with 119,470 students.

Finance.—The West German currency (1 Deutsche mark = U.S.\$0.2381) shows great stability. On July 1, 1955, the reserves of the German Central Bank amounted to DM11.44 billion, an 86% coverage of the active circulation of notes. The federal budget for fiscal year 1955-56 provided for expenditures totaling DM30.6 billion, including DM9 billion for defense. Of these, DM3.8 billion are to go to the Western Allies as

"stationing cost" for their forces in West Germany, and the remainder is to be used for rearmament. The budget for fiscal year 1956-57 lists expenditures of DM32.6 billion, with defense costs remaining DM9 billion. No stationing cost, however, will be paid.

Economic Developments.—The expansion of the West German economy after the currency reform of 1948 went through two periods. The first, ending in 1951, was characterized by the progressive utilization of the existing industrial capacity, while the second saw industrial capacity expanded beyond prewar levels. The year 1955 may have been the last in which a numerical increase of the labor force was possible and, in which the rate of expansion was further accelerated. In 1954 the increase in the gross national product, estimated at \$34,524,500,000, was 8%. Another 8% increase was expected for 1955, but the increase for 1956 is expected to drop to 7%. The index of industrial production (1948 = 100) was 180 in 1950, 216 in 1951, 231 in 1952, 251 in 1953, 282 in 1954, and 315 in July 1955. The monthly average for the first half of 1955 showed that industrial production has almost doubled over that of 1936.

Employment.—Employment rose from 14,608,000 in 1951 to 16,286,000 in 1954. Unemployment fell from 1,432,000 to 1,221,000 in the same period. In September 1955 there were 17.8 million employed, whereas the number of unemployed sank to 494,994. Scarcity of labor is particularly pronounced in the western and southwestern parts of the Federal Republic and in certain branches, such as the construction, iron and steel, and coal mining industries. Labor shortages will grow once German rearmament fully begins.

Cost of Living, and Income.—The cost of living index (1948 = 100) was 108 in 1953 and 1954. By August 1955 it had risen to 110. The estimated national income was DM103.7 billion in 1953 and DM112.3 billion in 1954. New investments rose from DM29.9 billion to DM32.4 for the same period. Private consumption increased from DM77.7 billion in 1953 to DM84 billion in 1954, and public spending rose from DM18.8 billion to DM20.2 billion. The wage index has risen (1938 = 100) from 177.4 in 1951 to 191 in 1952, 201.3 in 1953, and 210 in 1954. Since spring 1955 a further increase became noticeable (223.9 in July), which has raised some apprehension that a large improvement of wage levels could start an inflationary wage-price spiral. Average weekly working hours for male workers rose to 50.1 hours in May 1955 and declined for female workers to 46.1; average weekly pay was DM96.97 and DM56.13, respectively.

Agriculture.—The total arable land in West Germany is 19,995,737 acres. The bread grain crop for 1954-55 was (in 1,000 metric tons): rye, 4,098; wheat and spelt, 2,892; and mixed winter grain, 178. The feed and industrial grain crop for the same period was: barley, 1,919; oats, 2,473; and mixed summer grain, 1,010. In 1953 the potato harvest equaled 24,535,000 metric tons and the sugar beet harvest, 8,422,000 metric tons. Agricultural production has been raised by 21% above the average production for the years 1935 to 1938, and 100% above 1948 production. Grain production in 1955 was estimated to be 3% higher than in 1954.

Industrial Production.—Among West German industries in the first half of 1955, the food and stimulants industries, with a turnover of DM11.4 million, took first place, followed by the machine

construction industries (DM6.9 million) and the chemical industries (DM6.7 million). Coal mining constitutes somewhat of a bottleneck for German industrial production. The increase in coal production (1950, 111,137 million metric tons; 1951, 119,925; 1952, 124,802; 1953, 124,472; 1954, 128,035; and 1955 est., 131) falls behind the demands of West Germany and the European Coal and Steel Community. Coal and coke exports amounted in 1954 to 28 million metric tons. In spite of the additional production of lignite (87,811,000 metric tons in 1954; 43,560,000 in the first half of 1955), the need for coal imports is great. In 1954 they rose to 9,285,000 metric tons and are estimated at 13,000,000 for 1955, of which at least 4,000,000 will come from the United States. Crude steel production in 1954 reached 17,434,000 metric tons, and pig iron output was 12,512,000 metric tons. In the first half of 1955 production was 10,280,000 and 7,930,000 tons, respectively. Oil production in 1954 amounted to 2,666,000 tons and is estimated to rise to 3,000,000 tons in 1955, covering about 30% of the rather low West German oil consumption.

An unusual expansion was shown by the automobile and shipping industries. In 1954, 510,000 motor cars and 115,000 trucks were produced, of which 43% were exported. In the first half of 1955 production was 20% higher, and West Germany became the world's third largest producer of motor vehicles. The index of production of the shipping industry was 121.7 in 1954 as compared with 100 in 1936, with 256 sea-going vessels (893,536 gross registered tons) and 123 inland transport vessels (81,789) built. Almost 45% of production was exported, which made West Germany the world's largest exporter of ships.

Foreign Trade.—West German imports and exports in 1954 totaled DM19,337 and DM22,035 billion, leaving an export balance of DM2,698 billion. Of the imports, 37% were foodstuffs and 63% industrial commodities (28.5% raw materials and 18% half-finished goods); of the exports, 2.3% were agricultural products and 97.7% industrial products (7.7% raw materials and 13.1% half-finished goods). Of all imports, 11.5% came from the United States; 7.9%, from the Netherlands; 5%, from France; 4.7%, from Sweden; 4.5%, from Belgium-Luxembourg; and 4.4% each, from Great Britain and Italy. Of West German exports, 9.3% went to the Netherlands; 7.2%, to Belgium-Luxembourg; 6.7%, to Sweden; 6%, to Italy; 5.7%, to Switzerland; 5.6%, to the United States; and 5.4%, to France. In 1955, exports and imports grew considerably, but owing to the servicing of foreign debts, greater coal imports, and generally higher demands, imports rose more strongly. In the first eight months of 1955 the export surplus was only one third of that of the same period in 1954 (DM692 million and DM2,092 million, respectively).

Transportation and Communications.—On Jan. 1, 1955, registered motor vehicles of all types in West Germany numbered 4,449,971, of which 571,282 were trucks, 1,512,029 were cars and ambulances, 2,341,795 were motorcycles and scooters, and 24,865 were buses. In March 1945 the Federal Republic had 79,622 miles of roads, of which 1,377 were superhighways (Autobahnen) and 15,000 were federal highways. The total railway mileage as of July 1, 1954, was 18,966; and the total length of navigable rivers and canals was 2,654 miles. (See also CANALS.)

The Deutsche Lufthansa resumed national flights on April 1, 1955; European flights, May 15; and transatlantic flights, June 6. On Jan. 1, 1954, West Germany had 3,255,971 telephones, and on August 1 there were 12,522,520 radios and 40,980 television sets.

WEST BERLIN

Political Developments, 1955.—The control of the three Western Allies over West Berlin and its 2.2 million citizens continues to be based on the four-power agreement of 1945. West Berlin, although sending 22 non-voting representatives to the Bundestag and Bundesrat, is not a state of the Federal Republic, nor did it gain sovereignty along with the Federal Republic on May 5, 1955. On that day, however, the occupation regime of West Berlin was further liberalized by a proclamation of the three Allied military commanders. Legislation can now be passed without prior approval of the occupation authorities, although they continue to reserve the right of veto in all matters affecting the maintenance of the Four Power Statute.

The temporary detention on November 27 of two United States congressmen in East Berlin under an East German law was explained by the Soviet commandant two days later on the ground that the Soviet occupation of East Berlin had ended. Since this endangered the four-power agreement and West Berlin's connections with West Germany, the three Western powers sent a protest to the USSR on December 1. The Soviet position was reaffirmed in notes sent to the Western powers on December 14 by Georgi M. Pushkin, Soviet ambassador to East Germany.

City elections of Dec. 5, 1954, gave the Social Democrats 64 out of 127 seats in the West Berlin parliament. They formed a government, together with the Christian Democrats, under the leadership of the Social Democrat, Dr. Otto Suhr, who was elected lord mayor on Jan. 11, 1955.

Economic Affairs.—West Berlin's recovery is greatly handicapped by its isolation within the Soviet zone. A restoration of its economic life has been possible only with substantial assistance from the United States (DM2.4 billion in the years 1949-55) and the German Federal Republic. On March 30, 1955, the East German government raised the toll fees more than 11 times on the Autobahn which connects Berlin with West Germany. In long negotiations between the four powers only small concessions were achieved on July 4 and 10.

In spite of these new difficulties, progress was made in the development of West Berlin's economic life. The production index (1936 = 100) reached 64 in 1953, 76 in 1954, and 110 in September 1955. Only 1% of West Berlin's industrial production goes to the Soviet zone, whereas 59% goes to the Federal Republic, 10% is exported, and 30% is used in West Berlin. Exports amounted to DM214.9 million in the first half of 1954, DM246.8 in the second half, and DM216.42 in the first half of 1955. The Netherlands took DM20.62 million, Sweden, DM18.01, Switzerland, DM13.48, and the U.S., DM12.41 in 1954. In production and exports, the electrical equipment, machine, and chemical industries are by far the most important, followed by the precision instruments and optical industries. By September 1955 the number of unemployed had fallen to 115,861 from 312,000 in February 1950.

GERMAN DEMOCRATIC REPUBLIC
(EAST GERMANY)

Government and Political Events, 1955.—In 1955 the German Democratic Republic received from the Soviet leaders further promises of continued political support. It is the present line of the Soviet government that two legitimate governments exist in Germany and that German unification will have to be worked out chiefly by the cooperation of the Bonn and Pankow governments. Meanwhile the government of Premier Otto Grotewohl and Deputy Premier Walter Ulbricht poses as the true government of all the German people.

The Democratic Republic follows in its constitution the general pattern of a people's democracy. The Communist political organization, the Socialist Unity Party (SED), is by far the most powerful party. Four bourgeois parties—the Liberal Democratic Party (LDPD), the Christian Democratic Union (CDU), the National Democratic Party (DNPD), and the Democratic Peasants Party (DBD)—are officially tolerated, but must adhere to the government line.

The Democratic Republic has in the Volkskammer (People's Chamber) a rubber-stamp parliament, which passes all legislation unanimously. For elections, a "unity list" (National Front) of candidates is drawn up, with the majority taken from the SED. This system precludes any possibility of a democratic election taking place. In the elections of Oct. 17, 1954, 11,892,849 votes were cast. Of these, 11,828,877 were for the National Front candidates and 63,972 were declared invalid. The president of the Democratic Republic is Wilhelm Pieck, elected on Oct. 11, 1949, and re-elected on Oct. 7, 1953.

Immediately following Chancellor Adenauer's visit to Moscow, Grotewohl, Ulbricht, Foreign Minister Lothar Bolz, and other East Germans were received in the Russian capital on Sept. 16, 1955. On September 20 a treaty was signed by Soviet Premier Bulganin and Grotewohl, recognizing the full sovereignty of the German Democratic Republic in domestic matters and in foreign affairs, including relations with the Federal Republic. The East German government gave its approval to the continued stationing of Soviet troops in East German territory. Both governments agreed to develop further their "economic and scientific-technical cooperation" and to make the reunification of Germany their major common aim.

On September 26 the Volkskammer ratified the Soviet-East German treaty and proceeded with an amendment of the constitution providing for armed forces. Since armed forces are already in existence, the resolution was chiefly a political gesture and a preparatory step to the introduction of universal conscription. For five years or more, military cadres have been built in the form of police "alert units" (*Bereitschaften*). They number over 100,000 men, with 90,000 to 100,000 in the army, 10,000 in the navy, which operates mine sweepers and torpedo boats, and from 7,000 to 10,000 in the air force, which has begun flying Russian MIG-15's.

The withdrawal of Soviet forces from the frontier with West Germany and their replacement by East German border police began in September. The process was completed on December 1.

Economic Affairs.—In 1950 a five-year plan was launched, designed to double the output of the East German economy. The plan was revised in 1953 in order to bring the building of heavy industries in line with actual capacity and to improve the living standard of the population. Only 80% of the goals were achieved, however, and the revised plan proved unattainable in its two-fold objectives.

The disproportion between the development

of industrial and power production was not overcome in 1954. Steel production totaled 2,255,000 metric tons; brown coal production (175 million metric tons in 1953) was hardly increased; and the small output of coal (3.2 million metric tons in 1951) fell off slightly. Instead of a planned 740,000-kilowatt increase, only 441,000 additional kilowatts of electric power were added. Consequently the existing industrial capacity could not be fully used. No improvement in the production of consumption goods was achieved in 1954, nor was rationing abolished as promised. Owing to the agrarian policy (which aims not only at the collectivization of the farms, but also at a shift in emphasis from grain production, to cattle raising) the grain harvest sank from 4.7 million tons in 1953 to 4.5 million tons in 1954 (6.7 million tons in 1936). East Germany required grain imports of 1.4 million tons, of which the USSR could deliver only 74%.

The German Democratic Republic was also struggling with great financial difficulties in 1955. It gained nothing from the ending of reparations to the Soviet Union on Jan. 1, 1954, since the latter country continued to take much heavy industrial production. Although these goods were to be delivered within the terms of the Soviet-East German trade treaty, price and exchange dictate limited profits. In addition, new payments were required for settling former Russian credits or for covering new obligations, such as the 50% participation in the uranium mines of East Germany, which was "magnanimously" offered by the Soviet Union. As a result, the investment plans of the East German government could only partly be fulfilled.

The foreign trade of East Germany increased from the equivalent of \$1,715 million in 1953 to \$2,580 million in 1954. Within the Eastern bloc, East German trade was exceeded only by that of the Soviet Union (\$6,250 million). Over 70% of the exchange of goods in 1954 was with the Eastern bloc, and over 40% alone was with the Soviet Union.

The economic plan for 1955, the supreme law of the Democratic Republic, which was passed by its parliament in May, provides for an increase in production of 5.1%. It is questionable whether this goal will be reached in the spring of 1956, when a second five-year plan will begin. Soviet advisers have demanded a target of a 75% increase in production for this plan, but the East Germans consider an increase of 35% as the maximum.

As a result of the international developments, which apparently have dashed hopes for reunification, the stream of refugees from East to West Germany increased after the summer of 1955. In August, 25,690 people crossed the frontier; in September, 28,183, and in October, 32,874, a two-year high mark. The Bonn government announced on Aug. 28, 1955, that 2,300,000 refugees had fled East Germany since 1949.

Professor of History, Yale University.

GERONTOLOGY. See Index entry.

GIBRALTAR. Commanding the western entrance to the Mediterranean, this famous British outpost and crown colony had a civilian population of 24,921 in 1954. It occupies an area of 2½ square miles at the end of a low isthmus connecting it with Spain, the fortress rising to 1,400 feet above sea level, with an Admiralty

harbor occupying 440 acres at the base. A large-scale public works program to improve the port facilities and increase trade is under consideration.

On Jan. 1, 1955, Gibraltar was officially established as a subcommand of the North Atlantic Treaty Organization (NATO). The strategic position of Gibraltar as a naval and air base, covered by the guns of the fortress, gives "the Rock" a vital role in both the Mediterranean and eastern Atlantic defenses of NATO.

A governor (Lieut. Gen. Sir Harold Redman, appointed May 20, 1955) is assisted by a 7-member Executive Council and a 10-member Legislative Council (5 elected). Revenue in 1954 totaled £1,058,216; expenditure, £1,046,709. A government lottery brings in approximately £100,000 in revenue each year. In 1954, £65,287 was expended in the maintenance of 16 kindergarten and primary schools (2,375 pupils), and 6 secondary schools (1,188 pupils).

Industries, apart from the naval dockyard, include fish and fruit canning, and the manufacture of tobacco, coffee, macaroni, and confectionery. The labor force includes some 8,300 men and 4,500 women from adjacent Spanish towns, who enter and leave Gibraltar daily. Exports of dutiable goods were valued at £729,381 (exclusive of petroleum products) in 1954; imports (principally from the United Kingdom), £6,493,686. Highways aggregate 17 miles. British European Airways provides daily services to Tangier and to London.

GLASS. See CERAMICS and Index entry, *Glass Industry*.

GOLD. Mine production of gold in the United States declined 6% in 1954, to 1,831,741 ounces compared with 1,958,291 ounces in 1953. Production of 1,555,248 ounces during the first 10 months of 1955 indicated a very slight gain. South Dakota, Utah, Alaska, and California together produced 78% of the total in 1954. Over half of the gold is produced from direct mining operations, and the remainder is recovered as a byproduct of base-metal ores.

Canada.—Production in the first half of 1955 was 2,215,152 ounces, compared with 2,092,096 in the same period of 1954 and 4,366,506 ounces for the full year 1954.

Union of South Africa.—The world's leading gold producer mined 10,885,119 ounces in the first 9 months of 1955, compared with 9,723,529 ounces in the same period of 1954 and 13,237,119 ounces during the full year 1954. (See MINERAL PRODUCTION for output of major countries.)

GOLD COAST. See BRITISH WEST AFRICA.

GOLDEN, John, American theatrical producer and playwright: b. New York, N.Y., June 27, 1874; d. Bayside, Queens, N.Y., June 17, 1955. One of the theater's most successful producers, whose productions were notable for their clean unsophisticated humor, he was also known as a writer of song lyrics and of plays.

Taken to Wauseon, Ohio, as an infant, John Golden received his early schooling there, but returned to New York City at the age of 14. During the next two decades, while seeking to establish himself in a career, he studied architecture, attended the New York University Law School, became a highly successful salesman, worked as an actor, and wrote songs, sketches, and plays.

In 1908 he finally abandoned all other activities for the stage, and in the following year wrote one of his earliest successes, *The Candy Shop*, which established itself as a stock company favorite.

In the following decade he wrote the books and lyrics for four Hippodrome shows: *Hip, Hip, Hooray* (1915), *The Big Show* (1916), *Cheer Up* (1917), and *Everything* (1918), one of which included the song, *Poor Butterfly*. A second song hit, *Goodbye Girls, I'm Through*, from *Chin Chin*, helped finance his first venture as a Broadway producer. The play, *Turn to the Right* (1916), written by Winchell Smith, marked the successful beginning of a collaboration with Golden which extended through *Three Wise Fools* (1918), *Lightnin'* (1918), which ran for 1,291 consecutive performances, and *The First Year* (1920). On his own, Golden produced the long-running *Seventh Heaven* (1922), but in 1925 he rejoined Smith to present Marc Connelly's *The Wisdom Tooth*. Golden's felicitous collaboration as producer with the playwright Rachel Crothers resulted in *Let Us Be Gay* (1928), *As Husbands Go* (1931), *When Ladies Meet* (1932), and *Susan and God* (1937). During this period he also presented such other successes as *Counselor-at-Law* (1931), *Skylark* (1939), *Claudia* (1941), and *Three Is a Family* (1943), his seventh play to run for over a year on Broadway. Revivals of *They Knew What They Wanted* (1949) and *The Male Animal* (1952) were among his last offerings as a producer.

Golden served during World War II as director of the American Theatre Wing, for the entertainment of servicemen, and of the United Service Organization's Camp Shows, and was the sponsor of playwrighting contests among service personnel. The War Department awarded him its highest civilian award for his services.

GOVERNMENT DEPARTMENTS AND AGENCIES.

See Index entry; also separate articles on the major government agencies and bureaus.

GOVERNMENT PRINTING OFFICE, U.S. Created by Congressional Joint Resolution 25 on June 23, 1860, the Government Printing Office has since come to comprise the largest and best-equipped printing plant in the world.

The Government Printing Office executes orders from units of the federal government for printing and binding; furnishes, on order, blank paper, inks, and similar supplies to all governmental activities; distributes government publications as required by law, and maintains necessary catalogues and a library of these publications; and prints, for sale to the public, such documents as are not of a confidential nature.

The total area occupied by the Government Printing Office proper in 1954 was 32.1 acres. During the fiscal year 1955, it was necessary to place orders with outside contractors for printing in the amount of \$19,723,386.73, as the Government Printing Office was unable to handle the volume of printing ordered. The value of the buildings in 1955 was \$9,085,172.60, and of machinery and equipment and building appurtenances, \$15,262,095.16.

During the fiscal year 1955, there were 6,806 employees on the rolls with a payroll of \$33,618,755.05. The office made charges for 526,528,507 copies of publications of all classes. This total included 6,066,080 copies of the *Congressional Record*; 3,698,845 copies of the *Federal Register*; 5,399,066 copies of specifications of patents,

trademarks, designs, etc.; and 353,083 copies of the Patent Office's *Official Gazette*. The number of postal cards printed amounted to 2,424,360,084. The Division of Public Documents mailed out approximately 47,428,137 publications; its receipts from the sale of government publications during the year amounted to approximately \$5,508,904.26. Charges made to Congress and all other government agencies totaled \$77,261,053.75.

RAYMOND BLATTENBERGER,
Public Printer.

GRAINS. Grain production in the United States increased during 1955. The harvest of the eight food and feed grains totaled 162 million tons, 3% more than in 1954 and 5% more than the 1944-53 average, according to the Agricultural Marketing Service. The 130 million tons of feed grains was second only to 1948. The oats crop established a record; barley and sorghum grain production was near record; and the corn crop was above average. Food grain production, on the other hand, was the smallest since 1943. The rice crop was the second largest of record, but the wheat crop was the smallest in 12 years. Rye production was above average, but the buckwheat crop was extremely small.

Production of the major grains in the United States has exceeded use in recent years, and stocks have been built up to higher levels than ever before, creating serious surplus problems. At the beginning of the crop year, 1,021 million bushels and 26.7 million hundredweight of rice were on hand from preceding crops. The feed grain carry-over totaled a record 38.9 million tons, including 1,024 million bushels of corn. Most of these stocks had been acquired by the government under the price support programs.

The world harvest of the principal food and feed grains also was large in 1955. Wheat and rye production in 1955-56 totaled 261 million short tons, according to preliminary estimates of the Foreign Agricultural Service. This was 4% above 1954-55 and close to the record of 1953-54. The rice harvest increased 3% and was only 2½% below the record. Corn production was at a new peak, while the output of oats and barley was the largest of the post-World War II period.

WHEAT PRODUCTION, BY PRINCIPAL COUNTRIES (1,000 bushels)

	Average 1945-49	1954	1955*
United States.....	1,202,396	984,846	938,159
Canada.....	362,774	308,909	494,090
France.....	238,200	388,220	385,000
Italy.....	227,200	266,400	338,000
India.....	212,336	293,920	317,330

Pakistan.....	129,017	137,500	118,000
World total.....	5,895,000	6,945,000	7,300,000

* Preliminary. Years shown refer to years of harvest in the Northern Hemisphere. Harvest in the Northern Hemisphere is combined with that in the Southern Hemisphere which follows immediately. (Source: Foreign Agricultural Service, U.S. Department of Agriculture.)

Wheat.—The 1955 crop in the United States was estimated by the Agricultural Marketing Service at 938,159,000 bushels, 5% below 1954 and 19% below average. The crop was harvested from 47,222,000 acres, 13% less than in 1954 and nearly a third below average. Marketing quotas and acreage allotments restricted acreage for the second consecutive year. Yield per har-

vested acre was a record 19.9 bushels, 1.8 bushels more than in 1954. The crop included 705,372,000 bushels of winter wheat, 212,188,000 of spring wheat, and 20,599,000 of durum. Although production was reduced in 1955, the carry-over of old wheat boosted the total supply to 1,959 million bushels, largest in history.

World wheat production in 1955-56 was estimated at 7,300 million bushels, compared with 6,945 million in 1954-55 and only a little below the 1952 record. The increase over 1954-55 was largely accounted for by larger crops in Canada and the Soviet Union. Supplies of wheat in the four principal exporting countries—United States, Canada, Australia, and Argentina—reached a new high.

RICE PRODUCTION, BY PRINCIPAL COUNTRIES (Million pounds, rough)

	Average 1945-46 to 1949-50	1954-55	1955-56 ¹
India.....	76,000	85,000	85,000
Japan.....	24,734	24,988	30,000
Pakistan.....	26,889	28,266	28,500
Thailand.....	11,978	12,900	17,000
Philippines.....	4,872	7,061	7,162
United States.....	3,548	5,885	5,023
Formosa.....	2,897	4,461	4,900
Nepal.....	2,500	2,200	2,400
World total ²	225,782	261,334	270,211

¹ Preliminary. ² Excludes Communist China, North Korea, and the USSR. (Source: Foreign Agricultural Service, U.S. Department of Agriculture.)

Rice.—The 1955 production of 53,420,000 bags (100 pounds each) in the United States was less than in 1954 but higher than in any other year. Acreage allotments and marketing quotas were in effect and the 1,822,000 acres from which the crop was harvested was 28% less than in 1954. However, the record yield of 2,932 pounds per acre was 406 pounds above 1954.

A world crop of 270,000 million pounds of rice was estimated for 1955-56 (excluding Communist China, North Korea, and the Soviet Union). This was 3% above the preceding year and 2½% below the 1953-54 record. Largest increases were in Asia, which accounted for 88% of the world total.

Rye.—Acreage from which rye was harvested in the United States in 1955 totaled 2,066,000, a fifth more than in 1954. The yield of 14.1 bushels per acre was slightly lower than in 1954, but 2 bushels above average. The crop of 29,187,000 bushels was one fifth above 1954 and a third larger than average. Only about 41% of the acreage seeded to rye was harvested for grain. The remainder was used for pasture, hay, cover, or plowed under for green manure.

The world rye crop for 1955-56 was estimated at 1,505 million bushels, 30 million less than in 1954-55 and 25 million less than the 1945-49 average.

Buckwheat.—The 2,055,000 bushel 1955 crop in the United States was a fourth less than that of 1954 and the smallest of record. Only 117,000 acres were harvested. Yields were about average.

Corn.—The United States crop of 3,184,836,000 bushels in 1955 was 175,000,000 more than in 1954 and the sixth largest of record. Acreage in corn has been decreasing for several years, and the 72,955,000 harvested in 1955 was 1% less than in 1954 and 6% less than average. However, rising yields have more than offset the decline in acreage. The 1955 yield was 39.8 bushels per acre, compared with 37.5 in 1954 and the average of 36.4. Production of corn for

grain in 1955 was estimated at 2,857 million bushels from 69.3 million acres. Of the remaining acreage, 6.8 million was used for silage and 3.8 million were harvested for forage, hogged off or grazed.

Preliminary estimates indicated a 1955-56 world corn crop of 6,060 million bushels, slightly above the 1948 record and 10% above 1954-55. Most of the increase was in the United States and in the Soviet Union where corn production is receiving increasing emphasis.

OATS PRODUCTION, BY PRINCIPAL COUNTRIES
(1,000 bushels)

	Average 1945-49	1954	1955*
United States.....	1,376,527	1,497,045	1,575,736
Canada.....	341,612	306,793	409,991
France.....	221,821	246,220	244,140
United Kingdom.....	204,692	170,800	179,550
Germany, West.....	144,500	170,370	171,340
Denmark.....	67,820	55,115	57,250
Sweden.....	58,000	59,320	49,860
Finland.....	35,275	56,000	49,500
World total.....	3,931,000	4,295,000	4,335,000

* Preliminary. Years shown refer to years of harvest in the Northern Hemisphere. Harvest in the Northern Hemisphere is combined with that in the Southern Hemisphere which follows immediately. (Source: Foreign Agricultural Service, U.S. Department of Agriculture.)

Oats.—Record yields on the second largest acreage harvested in 9 years resulted in a record oats crop of 1,575,736,000 bushels in the United States, compared with 1,497,045,000 in 1954. The crop was harvested from 40,933,000 acres, 1.4 million less than in 1954. Yields averaged 38.5 bushels per acre, 3.1 bushels above 1954.

A world oats crop of 4,335 million bushels was produced in 1955-56. This was the largest crop since the end of World War II.

Barley.—Production in the United States in 1955 totaled 390,969,000 bushels, 20 million bushels more than the 1954 crop and the second largest on record. Acreage harvested was 14,247,000, compared with 13,183,000 in 1954, and was the fourth largest on record. Yields averaged 27.4 bushels per acre, compared with 28.1 in 1954.

World barley production in 1955-56 was estimated at 2,830 million, slightly more than in 1954-55 and well above the 1945-49 average of 2,170 million.

Sorghum Grain.—The 232,638,000 bushel crop of 1955 was almost up to the 1950 record for the United States. Harvested acreage totaled 12,597,000, compared with 11,218,000 in 1954; but the yield of 18.5 bushels per acre was below the 1954 average of 19.3. (See also AGRICULTURE.)

WAYNE DEXTER,
Agricultural Marketing Service, U.S. Department of Agriculture.

GRAPEFRUIT. See FRUITS.
GRAPES. See FRUITS.

GRAPHIC ARTS. New technical developments covering various branches of the industry, together with advances in the application of former developments, were announced in 1955.

The latest addition to the Intertype Fotosetter is the setting of Indian Devanagari. Devanagari, alphabet of Hindi, official language of India, is derived from ancient Sanskrit, and is one of the most complicated languages in the world to put in written form. In hand type, until now the only method of setting, it requires 700 to 1,000 characters in a basic font. It utilizes almost unlimited combinations of accents attached to bottoms and

tops of basic characters to indicate precise gradations of spoken sound and pronunciation.

The Fotosetter Devanagari has reduced the basic font to about 175 characters, including numerals and punctuation. Accents are superimposed on the basic characters by adjusting the movement of the film on which the characters appear. It is done automatically through a system roughly similar to that of typewriter keys bearing accents that are dead and do not move the carriage when depressed.¹

A new process for gravure platemaking, named Uniprint, is said to reduce plate costs while maintaining high quality of reproduction. Uniprint is described as utilizing the photographic technique of making negatives, the transfer technique of the gravure industry, and the molding of the transfer into a rubber material to produce an intaglio plate of fine quality that offers resiliency and acceptance of ink ideal for printing on cellophane, cardboard, parchment, and fine publication papers. Quality reproduction has been attained, according to the announcement, on runs of up to 500,000 without loss of detail. No special press equipment is required, regular cylinders or tubes being used. The feature stressed is the comparative low cost of platemaking by this method, designed to open up wider markets for gravure on short or long runs.

New fibers for papermaking were announced by du Pont de Nemours & Company. It is claimed that papers made from these fibers are three to ten times stronger than paper made from the conventional pulp or rags. The new papers, made experimentally from nylon fiber, Dacron polyester fiber, and Orlon acrylic fiber, were described recently for members of the Technical Association of the Pulp and Paper Industry.

The unusual properties of synthetic fibers are carried over into papers made from them. They are highly resistant to chemical attack, absorb very little moisture, and resist action of molds, bacteria, and light. Stability of the papers to moisture indicates possible use as map and tracing papers, and for important records and documents where permanence is necessary. The resistance of these papers to folding was up to 200 times that of papers made from wood pulp or rags.

Called the Metalmist plate by Huebner Laboratories, a new flat-plane plate takes ink where it should and repels ink where it is not needed. Its basic advantage is in the achievement of perfect color separation without need for etching relief dots and images. Long printing runs with this plate will also be possible. The ultimate objective is a million impressions from one plate; the immediate objective, 25,000 to 50,000 impressions before it is offered to the trade.

The basic principle of the plate is not new. It was tried out 30 years ago in England, using mercury on the plate and in the ink to replenish the mercury used up in printing. Its use was stopped because of the health hazards involved in the use of mercury. The present method, however, is new since it employs no mercury, and also utilizes a new way to produce the ink-repellent surface. Experiments are under way to test the durability and maintenance of fine-quality ink impression.

The Kemart Corporation has announced the

¹ On the Fotosetter the desired result is accomplished by the varying widths of the Fotomats, which determine the distance the film moves, and positioning of the character on the Celluloid image of the Fotomat, which dictates the position of the characters in their relationship to each other.

new Kemart color separation camera and presses. Designed to simplify and reduce time required in color separation and correction, the camera produces three- and four-color-process plate copy, and can be used for either lithographic reproduction or letterpress. The package unit for color separation consists of camera, dimensionally stable photo paper, retouching aids, and all the necessary equipment and supplies for preparing process work.

Color transparencies and negatives in small sizes can be made with highlight and principal masks fully color-corrected in less than an hour. The single-mask system with filter-separated negatives takes about 30 minutes, including development and drying of the mask. Employed is the pin-register system developed by Eastman Kodak Co. for its short-run three-color litho process, which is said to insure exact register from the smallest subject to the largest mask or final negative. With this register, the mask is projected onto the negative to be corrected.

An interesting application of the role of the atom as a useful industrial research tool, and the application of tracer chemistry to a specific study undertaken for Gravure Research, Inc., are discussed by James M. Dugan of Battelle Memorial Institute, Columbus, Ohio, in a study of the mechanism of penetration of a carbon tissue resist undertaken by means of radioactivity analysis.²

"Many other gravure problems could be studied profitably by the use of tracer chemistry," Dugan concludes. "These include a study of the manner in which ink is transferred from a gravure cup, the spread of ink on paper, foils or plastics, and wear of a cylinder. The drying of ink is another problem particularly suited to this method of investigation."

GRAY, Carl Raymond, Jr., American government official and railroad executive: b. Wichita, Kans., April 14, 1889; d. St. Paul, Minn., Dec. 2, 1955. An executive of a number of railroad companies before World War II, during which he was in charge of military railroads in North Africa and Europe, he was administrator of veterans affairs from 1948 until 1953.

The son of a president of the Great Northern and Union Pacific railroads, he began a long career in railroading as a yard clerk with the St. Louis-San Francisco Railway Company, on graduation from the University of Illinois in 1911. After serving in World War I, in which he rose to the rank of lieutenant colonel, he was active in business in Chicago and Kansas City, Mo., into the late 1920's. In 1929 he became general manager of the Chicago, St. Paul, Minneapolis, and Omaha Railway Company, and in 1937, executive vice president.

In 1943-45 he was director general of mili-

² Previous studies indicate that the presence of the sulfate ion in an etchant speeds the rate of penetration of a resist. Dugan points out. To study the method by which this effect is obtained, an etchant was prepared containing three radioisotopes with different radiation energies, so that radiation from the three could be separated by the use of proper absorbers. Illustrations show the special arrangement of a tissue resist used in the experiment, and Dugan explains the analyses through which it was determined that the resist acted as an ion-exchange membrane selectively absorbing negatively charged ions.

tary railroads in North Africa, and from Feb. 12 to Oct. 24, 1945, as director general of Military Railway Service in Europe, he was in charge of all European railroad service and was responsible for moving men and matériel to the front. Retired from the army in February 1946 with the rank of major general, he became in the same year executive vice president of the Chicago and North Western System. He left this position to take the office of director of the Veterans Administration on Jan. 1, 1948, after his appointment by President Harry S. Truman. He resigned on June 30, 1953, because of poor health.

GRAZIANI, Rodolfo, Italian military leader: b. Filetino, Italy, Aug. 11, 1882; d. Rome, Jan. 11, 1955. Conqueror of Ethiopia, and last commander in chief of Fascist forces in World War II, Graziani remained actively faithful to the cause of fascism until his death.

Graziani began his military career in 1908, serving first in Eritrea and later in Libya. With the outbreak of World War I, he returned to Europe to serve as a brigade commander in the Allied campaigns against Austria-Hungary. Returning to Libya in 1921, he spent the next decade militarily attempting to assert Italian sovereignty over rebellious Arab tribes. He attained the rank of brigadier general in 1923, was named commander of all Libyan forces in 1930, and was later appointed vice governor of Cyrenaica by Mussolini.

As a prelude to the Italian invasion of Ethiopia, Graziani was installed as governor of Italian Somaliland in February 1935. Shortly afterward, with Gen. Emilio De Bono, he launched and successfully carried out the notoriously barbarous southern campaign in Ethiopia. With the termination of hostilities in 1936, he was elevated to the rank of marshal, and in June was appointed viceroy of the conquered country, serving until December 1937. In 1937, King Victor Emmanuel conferred on him the hereditary title of marchese di Neghelli.

With the entrance of Italy into World War II in 1940, Graziani was made army chief of staff and placed in command of the Army of the Po, ranged along the French frontier. After the sudden collapse of France, he was sent late in June to Libya in the capacities of governor general and commander of all the Italian troops in Africa. His short-lived reputation as a desert fighter came in 1940 when, from his base at Bardia in eastern Libya, he launched an attack in September against the weak British Army and pushed eastward to Sidi Barrani, 75 miles inside Egypt. Stopping to consolidate his position, he gave the British, under Gen. Archibald Wavell, time to reorganize and take on reinforcements. On December 9, Wavell's forces struck at the Italians at Sidi Barrani, and, in a 500-mile advance, destroyed Graziani's army. In March 1941, the marshal "resigned" as chief of staff and governor of Libya.

After the Italian surrender in 1943, he came out of retirement to accept appointment as war minister of the puppet Fascist republic established by Mussolini in northern Italy. He was taken prisoner in April 1945 by Italian partisans and was incarcerated until 1950, when a military court found him guilty of collaboration with the Nazis and sentenced him to 19 years' imprisonment. He was released, however, as a result of a government amnesty after serving six months of his term. Shortly afterward he became an active leader of the Italian Social Movement, a neo-

Fascist organization, but was shelved by younger leaders to the position of "honorary president," which he resigned in 1954.

Graziani was the author of *Verso il Fezzan* (1930); *Cirenaica pacificata* (1932); *La riconquista del Fezzan* (1934); *Pace Romana in Libia* (1939); *Fronte Sud* (1939); and *Ho difeso la patria* (1948).

GREAT BRITAIN OR UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND. An island group off the northwest coast of Europe, the United Kingdom (loosely called Great Britain) consists of England (50,337 square miles), Wales (8,006 square miles), and Scotland (30,410 square miles), forming the true Great Britain, the largest island of the group; Northern Ireland (5,449 square miles); the Channel Islands (75 square miles); the Isle of Man (227 square miles); and about 500 smaller islands, which are included in England, Scotland, and Wales for administrative purposes. The total area of the group is 94,504 square miles.

Population.—The estimated total population on Dec. 31, 1954, was 50,887,000 (April 1951 census, 50,369,585), of which England and Wales contained 44,370,000; Scotland, 5,128,000; and Northern Ireland, 1,389,000. Population density averaged 538.5 in the United Kingdom as a whole, 760.5 in England and Wales, 168.6 in Scotland, and 254.9 in Northern Ireland.

Greater London, with a 1951 census population of 8,346,137 (County of London, 3,348,336; Outer Ring, 4,997,801) is the largest city, followed by Birmingham, 1,112,340; Glasgow, 1,089,555; Liverpool, 789,532; Manchester, 703,175; Sheffield, 512,834; and Leeds, 504,954. The leading ports, in addition to London, Liverpool, Glasgow, and Manchester, are Belfast, 443,670; Bristol, 442,281; Hull, 299,068; Newcastle-upon-Tyne, 291,273; Cardiff, 243,627; and Southampton, 178,326.

Government.—The United Kingdom is a limited constitutional monarchy, with fully democratic parliamentary institutions. The reigning sovereign, Elizabeth II, succeeded her father, George VI, on Feb. 6, 1952. Prince Charles, Duke of Cornwall, elder child and only son of Elizabeth II and her husband, Philip, Duke of Edinburgh, is heir apparent.

Executive power is in the hands of a cabinet, led by a prime minister, which sits in and is responsible to a bicameral Parliament. Though government is conducted in the name of the sovereign, she must act on the advice of her ministers. The prime minister, either as a party leader or as the head of a coalition, must be able to command a majority in the lower house of Parliament, the House of Commons. This consists of 630 members (including a speaker elected from among them at the beginning of each Parliament) elected from single-member territorial constituencies by universal suffrage. The voting age is 21. The normal life of a Parliament is five years, though it may be dissolved by the sovereign on the advice of the prime minister at any time. All money bills must originate in the lower house; other bills may originate in either house. The upper house, the House of Lords, can delay any bill except a money bill, but there is machinery whereby the House of Commons can pass bills in the face of Lords' opposition. To become law, all bills must be read three times in both houses and receive the sovereign's assent.

The House of Lords, basically hereditary in composition, is a revisionary chamber. It is composed of the Lords Spiritual (2 archbishops and 24 bishops of the Church of England), judges given life peerages to perform the house's function as the final court of appeal, 16 representative Scottish peers elected for the life of the Parliament, 6 representative Irish peers, and the hereditary peers, making a total membership of 873 as of September 1955.

The state of the parties in the House of Commons after a general election held on May 26, 1955, was: Conservatives and supporters, 344 seats; Labour, 277; Liberal, 6; Sinn Fein, 2; and speaker, 1.¹ The speaker

¹ On Oct. 25, 1955, 2 Ulster Unionists were seated in place of the 2 Sinn Fein candidates, who had been ruled incapable of being elected because they were in jail, but one of the former was found disqualified on December 19.

is W. S. Morrison, a Conservative. Sir Anthony Eden succeeded Sir Winston Churchill as prime minister on April 6, 1955. After he formed a caretaker cabinet to fight the election, his postelection cabinet included Harold Macmillan (foreign affairs), Richard Austen Butler (chancellor of the exchequer), the Earl of Home (Commonwealth relations), Alan Tindal Lennox-Boyd (colonies), and Selwyn Lloyd (defense). On December 20, the cabinet was reorganized, Macmillan becoming chancellor of the exchequer, and Lloyd foreign secretary. Sir Walter Monckton was named minister of defense.

Finance.—Revenue in 1954-55 totaled £4,738 million (£1 = U.S.\$2.80), and expenditure £4,305 million, giving a surplus of £433 million. The major items of expenditure were £1,512 million for defense, £602 million for national debt interest, £432 million for health services, and £469 million for National Insurance benefits. Revenue for the year 1955-56 was estimated at £4,844 million, and expenditure at £4,562 million. Of this, £1,494 million was allocated to defense, and £1,315 million (compared with £1,278 million in 1954-55) to social services.

Britain's overseas payments were roughly in balance in the first half of 1955. Excluding receipts from United States defense aid (£33 million), there was a deficit of £16 million over the period; with defense aid there was a surplus of £17 million, compared with a surplus of £165 million over the same period in 1954. The adverse change was entirely within the nonsterling area. With the dollar area, Britain had a trade deficit of £121 million, an increase of £86 million. Invisible earnings fell by £21 million to £11 million. As a result, gold and dollar reserves declined by \$82 million during the period, in contrast to a rise of \$449 million in the same period in 1954. A major factor was Britain's own larger deficit with the dollar area; the rest of the sterling area showed only a slight fall in its surplus with the dollar area, and this stability was due to the colonial territories. The other sterling countries had a considerable deficit (\$165 million), due to increased dollar imports. Britain's dollar balance was also adversely affected by a deficit, instead of a surplus, with the countries of the Organization for European Economic Cooperation (OEEC), where settlement is to a large extent in dollars.

The average monthly trade deficit in the third quarter of 1955 continued at about the same rate as in the first half of the year, owing to a large July deficit resulting from a dock strike (see below, *Principal Events, 1955*). Though the September figures showed an actual fall of about one third, the chancellor of the exchequer introduced a supplementary budget on October 26, containing measures designed to reduce home consumption and force goods into the export market. As these measures took effect, the situation promised some improvement. At the end of September 1955, the dollar reserves of the sterling area stood at \$2,345 million, compared with \$2,901 million a year earlier.

Taxation.—The standard rate of income tax was cut in the 1955-56 budget from 45% to 42½%. A single person's exemption was raised from £120 to £140, a married couple's exemption from £210 to £240, and that for a child from £85 to £100. There were some other changes in the rates, which now run from 11¼% on the first £100 of taxable income to 42½% on taxable income of £400 and above. Surtax, which remained unchanged, is payable on gross income over £2,000, rising from 10% on the first £500 of additional income to 50% on income over £15,000.

Profits tax, which is paid by companies on distributed profits in addition to income tax at the standard rate, was raised from 22½% to 27½% in the October supplementary budget. Changes in purchase tax rates were made in both the April and the October budgets.

Defense.—Military service has been compulsory in Great Britain since 1939. All male citizens between 18 and 26 must (with limited exceptions) serve for two years in the armed forces, plus three and one-half years with training liability (60 days) and a further five years without training liability in the reserves.

The strength of the Regular Army on April 1,

1955, was 223,800; that of the Royal Navy, 114,200; and the Royal Air Force (RAF), 180,100. In addition, there were 285,000 National Service men in service and 20,600 women.² Reserve and auxiliary forces, including part-time National Service men, totaled about 649,200, and the National Service reserve 530,000. The strength of the Home Guard, a part-time voluntary organization, was 37,300, plus 42,000 reserves. In September 1954, civil defense forces comprised 338,153 in the Civil Defense Corps, 160,000 in the Industrial Civil Defense Service, 20,640 in the Auxiliary Fire Service, 44,868 in the National Hospital Service Reserve, and 42,332 in the Special Constabulary.

In 1955, 4 army divisions (3 armored) were in Germany, and other forces were in Austria, Korea, Japan, Malaya, and Kenya. The force in the Suez Canal Zone was being reduced under the Anglo-Egyptian agreement of 1954, and small garrisons were guarding strategic points throughout the colonial territories. A base was being built in Cyprus to replace the Suez base. The Royal Navy, excluding attendant ships and small craft, consisted of about 600 vessels of all types. Units of the RAF were stationed in Europe, the Middle East, and the Far East. (See also NAVAL AFFAIRS.)

Atomic Energy.—Atomic research and development in Great Britain are the responsibility of the Atomic Energy Authority, set up in 1954. The authority is free from day-to-day government control, but unlike other statutory corporations in Britain, it derives the bulk of its revenue from public funds. A research establishment at Harwell, Berkshire, is the center for atomic research, as well as the site of reactor and isotope schools. A radiochemical center at Amersham, Buckinghamshire, is a dependency of Harwell. Production of fissile material is directed from Risley, Lancashire, and production factories are located at Springfields, Lancashire; Windscale, Cumberland; and Capenhurst, Cheshire. An experimental atomic power plant at Calder Hall, near Windscale, and a breeder reactor at Dounreay, Caithness, are also operated by the authority. Research on atomic weapons, with which the British forces are now being equipped, is conducted at Aldermaston, Berkshire. On Feb. 17, 1955, the government announced that it planned to produce hydrogen bombs.

A 10-year program for the production of nuclear power was announced on February 15. Twelve atomic power stations are planned at a cost of £300 million; by 1965 they would be producing 1,500,000 to 2,000,000 kw. of electricity, saving 5 million to 6 million tons of coal a year and providing one quarter of Great Britain's requirements of new generating capacity.

Education.—School attendance is compulsory in Great Britain from 5 to 15 years of age (14 in Northern Ireland until April 1957). Expenditure on public education in 1955-56 is estimated at £271.3 million in England and Wales and £38.2 million in Scotland. Grants to universities will amount to £32.3 million. In January 1954, there were 6,795,262 children in 31,244 schools recognized as efficient by the Ministry of Education, 6,445,614 of them in 29,603 schools maintained by public funds. The corresponding figures for Scotland were 854,322 children in 3,186 schools, and 829,916 in 3,162 schools, respectively. During the year new building provided

for 210,000 pupils in England and Wales and 34,410 in Scotland. The number of teachers increased by 7,000 to 256,506 in England and Wales, and there were 11,942 new teachers entering training. In Scotland there were 34,771 teachers on Oct. 1, 1954. New educational building started in 1954 totaled £59.4 million in England and Wales and £7.8 million in Scotland. The number of full-time students in technical colleges in England and Wales in the winter of 1953-54 rose to 59,000, and the number of part-time students was about 372,000. In Scotland there were 10,503 students undergoing full-time technical education and about 124,000 part-time technical students.

There are 16 degree-giving, self-governing universities and 2 university colleges in England and Wales. Scotland has 4 universities, and Northern Ireland 1 university and 1 university college. In 1953-54 there were about 80,602 full-time students (including 19,809 women) and 15,755 part-time students at universities and university colleges in the United Kingdom. Over 74% held scholarships or grants providing wholly or in part for their expenses. Included in the total were 4,607 full-time and 1,819 part-time students from the Commonwealth and 3,373 full-time and 1,379 part-time students from foreign countries. Recurrent income of the universities and university colleges in 1953-54 amounted to £31,112,204, of which 74.1% came from public funds.

Religion.—The Church of England, an established church, lies doctrinally between Roman Catholicism and Continental Protestantism. The sovereign, as constitutional head of the church, of which he must be a member, appoints all deans and bishops on the advice of the prime minister. There are 29 dioceses in the province of Canterbury, and 14 in that of York, each administered by a bishop; there are also 40 suffragan bishops. Church law is framed by the Church Assembly, consisting of Houses of Bishops, Clergy, and Laity. Anglican churches, not established, exist also in Ireland, Scotland, and Wales. The freedom of the Church of Scotland (Presbyterian) is recognized by Parliament, and the sovereign is represented at its General Assembly by a lord high commissioner.

Church membership figures in the United Kingdom are misleading, for they are compiled on different bases. The enrolled membership of the Church of England in 1955 was about 3,000,000, but about two thirds of the population are eligible for membership. The membership of the Anglican churches in Scotland, Ireland, and Wales was about 106,000, 400,000, and 200,000, respectively. Other church memberships were Church of Scotland (Presbyterian), 1,250,000; Methodist, 750,000; Baptist, 335,600; Congregationalist, 227,000; and Roman Catholic, 4,000,000.

Social Services.—The state, either through central or local authorities, provides subsistence for the needy, education and health services, housing, unemployment benefits, care of the aged and handicapped, nutritional services for mothers and children, sickness and industrial benefits, widows' and old-age pensions, and children's allowances. These services are financed by contributions from both employer and employee and by national and local taxation. The estimated cost to the central government in 1955-56 was £901 million.

At the end of 1954 nearly 3,250,000 families, with nearly 8,250,000 children, were receiv-

² On Oct. 8, 1955, the prime minister announced that it was planned to reduce the armed forces by 100,000 by March 1958.

ing family allowances of 8 shillings a week for each child after the first. Over 900,000 persons were receiving war pensions; 500,000, widows' benefits and guardians' allowances; 4,500,000, retirement pensions; and 115,000, disablement pensions. During 1954 new claims for sickness benefits totaled more than 7,000,000; for unemployment benefits, over 2,500,000; and for industrial injury benefits, over 800,000. The combined cost of these and other benefits was about £700 million.

In July 1954, there were 42,442,990 patients registered with 19,300 doctors under the National Health Service in England and Wales. In Scotland, about 2,500 doctors are in the service. About 1,250 dentists in Scotland and 9,599 in England and Wales were participating in the service in December 1954. Beds available and staffed in hospitals totaled 476,944 on that date, and there were 50,434 trained nurses and 7,570 midwives. There are about 250 hospitals and nursing homes outside the service. In 1954, 218,712,815 prescriptions were dispensed, at a cost of £45,969,620.

Agriculture.—Unfavorable weather resulted in a decline in the output of food from United Kingdom farms in 1954-55. Production for the year was estimated at 53% above the pre-World War II level, compared with 55% in 1953-54. The output of pigs, fat cattle, milk, and eggs, however, rose during the year. Acreages and production figures are shown in Table 1.

TABLE 1—AGRICULTURAL PRODUCTION
(Years beginning June 1)

Crop	1953-54	1954-55 ¹
Acreage (thousands):		
Wheat and rye.....	2,285	2,501
Other grains.....	5,870	5,253
Potatoes.....	985	946
Sugar beets.....	415	437
All tillage.....	12,304	11,835
Production (thousand tons):		
Wheat and rye.....	2,730	2,829
Other grains.....	6,187	5,219
Potatoes.....	8,260	7,201
Sugar beets.....	5,275	4,623
Eggs ²	526	532
Beef and veal.....	637	672
Mutton and lamb.....	176	183
Pig meat ²	606	720
Milk (million gallons).....	2,170	2,177
Net agricultural output (1936-39 = 100):		
Agricultural holdings ³	155	152
Total ¹	155	153

¹ Provisional. ² Includes production of eggs, pig meat, and other output from gardens, allotments, pig clubs, and other small producers. ³ Holdings of 1 acre and above (or over ¼ acre in Northern Ireland); excludes output from gardens, allotments, pig clubs, etc.

Minerals.—Coal production in 1954 totaled 223,795,100 tons (223,518,600 tons in 1953), and in the first nine months of 1955 about 162,984,000 tons. Average output per man-shift in 1954 was 3.26 tons at the coal face and 1.23 tons for all employees, as compared with 3.14 and 1.21 tons, respectively, in 1953. Manpower in the coal industry totaled 704,860 in December 1954, and 700,575 in September 1955. The industry, which is nationalized, is managed by the National Coal Board.

British refineries produced about 25.5 million tons of petroleum products in 1954. Home production of iron ore (iron content of about 28%) totaled about 19,930,000 tons.

Industrial Production.—The iron and steel industry, which had been nationalized in 1951 under an act passed in 1949, was denationalized under the Iron and Steel Act, 1953. It is now

run under the general supervision of the Iron and Steel Board. Steel production in 1954 reached a record 18,517,000 tons, and in the first nine months of 1955 about 14,624,000 tons.

The index of industrial production (1948 = 100) rose from 121 in 1953 to 129 in 1954, and the gross domestic product increased by about 4%. In the first six months of 1955 production was 6% higher than in the same period of 1954. Of the total increase in national output and imports, about half was due to increased consumer expenditure, one sixth to increased investment in buildings, and one third to the rise in exports.

In December 1954, 2,011,000 tons of shipping were under construction in British yards, including 650,000 tons for overseas owners. During the year, 1,424,000 tons of shipping were laid down, and 1,493,000 tons completed. The working population of the country in August 1955 numbered 24,009,000, of whom 23,028,000 were in civil employment; 182,000 were wholly unemployed. The output of selected industries is shown in Table 2.

TABLE 2—OUTPUT OF SELECTED INDUSTRIES

Commodity	1953	1954
Rayon and other synthetic fibers:		
Staple fibers (million lbs.).....	202	228
Continuous filament yarn (million lbs.).....	217	220
Cotton and cotton waste yarn (million lbs.).....	777	841
Spun rayon and mixture yarn (million lbs.).....	157	155
Woven cotton cloth (million linear yards).....	1,829	1,994
Woven rayon and mixture cloth (million linear yards).....	754	781

Electric motors (£ million).....	43	44
Cars and chassis (thousands).....	595	769
Commercial vehicles and chassis (thousands).....	240	270
Steam locomotives.....	500	583
Railroad freight cars (thousands).....	51	62
Agricultural tractors (thousands).....	110	135

External Trade.—There was a noticeable expansion of the United Kingdom's overseas trade between 1953 and 1954. Exports, at £2,673.4 million, compared with £2,582.0 million in 1953, reached a record level in both value and volume. Imports totaled £3,378.9 million, compared with £3,342.9 million in 1953, an increase of 1% in value and 2% in volume. Re-exports, at £100.8 million, showed a 5% decline from 1953 (£105.5 million). The adverse trade balance was thus £604.7 million.

Exports reflected changes in the pattern of world demand. Chemical exports rose by 15%, road vehicles by 11%, agricultural tractors by 15%, and nonelectrical machinery by 3%. Within the sterling area, exports to Australia and New Zealand rose from £313 million in 1953 to £404 million in 1954. This, coupled with a slight rise to India, Pakistan, and Ceylon and a decline to the colonial territories, resulted in a rise in exports to the sterling area as a whole from £1,254 million in 1953 to £1,330 million in 1954. Exports to the dollar area fell from £386 million to £360 million, but exports to the non-sterling area as a whole rose from £1,328 million to £1,343 million.

Though the volume of imports changed by only 2%, there were changes within this total. Imports of food, beverages, and tobacco actually fell in volume, though the value was slightly higher. Imports of textile materials and finished steel also declined, but those of other industrial materials rose. Dollar imports, after a fall, were

rising again in the latter part of 1954, and trade with the OEEC countries also rose.

United Kingdom imports in the first half of 1955 rose by 14% to £1,909.5 million, and by 9% in volume, one of the main features being a substantial rise in purchases from the dollar area. In the same period exports rose by 4% in value to £1,449.5 million, and by slightly more in volume, compared with the first six months of 1954. Statistics of British trade in 1953 and 1954 are shown in Table 3.

TABLE 3—BRITAIN'S IMPORTS AND EXPORTS, 1953 AND 1954

	1953	1954
(£ million, c.i.f.)		
PRINCIPAL IMPORTS:		
Food, drink, and tobacco:		
Cereals and cereal preparations.....	236	176
Meat and meat preparations.....	266	256
Dairy produce.....	170	161
Sugar and sugar preparations.....	129	103

Machinery (nonelectric).....	98	75
Textile yarns and manufactures.....	48	71
Chemicals.....	76	102
EXPORTS OF BRITISH PRODUCE: (£ million, f.o.b.)		
Iron and steel.....	135	137
Nonferrous metals.....	60	56
Motor vehicles and parts.....	248	276
Aircraft and engines.....	63	52
Machinery and electric goods.....	549	557
Other engineering products.....	212	225
Chemicals.....	177	204
Textiles (excluding clothing).....	326	325
Pottery and glassware.....	24	27
Other manufactures.....	260	265
Food, beverages and tobacco.....	149	157
Coal, coke, and briquettes.....	71	68
Refined petroleum.....	77	84
Raw materials.....	97	101

Communications.—All facilities owned by the railroads, including hotels, ports, and canals, are operated through the British Transport Commission. Road transport, also formerly nationalized, was denationalized in 1953. Civil aviation and air transport were handed over to state-owned corporations in 1946, though private companies operate charter flights under agreement with the Air Transport Advisory Council.

British Railways operated 51,508 miles of track in 1954, and owned 45,953 passenger coaches, 698 dining cars, and 1,124,710 freight

cars in December of that year. During the year, 991 million passengers and 283 million tons of freight were carried. Gross receipts in 1954, at £435.5 million, were £14.1 higher than in 1953, but the British Transport Commission as a whole showed a loss of £11.9 million on the year's working. In 1954, there were 1,019,388 vehicles engaged in road haulage. (See also below, *Principal Events, 1955.*)

British Overseas Airways Corporation (BOAC), which operates Britain's long-range overseas services, carried 291,136 passengers and 6,003 tons of freight in 1954-55. Traffic revenue earned during the year totaled £36,609,979, and the corporation showed a profit of £1,362,180. British European Airways, operating services to Continental Europe, carried 1,874,316 passengers and 14,884 tons of freight in 1954-55. Traffic revenue totaled £16,594,461, giving a profit of £63,039. Associated with BOAC are a number of regional airlines overseas, which are either direct subsidiaries or companies in which BOAC has a financial interest. There are approximately 100 civil airports in the United Kingdom, of which 30 are controlled by the Ministry of Transport and Civil Aviation and 17 by municipalities. There are also 59 military airports available for civil use. (See also *AERONAUTICS.*)

Radio broadcasting in the United Kingdom is provided by the British Broadcasting Corporation (BBC), a chartered public corporation, which operates 1 long-wave and 47 medium-wave transmitters. Short-wave transmitters provide a worldwide service 24 hours a day. Work is under way on nine VHF transmitters to supplement existing internal services. The corporation's income in 1954-55 amounted to £18,943,844 from licenses for receivers, £1,772,205 from publications, and £88,938 from investments.

The BBC operates a television service through 5 high-power and 6 medium-power stations, providing coverage of 90% of the country. An alternative service, with controlled commercial sponsorship, provided by the Independent Television Authority, a government-controlled body, began on Sept. 22, 1955. In April 1955, 13,980,496 licenses, including 4,503,766 for television receivers, were held in the country.

Overseas telecommunications services are operated by Cable and Wireless, Ltd., a public company under the indirect control of the postmaster general. The company's income in 1954-55 was £11,788,515, and the year's operations showed a profit of £1,828,220.

British merchant shipping in active operation on Dec. 31, 1954, totaled 17,286,000 tons of ships of 500 tons and over, and an additional 500,000 tons were laid up. The net tonnage of shipping in the foreign trade entering British ports in 1954 was 72,377,469, of which 55.9% was British; clearances totaled 51,144,591 tons, of which 63.6% was British.

Principal Events, 1955.—The outstanding event in British affairs in 1955 was the resignation of Sir Winston Churchill from the premiership on April 5, amid tributes from leading statesmen all over the world. His great contributions to British affairs and his lifelong service to the nation were acknowledged both in Parliament and in special ceremonies held in Westminster Hall. Sir Winston, however, did not retire completely from public affairs and retained his seat in Parliament.

Sir Anthony Eden, secretary of state for foreign affairs in Sir Winston Churchill's government, succeeded him as prime minister on

Sir Anthony Eden (at microphone) campaigns before his Conservative Party's victory in 1955 general elections.

(Left photo) Sir Winston and Lady Churchill entertain Queen Elizabeth II (right) on April 4, 1955, the day before Sir Winston announced his resignation as British prime minister. (Right photo) Sir Hubert Rance, then governor of Trinidad, delivers official welcome (February 1) to Princess Margaret, who toured British West Indies in 1955.

April 6, made several changes in the government on the next day, and announced a general election for May 26. This resulted in an increase in the Conservative majority in the House of Commons and the continuance of Eden as prime minister (see above, *Government*).

Later in the year, on December 7, Clement R. Attlee, former prime minister, who had been re-elected head of the Labour Party on June 10, resigned his party leadership and was raised to the peerage as Earl Attlee. He was succeeded as party leader by Hugh Gaitskell, who was elected on December 14 in a contest with Herbert Morrison and the left-wing leader, Aneurin Bevan.

A major reorganization of the cabinet took place on December 20. Prime Minister Eden named Robert Austen Butler lord privy seal and leader of the House of Commons, replacing him as chancellor of the exchequer by Harold Macmillan. Macmillan in turn was succeeded as foreign secretary by Selwyn Lloyd, whose post as minister of defense went to Sir Walter Monckton.

Notable also in domestic affairs were the announcements of a nuclear power program (see above, *Atomic Energy*), a road program, and a railroad modernization program. The road program, announced on February 2, would provide the country with a system of fast motor roads, to be authorized in the 4-year period 1955-59 at a minimum cost to the government of £147 million. Railroad modernization will be undertaken over a 15-year period and will result in both track improvement and improved equipment. The principal change, announced on January 24, will be a change-over from steam to electric and diesel locomotives. The plan will cost £1,240 million. There were major strikes, both on the docks (May 23-July 4) and on the railroads (May 29-June 14), and the government was forced on May 31 to declare a state of emergency in order to obtain the powers necessary to maintain supplies and services in the face of the railroad strike.

The chief development in Commonwealth

affairs in 1955 was the agreement that Pakistan should continue as a Commonwealth member when she became a republic, reached at a conference of Commonwealth prime ministers held in London on January 31-February 8. A number of matters of common concern were also discussed at this meeting (see also *COMMONWEALTH OF NATIONS*). During the year new defense agreements were reached (June 15-30) with South Africa.

Foreign relations were dominated by the Geneva Conference (q.v.), held on July 18-23, and the subsequent Geneva meeting of foreign ministers on October 27-November 16. In a report to the House of Commons on July 27, Prime Minister Eden outlined the British view of the Geneva talks and the proposals he had presented there. He felt that the outstanding problems to be solved were those of German unity and European security. He agreed that the discussions between the leaders of the four major powers had enabled them to get to know each other, and that the meeting had "certainly changed the climate of international relations." His cautious optimism about the outcome of the meeting of foreign ministers proved to be unjustified. Britain was represented at this meeting by Foreign Secretary Macmillan, who maintained the close alignment of British, French, and United States policy shown at earlier meetings.

Sir Anthony Eden, then still foreign secretary, attended the first meeting of the Council of the Southeast Asia Treaty Organization (q.v.), held at Bangkok, Thailand, on Feb. 23-25, 1955. In the course of his journey to and from Bangkok, he visited Egypt, Bahrain, Pakistan, Burma, India, Iraq, Lebanon, and Italy, and had talks with ministers and heads of state of those countries. Visitors to Britain during the year included Premier Mario Scelba and Foreign Minister Gaetano Martino of Italy, on February 15-20, to discuss Anglo-Italian relations; and the Libyan defense minister, Ibrahim Benshaban, on July 17-30, to discuss matters arising out of the 1953 Anglo-Libyan treaty of friendship and alliance. A

second visit by Foreign Minister Martino, on September 8-9, provided the opportunity for further discussions with Foreign Secretary Macmillan. On November 21-22 Macmillan attended a meeting at Baghdad of the signatories³ of the Baghdad Pact (q.v.), at which a permanent council was set up and the foundations of a Western-sponsored economic and military organization were laid.

During the year a number of agreements were reached, including an oil agreement between the Iraqi government and the Iraq Petroleum Company, which retained the 50-50 profit-sharing arrangement and amended the pricing formulas (March 24); atomic agreements with France (May 5) and Denmark (June 9); a payments agreement with Brazil (August 16); a sterling agreement with Egypt (August 29); trade agreements with Argentina (March 31) and Japan (October 17); and an agreement with Egypt providing for a plebiscite in the Sudan (December 3). Britain also took part in the International Conference on the Peaceful Uses of Atomic Energy, held at Geneva on August 8-20.

One of the most troublesome problems facing Britain in 1955 was the future of Cyprus (q.v.). A conference between Britain, Greece, and Turkey, held in London on August 29-September 7, to discuss the island's future and problems of the eastern Mediterranean, ended without agreement. Greece, in support of the Greek Cypriotes favoring union with Greece, attempted unsuccessfully to bring the matter before the United Nations in September, and increasing internal disturbances resulted in the declaration of a state of emergency on November 26. In other matters which came before the United Nations, Britain opposed the inclusion of Algeria on the agenda, and played an important part in the discussions of the Subcommittee of the U.N. Disarmament Commission, which met in New York on August 29-October 7, following the recommendation of the Geneva Conference. In these discussions, Anthony Nutting, minister of state for foreign affairs, elaborated on Sir Anthony Eden's Geneva proposal of a pilot scheme of inspection of the forces confronting one another in Europe, and supported the United States position on the Russian proposals.

In general, relations with the United States remained good. The main difference of opinion arose over the question of defense of Chinese offshore islands early in the year. The British position, as outlined by Sir Anthony Eden on January 26, did not seem to go as far as that of the United States, a distinction being drawn between Formosa and the coastal islands. This resulted in apprehension in some quarters in Britain that the United States policy was more likely to lead to hostilities. On all major world questions, both inside and outside the United Nations, there was, however, a similarity of outlook and approach between the two governments.

GREECE. A kingdom in the Balkan Peninsula, Greece is 51,182 square miles in area, and is bounded on the north by Albania, Yugoslavia, and Bulgaria; on the east by Turkey, from which it is separated by the Maritsa (Evros) River; and on the southeast, south, and west, respec-

tively, by the Aegean, Mediterranean, and Ionian seas.

Population and Language.—The population of Greece at the end of 1955 was estimated as somewhat in excess of 8,000,000 (official estimate for 1953, 7,821,295). Athens, the capital, is the largest city, with a population of 565,084 (1951 census), while Greater Athens, including its seaport, Piraeus (186,014), and the suburbs, had 1,378,586 inhabitants. Other important cities (1951 populations) are Salonika (Thessalonikē), 217,049; Patras (Pátrai), 79,014; Nikia, 72,176; Volos, 54,919; and Herakleion, 51,144. In general terms 63.2% of the total population is rural and 36.8% is urban. With about 156 inhabitants per square mile, Greece is one of the most thickly populated countries of Europe.

Greek is the language of 94% of the population. Other languages include Turkish, Macedonian, Slavic, Vlach, Albanian, Armenian, and Pomak Bulgarian.

Government and Politics.—Greece is a constitutional monarchy under King Paul I, who ascended the throne on April 1, 1947, upon the death of his brother George II. The constitution now in operation is that of 1911 as amended in 1951. The representatives of the people, elected for 4-year terms, constitute the unicameral Chamber of Deputies. Women have had the right to vote in parliamentary elections and to stand for election to parliament since May 29, 1952.

The Greek Rally, founded by Marshal Alexander Papagos in 1951 with the support of politicians of the right and center, is the party in power, having won the elections of Nov. 16, 1952. The opposition consists of three major parties: the middle-of-the-road Liberal Democratic Union; the moderately socialist Union of Democratic Leftists; and the newly established Progressive Party, headed by Spyros Markezinis, who resigned from the Papagos government in April 1954. General elections are scheduled for March 1956.

Religion.—Although all religions are tolerated, the constitution recognizes as the state religion the Eastern Orthodox form of Christianity, which is the faith of approximately 96% of the people. The Church of Greece is independent under a Holy Synod headed by the archbishop of Athens. The synod represents the dioceses of the Old Kingdom of Greece (prior to 1912) and the new provinces (Epirus, Macedonia, and Thrace), annexed by Greece as a result of the Balkan Wars (1912-13) and World War I. The patriarchate of Constantinople exercises a "spiritual" jurisdiction over the churches of the new provinces. The Church of Crete is autonomous under the patriarchate, and the Dodecanese Islands and Mt. Athos are directly under the authority of the patriarch of Constantinople and his synod.

Education.—Education is compulsory at the elementary level. In October 1954 there were about 938,000 elementary school pupils and 18,792 teachers. Secondary schools, for the most part classical gymnasia, exist in the chief towns. In 1954 they were attended by about 192,000 students and were served by 4,775 teachers. At the higher level there are two universities (Athens and Salonika) and half a dozen schools of university status, such as the National Polytechnic Institute, the College of Agriculture, and the Graduate School of Commercial and Economic Studies at Athens. There are three American colleges—Anatolia College in Salonika, Athens College, and Pierce College in Athens.

Finance.—The rate of exchange since the devaluation of the drachma in April 1953 has been 30 drachmas to the U.S. dollar and 84 drachmas to the British pound. Exchange receipts during 1954 were \$42 million (or 15%) greater than those of 1953 and about \$95 million (50%) above those of 1952. At the same time, however, imports exceeded those of the preceding year by \$94 million (37%), and they absorbed the exchange earnings, leaving a deficit of \$59.5 million.

Of the \$54 million in United States aid for 1954-55, \$6 million remained to be carried over to the 1955-56 allocation; a serious reduction in monetary reserves was thus avoided. Originally limited to \$15 million, American aid has been increased by an additional \$19.2 million for the reconstruction of towns destroyed by earthquakes. In all, American assistance amounts to \$41.7 million for 1955-56.

The preliminary budget for 1955-56 provides for revenues of 10,300 million drachmas and an expenditure of 11,500 million drachmas, thus leaving a deficit of 1,200 million drachmas (\$40 million).

General Economic Conditions.—By 1955, Greece had not yet recovered from the effects of the German occupation. One of the principal obstacles to total recovery is the fact that the government's military expenditures are disproportionate to the country's revenue. Although the national income has risen above the prewar level (\$47,128,000 in 1954), wages and purchasing power of the workers are considerably below

³ Great Britain, Iran, Iraq, Pakistan, and Turkey. Britain signed the pact on April 4, 1955.

those of 1938. Out of a potential working force of approximately 3,997,000 there are 166,000 unemployed, exclusive of the underemployed and the periodically employed.

The rise in currency circulation during 1954 amounted to 475 million drachmas. Wholesale prices increased 6%; the cost of living, 7 or 8%; and retail prices, approximately 3%. To avoid inflation the government has imposed restrictions on credit. The shortage of capital has been a perennial drawback to economic activity.

Agriculture.—Although only one tenth of its area consists of arable land, Greece is primarily a food-importing agricultural country. The total area under cultivation in 1953 was 3,598,000 hectares. With the help of American experts and the extension service of the Ministry of Agriculture, farming methods have shown improvement in most of the 400 rural sections into which the country was divided in 1952.

In 1953 the production of foodstuffs (in metric tons) was as follows: wheat, 1,400,000; barley, 258,000; oats, 167,000; rye, 67,000; maize (corn), 309,000; rice, 66,000; potatoes, 445,000; fresh vegetables, 891,000; legumes, 101,000; olives, 56,000; olive oil, 175,000; and citrus fruits, 179,000. There has been a 22% increase in the quantity of foodstuffs, as compared with prewar figures, but production has failed to keep up with increasing domestic needs.

On the other hand, agricultural production as a whole, including such export items as tobacco and dried fruits, is 50% greater than in the prewar years. The production of cotton (160,000 bales of 500 pounds each in 1954) is 100% higher. The yield of tobacco in 1953 was 61,000 metric ton; currants, 77,000; sultanas, 46,000; and dried figs, 30,000.

Livestock is approaching or exceeding the prewar figure. There are about 904,000 cattle, 603,000 pigs, 8,254,000 sheep, 4,510,000 goats, 315,000 horses, 200,000 mules, and 500,000 donkeys.

Forestry and Fishing.—About 15% of the entire area of Greece is wooded, even after the destruction of 5 million acres of forests during World War II. A reforestation program is under way. The annual income from forest products, is estimated at \$12 million. There are more than 70 million olive trees in the country.

The extent of the fishing industry is unprecedented, although it meets only 71% of the country's needs. The annual yield of seafood exceeds 50,000 metric tons (60,000 in 1954), and represents a value of approximately \$20 million.

Manufacturing and Mining.—In 1955, Greek industry was producing at a rate of 65% above the prewar level. It provides 18.9% of the national income and employs approximately 150,000 persons. Principal products are textiles, chemicals and fertilizers, processed foods, soap, paper, cement, farm equipment, cigarettes, and electrical appliances. The Ladoa River hydroelectric plant, the last of four built under the Marshall Plan program, was inaugurated in May 1955; it will supply Greece with an additional 35 million kw.-hr. of electricity annually. The total power supply in 1955 was 1 billion kw.-hr. per year, as compared with 272 million in 1938. Plans were announced in 1955 for the construction of an 84,000-kw. hydroelectric plant on the Megdova River in Thessaly and an oil refinery near Athens with a capacity of 1.3 million tons.

Most of Greece's minerals are exported unprocessed. The 1953 yields included iron, 88,333 metric tons; iron pyrites, 237,323; lead,

WIDE WORLD

Greece's King Paul (l.) and Yugoslavia's President Tito, shown during the king's visit to Yugoslavia in September.

6,487; zinc, 11,198; antimony, 5,003; chrome, 36,759; bauxite, 328,241; barite, 26,903; manganese, 17,000; and emery, 10,000. A new plant, which went into operation in November 1955, will process nickel and produce 60,000 tons of pig iron annually. The lignite reserves of Ptolemais will yield 1,800,000 tons annually beginning in 1959.

Foreign Trade.—In 1954, Greek exports were valued at 4,556 million drachmas, as compared with 3,397 million in 1953; imports were valued at 9,901 million drachmas, as compared with 7,156 million in 1953. Tobacco constituted 40% of the total exports; raisins, 18%. The principal markets for Greek products were Germany (24%), the United Kingdom (13%), and Italy (13%); the principal suppliers of Greece were Germany (16%), Italy (16%), and the United States and Canada (14%).

Transportation and Communication.—Greece's railway network, destroyed by the Germans during World War II, has been restored. In 1951 there were 13,714 miles of roads, serving 4,796 buses, 18,600 trucks, and 10,143 passenger cars. A domestic air transport company provides service between Athens and the larger cities of Greece, Rhodes, and Crete. Thirty foreign lines connect Athens with the principal cities of the world.

In March 1955 there were 488 ships in the Greek merchant marine, with a gross tonnage of 1,370,000. Greek citizens in Greece and abroad own 1,257 vessels with a gross tonnage of 9,303,321.

Principal Events, 1955. Foreign Relations.—In their first meeting (Feb. 28–March 2) since the conclusion of a mutual assistance treaty on Aug. 9, 1954, the foreign ministers of Greece, Turkey, and Yugoslavia announced from Ankara that their respective countries would continue to build up their military strength, but would employ all appropriate political methods to help promote international peace. Relations between Greece and Turkey, however, took a sudden turn for the worse as a result of mob violence perpetrated against the Greek inhabitants of Istanbul and Izmir (Smyrna) on September 6. The pretext for the riots was tension over the Cyprus question (see CYPRUS). It was estimated that the loss of property in Istanbul exceeded \$300 million. A large number of Greek Orthodox churches

were desecrated or destroyed. On September 7, the Turkish government imposed martial law on Istanbul, Izmir, and Ankara, and issued a statement expressing deep regret for the damage inflicted on Greek property and promising compensation commensurate to the losses.

Relations with the United Kingdom reached a very low ebb as a result of British refusal to recognize the principle of self-determination in the case of Cyprus. Great Britain was severely criticized by the Greek press for involving Turkey in the Cyprus question and thus provoking the anti-Greek riots of September 6.

Domestic Affairs.—Field Marshal Alexander Papagos (q.v.), prime minister since November 1952, died on Oct. 4, 1955. He was succeeded by Constantine Karamanlis, a political moderate and anti-Communist, who was minister of public works in the Papagos cabinet. With few exceptions, the new government consists of "new men" of the Greek Rally. On October 12 the Karamanlis government won an overwhelming vote of confidence in its first test.

On April 19–21 the city of Volos was hit by a major disaster in the form of an earthquake. Eight persons were killed, over 100 were injured, and 40,000 were left homeless in Volos and 20,000 in the surrounding area. To meet this and other disaster emergencies the government announced an increase of taxes up to 600 million drachmas.

University of Texas.*

GREENLAND. A department of Denmark in the North Atlantic. Area, about 840,000 square miles (132,000 ice free); pop. (Dec. 31, 1952), 24,768, including 23,360 native Eskimos and persons of Eskimo-Scandinavian descent. Godthaab (1,021) is the capital. Formerly a colony, Greenland became a department of Denmark on June 5, 1953, Greenlanders obtaining equal political rights with other Danish subjects. Greenland elects two representatives to the Danish Parliament. The Greenland Council has 13 members elected for four years. The budget for the fiscal year ended Sept. 30, 1953, was: revenue, 3,140,880 kroner; expenditure, 3,077,000. In 1952, pupils in elementary schools totaled 4,258. In 1951 the United States and Denmark signed a 20-year pact for the joint defense of Greenland, and a United States airbase was subsequently established at Thule.

Chief occupations are fishing (fish landings in 1953: 25,000 metric tons), processing of fish

products, sheep raising, hunting and trapping, and mining. Greenland is the world's chief source of cryolite, an aluminiferous ore. Exports in 1953 totaled 40,289,000 kroner; imports, 57,891,000. Trade is mostly with Denmark. Greenland had 1,500 radio receivers in 1952. (See also ARCTIC EXPLORATION.)

GRENADA. See WINDWARD ISLANDS.

GRIFFITH, Clark (Calvin), American baseball executive: b. Clear Creek, Vernon County, Mo., Nov. 20, 1869; d. Washington, D.C., Oct. 27, 1955. A major league pitcher with a lifetime record of 233 wins and 147 losses (13 full seasons), one of the founders of the American League, and owner of the Washington Senators, he had been elected to Baseball's Hall of Fame in Cooperstown, N.Y., in 1946.

Clark Griffith entered organized baseball in 1888 as a pitcher with the Bloomington (Ill.) team of the old Inter-State League. In 1893, following a number of years in the minor leagues, he joined Adrian "Cap" Anson's famous Chicago Colts (National League), with which he made his reputation as a pitcher and earned his nickname, "Old Fox," winning 148 games and losing 96 in eight seasons.

In 1900 Griffith, with Byron "Ban" Johnson, president of the Western League, and Charles Comiskey, manager of the St. Paul team, planned the establishment of an American League to challenge the National League's monopoly in the Eastern cities. Financial backing was obtained, and in 1901 the American League, with players lured from the senior circuit, became a reality. In the 1901 season, Griffith led Comiskey's Chicago White Sox to the first American League pennant.

In 1903, when the junior circuit transferred the Baltimore franchise to New York, a National League stronghold, Griffith became manager of the new team called the Highlanders (later the Yankees). Despite an unfriendly press, he fielded strong teams, and in a few years the American League was firmly established there. Griffith's pitching career ended in 1907, and in 1908, after a disagreement with the Highlanders' owners, he reluctantly returned to the National League as manager of the Cincinnati Reds.

He rejoined the American League at the close of the 1911 season, when he bought a 10% interest in the Washington Senators, a team which in the 11 preceding years had not finished above sixth place. As the largest single stockholder, he took over the club's managership, and in his first season (1912) led it to a second-place finish. In that year he also helped further establish baseball as the national pastime by persuading President William Howard Taft to throw out the first ball in Washington's opening game. In 1919 he gained controlling interest in the Senators with William Richardson. Named the club's president, a post he held until his death, he relinquished his managership of the team at the close of the 1920 season to take full charge of its policy matters. In his nine years as manager, the Senators had failed to win a pennant, but finished in the first division five times. Subsequently, under his shrewd direction the Senators won the American League pennant in 1924 (defeating the New York Giants in the World Series), in 1925, and again in 1933.

GRONCHI, Giovanni, president of Italy: b. Pontedera, near Pisa, Italy, Sept. 10, 1887. A member of the left wing of the Christian Democratic

Party, he was elected third president of the Italian Republic for a seven-year term by the National Assembly on April 29, 1955. Gaining office by 658 of a total of 833 possible votes, he succeeded Luigi Einaudi, who was a candidate for re-election.

While a student at the University of Pisa, Gronchi became interested in politics and was active in the initial stages of the Roman Catholic workers' movement. After serving with distinction in World War I, he became a teacher of Italian in a technical school, but continued his political activities. In 1919 he helped found the Popular Party, the forerunner of the present Christian Democratic Party, and was elected to Parliament. In the same year he was also appointed head of the Confederation of Christian Workers. In 1922 he served briefly as under-secretary of industry and commerce in Mussolini's first government before going over to the opposition in 1923. He was forced out of active politics by the Fascists for his outspoken criticism of their policies. During World War II he was one of the leaders of the resistance movement in Italy.

With the fall of Mussolini, Gronchi returned to public life as co-founder, with Alcide De Gasperi, of the Christian Democratic Party. He served as minister of industry, commerce, and labor in the first and second cabinets of Ivanoe Bonomi (1944-45) and in the cabinet of Ferruccio Parri (1945), and as minister of commerce in the first cabinet of De Gasperi (1945-46). After the referendum of June 2, 1946, which called for the establishment of an Italian republic, he was elected to the Constituent Assembly. On May 8, 1948, he was elected speaker of the Chamber of Deputies, a post he held until his election to the presidency of Italy. He was sworn into office on May 11, 1955. (See also ITALY.)

GROUP INSURANCE. The growth of employee protection under group insurance and annuity plans established new records in 1954, with more individuals covered for larger amounts of insurance, and more insurance companies offering their services in this branch of the insurance business, resulting in a substantially higher total premium income.

Premiums.—A new high of \$3,299,000,000 in total premiums and considerations for all forms of group insurance and group annuities was recorded by the 427 life, accident and health, and

casualty insurance companies in the group field in 1954. This represented a 9% increase for the year in total premium income and a 9% increase in the number of group-writing companies. Premiums in both the group life and the accident and health lines increased about 11.5%; in the annuity branch they rose about 2.5%.

Group Life Insurance.—The largest amount of new group life insurance ever purchased in a year was recorded for 1954: \$14,279,000,000, covering 6 million individuals. This represented a volume increase of more than 100% over the previous year's production. Included in these figures was the largest group ever written—1,685,000 United States Government employees for \$6,738,000,000 of insurance.

The volume of group life insurance in force reached the record figure of \$94,312,000,000 covering 45 million individuals. The largest part of this insurance—\$86.4 billion—covered individuals under employer-employee contracts for an average amount of \$3,000 each. (See also LIFE INSURANCE.)

Group Accident and Health Insurances.—The volume of weekly indemnity in effect for loss of income through sickness or accident increased about 5%, although the number of contracts and individuals covered declined 2% and 1.5%, respectively. Group accidental death and dismemberment insurance increased substantially both in the volume of new business and in business in force.

Increases were registered in hospital, surgical and medical expense benefits in force. The total daily benefit payable under hospital expense insurance increased 9% for both employees and dependents, while maximum surgical benefit increased 5.5% for employees and 15% for dependents. The number of employees and dependents insured under group medical expense contracts increased 10% and 18.6%, respectively. The greatest percentage advance in the number of persons covered occurred in group major medical expense insurance, a more recent group offering.

Protection under the blanket Blue Cross-Blue Shield and independent plans also increased in 1954. According to the Health Insurance Council, 52,680,000 individuals were covered by these plans for hospital expense, 39,700,000 for surgical expense, and 29,576,000 for medical expense. The Health Insurance Council reported a net total in group plans or individual contracts of

For dependents.....	1,120	1,093,000	...	9,600,000
Group accidental death and dismemberment insurance.....	56,950	13,972,000	35,023,000,000 ⁷	33,500,000

¹ Not including group creditors or wholesale life insurance. ² Units. ³ Annual income. ⁴ Weekly indemnity. ⁵ Daily benefit. ⁶ Maximum benefit. ⁷ Principal sum. (Source: Life Insurance Association of America, using group annuity data supplied by the Institute of Life Insurance.)

101,493,000 persons with hospital expense, 85,890,000 with surgical, and 47,248,000 with regular medical expense protection.

Group Annuities.—The number of individuals covered under group annuity plans increased modestly, as did the amount of annual income payable at retirement, which passed the billion dollar mark. This, however, is only part of the story of old-age protection for employees. In addition to the benefits provided by the Federal Social Security Act (see also **SOCIAL SECURITY**), the Institute of Life Insurance estimated that, as of Dec. 31, 1954, there were 11,550 individual policy pension trusts in force covering 455,000 persons and 1,560 other pension plans covering 275,000 persons, in addition to group annuities, making a total of 17,280 insured plans covering 3,915,000 persons and providing an aggregate annual income of \$1,625,000,000. There were also a large number of uninsured trusted plans in effect for employee retirement.

Legislative Expansion.—The removal of the legal minimum requirement of 25 lives in a number of states and the passage of legislation in 1954 and 1955 permitting the writing of group coverage on 10 lives have opened up a new field for insurance service to employees. An ever-growing number of insurance companies are offering package plans of life insurance, accidental death and dismemberment, weekly indemnity plans for employees, and hospital, surgical and medical expense insurance for employees and dependents.

Major legislation was the adoption of the National Insurance Commissioners' Model Group Life Insurance bill, which increased the statutory maximum from \$20,000 to \$40,000 for higher salaried personnel where the amount of coverage is based on annual salary.

WILLIAM J. GRAHAM,
Consulting Actuary.

GADELOUPE. An overseas department of France, in the Lesser Antilles islands of the Caribbean Sea. Area, 687 square miles; pop. (1954 census), 229,120, the great majority of whom are colored. The department consists of two large islands—Basse-Terre (Guadeloupe proper) and Grande Terre (combined area, 583 miles; pop., 203,454)—and six outlying small islands (Désirade, Les Saintes, Marie Galante, Petite Terre, St. Barthélemy, and the French part of St. Martin). The city of Basse-Terre (12,837) is the capital; and Pointe-à-Pitre (26,160), on Grande Terre, is the chief port. The prefect is aided by an elected general council of 36 members. Elementary schools in 1950 numbered 128 (35,156 pupils); secondary and technical schools, 7 (2,616).

Sugar is the mainstay of the economy. The sugar crop for 1954 (prelim.) totaled 128,000 short tons (114,000 in 1953). Other cash crops are bananas, coffee, cacao, vanilla, and pineapples. Subsistence crops include sweet potatoes, manioc, corn, and other vegetables. Chief industries are sugar refining, rum distilling, and molasses production. Exports in 1954 totaled 11,709 million francs; imports, 12,677 million. Chief exports were: sugar, 102,666 metric tons (5,407 million francs); bananas, 76,914 (4,810 million); and rum, 8,691 (940 million). Railways serve the sugar plantations; there are no public carriers. Roads total 775 miles. Four international lines provide air services. Passenger cars numbered 4,300 in 1955; telephones, 1,513.

GUAM. Largest and most populous of the

western Pacific islands known as the Marianas. Guam is an unincorporated territory of the United States. It lies about 5,000 miles southwest of San Francisco, is 30 miles in length, varies from 4 to 8½ miles in width, and has a land area of about 203 square miles.

Population.—According to the 1950 federal census the population was 59,498, including (July 1, 1951) 28,170 Guamanians. Half the population comprises American military and civilian personnel and their families. Guamanians are a mixture of ancient Chamorro stock with outside strains and are predominantly Roman Catholic in religion. Although English is the official tongue, the Chamorro language is widely used.

Populations of principal municipalities (1950 census, with numbers of permanent residents as of July 1, 1950, given in parentheses) are: Agaña, the capital, 800 (496); Agat, 4,682 (2,025); Asan, 3,090 (1,179); Barrigada, 11,534 (4,352); Dededo, 6,441 (1,404); Sinajana, 9,169 (4,064); and Yigo, 9,002 (886). Sumay had a 1950 population of 6,718.

Government.—Guam is administered under the Organic Act of Guam of Aug. 1, 1950, which provides statutory local powers of self-government and places Guam's relations with the United States under the general supervision of the secretary of the interior. The act also made Guamanians citizens of the United States without conferring the right to vote in national elections or of having representation in the U.S. Congress.

The local government comprises executive, legislative, and judicial branches, with the executive headed by a civilian governor appointed by the president of the United States, with the approval of the Senate.

A 21-member unicameral legislature, biennially elected at large, is empowered to pass laws on local matters. Among major enactments of the 1955 session were those which continued and implemented the territorial reconstruction and capital improvements program and extended the jury system in civil and criminal cases.

The District Court of Guam has jurisdiction in all cases arising under the laws of Guam. Its decisions are reviewable by higher United States courts. The Island Court and the Police Court and a newly established juvenile court have jurisdiction in certain cases arising under the laws of Guam.

Chief territorial officers in 1955 included Ford Q. Elvidge, governor (inaugurated April 23, 1953); R. S. Herman, secretary; Paul D. Shriver, judge of the District Court of Guam; and F. B. Leon-Guerrero, speaker of the Guam legislature.

Finances.—The operating budget for Guam in the 1955-56 fiscal year called for expenditures of \$7,105,370, to be met through local taxes and revenue, derived largely from individual income, specific sales, and business gross receipts taxes. Banking facilities are provided by the island's Bank of America, which moved into its new modern concrete building on March 8, 1954: The Guam Savings and Loan Association began operations on July 7, 1954.

Education and Social Welfare.—School attendance is compulsory for all between the ages of 6 and 16, inclusive, and budgeted school expenditures for 1955-56 were \$2,065,195. The 1955 enrollment for the island's 21 elementary schools and its single high school reached 10,775. In addition, over 1,100 pupils attended parochial schools offering primary and secondary education. The only public institution of higher learning is the Territorial College of Guam, situated at Agaña, and having a 1955 enrollment of 238. The government also maintains a vocational school. In 1955 over 150 Guamanians attended colleges and universities in the United States.

Economy.—Relatively poor in natural resources, the island is nevertheless one of the important military bases of the United States in the Pacific, thereby providing an important service economy for local residents.

Agriculture is the principal other factor in the economy. A 1955 census showed 1,300 persons engaged in active farming, with a harvest of over 3.3 million pounds. Major crops include bananas, truck crops, cassava, papaya, coconuts, mangoes, citrus fruits, and taro. The livestock census of 1954 reported 171,840 chickens, 11,895 swine, and 6,136 cattle on the island.

Nonfarming activities are largely limited to fisheries and quarry production. In the period of

July 1953 to July 1954, fisheries yielded an estimated 405,164 pounds and engaged 312 persons. The production of concrete in the same period was 14,707 cubic yards; crushed stone output in 1953 was 2,080,650 short tons. There are also several bottling, construction, and marketing companies with plants or headquarters on Guam, and there is some handicraft manufacture. The government's Department of Commerce seeks to encourage new industries and to induce American firms to locate their central Far Eastern offices on the island. A provision in the general tax laws exempts production or manufacturing industries from the 2% gross receipts tax. During 1955 a strong program of utility expansion went forward.

Foreign Trade.—The commercial port of Guam at Apra Harbor has experienced a steady increase in trade. The physical plant comprises 27 acres, 8,400 square feet of warehouse space, and 1,500 lineal feet of deep-water docking frontage. During the 1953-54 fiscal year, commercial imports and exports totaled 154,264 revenue tons valued at \$26,199,158. Principal imports, mainly from the United States, are foods, building materials, hardware, tobacco, liquors, and textiles.

Transportation and Communications.—Guam is a port of call for the Pacific Far East Lines, with an average of four arrivals a month, and for the American President Lines, with one arrival a month. Guam is also the home port of the Pacific Micronesian Lines. The island is a regular stop for Pan American World Airways and Transocean Air Lines. Guam's first commercial broadcasting station, KUAM, began operations on March 14, 1954. The U.S. Navy maintains the local telephone service, and the government of Guam administers the service for the civilian community. The Radio Corporation of America provides external commercial radio and telephone service.

There are about 100 miles of paved roads and more than 60 miles of improved secondary roads. English-language newspapers, with a combined circulation of 30,000 in 1954, include the *Guam Daily News* and two Sunday papers. There were 15 motion picture houses with a total attendance of 300,000 in the 1953-54 fiscal year.

JOHN P. BARTON,
Special Assistant to the Governor.

GUATEMALA. Most northerly and largest (42,042 square miles) of the Central American republics, Guatemala is divided into four main geographic regions—the tropic lowlands along both the Pacific and the Caribbean coasts, the low tableland in the north (Petén), and the central highlands, where most of the 3,201,000 (est., Dec. 31, 1954) Guatemalans live. Spanish is the official language of the republic, but many of the Indians still use their own languages. Cities of over 10,000 population (1950 census) are Guatemala City, the capital (293,998), Quezaltenango (36,209), Cobán (29,242), Zacapa (27,696), Puerto Barrios (15,332), Mazatenango (11,032), and Antigua (10,744).

Government.—By the plebiscite of Oct. 10, 1954, Col. Carlos Castillo Armas was continued in office as president for a term which the Constituent Assembly, elected on the same date, extended to March 15, 1960. Until the new constitution, which the assembly is drawing up to replace that of 1945, has been approved, the president rules under a political statute issued on Aug. 11, 1954. He has appointed judges to serve on the nation's courts. Under an election law approved by the Constituent Assembly on Nov. 22, 1955, congressional and municipal elections were set for December 18. On November 19, by executive decree, President Castillo legalized the formation of political parties which could give signatory proof of a minimum of 5,000 members. Since all candidates for the 66 seats in Congress had

promised their support to Castillo, it is not surprising that he was able to announce the victory of his National Democratic Movement in the December elections. Some 2,000 municipal councilors and 322 mayors were also elected.

Religion and Education.—Roman Catholicism is the prevailing religion in Guatemala, but, with freedom of worship, many of the Indians still cling to their ancient beliefs.

As of 1953 there were 3,537 primary schools (with 7,809 teachers and 191,330 pupils) to contend with an illiteracy rate estimated at 72.2% in 1950. Opportunities for higher education are provided in 125 "postprimary" schools (2,234 teachers and 17,251 pupils) or in the University of San Carlos of Guatemala, where 4,005 students were enrolled in 1954.

Economic Conditions.—The \$45 million debt left by the administration of ex-President Jacobo Arbenz Guzmán, in addition to some \$11 million "borrowed" by its officials from government banks and the withdrawal of \$50 million of private capital which took refuge abroad, left the new government of President Castillo with an economic problem made still more serious by the effects of social unrest and civil war. Guatemala met this situation by confiscations of property of the absconding officials, by regular and new emergency taxes, and through a gradual return to a more normal economic life. Favored by a good banana harvest and high coffee prices, the government closed the fiscal year on June 30, 1955, with a surplus of 2 million quetzales (1 quetzal = U.S. \$1), and it had paid off 2 million quetzales of the national bonded debt. Gold and foreign exchange totaled \$56,442,500. The 1955-56 budget was fixed at 66,385,825 quetzales.

Aid from the United States had come from private capital when businessmen, their confidence in the Guatemalan government renewed, came in search of investment opportunities. The United States government allocated \$10 million for aid in the fiscal year 1954-55 and \$16.5 million in 1955-56.

There was a large favorable trade balance in 1954, with exports totaling \$95,660,365 and imports, \$86,310,997. The United States supplied \$55,663,838 of the imports and received \$67,753,573 of the exports.

Agriculture.—As in the old Mayan days, corn is Guatemala's basic food. There are no accurate production figures—the 1954-55 crop was estimated at 10 million quintals (1 quintal = 101.43 pounds)—but the reality of a tragic food shortage in early 1955 was evident. The International Cooperation Administration sent 30,000 tons of corn from United States surplus stocks to help until new crops could be harvested in August. With village mayors in charge of distribution, the grain was sold by the government at around the usual, and far below the current, price. The program not only relieved widespread hunger, but brought in about \$1,500,000 for use in easing unemployment or in settling more farmers on the land.

Guatemala's two chief agricultural export crops are coffee and bananas. Estimated 1954-55 coffee production was 1,175,000 bags (of 132 pounds each), of which 975,000 were for export. Although bananas did well (6,102,788 stems were exported in 1954), the solution of the government's dispute with the United Fruit Company, the producing firm, was of greater importance for Guatemalan economy. By the terms of a revised contract signed on Dec. 27, 1954, the company withdrew its \$15 million claim for payment for the land expropriated by the Arbenz regime, agreed to pay a 30% tax on net profits, and turned over to Guatemala 109,500 acres of land in return for 245,640 acres restored to it by

the government. The government thus gained added income and yet kept some of the land for distribution as small farms. It is needed for raising subsistence crops, since the tilled acreage has been estimated at less than one acre per person, and too large a proportion has been used for cash export crops.

In a speech on July 3, 1955, commemorating his first year in power, President Castillo said that up to May 6, 61,370 acres had been distributed to 10,359 farmers by his government, and that \$1,666,980 was budgeted to cover expenses of distributing more land. The farms are sold at nominal prices (for as little as \$50), and the Agrarian Bank grants loans of \$200 to \$300 to help the new owners until harvest time.

Industry.—Of 243,000 salaried workers in Guatemala, only 28,000 were employed in industry in early 1955. To encourage new industrial activity, the country has fixed a sliding scale of tax exemptions over an 8-year period, lifted duty on imports of equipment, and signed an investment guarantee agreement with the United States. Thus far actual results have been small, but they are significant in the Guatemalan economy, and the changed complexion of the government, as indicated by the agreement made with the United Fruit Company, is encouraging foreign investment. Since President Castillo came into power in 1954, 15 new industries either have begun operation or have definite plans for the near future. As of June 1955, the industrial production index was 114 (1948 = 100).

Labor.—Only 26 of the estimated 300 unions which existed under Arbenz had been permitted to reorganize by mid-1955, but this figure included all of the major unions of the country. Labor union representatives have reached an amicable agreement with the United Fruit Company, increasing the base wage from \$1.36 to \$1.80 a day, a wage which compares favorably with the average farm worker wage (60 to 80 cents) paid in Guatemala.

Under a program to provide low-cost housing for low-salaried workers, a group of 200 postmen received homes on July 3, 1955. Their houses cost more than \$4,000 each (although the government assumed any cost over that figure), and they were sold with 20-year mortgages.

Mineral Products.—Although oil is produced across the northern border in Mexico, and geological work hints that rich deposits may be present in Guatemala as well, the country now pays some \$9 million yearly for imported oil products. Early in 1955 several United States firms received permits for exploration under a preliminary decree, but the new petroleum law signed by the president in July requires each company to drill at least one well every six months on each concession and seems to involve prohibitive expense. Under this law, which became effective on November 9, foreign investment is favored,

however, by release from all import duties on oil machinery and all export duties on oil and its derivatives.

Transportation and Communications.—As of 1954, Guatemala had 16,704 motor vehicles. In an ambitious program to add to its 2,316 miles of paved and 3,227 miles of unpaved roads (1952), the country has under construction a 190-mile Atlantic highway to connect the capital with Puerto Barrios and with the fine new nearby port of Santo Tomás, which was inaugurated on Sept. 13, 1955, as well as the Pacific and Inter-American highways, extending from the Mexican to the Salvadoran border. Also planned is a northern highway to the Petén region of hardwood forests and, possibly, petroleum. Guatemala allocated \$14.3 million to its road program for the fiscal year 1954-55, and an \$18.2 million loan was obtained from the International Bank for Reconstruction and Development on July 29, 1955, in addition to Inter-American Highway aid of \$12 million from the United States.

Guatemala has 725 miles of railway. There are (1954) 6,428 telephones. In 1955 the country opened its first television station.

Principal Events, 1955.—A quickly suppressed January 20 attack on the Aurora military base outside Guatemala City was attributed to Communists, former Arbenz supporters, and disgruntled military men. A state of siege was imposed until February 17, and 417 persons were arrested. Meanwhile, the failure of the extradition proceedings which had been begun in Mexico against leading Arbenz regime refugees was reportedly followed by their preparation of a Free Guatemala movement there.

Happier events of the year were Guatemala's formal adherence to the 1947 Inter-American Treaty of Reciprocal Assistance and its ratification of the 1948 Charter of the Organization of American States. The meeting at Antigua on August 18-24 of the Organization of Central American States was further evidence of Guatemala's return to inter-American cooperation. On June 18, a military assistance agreement was signed with the United States, and at the end of October, President Castillo made an official visit to Washington. Addressing the U.N. General Assembly on November 3, he urged all nations to adopt a policy of peaceful coexistence without "the renunciation of principles, or appeasement, or the acceptance of injustice."

GYPSUM. See MINERAL PRODUCTION.

HAITI. A republic occupying the western third of the Caribbean island of Haiti (Hispaniola). Area, 10,714 square miles; pop. (est. mid-1953), 3,227,000. Chief cities and populations (1950 census): Port-au-Prince, the capital, 134,117; Cap-Haïtien, 24,423; and Gonaïves, 13,634. The people are Negroes. French, the official language, is spoken by a small educated minority, chiefly in the capital. Creole French is the popular tongue. The majority of Haitians are peasants who eke out a subsistence on tiny farm plots. Annual per capita income is less than \$70.

Government.—Col. Paul Magloire was elected president on Oct. 8, 1950, in the country's first direct presidential election. The president's term is 6 years and he may not succeed himself. The National Assembly consists of a Chamber of Deputies of 37 members who hold office for 4 years, and a Senate of 21 members who serve for 6 years. Senators and deputies are elected by the primary assemblies of the departments.

Education and Religion.—Over 85% of the population is illiterate. In 1952, primary schools had 135,023 pupils; secondary schools, 6,067; technical schools, 2,605; teachers training schools, 79; and higher institutions, 632. Higher education is provided by the state-controlled University of Haiti and by schools of law, medicine, agriculture, and technical studies. Many schools are maintained by Catholic teaching orders, and a few are under Protestant direction. Roman Catholicism is the principal religion, although voodoo priests flourish in the rural areas.

Finance.—Receipts in the fiscal year ended Sept. 30, 1954, totaled 161,091,110 gourdes (the Haitian gourde equals U.S.\$0.20); expenditures, 175,029,467. The gross public debt as of March 31, 1955, was 136,039,000 gourdes.

Production.—Subsistence crops grown by the peasants include maize, rice, beans, peas, manioc, yams, mangoes, citrus fruits, and avocados. Chief cash crops and exports in the 1953-54 fiscal year were (in metric tons): coffee, 31,777; sisal, 23,975; cacao, 2,246; and sugar, 15,359. Cotton, castor beans, essential oils, and bananas are among the other cash crops. The hurricane of October 1954 reduced coffee exports in 1954-55 to an estimated 18,000 metric tons.

Manufactures include sugar, molasses, rum, sisal and straw products, shoes, sandals, soap, cement, wood products, and essential oils. An American company has recently begun to work the bauxite deposits at Miragoâne. Haiti's national income approximates \$200 million, of which industry contributes about 25%.

Foreign Trade.—For the fiscal year ended Sept. 30, 1954, exports totaled 277,663,130 gourdes; imports, 237,782,472. Chief exports and values were: coffee, 217.8 million gourdes; sisal, 24.6 million; cacao, 9.8 million; and sugar, 6.1 million. Imports are mainly cotton cloth, foodstuffs, machinery and parts, iron and steel manufactures, motor vehicles, and other manufactures. The United States provided 63.2% of Haiti's 1953-54 imports and purchased 45.3% of exports. Tourists in 1954 numbered about 48,000, spending a record \$3.5 million.

Transportation and Communications.—At the end of 1952, Haiti had about 750 miles of improved earth and gravel roads, and 120 miles of paved or asphalted roads. The country's 2 railroads have an aggregate length of 187 miles. The Haitian Aviation Corps provides internal air services, and several foreign airlines land at Bowen Field in Port-au-Prince. Motor vehicles in 1955 included 4,970 passenger cars and 2,921 trucks; telephones (1955), 4,293. In 1952 there were 6 daily newspapers with a total circulation of about 10,000.

Principal Events, 1955.—President Magloire arrived in Washington on January 26 on a three-day state visit. Addressing a joint session of the

U.S. Congress on January 27, Magloire expressed his thanks for the \$2,740,000 in emergency aid following the hurricane of October 1954, as well as for the \$3,581,000 contributed since 1950 toward the development of agriculture and education in Haiti. Magloire declared that he was seeking to immunize Haiti against communism by raising the living standards of his people. In New York City on January 31, the Haitian president sought to stimulate private capital investment in Haiti. Magloire then proceeded to Ottawa on February 9, on a five-day visit to Canada.

During Magloire's visit to Washington, a bilateral military aid agreement was signed on January 28 by U.S. Secretary of State John Foster Dulles and Haitian Foreign Minister Maclair Zephirin. A treaty of friendship, commerce, and navigation was signed by the two nations on March 3 at Port-au-Prince. The Export-Import Bank of Washington announced on April 18 a \$7 million loan to Haiti for the Artonibon Valley irrigation project; and the International Bank for Reconstruction and Development at the same time reported a \$10 million loan to Haiti for road construction and port improvement.

Painfully recovering from the disastrous 1954 hurricane, Haitians suffered a further blow to their marginal economy in 1955, when a spring drought withered crops. In mid-August, starvation conditions were reported in the Jérémie area, with thousands of peasants dying in the remote districts to which food or medical supplies could not be supplied quickly.

HALL OF FAME. Quinquennial elections to the Hall of Fame for Great Americans, announced by its director, Dr. Ralph W. Sockman, on Oct. 31, 1955, added two inventors, Wilbur Wright and George Westinghouse, and a Confederate hero, Gen. Thomas J. (Stonewall) Jackson, to the 83 persons so honored since 1900. Although 7 names could have been selected from 209 candidates who had been dead at least 25 years, only these three men received a majority of the votes cast by the shrine's College of Electors. Their busts will be placed with those of their predecessors in an open-air colonnade on the campus of New York University, in the Bronx, New York.

HAMPDEN, Walter (real name WALTER HAMPDEN DOUGHERTY), American actor: b. Brooklyn, N.Y., June 30, 1879; d. Los Angeles, Calif., June 11, 1955. Firmly established as the dean of the American stage, he held the interest and imagination of a vast audience in the theater, in motion pictures, in radio, and in television with the excellence and variety of his performances.

Educated at Harvard College and Brooklyn Polytechnic Institute (B.A. 1900), he rounded out his dramatic studies in Paris before crossing the channel for his first role, a walk-on with Sir Frank R. Benson's Company at Brighton, England, on Sept. 2, 1901. His apprenticeship in classical repertory lasted until 1904, when he achieved the distinction of leading man at the Adelphi Theatre in London for three seasons, and for one week, in May 1905, replaced Henry B. Irving as *Hamlet* in his first real theatrical triumph.

He returned to the United States in 1907 to make his Broadway debut as a supporting actor for Alla Nazimova in a number of Ibsen's plays produced at the Bijou Theatre, and in 1908 began a three-year success as Manson in Charles R. Kennedy's *The Servant in the House*. It was not until 1918 that he was able to introduce Shake-

speare to American audiences as regular theatrical fare, first in individual offerings of *Hamlet* and *Macbeth*, and, in the following year, with his own repertory troupe. In the 1923-24 season he revived Rostand's *Cyrano de Bergerac* at the National Theatre in an eight-month run that ended in a triumphant tour of the nation. Leasing the Colonial Theatre in 1925, he renamed it the Hampden, and during the following season appeared with Ethel Barrymore in *Hamlet* and *The Merchant of Venice*, and in subsequent seasons in Goodrich's *Caponsacchi*, Ibsen's *An Enemy of the People*, Bulwer-Lytton's *Richelieu*, Barrie's *The Admirable Crichton*, and his entire repertory of Shakespearean roles.

Hampden essayed the motion picture field in 1939 with *The Hunchback of Notre Dame*, and continued in a series of sustainedly workmanlike performances, notably in *The Adventures of Mark Twain* (1944), *The First Legion* (1950), *All About Eve* (1950), *Sabrina* (1954), and *The Silver Chalice* (1954). At the time of his death he was preparing to appear in *Diana*.

Radio knew him almost from its inception, particularly in a serial called *The Adventures of Leonidas Withersall* and as host on *Great Scenes from Great Plays* (1948). He also led the Players' excursion into television in 1949 with a two-hour presentation of *Macbeth*.

Never quite abandoning the stage, he appeared during 1941-42 in Sheridan's *The Rivals* and toured with Joseph Kesselring's *Arsenic and Old Lace* (1942-43). In 1949 he had a brief run in Herman Wouk's *The Traitor* and, on December 26 of the same year, launched a successful run in Rosemary Casey's *The Velvet Glove*. His last stage appearance was in 1953 in Arthur Miller's *The Crucible*. In the following year he became the first person to step down from the traditionally lifetime presidency of the Players, a post he had held since 1927.

HARRIMAN, (William) Averell, American public official: b. New York, N.Y., Nov. 15, 1891. After an extensive career in finance and government service, Averell Harriman was elected governor of New York on Nov. 2, 1954. Graduating from Yale University in 1913, he entered his family's railroad enterprises and later banking (1920-31). He served as ambassador to the USSR (1943-46) and Great Britain (1946), and as secretary of commerce (1946-48). In President Truman's administration he also acted as roving administrator (1948-50) for the Economic Cooperation Administration, as special assistant on foreign affairs (1950-51), and as director of the Mutual Security Agency (1951-January 1953).

A severe critic of the Republican administration, Harriman scored the administration's policies in 1955 on Formosa, Communist China, civil defense, and other matters. During the International Longshoremen's Association strike (Sept. 7-14, 1955), Governor Harriman, with Gov. Robert B. Meyner of New Jersey, refused to intervene, saying that the strikers should return to work and submit their grievances to the Water-front Commission.

An active candidate for the Democratic presidential nomination in 1952, Harriman was in 1955 again being seriously considered as a prospective contender at the 1956 Democratic con-

vention, although he did not formally announce his intention to campaign for the nomination.

HATOYAMA, Ichiro, premier of Japan: b. Tokyo, Japan, Jan. 1, 1883. A leading prewar political figure and founder of the Liberal Party in 1945, Hatoyama broke with Liberal Premier Shigeru Yoshida in 1953, and in 1954 organized the Democratic Party. Following Yoshida's resignation, Hatoyama was named premier on Dec. 9, 1954, heading a caretaker coalition government pending the holding of national elections.

In the pre-election campaign, Hatoyama stated that he wished to retain close ties with the United States but also favored greater trade with Communist China and negotiations with Soviet Russia on ending the state of war. The elections of Feb. 27, 1955, gave Hatoyama's Democratic Party 185 of the 467 seats in the Japanese House of Representatives. Obtaining the support of the Liberals, who had run second with 112 seats, Hatoyama was re-elected premier by the House of Representatives on March 18, by a vote of 254-160. He resigned on November 21, and was re-elected on November 22. A conservative and a moderate nationalist, Hatoyama in 1955 pressed for a revision of the Japanese Constitution to permit further rearmament. He also defended the extension of United States military bases in Japan as consistent with Japan's self-interest, sought the return of Soviet-held former Japanese territories, and called for repatriation of remaining Japanese war prisoners in Soviet Russia and Communist China. (See also JAPAN.)

HAWAII, Territory of. The Territory of Hawaii, a large archipelago of volcanic origin, lies in the Pacific Ocean, 2,090 miles southwest of San Francisco between 18°55' and 22°15' north latitude and between 154°50' and 160°30' west longitude. Honolulu, on the island of Oahu, is the capital of the territory and is its largest city and principal port, and has a population (July 1, 1955) of 259,580.

Area and Population.—The eight major islands of the territory, with a total area of 6,407 square miles and a civilian population (July 1, 1955) of 500,976, are as follows:

Island	Land area (sq. mi.)	Population (July 1, 1955)
Hawaii.....	4,021	63,366
Maui.....	728	38,263
Oahu.....	589	362,196
Kauai.....	551	29,437
Molokai.....	259	5,051
Lanai.....	141	2,450
Niihau.....	72	213
Kahoolawe.....	45	0

The population is of diverse racial extraction and is characterized by a high ratio (currently about one third) of intermarriages between the various ethnic stocks. Persons of Japanese and Caucasian origin constitute the two largest groups; others include full-blooded Hawaiians (less than 3% of the population), part Hawaiians, Chinese, Filipinos, Koreans, Puerto Ricans, and Samoans. Approximately 85% of the entire population are United States citizens.

The exact area of the territory was not established either by the terms of the joint resolution of the U.S. Congress which annexed Hawaii to the United States in 1898, or by the Organic Act of Hawaii (1900), so that there remains some ambiguity as to whether certain outlying islands come officially within the territory. The convention of 1950, which drafted a constitution in anticipation of statehood, avoided the issue by defining the State of Hawaii to "include the islands and territorial waters heretofore constituting the Territory of Hawaii."

In addition to the eight major islands listed above, the area of the territory includes the Leeward Islands (except Midway), a chain of small islands, shoals, and reefs extending some 1,250 miles northwestward from Niihau and forming the Hawaiian Islands Bird Reservation, almost uninhabited (except for a few Coast Guard and other official personnel). The Leeward group includes the following: Kaula, Nihoa, Necker, French Frigate Shoal, Gardner Pinnacles, Maro Reef, Laysan,

Lisianski, Pearl and Hermes Reef, Brook Shoal, Dowsett Reef, Gambia Shoal, Frost Shoal, and Kure (or Ocean) Island. The latter is under U.S. Navy administration.

Palmyra Island (area about 1 square mile), one of the Line Islands some 960 miles south of Honolulu, is also within the territory and, like all distant points of Hawaii, falls within the jurisdiction of the city and county of Honolulu. Actual administration is exercised by the Civil Aeronautics Administration.

Johnston Island, 717 miles southwest of Honolulu, was annexed to Hawaii in 1859; actual operations there are under the U.S. Air Force.

Administration.—Both the governor and the secretary (the latter position corresponding to a state's lieutenant governor) are appointed to four-year terms by the president of the United States, with Senate approval. Judges of the Supreme Court of Hawaii and of the four circuit courts are similarly appointed. The only major units of local government are the three counties of Maui, Kauai, and Hawaii, and the city-county of Honolulu. Most major functions of government are exercised by the territory.

Chief territorial officers in 1955 were:

Governor: Samuel W. King (Republican)

Secretary: Farrant L. Turner

Attorney General: Edward N. Sylva

Treasurer: Kam Tai Lee

Superintendent of Public Instruction: Clayton J. Chamberlin

Chief Justice, Supreme Court: Edward A. Towse

Legislature.—The legislature consists of 15 senators and 30 members of the House of Representatives, who are popularly elected. It convenes in odd-numbered years on the third Wednesday of February for a 60-day session. The 28th territorial legislature convened on Feb. 16, 1955 (see below, *Principal Events*). Hawaii is represented in the federal House of Representatives by a delegate, elected by the entire territory, who has the right to introduce legislation and participate in debate, but who has no vote. The present delegate to Congress is Elizabeth P. Farrington, Republican.

Finances.—Under its Organic Act, Hawaii has a taxing power equal in scope to mainland states. Chief revenue sources are the general excise (a comprehensive turnover) tax; a 2% tax on wages and dividends; gasoline, liquor, and tobacco taxes; a corporate income tax; and a real property tax collected by the territory for the counties. The net assessed valuation of real property was \$676,100,000 for the calendar year 1955.

During the biennium ended June 30, 1955, \$114,-371,537 was received by the territorial general fund, while \$121,136,248 was disbursed. On July 1, 1955, the cumulative general fund deficit was \$8,032,931, and territorial bonded indebtedness was \$47,875,000.

Banking.—Five banks, operating 46 branches, had total deposits of \$386,748,755 on June 30, 1955, and assets totaling \$418,498,095.

Education.—Compulsory education for children between 6 and 16 years of age, inclusive, is administered by the territorial Department of Public Instruction. Expenditures for public instruction during the fiscal year 1954-55 amounted to \$25,070,972 for a program administering to 203 public schools with an enrollment of 119,046 students and employing 4,146 teachers. There were 114 private schools, ranging from kindergarten to the 12th grade, which employed (1953-54) 1,254 teachers for an enrollment of 25,897 pupils. Five junior colleges were in operation in 1955, four on Oahu and one on the island of Maui. The University of Hawaii, a land-grant college, had a student enrollment of 6,491 and a staff of 534 for the academic year 1954-55.

Social Welfare.—During the fiscal year 1954-55, the territorial Department of Public Welfare expended a total of \$7,583,125, including \$918,-783 for administrative costs. The remaining \$6,664,342 was spent on public assistance as follows:

Type of assistance	No. of cases ¹	Expenditure
General assistance	1,836	\$1,260,133
Disabled persons	1,276	735,150
Old-age	1,844	799,198
Dependent children and their parents	3,195 ²	3,420,114
Children under foster care	825	388,102
Blind	111	61,645

¹ Average number assisted monthly. ² 9,629 children involved.

Approximately 49% of these costs were borne by the federal government under national social welfare laws.

Lava spurts skyward from fissure in Kilauea, crater on Hawaii's Mauna Loa, which erupted in 1955.

Industry.—The production of cane sugar and the production and processing of pineapple, both highly mechanized, are the two most important industries in Hawaii. The combined value of these two crops for 1954, approximately \$249 million, constituted about 85% of total agricultural income. In the calendar year 1954, 220,138 acres of sugar cane were cultivated, producing 1,077,347 short tons; 28 plantations (and about 2,000 independent planters) employed 19,833 persons, paying wages amounting to \$62,158,000. For the crop year ending May 1954, pineapple production totaled 29,411,000 cases of canned fruit and juices; the industry employed 12,775 workers and paid wages of \$33,017,000. Coffee production for 1953-54 was estimated at 8,264,-000 pounds. Animal products for this period had a value of \$24,763,000.

A steadily expanding tourist industry brought an estimated 106,000 visitors to Hawaii in 1955, who spent some \$56 million in the territory.

Labor.—The labor force for all industries in 1954 was estimated to be 205,700. Diversified agriculture, forestry, and fishing employed 25,746 persons, paying average annual wages amounting to \$2,925. Manufacturing of food, textiles, chemicals, and miscellaneous commodities gave employment to 20,724 persons, who received average annual wages of \$3,395. Wholesale and retail trade employed 32,145, paying average wages of \$3,038.

The largest single employer in Hawaii, the federal government, had a 1954 payroll of \$231,-403,000, employing 60,963 persons, more than half of whom were in the military service, with about 25,000 civilian employees. Local government agencies employed 17,900 persons; their wages aggregated about \$65,500,000.

Communications.—Honolulu is a regular port of call for steamship lines, with several lines con-

necting the islands with the United States mainland and with Canada, Australia, the Philippines, China, and Japan. During the year ending June 30, 1955, 996 overseas vessels entered (with 2,557,518 tons) and cleared (with 941,569 tons) the port of Honolulu. Freighters and barges provide transport between the islands, but almost all passenger travel is by air, with 3 airlines and 15 airports serving the territory. One nonscheduled and six scheduled airlines connect Hawaii with the United States west coast, Canada, Australia, and the Far East. For the year ending June 30, 1955, airlines carried 255,421 passengers.

In December 1954, 141,326 passenger motor cars were locally registered. Interisland communications, as well as communications with the continental United States, are facilitated by radiotelephone service. Wireless telegraph service is maintained between the six principal Hawaiian islands. The U.S. Federal Communications Commission on Sept. 8, 1955, authorized the American Telephone and Telegraph Company to embark on a \$35 million project of building twin undersea cables connecting Point Reyes, Calif., with Koko Head on Oahu. These projected 2,000-mile telephone-telegraph submarine cables are scheduled for completion in 1957.

Other communications facilities in 1955 included 131,752 telephones; 13 radio stations, of which 8 are on Oahu; and 3 television stations, all located at Honolulu.

Principal Events, 1955.—On Feb. 16, 1955, for the first time in Hawaii's history, the legislature convened with a majority of Democrats, both in the Senate and the House of Representatives. In an attempt to finish its work, the normal 60-day session was extended by the device of stopping the legislative clocks on the 60th day. The session was thereby allowed to complete its interrupted course 28 days later.

The U.S. Congress, for the 20th time since 1903, failed to act on a statehood bill for Hawaii in 1955. In November, Gov. Samuel W. King called on the delegates of the 1950 Constitutional Convention to meet for the purpose of considering one portion of the 1950 "hope-chest" constitution—that of reapportionment of representation in the legislature.

February 28 marked the beginning of a volcanic eruption on the island of Hawaii, which was active intermittently over a period of three months, causing much property damage and necessitating the evacuation of several villages in the Puna area (southeast coast) of Hawaii. In April, Puna was declared a federal disaster area. There was an underwater volcanic disturbance approximately 430 miles northwest of Honolulu in August, resulting in the formation of an island of pumice, which sank soon after its birth. September brought reports of similar underwater disturbances about 380 miles northwest of Honolulu, but geologists were divided in opinion as to the significance of these eruptions in an area formerly believed to have completed its period of volcanic activity.

In September, the Episcopal Church held its 58th international convention in the city of Honolulu. Honolulu also was the meeting place on Nov. 1, 1955, of members of the Southeast Asia Treaty Organization (q.v.). The Honolulu meeting was held to integrate plans of subordinate committees of SEATO working toward a regional defense pact.

ROBERT M. KAMINS,
Director, Legislative Reference Bureau,
Territory of Hawaii.

HAY. The United States crop of hay harvested in 1955 totaled 109.7 million tons, a record high figure (4.7 million tons more than in 1954, and 7.5 million tons above average), according to the Agricultural Marketing Service, U.S. Department of Agriculture. Production by kinds in 1955, in millions of tons, was as follows: alfalfa and alfalfa mixtures, 53.0; clover and clover mixtures, 26.7; wild, 9.7; lespedeza, 4.9; grain, 4.4; soybean, 1.0; peanut, 0.8; cowpea, 0.2; and other kinds, 9.0. The 1955 yield of 1.48 tons per acre was also a record high figure, and resulted from generally favorable growing conditions in most of the important producing areas, plus increased acreage of the higher-yielding alfalfa.

HEART DISEASE. Both the number of deaths and the rate of deaths per 100,000 population from diseases of the cardiovascular system dropped in the United States in 1954, as compared with 1953, according to figures released by the National Office of Vital Statistics. However, the decrease in cardiovascular deaths paralleled a drop in total death figures, so that the proportion of all deaths attributed to heart and blood vessel disease was 52.3 per cent, approximately the same as in previous years.

Rheumatic Heart Disease.—Continued studies of acute rheumatic fever, the cause of rheumatic heart disease, have established that both initial and recurrent attacks are precipitated by infections with hemolytic streptococci. The American Heart Association has thus been able to publish definite recommendations for prevention of rheumatic fever. The main points are: (1) About 3 per cent of untreated streptococcal infections in the general population are followed by rheumatic fever; early treatment of these infections with penicillin and maintenance of effective blood levels of penicillin for 10 days will prevent this complication. (2) Prophylactic (preventive) treatment should be given to all individuals who have had rheumatic fever or who show definite rheumatic heart disease; this can be carried out by daily oral administration of penicillin or sulfadiazine or by monthly injection of benzathine penicillin G.

A cooperative clinical trial of aspirin and two hormonal products, ACTH and cortisone, in the treatment of acute rheumatic fever in children was carried out at 5 centers in the United States, one in Canada, and 6 in the United Kingdom. Records of 497 children treated (162 with ACTH, 167 with cortisone, and 168 with aspirin) for a period of six weeks showed that the hormones controlled acute manifestations more promptly, but rheumatic fever could not uniformly be terminated by any of the compounds. At the end of one year the incidence of heart damage was the same in the three groups. Two new hormonal drugs, prednisone (Meticorten) and prednisolone (Meticortelone), also apparently are effective in the control of acute rheumatic fever symptoms, and lack some of the undesirable effects of previously employed hormones.

Surgical relief of narrowing of the mitral heart valve due to rheumatic fever is producing satisfactory results in properly chosen cases throughout the world. Since correction of nar-

rowing of the aortic heart valve has proved more difficult, Stanley J. Sarnoff of Bethesda, Md., has employed a lucite bypass of this valve in experimental animals. A rigid tube containing a polyethylene ball valve was placed between the left ventricle and the aorta. Surviving dogs with this implant exhibited their normal tendency to run, play, and fight. (See also ARTHRITIS; PEDIATRICS.)

Coronary Artery Disease.—Since the heart muscle receives its blood largely through the coronary arteries on the outside of the heart, disease of these vessels impairs muscle nutrition. Some surgeons remain enthusiastic about procedures designed to bring additional blood to heart muscle from other parts of the body, but the clinical results and experimental background of such operations have not been generally accepted. Charles P. Bailey of Philadelphia has resected a large aneurysm (outpouching) of the left ventricle due to muscle destruction secondary to coronary artery disease in a 56-year-old man, with relief of congestive failure and heart pain.

Disorders of Heart Rhythm.—The treatment of heart block (interruption of conduction between the auricles and ventricles) has been greatly improved by the use of Isuprel to speed up the rate of the ventricles, and also by the intravenous administration of sodium lactate as suggested by Samuel Bellet of Philadelphia. Charles P. Bailey has grafted right auricular muscle into the ventricle to improve conduction in a patient with heart block. Boston workers have found Ambonestyl (2-diethylaminoethyl-isonicotinamide) effective in controlling disorders of rhythm originating in the ventricles.

Surgery.—Study continued of methods to temporarily suspend blood flow through the heart, permitting operation under direct vision in a dry field. University of Minnesota workers have aerated blood during operation on the heart of a 13-year-old boy by pumping it through a dog's lung. At the Mayo Clinic, a modification of the mechanical oxygenator developed by J. H. Gibbon, Jr., was used in 8 heart operations on very ill patients; 4 survived. In repairing or replacing damaged peripheral arteries, technical improvements included use of preserved human vessels as permanent shunts around occluded segments. A pig artery has been used as a temporary bypass around a section of diseased human aorta during insertion of a graft taken from a cadaver. (See also NUTRITION.)

HEATING. See Index entry.

HEBRIDES, The, or WESTERN ISLANDS. Politically part of the Scottish counties of Argyll, Inverness, and Ross and Cromarty, the Hebrides form an archipelago of some 500 islands (about 100 inhabited) lying off the west coast of Scotland (area, 2,812 square miles). The Little Minch divides the islands into two groups: the Outer Hebrides, including Lewis-with-Harris, on which is Stornoway, the chief town (pop., 3,121 in 1951), North Uist, South Uist, Benbecula, and Barra; and the Inner Hebrides, of which Skye (pop., 8,267 in 1951), Mull, andIslay are principal islands. The aggregate population, estimated at 53,000 in 1951, had declined by 15.5 per cent since the 1931 census. Gaelic is the

predominant language. Subsistence crops of oats, barley, and potatoes are grown under primitive conditions, the major economic resource being sheep raising and the weaving of Harris tweed, the latter industry engaging some 2,000 persons.

HEDTOFT, Hans Christian, premier of Denmark: b. Aarhus, Denmark, April 21, 1903; d. Stockholm, Sweden, Jan. 29, 1955. Ousted by the Nazis as chairman of the Social Democratic Party of Denmark, he played a significant role in the Danish underground movement during World War II. After the war, as leader of his party and later as premier, he advocated a strong Scandinavian defense alliance and customs union, and was instrumental in Denmark's decision to enter the North Atlantic Treaty Organization (NATO).

The son of a tailor, Hans P. Hansen (the surname Hedtoft was adopted later), Hedtoft entered politics early in life. In 1922, while serving as an apprentice to a lithographic printer, he was elected secretary of the National Social Democratic (Socialist) Youth Organization, an office he held until 1928, when he became the group's president. In 1929 he was elected assistant secretary of the Social Democratic Party, and in 1935 won a seat in the Folketing (then the lower house of Parliament). Four years later, at the age of 36, he was elected chairman of the Social Democratic Party.

With the invasion and occupation of Denmark by Germany in 1940, Hedtoft, who refused to cooperate with the Nazis, was stripped of his party leadership. During the occupation, however, he often and dramatically slipped out of the country, on at least one occasion going to Sweden to negotiate for arms for the Danish underground.

With the termination of hostilities, he was recalled as chairman of his party, served as Danish minister of labor and social affairs in 1945, and on Nov. 12, 1947, after elections in which none of the several contending parties won a majority, was called upon by King Frederick IX to form a new government. He held the office of prime minister twice: from Nov. 12, 1947, to Oct. 28, 1950, when he yielded to a coalition choice, Erik Eriksen, and from Sept. 30, 1953, after the Social Democratic Party significantly increased its parliamentary strength. The prime minister died in Stockholm while attending a session of the Nordic Council.

HELICOPTERS. See Index entry.

HEMPEL, Frieda, German-American coloratura soprano: b. Leipzig, Germany, June 26, 1885; d. Berlin, Oct. 7, 1955. Gifted with an exquisite purity of tone and a wide vocal range, Miss Hempel came to be recognized as one of the foremost interpreters in her time of Mozart's operas.

Frieda Hempel began her career in music as a piano pupil at the Leipzig Conservatory in 1900. After her voice had matured, she entered the Stern Conservatory in Berlin, where she studied from 1902 to 1905. She made her operatic debut at the Royal Opera House in Berlin in August 1905 in Otto Nicolai's *The Merry Wives of Windsor*. Subsequently she sang for two years at the Court Opera of Schwerin, Germany, before being permanently engaged by the Royal Opera House. In 1912 she went to the United States, where she made her debut at the Metropolitan Opera House as Marguerite de Valois in Meyerbeer's *Les Huguenots*. With the

exception of the 1913 season, when she sang in London with Sir Thomas Beecham's opera company, she remained with the Metropolitan Opera Company until 1919.

During her career, Miss Hempel developed a varied and extensive repertoire, although it was her rendering of Mozart's operas that won her widest critical acclaim. Her most admired roles included Violetta in Verdi's *La Traviata*; Gilda in Verdi's *Rigoletto*; Eva in Wagner's *Die Meistersinger*; Marguerite in Gounod's *Faust*; Rosina in Rossini's *The Barber of Seville*; the Marschallin in Richard Strauss' *Der Rosenkavalier*; Susanna in Mozart's *The Marriage of Figaro*; and the Queen of Night in Mozart's *The Magic Flute*.

After 1919, a year after she became an American citizen, Miss Hempel turned her attention to the concert stage. In 1920 she impersonated Jenny Lind in a concert at Carnegie Hall celebrating the great soprano's centennial year. In the ensuing years she gave many "Jenny Lind" concerts and personal recitals in the United States, Great Britain, and continental Europe. After her 1927 concert appearance in Berlin, which evoked a Nazi demonstration against her, she did not return to Germany until a few months before her death in 1955. Her autobiography, *Mein Leben dem Gesang (My Life for Song)* was scheduled for publication in Germany in 1955.

HIGH-FIDELITY ("HI-FI"). See RECORDS, PHONOGRAPH.

HIGHWAYS. Federal-aid highway improvement and all other highway work went forward at a record-breaking rate in the United States during 1955. Continued growth in highway traffic with a corresponding gain in motor vehicle revenues for highways, increased federal funds, continued building of toll roads, and other factors combined to make the year one of great physical accomplishment.

The significant feature of the year, however, was not the record volume of construction, but the increased recognition of the much greater improvements still needed to remove congestion, delays, and accidents on the nation's highways. There was increasing evidence of public demand for highway improvements. A report submitted to Congress showed that the cost of construction needed to modernize the nation's roads and streets in a period of 10 years was \$101 billion. Legislation looking toward a greatly enlarged program of highway improvement was given careful consideration by Congress.

Estimated expenditures for highways during 1955 amounted to \$7.6 billion. Of this total, \$4,625 million was for construction plus right-of-way costs, \$1,848 million was for maintenance, \$261 million was for interest on highway debt, \$377 million was for debt retirement, and \$441 million was for administrative costs and the policing of highways. Funds were derived from the following sources: highway user taxes, \$3,344 million; property taxes, general revenue, and miscellaneous receipts, \$1,403 million; federal funds, \$771 million; toll receipts, \$253 million; and borrowing, \$1,563 million. Of the total highway revenue, state governments provided 62.5%; the federal government, 13.3%; counties and other rural units, 10.5%; and urban places, 13.7%.

Motor vehicle registrations were expected to exceed 61 million in 1955, a gain of nearly 2½ million over 1954. Vehicle-miles traveled on all roads and streets during the 12 months ending

June 30, 1955, increased by 3.7% over the preceding 12 months.

Federal-Aid Program.—Completions of all classes of federal-aid projects during the fiscal year ending June 30, 1955, accounted for the improvement of 22,155 miles of roads—an increase of 1,166 miles over the previous year. Included were 6,050 miles of highways and 1,202 bridges on the federal-aid primary highway system outside of cities; 842 miles of highways and 465 bridges on urban portions of the federal-aid primary system; 14,692 miles of roads and 1,764 bridges on secondary or farm-to-market roads; and 571 miles of highways in national parks, forests, parkways, etc.

Federal-aid work in progress or in the "plans approved" stage in 1955 consisted of improvements to 23,902 miles of highways and streets and construction of 5,015 bridges. This work was estimated to cost \$2.1 billion, including \$1.08 billion of federal funds.

The active program of highway improvements in national forests and parks and public lands, and the restoration of flood-damaged roads and bridges involved an additional 1,255 miles with an estimated cost of \$63.9 million, of which \$56.3 million was federal funds.

Urban Highways.—Federal-aid highway improvements in urban areas have increased gradually over a 10-year period, reaching almost \$500 million in the fiscal year ending June 30, 1955.

Expressways were under construction in 1955 in 44 cities of between 100,000 and 500,000 population and in 58 smaller cities. Construction has been started in Boston, Baltimore, Louisville, and other cities, of circumferential routes near the outskirts of the metropolitan areas. These routes will permit a free interchange of traffic between the several radial routes without passing through the more congested areas. Some of the major improvements were as follows:

Two-Level Highway in Newark, N.J.—To relieve extreme congestion, a two-level road—a viaduct and ground-level highway—was constructed on a 42-foot right-of-way. The elevated roadway has 3 lanes for southbound traffic; northbound traffic will use the 3 lanes under the 2,000-foot steel and concrete viaduct.

Baltimore-Washington Parkway.—This route, entirely on new location, has complete control of access on a right-of-way ranging from 400 to 1,200 feet in width, with opposing traffic lanes separated by as much as 200 feet by a grassy, tree-studded median. The grading, base, and bridges are all wide enough to permit the construction of two additional lanes when needed.

Atlanta Freeway System.—The north-south section of Atlanta's freeway system consists of a main artery and legs to the northeast and northwest, totaling 20.3 miles, of which 18.3 miles had been completed in 1955. The northwest leg carries route U.S. 41 and connects with 40 miles of completed 4-lane development. The northeast leg connects with a 10.6-mile section of the National System of Interstate Highways. The south leg of the expressway carries U.S. 41 and 19, and connects with 29 miles of 4-lane development.

Detroit Expressways.—The first two sections of the Edsel Ford and John C. Lodge expressways were completed during 1955, providing free, unrestricted traffic flow from the west limits of Detroit to the heart of the business district. Both routes are urban extensions of the interstate system. About 8 miles in length, the completed sections provide a continuous 6-lane depressed

freeway. The 14-structure interchange at the junction of the two expressways provides for unrestricted traffic flow in all directions. A 6-mile extension of the Lodge Expressway to the northwest city limits and a 9-mile extension of the Ford Expressway from the interchange to the northeast city limits were under construction in 1955.

Elevated Structure in New Orleans.—To improve properly U.S. 90 in New Orleans and avoid conflict with the large volume of highway and rail traffic near the Union Passenger Terminal, it was necessary to construct a viaduct 3,450 feet long. Divided roadways, each 40 feet wide, provide for three streams of traffic in each direction.

San Bernardino Freeway.—The San Bernardino Freeway is the established routing of the interstate system into Los Angeles from the east. At the end of 1955, construction was under way on a 15.1-mile section scheduled for completion during 1956. Upon its completion, there will be a continuous section of 4-lane and 6-lane divided roadway 53.5 miles long between Los Angeles and the westerly outskirts of Colton, near San Bernardino. Construction of a 2-mile section through Colton has been scheduled.

Forest and Park Roads.—Typical projects constructed in 1955 were the following:

William-Grand Canyon Highway.—The main approach to Grand Canyon National Park in Arizona is a 52-mile forest highway connecting with U.S. 66. Reconstruction of the route to modern standards was completed in 1955.

Huntington Lake Highway.—A forest highway serves the Huntington Lake area of the Sierra Nevada range east of Fresno, Calif. Construction of 16.5 miles on new location through rugged terrain was scheduled for completion in the fall of 1955. The road provides access from Fresno and the Central Valley.

Kenai River Bridge at Schooner's Bend, Alaska.—Completion of a bridge over the Kenai River, consisting of four 70-foot prestressed-concrete spans with a 24-foot roadway, removed an old bottleneck on the Kenai River forest highway. The new bridge is unique in several respects. The entire superstructure, including girders, deck and curbs, was precast at Portland, Oreg., and then shipped to Seward, Alaska, for hauling to the job site.

Foreign Activities.—Since the end of World War II, the Bureau of Public Roads has assisted in launching highway programs in several countries. Such work has included the training of foreign visitors in highway practices, supervision of highway aid programs in underdeveloped areas, and furnishing technical advisers.

The Inter-American Highway.—Since 1930 the bureau has been assisting the Central American republics in the construction of a 3,200-mile road from the Mexico-Texas border to Panama City. In June 1955, 95% of the highway was usable in all kinds of weather. The two still impassable gaps were a 25-mile strip in Guatemala and a section of about 150 miles from San Isidro, Costa Rica, to Concepción, Panama.

Turkey.—Turkey's extensive program of highway development showed further progress in 1955. The bureau's program of technical and economic assistance, begun in 1947, continued through the year. All-weather roads on the national highway system have been extended to 13,400 miles since 1948. Fairly good highway facilities are now available to all important sections of the country.

Ethiopia.—More than 90% of the 3,100-mile

BUREAU OF PUBLIC ROADS

Interchange between Edsel Ford and John C. Lodge expressways, which extend into Detroit's business center, allows free traffic flow in all directions.

primary highway system was open in 1955 to year-round travel at reasonable speeds.

Other Countries.—The Bureau of Public Roads also was active in the Philippines, Liberia, Jordan, and Pakistan. Bureau representatives also assisted in Nepal, Korea, Haiti, Cambodia, Vietnam, and Laos.

Highway Safety.—The bureau continued to participate in the joint effort to advance safety on the highways. Assistance was extended to five national organizations, including the President's Action Committee for Traffic Safety. The most noteworthy undertaking of the year was a 30-day "safe driving" campaign that culminated in Safe Driving Day on Dec. 15, 1954. In spite of a continuing increase in highway travel, traffic deaths declined 2% in the 1954-55 fiscal year.

(See also ACCIDENTS; AUTOMOBILES; BRIDGES; CITY PLANNING; *Transportation and Communications* sections of individual countries and states; and for information on state turnpikes and tollroads, under construction in 1955, see articles on the states concerned—for example, Florida, Kansas, New York, and Ohio.)

R. E. ROYALL,
Chief, Research Reports Branch,
Bureau of Public Roads.

HIRSHBERG, Herbert Simon, American librarian; b. Boston, Mass., July 7, 1879; d. Winter Park, Fla., Sept. 15, 1955. Dean of the School of Library Science at Western Reserve University from 1929 to 1943 and director of the university's libraries from 1943 to 1945, he was from 1945 an editorial adviser of THE ENCYCLOPEDIA AMERICANA and the contributor of a number of its articles on library themes.

A graduate of Harvard College (1900), Herbert Hirshberg obtained his Bachelor of Library Science degree in 1905 from the New York State Library School. He began his career in library as an assistant in the music division of the Library (1902-03), then as an assistant in the New York State Library in Albany (1904-05). He was an assistant in the music division of the Library of Congress from 1905 to 1906, and for the next two years was assistant and branch librarian of Pittsburgh's Carnegie Library. From 1908 to 1914 he was reference librarian of the Cleveland Public Library, serving at the same time as instructor in the Library School of Western Reserve University. Appointed librarian of Toledo's Public Library in 1914, he remained there until 1922 when he became head of the

Ohio State Library. From 1927 to 1929, the years immediately preceding his deanship at Western Reserve University, he served as librarian of the Akron Public Library.

He was the author of *Elements of the Library Plan* (1930); *Subject Guide to Reference Books* (1942; 2d ed. 1952), and, with Carl H. Melinat, *Subject Guide to United States Government Publications* (1947).

HISPANIOLA (formerly also HAITI or SANTO DOMINGO). An island in the West Indies, east of Cuba; area, about 30,000 square miles; divided politically into the Republic of Haiti and the Dominican Republic (qq.v.).

HOCKEY. See SPORTS, GAMES, AND SHOWS.

HODIAK, John, American actor: b. Pittsburgh, Pa., April 16, 1914; d. Tarzana, Calif., Oct. 19, 1955. For over a dozen years he acted in a variety of roles in motion pictures, and his stage portrayal of Lieutenant Maryk in Herman Wouk's *The Caine Mutiny Court Martial* in New York in 1954 brought him critical acclaim.

The quality of his acting in Russian and Ukrainian plays put on by his local parish in Detroit, to which his family had moved, brought him a scholarship in dramatics at Northwestern University. Succeeding in a second attempt to become a radio actor, he began his career by playing villainous roles in such radio programs as *The Lone Ranger* and *The Green Hornet*. In 1942 he went to Hollywood, where he played small parts until 1944, when he was chosen to appear with Tallulah Bankhead in *Lifeboat*.

Hodiak acted in a variety of films, ranging from the musical, *The Harvey Girls*, to the war film, *A Bell for Adano*. In his last picture, *On the Threshold of Space*, he was cast as an army officer who volunteered to ride in a high-speed rocket sled for medical research. Also among the more than 20 motion pictures in which he appeared were *Command Decision*, *Across the Wide Missouri*, *Desert Fury*, and *Trial*, released several days before his death. Hodiak had been married in 1946 to the actress Anne Baxter, but they were divorced on Feb. 9, 1954.

HONDURAS. The most mountainous and most heavily mineralized of the Central American republics, Honduras is bounded by Guatemala on the northwest, El Salvador on the southwest, and Nicaragua on the south. It has an area of 43,227 square miles and a population (United Nations est., 1954) of 1,608,000. The principal cities (with 1950 populations) are Tegucigalpa (which includes Comayagüela), the capital (district, 99,948; urban area, 72,385), and San Pedro Sula (district, 54,268; urban area, 21,139). Among smaller cities are Puerto Cortés, Choluteca, La Ceiba, Santa Rosa de Copán, Tela, Trujillo, Comayagua, Danlí, and Juticalpa. According to the 1950 census, racial distribution is as follows: mestizos, 91%; Indians, 6%; Negroes, 2%; and whites, 1%.

Government.—Dr. Julio Lozano Díaz has been governing Honduras as chief of state with all executive, legislative, and judicial power since December 6, 1954, in a *de facto* government, assisted by a 59-member Council of State. The country is divided into 16 departments and one territory, 31 districts, and 245 municipalities.

Education and Religion.—Education is free and compulsory for children aged 7 to 15. The budget for 1955-56 allocated 6,462,880 lempiras, the largest amount ever to be spent in one year, for education. A strong effort was begun in 1950 to reduce the illiteracy

rate (63.71% of those 10 years of age or over in 1953). Of the 220,438 children of school age in 1953, 117,292 were enrolled in 2,214 primary schools; 6,847 students were enrolled in 32 secondary and normal schools, and 636 in the 7 faculties of the National University.

Over 95% of the population is Roman Catholic. The constitution of 1936 guaranteed religious freedom and separated church and state. The Roman Catholic Church has 133 priests in 76 parishes and operates 15 schools with 2,753 students.

Finance.—The budget for the fiscal year 1955-56 was fixed at 76,327,358 lempiras (2 lempiras equal U.S.\$1), much the largest in the country's history. The Ministry of Development was given 23,175,080 lempiras, about 30% of the total budget, most of which will be spent on road construction and the Rio Lindo hydroelectric project. The chief sources of revenue are expected to be: import duties, about 20 million lempiras; income taxes (doubled in 1955), 15 million; and monopolies, about 12 million. The government expects to borrow up to 12 million lempiras in loans divided about equally between internal and external sources. The national debt, without additional borrowing, is 14 million lempiras.

Foreign Trade.—Exports to the United States during the first half of 1955 amounted to \$18,600,000, and imports from the United States during the same period were \$14,900,000. In 1953-54, the United States took 77.2% (102,769,986 lempiras) of Honduras' exports and supplied about 69.3% (68,226,890 lempiras) of its imports. Bananas and coffee usually constitute about 80% of Honduras' exports. Other exports are silver, pine lumber and logs, mahogany, livestock, abacá, and tobacco.

Agriculture and Industry.—About 83% of the people are engaged in agricultural work. Approximately 42% of the land surface is in forests, 26% in mountains, 17% in pasture, 3% in untilled land, and 4% in cultivated land. There are approximately 102,000 acres of banana plantations on the Caribbean coastal plain. Coconuts are grown on about 10,000 acres, and rice, tobacco, and sugar are also produced.

Banana production in late 1954 and in the first half of 1955 suffered considerably from the combined effects of a blowdown of 2 million bunches of bananas in February 1954, the prolonged strikes of May-June 1954, and the disastrous floods of September-October 1954. During the five months after the floods of late 1954, banana exports were about one third of normal, and in the first quarter of 1955 they were even lower. Shipments of bananas in 1954 amounted to 9.2 million stems, compared with 12.4 stems in 1953, an average year. It is not expected that banana exports will reach the 1953 level until late in 1956.

By the end of June 1955, an estimated 90% of the exportable coffee had been shipped. The 1955 coffee crop, the harvesting of which begins in October, was expected to be at least as large as that of 1954, when coffee exports were valued at 25,524,709 lempiras (\$12,762,354).

Silver is the principal mineral resource of Honduras (5,807,028 fine ounces in 1953-54). Gold and lead are mined in small amounts, and there are deposits of zinc, copper, iron, and antimony. During the year ending Dec. 31, 1954, the El Mochito mine of the New York and Honduras Rosario Mining Company produced a total of 1,145,916 ounces of silver, 880 ounces of gold, and 2,172,612 pounds of lead.

With the assistance of the International Bank for Reconstruction and Development, an interim Committee for the Organization of a Plan of Economic Development was formed in October 1954. The committee drew up a five-year plan which calls for the expenditure of \$150 million over a 5-year period for road construction,

schools and hospitals, agriculture, electric power, and rehabilitation of the flood-damaged Sula Valley. The plan will be financed by a \$25 million internal loan, external loans totaling \$50 million, and \$75 million from taxation during the fiscal years 1955-56 through 1959-60.

The Fundamental Charter of Labor Guarantees, the first broad labor law in Honduras, took effect on Feb. 16, 1955. It provides for conciliation, collective bargaining, minimum wages, maximum hours, social security institutions, and the framework of a state employment service.

Through an exchange of notes with the United States, Honduras has agreed to co-operate in the United States investment guaranty program administered by the International Cooperation Administration (ICA) against currency inconvertibility and expropriation. The ICA allocated more than \$1 million in the fiscal year 1955 for Honduras, in order to raise productivity, increase agricultural output, expand and improve aviation and transportation, and improve public administration.

Transportation and Communication.—The finest road ever built in Honduras, the South Highway linking Tegucigalpa with the Inter-American Highway at Jicaro Galán, was inaugurated on June 2, 1955. The road reduces the distance from Tegucigalpa to Jicaro Galán on the Pacific coast from 72.7 to 57.2 miles. In 1953 the country had 1,238 miles of roads, and in October 1954, 6,342 vehicles. The Tela Railroad Company and the Standard Fruit Company operate 388 and 216 miles of railroad lines, respectively, and the state-owned National Railway operates about 110 miles. Honduras is served by 14 radio broadcasting stations, 7 of them in Tegucigalpa, and by 6 commercial aviation companies. There is one large international airport and 15 smaller ones.

Principal Events, 1955.—The dangers of civil war following the indecisive presidential election of October 1954 seemed to subside during 1955. On numerous occasions, Chief of State Dr. Julio Lozano stated that he wished to relinquish his monopoly of power and retire from office as soon as free elections were possible. An electoral census, as a first step toward new elections, was to have been completed by the end of October 1955. On Jan. 24, 1955, Chief of State Lozano issued a decree giving women the right to vote.

Honduras contributed to the important progress made in 1955 toward successful operation of the Organization of Central American States. Representatives of Honduras attended the meeting of the Committee for Economic Integration of Central America early in May 1955, and the conference of foreign ministers of the five member countries in Antigua, Guatemala, in August 1955. A minor border dispute with Nicaragua in May was settled amicably in June.

WILLIAM S. STOKES,
Professor of Political Science,
University of Wisconsin.

HONDURAS, British. See BRITISH HONDURAS.

HONEGGER, Arthur, Franco-Swiss composer: b. Le Havre, France, March 10, 1892; d. Paris, Nov. 27, 1955. One of the foremost composers of contemporary music, he was noted for his use of a harsh and complex modern idiom to create dynamic architectonic musical compositions.

A Swiss national, Honegger began his formal musical studies at the age of 13 in Le Havre. From 1909 to 1911 he studied at the Conservatory of Zurich, and from 1911 to 1913, at the

Paris Conservatory under André Gédalge and Lucien Capet. Subsequently he settled in Paris to continue his studies under Widor and d'Indy and to compose in earnest.

In much of Honegger's early work are apparent his academic concern for technical problems and the conflicting influences of Johann Sebastian Bach and the impressionists, particularly Debussy. Soon, however, he had assimilated Bach to his own needs and had repudiated the methods (although not the complex harmonics) of impressionism to give vent to his private awareness of 20th century life. His incidental music for Paul Mèral's masque, *Le Dit des jeux du monde*, performed in 1918, was the first large-scale work in which he fully expressed his individuality as a composer.

Although he was one of the famous *Les Six* (a name given rather arbitrarily by the critic Henri Collet to a group of young Parisian composers, comprising Honegger, Darius Milhaud, Francis Poulenc, Georges Auric, Louis Durey, and Germaine Tailleferre), Honegger refused to betray his nature, as much Germanic as French, and his artistic conceptions to conform to a "Parisian" school.

During 1920, one of his most productive years, Honegger wrote three sonatas (for viola and piano, cello and piano, and two unaccompanied violins); the *Pastorale d'été* for small orchestra, which won the Prix Verley; and his first ballet, *Verité? Mensonge?* His public reputation was firmly established in 1921 with the production of the "dramatic psalm" *Le roi David*, after the drama by the Swiss poet René Morax, and was greatly enhanced by his "mouvement symphonique," *Pacific 231* (1924), whose popular appeal was due more to its unusual subject than to its merit as music. He was a bold experimentalist, with an acute dramatic sense, and with an awareness of the evocative power of realism, of orchestral color, and of complex harmonies. Nevertheless he subordinated these within the framework of traditional musical form.

Honegger composed a large number of important pieces for the theater, the subjects and forms of which indicate the wide range of his interests and technical virtuosity. These include the biblical opera, *Judith* (libretto by René Morax, 1926); the classical opera, *Antigone* (Jean Cocteau, after Sophocles, 1924-27); the ballet-melodrama, *Amphion* (Paul Valéry, 1929); the operetta, *Les aventures du roi Pausole* (Albert Willemetz, from a story by Pierre Louÿs, 1930); the stage oratorio, *Jeanne d'Arc au bûcher* (Paul Claudel, 1934-35); the mimed symphony, *Horace victorieux* (1920); the ballet, *Les mariés de la Tour Eiffel* (with others of *Les Six*, 1921); and incidental music of the plays, *Sail* (André Gide, 1922), *Phaedre* (Gabriele d'Annunzio, 1926), *Le soulier de satin* (Paul Claudel, 1943), and *Hamlet* (translated from Shakespeare by André Gide, 1946).

In his later years, Honegger turned more insistently to orchestral composition to express his increasingly abstract and intellectual ideas. These include five symphonies (1930, 1941, 1945-46, 1946, 1951), a prelude (1936), and two suites (1943, 1952). Stylistically characterized by elaborate counterpoint and harsh polytonality, these later works reveal most fully in their tragic themes and heroic romanticism the artist's Teutonic heritage.

A versatile and prolific composer, Honegger also wrote songs, choral works, works for solo instruments, and music for the radio and films.

His last major composition was the *Christmas Cantata*, completed in 1953.

HONEY. Due primarily to drought conditions throughout much of the country in the summer of 1954, the honey crop in the United States, produced by 5,467,000 colonies of bees, dropped to 217,414,000 pounds in 1954—about 3% less than the 1953 crop of 224,414,000 pounds, and the smallest crop since 1948. Beeswax production totaled 4,031,000 pounds in 1954, or 2% less than in 1953. Chief honey-producing states in 1954 were California, Minnesota, Florida, Wisconsin, Iowa, Idaho, Texas, Ohio, Illinois, and Michigan; together these states supplied 59% of the total crop.

HONG KONG. Situated only 20 miles east of the Pearl River estuary on the southeastern coast of the Province of Kwangtung, Hong Kong lies "on the doorstep of Communist China" and serves as a frequent channel of return to the free world of prisoners released by the Communist government. This famous center of Far East trade is a British crown colony comprising the island of Hong Kong (32 square miles) and the ceded territory of Kowloon on the mainland (3¼ square miles), in each of which are cities with nearly one million inhabitants; and the leased New Territory (356 square miles), extending inland on the Kowloon peninsula. Principal industrial, commercial, and port facilities are within Victoria, the capital, on Hong Kong Island, and Kowloon, across the almost landlocked, deep-water harbor. The climate is subtropical.

Population.—The population was estimated in December 1954 at 2,300,000, of which about 19,000 were non-Chinese, including 13,000 British subjects from the United Kingdom and Commonwealth countries. There were also approximately 1,600 Portuguese, 1,500 Americans, 340 Dutch, and 300 Filipinos. The findings were made public in March 1955 of a United Nations mission appointed to investigate the problem of Chinese refugees in Hong Kong. It was revealed that in 1954 there were 385,000 Chinese political refugees, with 282,000 dependents in the colony, creating conditions of poverty, overpopulation, and unemployment—problems which the government had faced, thus far without outside help, with "energy and determination."

Government.—Hong Kong is administered by a governor (Sir Alexander Grantham, appointed April 21, 1947); a 12-member Executive Council, headed by the commander of British forces (Lieut. Gen. Sir Cecil S. Sugden); and a 17-member Legislative Council whose procedures follow those of the House of Commons.

Finance.—In 1954–55 administrative revenue was estimated at HK\$434,452,321; expenditure, including HK\$16 million for re-inforcement of the Hong Kong garrison, HK\$373,343,609 (HK\$1 = U.S.\$0.175).

Education.—In 1955 there were 1,136 primary and secondary schools (246,833 pupils, of whom 90,342 were receiving government-aided education). Government expenditure for education rose from HK\$26.5 million in 1954 to HK\$41 million in 1955. The University of Hong Kong (844 students in 1955) has faculties of medicine, engineering, arts, science, and architecture; maintains the colony's most extensive library; and receives an annual government grant of HK\$4 million.

Economy.—Some 315,000 persons are employed in 2,300 registered factories. Manufacturing has become increasingly important with the curtailment of Hong Kong's entrepôt trade since the Communist conquest of the China mainland. Local manufacturing industries accounted for about 30% of the total value of exports in 1954, compared with about 10% in 1947. Cotton spinning and weaving (the largest single industry) were responsible in 1954 for exports of cotton piece goods, valued at HK\$181,488,369; cotton yarn, HK\$96,780,395; cotton singlets, HK\$66,655,667; and shirts, HK\$64,031,438. Products of local industry exported during 1954 also included footwear, HK\$57,407,209; household utensils, HK\$65,878,018; and flashlights and

flashlight batteries, foodstuffs, towels, lacquers, varnishes, and paints, and embroidered clothing. Also manufactured are iron and steel bars, cement, rope, matches, cigarettes, firecrackers, furniture, and diesel engines. Ship repairing, sugar refining, and a motion picture industry are also important.

The fishing fleet (largest in the Commonwealth of Nations) consists of 6,160 junks (719 mechanized and 31 company-operated, distant-water trawlers). The further mechanization of the fleet is being assisted by allocations from the Colonial Development and Welfare Fund.

Production of subsistence crops of vegetables amounted to 61,939 metric tons in 1954, together with 26,000 metric tons of rice paddy. Minerals produced in 1954 included iron ore, 90,800 tons; kaolin, 6,053 tons; lead ore, 368 tons; graphite, 1,840 tons; wolframite, 60,530 pounds; and molybdenum, 193 pounds.

Foreign Trade.—In 1951 the United Nations passed a resolution forbidding the export of strategic goods to China; strict controls were then imposed and remained in force in 1955. The embargo accounted mainly for the decline in the value of exports from HK\$2,899,010,064 in 1952 to HK\$2,417,015,601 in 1954. (Of total exports, 39% went in 1950 to China; 16% in 1954.) Imports in 1954 were valued at HK\$3,435,419,225 (a decline of more than HK\$437 million from the 1953 total), and came chiefly from China, HK\$691,845,761; the United Kingdom, HK\$369,370,054; Commonwealth countries (except Malaya), HK\$352,659,228; Japan, HK\$464,537,320; the United States, HK\$281,051,186; West Germany, HK\$155,572,923; and Malaya, HK\$161,609,904. Principal imports were textile yarns and fabrics, HK\$555,232,679; grains, including 105,400 tons of rice, HK\$146,717,350; fruits and vegetables, HK\$197,747,469; and textile fibers, HK\$259,048,350. In 1954 exports went mainly to China, HK\$350,786,609; Indonesia, HK\$224,642,245; Malaya, HK\$330,540,133; Commonwealth countries (except Malaya), HK\$315,847,845; the United Kingdom, HK\$162,165,696; and South Korea, HK\$170,133,476. Principally exported were textile yarns and fabrics, HK\$496,036,277; clothing, HK\$264,842,354; and dyeing materials, HK\$150,840,460.

Transportation and Communications.—In 1954–55 a total of 31,788 vessels (net tonnage, 25,756,509) entered and cleared the port of Hong Kong, and 775,556 passengers were embarked and disembarked. A government-owned railway links Kowloon with Shunchun, affording direct communication with Canton, Hankow, and Shanghai. Highways aggregate 431.63 miles. Fourteen airlines provide services to Europe, the United States, and neighboring territories (excluding China), from Kai Tak airport. In 1954–55, aircraft on 6,230 international flights carried 121,160 passengers to and from Hong Kong.

HOOVER COMMISSION. The second Hoover Commission, headed by former president Herbert Hoover, and officially known as the Commission on Organization of the Executive Branch of the Government, was created by Congress in July 1953 and was terminated on June 30, 1955. Vested with a broader scope than its predecessor (1947–49), the second Hoover Commission was granted the authority to investigate not only the manner in which the agencies of the executive branch of the government were operating, but also whether the federal government should be operating in certain areas. It was composed of

12 members (7 Republicans and 5 Democrats), 4 of whom were appointed by President Dwight Eisenhower, 4 by Vice President Richard Nixon, and 4 by former Speaker of the House Joseph Martin, Jr.*

Based on the findings of individual study groups, the detailed reports issued periodically by the commission covered 60 of the government's 64 agencies and made 314 recommendations, approximately half of which would require legislation before enactment. The general subject, major provisions, and date of issuance of these reports were as follows:

Personnel and Civil Service (Feb. 13, 1955).—Recommended creation of a "senior Civil Service group" of nonpartisan, well-paid executives of exceptional skill and considerable experience, and the political appointment of more executives to assume partisan duties.

Paper Work Management (first part, February 20; second part, July 17, after the commission's termination).—Recommended a paper work management program, and proposed that the General Services Administration supervise all such work in the executive branch.

Federal Medical Services (February 27).—Recommended creation of an advisory council of health to advise on all aspects of government health programs; stricter control of medical care for veterans; and closing of certain uneconomic hospitals.

Federal Lending Guaranteeing, and Insurance (March 13).—Recommended liquidation or curtailment of federal lending services in favor of private interests.

Transportation Operations (April 3).—Recommended methods for ending waste and inefficiency in federal transportation operations.

Legal Services and Procedures (April 10).—Recommended creation of a 3-section federal administrative court to deal with judicial aspects of taxation, trade, and labor.

Use and Disposal of Federal Surplus Property (April 17).—Recommended more efficient and economical methods for disposing of and reducing excess and surplus stock.

Subsistence Services: Food and Clothing (April 24).—Recommended creation of two central agencies in the Defense Department to manage purchasing, distributing, and storing food and clothing for the armed forces.

Business Enterprises in Competition With Private Enterprise (May 15).—Recommended termination or transfer to private hands of over 1,000 government enterprises, including the Postal Savings System, post exchanges, bakeries etc.; termination of all chemical research by the Tennessee Valley Authority; and increase of parcel post rates "to eliminate unfair competition" with private express service.

Depot Utilization: Warehousing and Storage (May 25).—Recommended means of eliminating duplication and waste in government storage.

Research and Development in the Government (May 31).—Recommended appropriation of more funds, higher salaries, and more personnel to accelerate scientific research and development in both military and civilian programs.

Overseas Economic Operations (June 5).—Recommended continuation of foreign aid, but on a reorganized, more economical basis, and declared that the primary purpose of foreign aid should be that of strengthening the security of the United States.

Real Property Management (June 13).—Recommended strengthening the Bureau of the Budget and the General Services Administration to effect tighter administrative control on federal property dealings.

Budget and Accounting (June 19).—Recommended adoption of private business methods in budgeting and accounting, including the shifting of the executive budget and congressional appropriations from an obligation to an accrued expenditures basis; and creation

of an Office of Accounting under the Bureau of the Budget.

Business Organization of the Department of Defense (June 26).—Recommended creation of a civilian-administered fourth branch of the Defense Department to supply the armed forces with nonmilitary goods, such as food and clothing.

Intelligence Activities (June 28).—Expressed concern over the lack of adequate intelligence information on the USSR, and recommended reorganization of the CIA and creation of a permanent commission consisting of members of Congress and presidential appointees to observe its operations.

Water Resources and Power (June 29).—Recommended a power policy designed to equalize public and private power rates, and the return of public power production to private enterprise wherever possible.

Final Report (June 30).—Recommended that supervision of 33 of the 64 agencies reporting directly to the president be undertaken by other officials; listed estimates of potential savings totaling \$8.5 billion annually, and an additional \$10 billion which could be derived from the recovery of investments, liquidation of liabilities, and property sales.

Among the commission's announced objectives were: the preservation of national security; the stimulation of fundamental research; the improvement of efficiency and elimination of waste in executive agencies; the elimination or reduction of government competition with private enterprise; and the strengthening of the national economic, social, and governmental structure. The general tenor of its recommendations was expressed by Chairman Hoover when he stated that "private enterprise is the root of our system, and the underlying thesis of the commission has been to preserve and strengthen the fundamentals of our system and government." Thus a great many of the recommendations were the subjects of partisan controversy. In a dissenting statement accompanying the final report, Representative Holifield declared that in dealing with United States policy, the commission was usurping the function of Congress. After the commission passed out of existence on June 30, 1955, bills designed to implement most of its recommendations requiring legislative action were introduced in Congress.

W. V. S.

Chiefs of Hoover Commission on government reorganization, which was terminated in 1955, are ex-President Hoover (r.), chairman, and W. H. Tuck, executive director.

WIDE WORLD

* Members appointed by the president were: Herbert Hoover (chairman); Herbert Brownell, Jr., attorney general of the United States; James A. Farley, former postmaster general; and Arthur S. Flemming, director of defense mobilization; those appointed by the vice president were: Homer Ferguson, former Republican senator from Michigan (resigned April 4, 1955, succeeded by Styles Bridges, Republican senator from New Hampshire); John L. McClellan, Democratic senator from Arkansas; Solomon C. Hollister, dean of the Cornell School of Civil Engineering; and Robert C. Storey, dean of the Southern Methodist University Law School; those appointed by Representative Martin were: Clarence J. Brown, Republican representative from Ohio; Chet Holifield, Democratic representative from California; Joseph Kennedy, former ambassador to Great Britain; and Sidney Mitchell, executive director of the first Hoover Commission.

HORGAN, Paul, American author: b. Buffalo, N.Y., Aug. 1, 1903. A prolific and versatile writer, he was awarded the 1955 Pulitzer Prize in history (announced May 2, 1955) for his book, *Great River: The Rio Grande in North American History* (1954).

Moving with his family to Albuquerque, N. Mex., early in his youth, Paul Horgan enrolled in the New Mexico Military Institute at Roswell in 1920. After three years as a student, when he also worked as a reporter and music critic for the Albuquerque *Morning Journal*, he returned to the East to become a student of singing at the Eastman School of Music in Rochester, N.Y. (1923-26). In 1926 he was appointed librarian of the New Mexico Military Institute, a post he held until 1942, when he entered the U.S. Army. He was awarded the Legion of Merit for his services as chief of the Army Information Branch of the War Department's Information and Education Division. After the war, he taught in the graduate school of the University of Iowa during the first half of 1946 before being named assistant to the president at the New Mexico Military Institute. He held the latter post until 1950.

Horgan has published numerous works in fiction and history, including *Men of Arms* (1931); *The Fault of Angels* (1933; winner of the Harper Prize Novel Award); *No Quarter Given* (1935); *Main Line West* (1936); *A Lamp on the Plains* (1937); *Far from Cibola* (1938); *The Habit of Empire* (1939); *Figures in a Landscape* (1940); *The Common Heart* (1942); *One Red Rose for Christmas* (1952); and *The Devil in the Desert* (1952). He is also the author of an opera, *A Tree on the Plains* (music by Ernst Bacon, 1942); and a play, *Yours*, A. Lincoln (1942).

HORTICULTURE. During 1955 major interest has been in the marketing, storage, and handling of horticultural products. Rising labor and transportation costs and relatively low commodity prices, coupled with available federal marketing research funds and the widespread use of plastic film for packaging and storage, have spurred activity in this field. Merchandising studies have been conducted to explore methods of selling increased volume through chain stores and supermarkets. Growing ornamental plants, especially roses and evergreens, in cheap metal or paper containers has lengthened the sales and planting season. Controlled atmosphere storage for fruits, and the commercial storage of cut flowers at 31°F. have been increasingly adopted. The preparation of vegetable commodities at the point of origin in consumer packages ready for use has also made progress.

Fraudulent advertising of horticultural products has been discouraged by the imposition in the courts of heavy fines and imprisonment for violators.

The practice of irrigation on horticultural crops under intensive cultivation in the central and eastern United States has been increasing rapidly.

A significant step toward the standardization and registration of names of horticultural plants is the invitation of the 14th International Horticultural Congress to the American Rose, Iris, Hemerocallis and Holly societies to act as the international registration authorities for fancy names of varieties of plants within their specialties.

Research.—Basic research on the environmen-

tal factors of temperature, light, length of day, and soil and water relations continues at a high level. In addition, emphasis has been placed on the evaluation of various trends and practices which have been in evidence for some time. The application of fertilizers by foliar sprays has proved to be of some value with certain fruits under special conditions, but is not considered an inexpensive or effective way to apply fertilizers, and has only limited use. Leaf analysis to determine nutrient needs of crops, although a useful tool under some conditions, is proving to be limited in its application.

The place of the plant hormones in horticulture is becoming stabilized as the effect of these substances is better understood. Their use for stimulating root formation, thinning fruit by blossom sprays, preventing fruit drop at harvest, and controlling weeds is becoming standard practice. Effective chemical weed control is being extended to new crops as more materials are tested for their selective value. A selective weed control in tomato plantings is promising.

The propagation of plants by cuttings, using intermittent mist and the growing of florist crops under mist, is gaining favor.

Insects and Diseases.—The Dutch elm disease has now spread almost throughout the natural range of the American elm. Control measures are so costly as to be impractical in forest areas, so that utilization of elms before they are killed by the disease is recommended. Effective protection is possible in restricted areas where the cost of control measures is justified.

Many insect pests, including the two-spotted mite, the cabbage looper, and the potato beetle, have developed spray-resistant strains and present serious control problems. The systemic poison, Cystox, has been cleared for use on some fruits. New and promising nontoxic materials for the control of mites are being tested. (See also AGRICULTURAL RESEARCH SERVICE.)

New Varieties.—Circus, a multicolored floribunda rose, is the 1955 choice of the All American Rose Selections. The All America Seed Selections awarded their bronze medal to the crested coxcomb, variety Toreador, and to the giant columbine, variety McKana. The Michigan State Experiment Station introduced two new peach varieties, the Sunhaven and the Richhaven. Ned Seymour is a new dahlia introduction.

Awards.—The George Robert White Medal of the Massachusetts Horticultural Society went to Richard P. White, and its Jackson Dawson Medal to Paul Vossberg. The Men's Garden Club awarded its gold medal to F. F. Rockwell, and the Johnny Appleseed Medal to James Handy.

The awards of the American Society for Horticultural Science for the best research papers published were as follows: Alex Laurie Award to H. M. Cathey for *Chrysanthemum Temperature Studies*; Leonard Vaughan Award (Floriculture) to B. L. Johnson for *Effect of Crossovers on Deterioration in Percentage of Doubles in Ever-sporting Lines of Matthiola incana* (stocks); Woodbury Award to Otmar Silberstein for *Volatile Carbonyl Compounds of Vegetables and their Possible Role in Flavor*; J. H. Gourley Award (Pomology) to E. L. Probsting and A. L. Kenworthy for *Growth and Leaf Analysis of Montmorency Cherry Trees as Influenced by Color Radiation and Intensity of Nutrition*; Vaughan Award (Vegetable Crops) to C. M. Geraldson for *Control of Blackheart of Celery*.

Merit awards of the American Horticultural Council were as follows: Mrs. Bessie R. Buxton,

Ezra Jacob Kraus, H. Harold Hume, James H. Burdett, Harland P. Kelsey, Eric Walther, Richardson Wright, Fred F. Rockwell, Edward I. Farrington, and Edward L. D. Seymour.

The Norman J. Colman Award of the American Association of Nurserymen went to H. Harold Hume for his book, *Hollies*. The Society of American Florists' Award for outstanding research of the year went to Henry M. Cathey. The first Garden Writer's Award went to Jean Lawson of *House Beautiful*.

Books.—Among recent books on horticulture are: *Growing Plants under Artificial Light*, by Peggy Schulz; *Fruit Nutrition*, by Norman F. Childers; *Improved Nut Trees of North America*, by C. A. Reed and John Davidson; *The Care and Feeding of Garden Plants*, edited by Kenneth Post; *The Pruning Manual*, by E. P. Christopher; *Cacti and Succulents*, by G. Gilbert Green; and *A Treasury of American Gardening* edited by John Whiting.

L. H. MACDANIELS,

Professor of Horticulture and Head of the Department of Floriculture and Ornamental Horticulture, Cornell University.

HOSPITALS. Starting in August 1955, the official source for all hospital statistics is *Hospitals* (Part 2), published each year by the American Hospital Association (AHA). As a result of joint action, the American Medical Association will discontinue its program of registration of hospitals which began in 1909 and has been published annually since 1931. The AHA will expand its statistical program to include certain tabulations on hospital utilization, nursing and nursing schools, and paramedical personnel.

HOSPITAL STATISTICS, 1954

(Source: *Hospitals*, Part 2, Administrators Guide Issue, August 1954)

	United States	Canada
Number of hospitals (total) . . .	6,970	852
Short-term nonfederal . . .	5,212	661
Short-term nonprofit . . .	3,056	434
Number of beds (total) . . .	1,577,961	159,421
Short-term nonfederal . . .	553,068	67,050
Short-term nonprofit . . .	377,863	51,078
Admissions (total) . . .	20,345,431	1,981,350
Short-term nonfederal . . .	18,391,675	1,842,941
Short-term nonprofit . . .	13,364,431	1,419,164
Births in hospitals (all) . . .	3,342,599	252,051
Average daily census (all) . . .	1,342,508	133,684
Short-term nonfederal . . .	392,969	50,912
Short-term nonprofit . . .	273,818	38,978
Per cent occupancy (all) . . .	85.1	83.9
Short-term nonfederal . . .	71.1	75.9
Short-term nonprofit . . .	72.5	76.3
Average days stay:		
Short-term nonfederal . . .	7.8	10.1
Short-term nonprofit . . .	7.5	10.0
Outpatient visits (total) . . .	65,397,318	...
Short-term nonfederal . . .	50,408,617	...
Short-term nonprofit . . .	30,690,537	...
Plant assets per bed (all) . . .	\$5,640	...
Short-term nonfederal . . .	\$8,256	\$7,043
Short-term nonprofit . . .	\$8,663	\$7,469
Operating expenses (all) . . .	\$5,229,040,000	\$415,368,000
Short-term nonfederal . . .	\$3,120,598,000	\$261,158,000
Short-term nonprofit . . .	\$2,276,457,000	\$201,878,000
Cost per patient day:		
Short-term nonfederal . . .	\$21.76	\$14.05
Short-term nonprofit . . .	\$22.78	\$14.19
Payroll (all hospitals) . . .	\$3,344,416,000	\$244,756,000
Short-term nonfederal . . .	\$1,894,987,000	\$154,154,000
Short-term nonprofit . . .	\$1,366,400,000	\$118,256,000
Number of full-time personnel . . .	1,245,669	115,740
Short-term nonfederal . . .	777,215	75,656
Short-term nonprofit . . .	567,871	58,657
Personnel per 100 patients (all) . . .	93	87
Short-term nonfederal . . .	198	149
Short-term nonprofit . . .	207	150

Hospital Finance.—Nonprofit general hospitals, which care for a large majority of the acute short-term cases, spent \$22.78 a day for each patient during 1954, an increase of \$1.69 since

1953. Much of this rise may be attributed to increased payroll expenses of \$1.32 per day during the same period. Payroll expenses during 1954 were \$13.67 per day, representing 60% of total expenses.

Patients in nonprofit general hospitals provided 90.4% of the total hospital income in 1954. Each patient paid an average of \$1.71 per day less than the cost of caring for him. Total income of nonprofit general hospitals during 1954 was \$2,330,005,000, or \$23.31 per patient day.

Primary sources of nonpatient income, which totaled \$223,811,000 in 1954, are endowments, subsidies from state and local governments (often in lieu of payment for charity cases), community chests, organized fund drives, and gifts from individuals. Nonpatient income, which in 1946 provided 16.5% of total hospital income, declined to 9.6% of total income in 1954.

The Commission on Financing Hospital Care in the United States, a nongovernmental study group sponsored by the AHA and financed by foundations and industry, published its findings and recommendations in a three-volume report. Many recommendations are made for future hospital and community action in the areas of *Factors Affecting the Cost of Hospital Care*, *Prepayment and the Community and Financing Hospital Care for Non-Wage and Low Income Groups*.

Hospital Construction and Research.—Funds totaling \$111 million were appropriated by Congress to continue the services of the Hospital Survey and Construction Act during the fiscal year ending June 30, 1956. Of this total, \$21 million is allocated for the construction of diagnostic treatment centers, chronic-disease hospitals, nursing and convalescent homes, and rehabilitation facilities. For the first time, an appropriation of \$1.2 million was made for research studies on "effective development and utilization of hospital services, facilities and resources."

Accreditation of Hospitals.—During 1954 the Joint Commission on the Accreditation of Hospitals examined survey reports of 1,385 hospitals. The approval list as of Dec. 31, 1954, included 3,513 hospitals in the United States, 585 of which are only provisionally approved. Hospitals which receive provisional approval are inspected twice during the following two years; if they still do not meet the joint commission standards they are removed from the approval list.

Health Services for the Needy.—A joint committee of the American Dental Association, American Hospital Association, American Medical Association, American Public Health Association, and American Public Welfare Association has written a statement of 14 principles on the provision of tax-supported personal health services (hospital care, and care of physicians, dentists, and other health personnel) required for those individuals who are unable to obtain such services through their own resources or with the assistance of family or voluntary agencies. Among the principles approved by the AHA were:

- (1) Tax-supported personal health services . . . should be administered by an appropriate government unit . . . as close to those being served as is consistent with economical . . . administration.
- (2) This responsibility should be assumed by a single government agency at each level of government.
- (3) Care provided in tax-supported personal health service programs . . . should meet as high standards . . . as are available to others in the community.
- (4) Persons eligible for service should . . . receive care from a family physician, dentist or clinic . . . of their choice.

(5) Financial eligibility . . . should be determined by a public agency. . . . The process of determining eligibility should not delay receipt of necessary care.

(6) Methods and amounts of payment . . . should be equitable and determined in conference between the responsible public agency and representatives of the providers.

JAMES A. HAMILTON,
*Professor of Hospital Administration,
University of Minnesota.*

HOTELS. Average room occupancy of hotels in the United States during the first nine months of 1955 was 72%, 1% lower than in the corresponding period of 1954, but there was a 4% rise in the average room rate. On a 12-month basis, however, the 1954 rate was also 72%, according to Horwath & Horwath, national hotel accounting and consulting firm. Highest rate of occupancy (92%) occurred in 1946.

Latest available Bureau of the Census data revealed that in 1948 there were 29,650 hotels of all sizes, with 1,550,000 guest rooms and a combined sales volume of \$2,173 million. Between January 1949 and July 1955, according to the Ahrens Publishing Company, 596 new hotels with almost 86,000 guest rooms were added. These additions represented an expenditure of slightly more than \$1 billion, or a per-room expenditure of almost \$12,000.

As of July 1955 the Ahrens organization placed the American hotel industry at 30,246 hotels of all sizes, with 1,654,000 guest rooms. The industry has an approximate value of \$8 billion, including land, buildings, and furniture and fixtures. Hotels employed between 460,000 and 500,000 persons in 1955.

Gross sales by the nation's hotels in 1954 were estimated at \$2,439 million, and increased by 3% in the first nine months of 1955. Approximately 46% of the 1954 income was derived from room sales, and 47% from food and beverage sales.

The American Hotel Association estimates that American hotels are currently spending about \$300 million annually for modernization. Part of this expenditure is for parking lots and garages to attract motorists.

In addition to some 35 new major conventional or vertical hotels built between January and July 1955, hotel interests announced the building of 26 new luxurious motor hotels with 5,460 guest rooms. This activity reflects an expenditure of almost \$61 million. Total known

expenditures for all new hotels and additions were \$260 million in the first six months of 1955, resulting in the addition of 17,800 rooms.

The most conspicuous hotel opening in 1955 was that of the \$18 million Beverly Hilton in Beverly Hills, Calif. On a cost per room basis (\$44,000), it is the most expensive hotel ever built. The greatest concentration of other new hotels opening in 1955 was at Miami Beach, Fla., with, among others, the swank Fontainebleau (554 rooms, \$15 million) and the Eden Roc, Seville, Bal Harbour, and Lucerne hotels; and in Las Vegas, Nev., with the Riviera (315 rooms, \$3.5 million) leading the list. The first part of a large project in Disneyland (q.v.), Anaheim, Calif., was also completed.

Among the most important hotels finished abroad in 1955 were the Istanbul Hilton in Turkey, the Westbury and Leofric hotels in London, and the Princess Kaiulani in Honolulu, Hawaii.

WALTER O. VOEGELE,
Editor, "Hotel Management."

HOUSING. Figures covering the first six months of 1955 forecast an annual construction rate of 1,300,000 private and public, urban and rural nonfarm dwelling units in the United States—the sixth consecutive year in which over 1 million units will have been built. During this period the number of starts equaled 684,300, an increase of 114,800 (or 20%) over the number in the comparable period of 1954. Public housing starts declined by 1,000 (from 10,800 to 9,800) so that the increase was due entirely to the boom in private housing construction. (See also BUILDING AND CONSTRUCTION.)

Statistics as to type of housing indicate that, compared with the first six months of 1954, the increase in the number of one-family house starts was entirely responsible for the overall rise. During this period, one-family house starts amounted to 612,500, an increase of 115,700 over the 496,800 such starts in the first six months of 1954. Two-family house and multiple-dwelling starts showed no significant change (17,700 and 54,100 in 1955, as against 16,300 and 56,400 in 1954, respectively).

An important change in the method of financing new dwellings took place beginning in late 1954 and continuing into 1955. Whereas starts financed by the Federal Housing Administration (FHA) remained relatively stable (declining

Part of the New York Life Insurance Company's 2,000-unit apartment project, shown under construction in Chicago.

CHICAGO PLAN COMMISSION

from 26% of all housing starts in 1951 to 23% in 1954), starts financed by the Veterans Administration (VA) mounted from 15% of all starts in 1951 to 26% in 1954 and to 29% in the first six months of 1955. This aspect of the housing picture had a great influence on federal credit policies. (See below, *Federal Credit Policies*.)

In the first six months of 1955 the advance in dollar value of new, nonfarm private residential construction amounted to 28% over the corresponding period in 1954 (\$7,202 million, as against \$5,598.3 million in 1954).

Mortgage Financing.—The dollar volume of recorded nonfarm mortgages of \$20,000 or less rose 36% from \$10,170 million in the first six months of 1954 to \$13,910 million in the corresponding period in 1955. The average amount of each mortgage registered a 12% increase, from \$6,399 to \$7,183.

Costs.—In July 1955, most cost indexes stood at an all-time high. This was true of the Boeckh Index of residential construction costs (124.6), based on average costs for the years 1947-49; the Boeckh Index of apartment, hotel, and office building costs (131.5); and the index of production and price of building materials (both of which stood at 125.7). Residential rents climbed to 130.4 (the average for the first six months of 1954 was 128.1). Average hourly earnings (\$2.64) in building, however, showed no significant change from the levels reached in December 1954 (\$2.65).

Congressional Action.—On Aug. 11, 1955, President Dwight D. Eisenhower signed the bill known as the Housing Amendments of 1955, which thus became Public Law 345. Its principal provisions included the following:

Urban Renewal.—The original capital grant authorization of \$500 million was increased by an additional \$200 million as of July 1, 1955, and by another \$200 million as of July 1, 1956. The president was authorized to increase the amounts at any time by an additional \$100 million.

The original requirement that not more than 10% of all grants made under this program by the federal government be allocated to any one state was amended to permit \$70 million to be allocated to local public agencies in states where more than two thirds of the permitted maximum has been obligated.

Public Housing.—The Public Housing Administration (PHA) was authorized to enter into new contracts for loans and annual contributions for 45,000 units in the period between the enactment of the bill and July 31, 1956 (the president had requested 70,000 units over a two-year period).

Certain restrictions in the Housing Act of 1954 were eliminated. These had formerly limited public housing to cities with Title I Urban Renewal projects, had also required certification by the local governing body that new public housing units were needed for relocation purposes, and had required a determination by the HHFA administrator that not more than the number of units needed for relocation purposes were placed under contract.

The requirement that a community must have a "workable program" for eliminating and for preventing the recurrence of slums and blight was retained as a prerequisite for federal grants for urban renewal, but it was eliminated as an eligibility requirement for federal aid for public housing.

Federal Housing Administration Programs.—

The FHA's general mortgage insurance authorization over and above outstanding insurance liability and commitments on June 30, 1955, was increased by \$4 billion.

The Title I home repair, modernization, and improvement program was extended to Sept. 30, 1956.

The dollar limitation (applicable only to each insured mortgage, not to individuals or corporations) on FHA-insured mortgages on multifamily housing under Sections 207, 213, 220, and 221, was increased from \$5 million to \$12.5 million.

Whereas formerly, in order to qualify for mortgage insurance on rental properties under Sections 207 and 213 a project had to include at least 12 units, the new measure reduced the number to 8.

Henceforth the maximum mortgage amounts under Sections 213 and 220 will be determined not on the basis of "estimated value" of the property, but on the basis of "estimated replacement cost." The purpose of this amendment was to bring the maximum mortgage amount closer to the actual cost of construction of a given project, and thus to help stimulate the rental and cooperative housing programs, which were at a virtual standstill since the "windfall profits" investigations of 1954.

Fifty million dollars was made available to the Federal National Mortgage Association (FNMA) to enter into advance commitments to purchase FHA-insured Section 213 cooperative mortgages, subject to the limitation that not more than \$5 million may be committed in any one state. Also, to assist the exceedingly slow-moving cooperative housing program, a special assistant with adequate staff was made available to the FHA commissioner.

The rental housing section (207) was amended to include insurance on land, utilities, and other improvements in trailer parks, with a maximum limit set at \$1,000 per trailer or \$300,000 per mortgage.

Miscellaneous Provisions.—Title IX (defense housing and community facilities program) was discontinued, except for commitments issued before Aug. 1, 1955.

The military housing program under Title VIII was extended to Sept. 30, 1956. A 100,000-unit program was authorized, and the FHA was empowered to insure such units for 25 years at 4% interest to the extent of \$1.3 billion over and above its general insurance authorization, provided that the maximum insured mortgage may not exceed \$13,500 per unit. The FNMA was authorized to purchase mortgages under this title to the extent of not more than \$200 million.

Also broadened were the college housing program (to include not only college housing, but also educational facilities such as cafeterias, student centers, etc.) and the farm housing program. In both instances the amount of funds available was increased, and in the college housing program, interest rates were reduced and the maximum term of loans increased from 40 to 50 years. Also, \$100 million from the U.S. Treasury was made available to the HHFA administrator for 40-year loans for public facilities in communities of less than 10,000 population, and additional funds were made available for the advance planning of public works under Section 702.

Federal Credit Policies.—A tightening of credit policies announced by the government in late July may have a more significant effect on the future volume of home-building than any measure enacted by Congress. The new rules were

put into effect in order to eliminate a possible cause of inflationary pressures in the national economy. Particularly worrisome to the government was the significant rise in mortgages insured by the VA (70% in the first six months of 1955 as against an increase of only 17% in FHA loans). Under the VA program, a qualified home buyer did not have to make any down payment.

Under the new rules, home buyers under the VA program would henceforth have to pay 2% of the purchase price of the dwelling, plus closing costs. FHA down payments were increased by 2% of the purchase price of the dwelling (which, in some instances, amounted to a doubling of the required down payment). Finally, maximum mortgage terms were reduced from 30 to 25 years for FHA-insured loans and to 25 years 32 days for VA loans. The full effect of these new credit restrictions was not fully felt by late 1955.

Activities Under the Housing Acts of 1949 and 1954.—As of November 1955, the Urban Renewal Program (which now includes the former Slum Clearance and Urban Redevelopment Program) had 108 projects under construction, as against 73 in July 1954. Of the \$700 million total capital grant authorization, over \$182 million in grants were under contract. The amount of loans committed (\$181,958,000) was almost equal to the amount of the capital grants.

As of Oct. 31, 1955, the HHFA administrator had certified the "workable programs" (locally developed long-range programs to eliminate and prevent slums and blight) of 70 communities in 23 states and Puerto Rico.

Under the Urban Planning Assistance Program (Section 701), which makes funds available on a matching basis to communities with less than 25,000 population and to state and metropolitan planning agencies for planning purposes, HHFA had awarded grants totaling about \$160,000 to six state and metropolitan planning agencies as of the end of fiscal year 1955. The total available for such grants is \$5 million.

During the same year, the PHA had placed under contract 29,509 low-rent housing units out of the total of 35,000 authorized in the Housing Act of 1954. In October the PHA announced that the 45,000 units authorized in 1955 will be allocated first to communities in need of such housing for relocation of families displaced by Title I projects and to communities desiring to correct any racial inequities in their existing housing programs.

U.S. Supreme Court Action.—In a far-reaching decision handed down in late 1954, the U.S. Supreme Court upheld the constitutionality of the District of Columbia Redevelopment Act of 1945 (*Berman v. Parker, et al.*). Perhaps the most important aspect of this decision lies in the statement of the purposes and extent of the application of the police power. Public safety, public health, morality, peace and quiet, law and order were described as being illustrative of, rather than delimiting, the scope of the power. The decision, written by Justice William O. Douglas, goes on to say: "... the concept of the public welfare is broad and inclusive ... The values it represents are spiritual as well as physical, aesthetic as well as monetary. It is within the power of the legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well-balanced as well as carefully patrolled. ..."

This decision upheld the right of the redevelopment agency to condemn individual nonsub-

standard properties if their acquisition was required for the coordinated redevelopment of an essentially substandard area. As early as March 1955, at least one state court (Wisconsin) was influenced by this decision to the extent of reversing its previous attitude toward the application of the police power for purely aesthetic purposes.

State Court Action.—The challenge to the construction of public housing projects on vacant land, rather than on land cleared of slums, was dismissed in two decisions handed down by the Pennsylvania Supreme Court and by the Kentucky Court of Appeals.

The so-called Gwinn Amendment (under which occupancy of premises in federally aided housing projects is denied to persons who are members of organizations designed as subversive by the attorney general) was declared unenforceable by the Supreme Court of Illinois on the grounds that exclusion of otherwise qualified persons from such housing does not further the statutory purposes of the Illinois Housing Authorities Act, which purposes are slum eradication and the provision of housing for persons of low income. At the same time, a lower court in the state of Washington upheld the constitutionality of the amendment. In New York, New Jersey and California this issue was still being litigated. In October 1955, the U.S. Supreme Court refused to review a decision of the Wisconsin Supreme Court which held the Gwinn Amendment unconstitutional.

A suit charging discrimination in the sale of FHA-insured housing and seeking an injunction against the FHA and the VA to bar them from extending loan insurance to a Pennsylvania builder was dismissed by a United States district court on the grounds that neither the FHA nor the VA have been charged by Congress with the duty of preventing discrimination in the sale of housing financed with their aid.

State and Local Actions.—In Arkansas and in Massachusetts, bills which would have authorized the sale of publicly aided housing projects to private parties were defeated.

Georgia, Kansas, North Dakota, and Oklahoma passed redevelopment enabling legislation, thus bringing the total number of states with such legislation on the books to 36 (plus the District of Columbia, Puerto Rico, Hawaii, Alaska, and the Virgin Islands). The Kansas law is applicable only to communities of more than 75,000 people.

A series of significant housing steps was taken in 1955 by the New York State Legislature. It includes the following:

(1) The total amount the state may pay in subsidies in any one year to maintain low rents in state-aided public housing projects was increased from \$25 million to \$34 million by a constitutional amendment approved by the voters. This cleared the way for the construction of the additional public housing authorized by the voters in 1954.

(2) Cities were authorized to give 12-year tax exemptions on the increased value of properties brought up to standard, and a 9-year tax abatement on 8.3% of the cost of the alterations.

Families displaced from slum clearance areas, whose income would otherwise disqualify them from occupancy in public housing, may be relocated in such projects provided that their incomes do not exceed the maximum for continued occupancy. Such families are required to move out at the end of one year, unless the removal would occasion undue hardship.

(3) By a referendum vote, the state was authorized to use \$50 million of the \$200 million previously authorized for loans for public housing for the purpose of making loans to limited profit corporations for rental and cooperative housing developments. The legislature authorized cities to make loans to such corporations for the same purposes. Both city and state loans may cover 90% of the cost of construction and may be made for a period of 50 years at the rate of interest paid by the city and state to obtain the funds, plus a charge for administrative expenses. Cities are also authorized to exempt limited profit housing corporations from taxes up to 50% of the full value of the new developments, or up to the total difference between such full value and the assessed value of the land and buildings at the time they were acquired for the development, whichever is less.

(4) Discrimination because of race, creed or color was prohibited in the rental of multifamily housing in New York City and Buffalo financed after July 1, 1955, with the assistance of federally insured mortgages of the FHA types. The law also prohibits discrimination by any person who owns or controls the sale of ten or more single-family houses located on contiguous land and financed after July 1, 1955, with the aid of FHA or VA mortgages.

In Illinois, redevelopment agencies were authorized to borrow funds from private sources to be secured with pledges of federal loan contracts, for the purpose of achieving interest rates lower than the existing federal rate. The redevelopment of slum areas for other than residential purposes was also authorized. In Wisconsin, Gov. Walter J. Kohler vetoed two bills which would have permitted the sale of public housing projects and would have called for a local referendum on all future construction of such housing. Later he signed a bill which authorizes, among other things, a city council to liquidate a city housing authority and dispose of its assets to the highest bidder. It also authorizes a city council to take the same action with an urban renewal project being carried out under Wisconsin's Blighted Areas Law.

A constitutional amendment passed in Rhode Island specifically included urban renewal activities (including rehabilitation and improvement of blighted and substandard areas) among the activities of redevelopment agencies.

The Connecticut moderate rental housing program, inaugurated in 1947, was expanded by the appropriation of \$15 million. Construction funds will be allocated first for the purpose of rehousing families displaced by public improvement projects, including redevelopment.

New Jersey prohibited discrimination in the granting of mortgage loans. A local ordinance in Milwaukee, Wis., aims to prevent private construction on lands scheduled to be acquired by the city for public improvement programs. In Providence, R.I., the voters approved a \$2.5 million bond issue to be added to the city's \$2 million revolving fund for redevelopment purposes.

HOUSING AND HOME FINANCE AGENCY. See HOUSING.

HULL, Cordell, American statesman: b. Star Point, near Olympus village, Overton County, Tenn., now part of Pickett County, near Byrdstown, Oct. 2, 1871; d. Bethesda, Md., July 23, 1955. As United States secretary of state for over 11 years in the administration of President Franklin D. Roosevelt, he was instrumental in founding the reciprocal trade program of the United States, played a prominent role in the development of the Good Neighbor policy, and participated in the diplomatic meetings that gave birth to the concept of the United Nations.

The son of a backwoods lumberman, Cordell Hull received his education in the rural schools of Overton County, the National Normal University in Lebanon, Ohio (1889-90), and the Cumberland University Law School (1890-91) in Lebanon, Tenn. He was admitted to the Tennessee bar in 1891. An ardent Jeffersonian Demo-

Cordell Hull
(d. July 23, 1955)

WIDE WORLD

crat, he won his first political office in 1892 with his election to the state legislature.

After the Spanish-American War, in which he served as a captain of the 4th Tennessee Regiment in Cuba, Hull returned to Tennessee, where in 1902 he was elected judge of the 5th Circuit. He held that office until 1907, when he was sent to the U.S. House of Representatives by the 4th Tennessee District. With the exception of the years 1921-24, when he served as chairman of the Democratic National Committee after losing his congressional seat, he served in the House until 1931. As a member of Congress, he waged a constant battle for lower tariffs, and sponsored the federal income tax law of 1913, the revised tax law of 1916, and the federal inheritance tax law of 1916. In 1930 he was elected to the Senate, and on March 4, 1933, he was appointed secretary of state by the president-elect, Franklin D. Roosevelt.

Hull's appointment as secretary of state came at a critical period in world affairs. The depression was still in an acute stage, and the United States' political and economic relations with European and Latin American countries were at their lowest ebb. Hull believed that international tensions and economic pressures could be eased by the liberalization of trade. At the London Economic Conference, convened on June 12, 1933, he unsuccessfully endeavored to bring about agreement on his trade program. He finally won his battle on June 12, 1934, when Congress enacted the Trade Agreements Act, which gave recognition to the principle of reciprocal trade. By 1939, 21 reciprocal trade agreements had been negotiated.

Hull's efforts to develop more cordial relations with the countries of Latin America were no less dedicated. As head of the American delegation

at the Seventh International Conference of American States, convened at Montevideo on Dec. 3, 1933, he did much personally and diplomatically to give substance to the Good Neighbor policy of the United States. Subsequently he accompanied President Roosevelt in December 1936 to the Inter-American Conference for Peace in Buenos Aires; and led the United States delegation at the Eighth International Conference of American States at Lima (convened Dec. 10, 1938), and at the First Meeting of Foreign Ministers of the American Republics at Panama (convened Sept. 23, 1939), at which he sought with increasing success to bring the 21 countries of the Western Hemisphere into solid alignment against aggressor nations. He also attended the second and third meetings of American foreign ministers in Havana (convened July 21, 1940) and in Rio de Janeiro (convened Jan. 15, 1942), which succeeded in ironing out the hemisphere's war problems and in bringing about the severance of relations between the Axis powers and all the American republics except Chile and Argentina.

With the entry of the United States into World War II, the major role in diplomacy shifted from the secretary of state to the president. Hull played an important part, however, in the major conferences which developed the postwar program for international peace. Although suffering from poor health, he headed the United States delegation at the Moscow Conference (Oct. 19–31, 1943). There, with Anthony Eden and Vyacheslav Molotov, he assisted in writing the Moscow Declaration, which pledged the establishment of a new world organization for peace. On his return to the United States he reported the results of his mission to a joint session of Congress (Nov. 18, 1943), the first time in American history that a cabinet member had been invited to do so. Hull was also an important figure at the Dumbarton Oaks Conference (Aug. 21–Oct. 7, 1944), at which the first draft of the United Nations Charter was penned.

On Nov. 30, 1944, Hull was forced to resign as secretary of state because of ill health. Nevertheless, he was made a member and senior adviser of the American delegation, headed by the new secretary of state, Edward R. Stettinius, Jr., at the United Nations Conference on International Organization in San Francisco (April 25–June 26, 1945). Although his illness made it impossible for him to attend, he was in constant touch with the proceedings, and, when the conference ended, the United Nations Charter was flown to Washington, where, on June 29, Hull climaxed his long and distinguished career by signing the document for the United States. For his part in making the United Nations a reality, he was awarded the Nobel Peace Prize for 1945.

Cordell Hull spent almost all of his last years in the Naval Hospital at Bethesda, Md. During this time he wrote his memoirs, published in 1948. Mrs. Hull, the former Mrs. Rose Frances Witz Whitney, to whom he had been married on Nov. 24, 1917, died on March 26, 1954.

HUMAN RIGHTS. See Index entry.

HUMPHREY, George Magoffin, American public official: b. Cheboygan, Mich., March 8, 1890. A leading industrialist and banker, appointed chairman of the M. A. Hanna Company in May 1952, Humphrey took office as secretary of the Treasury on Jan. 21, 1953. Humphrey had previously served as chairman of the Business Advisory

Council of the Department of Commerce (1946) and as head of the Reparations Survey Committee of the Economic Cooperation Administration (1948–49).

In his first two years as secretary of the Treasury, Humphrey characterized the Eisenhower fiscal policy as seeking to reduce government spending to avoid inflation and eliminate "incentive-destroying taxation." In line with the administration's "hard money" policy, Humphrey in April 1953 defended the high interest rate on a Treasury bond flotation as an anti-inflationary measure necessary for economic stability. In early 1954, Humphrey termed the 1953–54 recession a "rolling readjustment" to a peacetime economy, and advocated tax reductions for business to encourage production. Humphrey led the United States delegation to the 21-nation Inter-American Economic Conference in Petrópolis, Brazil, Nov. 22–Dec. 2, 1954.

In 1955, Humphrey stressed balancing the budget before reducing taxes. On February 28, he told a congressional committee that the administration favored tax cuts only in conjunction with reduced spending and increased revenue, and opposed Democratic-sponsored tax-cut measures as "irresponsible" and politically motivated. On October 15 he denied allegations that he had sought cuts in defense spending as a means of balancing the budget, but reiterated his opposition to tax reduction before attainment of a balanced budget.

HUNGARY. A central European Communist-ruled people's democracy, Hungary is bounded on the south by Yugoslavia, on the west by Austria, on the north by Czechoslovakia, and on the east by Rumania and the Ukrainian SSR. It occupies an area of 35,912 square miles, and had an estimated population (June 1955) of 9,808,000, 40% of which is urban. Provisional birth and death rates for 1954 were 23 and 11 per thousand, respectively. The capital and principal city is Budapest, with a population of 1,780,000 at the beginning of 1955. Other important cities (1949 census) are: Szeged, 132,618; Debrecen, 119,635; Miskolc, 103,724; and Kecskemét, 88,374.

Government.—Hungary is a typical people's democracy with full Communist control. According to the constitution of Aug. 18, 1949, the state's highest organ is the unicameral National Assembly. When this body is not in session, it is represented by the 21-member Presidium of the National Assembly. The cabinet (Council of Ministers) appointed by, and theoretically responsible to, the National Assembly is, in practice, an agency of the central authorities of the Hungarian Workers (Communist) Party and merely rubber-stamps the decisions actually made by the top level of the party hierarchy.

The 1953 amendment of the electoral law abolished the national nomination list compiled by constituencies, and established representation on the basis of population rather than on the number of voters. The number of deputies was reduced from 402 to 298, with 154 alternates. The president of the Presidium (nominal chief of state) is István M. Dobi. The prime minister, or chairman of the Council of Ministers, is András Hegedüs. (See below, *Principal Events*, 1955.)

The Hungarian Workers (Communist) Party, which had 864,607 members in 1954, is recognized by the constitution as the guiding force in the country's entire political, economic, and social life. The Politburo, as elected by the Central Committee of the Party, consists of 9 full members: Mátyás Rákosi (first secretary), István Hidas, Ernő Gerő, András Hegedüs, Antal Apró, Lajos Acs, Béla Szalai, József Mekis, and István Kovacs. Most members of the Politburo occupy ministerial and other high governmental positions.

In May 1954 the Workers Party sponsored the organization of the Patriotic People's Front (PPF) to replace the Independent People's Front (IPF). At the PPF's first congress (Oct. 23–24, 1954) József Darvas, minister of popular culture, stated that the new group was not to serve as a mass political organization, but

merely as an assembly of the Communists, of the dissident groups from various traditional parties, and of individuals not identified with any organized political groups. It was also decided that the PPF should not have local organizations, but merely local committees which would represent their localities. The PPF thus became a Communist satellite without any delegated power.

The government is represented on the local level by people's councils whose deputies are either Communists or Communist collaborators. Although the constitution defines the local councils as the source of all power in Hungary, they are in actuality instrumentalities of the central government.

Education.—In 1946 the educational system was secularized and subordinated to full state control, and general school education (which combines 4 years of elementary and 4 years of secondary schooling) was made compulsory from the ages of 6 to 14. In 1952-53 there were 1,196,043 pupils enrolled in the general schools; 165,000 in 425 secondary schools; and 45,328 in 31 universities and other institutions of higher learning. In 1953 there were also 48 agricultural schools, 64 industrial technical schools, and 67 economic schools. The highest scientific institution is the Hungarian Academy of Sciences, which has been completely reorganized along the model of the Soviet Academy of Sciences. The academy, which places emphasis on applied science, has been assigned the task of training young scientists and has been authorized to grant Ph.D. degrees.

Religion.—The distribution of major religious groups is as follows: Roman Catholic, 65.7%; Reformed, 20.8%; Lutheran, 6%; Jewish, 4.3%; and Greek Catholic, 2.5%. Full separation of the state and church is constitutionally established. A special government agency, directly subordinated to the Council of Ministers, controls the work of religious organizations. Following the Soviet lead, during 1955 the Hungarian Communists sponsored intensive antireligious propaganda. The official propagandists, however, continued to claim that the church has been guaranteed full freedom. Bishop János Péter of the Reformed Church of Hungary, and a member of the National Assembly, stated that state subsidies to the church have been decreasing and that the church will eventually become self-supporting.

National Defense.—According to stipulations of the 1947 peace treaty, Hungary's army was to be limited to 65,000 men and its air force to 5,000. Foreign observers estimated the Hungarian armed forces in 1955 at 12 divisions with from 165,000 to 180,000 men. According to an official announcement of Sept. 7, 1955, Hungary planned to cut her armed forces by 20,000 men by Dec. 31, 1955.

Finance.—The budget for 1954 included revenues of 45,286,639,000 forints (11.74 forints = U.S.\$1) and expenditures of 43,980,136,000 forints. The estimated budget for 1955 included revenues of 47,011,362,000 forints and expenditures of 45,502,017,000 forints, 55.5% of which was allotted for development of the national economy; 22.9%, for social welfare and cultural purposes; 12.5% (an increase of 1.5% over the 1954 allotment), for military expense; 4.6%, for police; and 4.5%, for administrative purposes.

Agriculture.—After 1952 the collectivization of Hungarian agriculture, which had grown at a steady pace until then, became accelerated. The peak of collectivization was reached in mid-1953, by which time 240,000 peasant families had been embraced by 5,500 collective farms. By the end of 1953, however, the pace of collectivization had come to a standstill, and by the end of 1954 the number of collective farms had decreased to 4,500 and included about 300,000 peasants. These farms were serviced in 1954 by 364 machine and tractor stations, which had at their disposal 12,000 tractors (in terms of 15-hp. units) and 955 harvesters. Socialized agriculture in 1954 accounted for 33.3% of Hungary's arable land, 20.8% of which was in collective farms and 12.5% of which was in 469 state farms.

In mid-1955 the government began again to emphasize collectivization as a cure-all for agricultural deficiencies. Communist spokesmen promised that by 1960 over 50% of the total arable acreage would be socialized, and from June to September 1955 approximately 43,000 new peasants became collectivized on 220 additional farms.

Hungary's estimated 1954 production of basic crops, in millions of tons, was as follows: corn,

2.8; potatoes, 2.3; wheat, 2.4; and sugar beets, 2.5. In 1953 oat production totaled 200 metric tons; rye, 725; and barley, 700.

Industry.—In 1954 the first Five-Year Plan was completed, but the government decided not to begin the second Five-Year Plan until 1956. The delay will enable Hungary to synchronize its plans with those of the Soviet Union and Czechoslovakia, which are to begin in that year.

In 1953 the government stated that the emphasis in industrial production would be on consumer goods, rather than on heavy industry. In 1955, however, this stand was reversed, and Mátyás Rákosi said on Jan. 25, 1955, that, in view of the "war threat from the West and the rearmament of Germany," it would be necessary to revert to basic industrial production.

The government continued during 1954 to emphasize the development of the country's mining resources. New coal mines were under development in Komló, Balindabánya, Tata-bánya, and Petőfibánya. In 1953 an estimated 4.58 billion kw.-hr. of electric power were generated, and in 1954, Hungary produced (in thousands of tons): coal, 22,000; steel, 1,500; oil, 1,194; cement, 1,100; and aluminum, 28.4.

During the first six months of 1955 industrial production increased by 9.5% over 1954 production for the same period. The increase was credited to additional investments rather than to increased labor productivity per individual worker. Despite the over-all increase in industrial production, the targets for cast steel, pig iron, and aluminum had not been met in the second quarter of 1955.

Foreign Trade.—In 1955, 80% of Hungary's foreign trade continued to be oriented primarily toward the Soviet Union and the Soviet-dominated eastern European countries. In 1953 Hungary's total trade (exports and imports) with eastern Europe totaled \$740 million; its total trade with the West, including Yugoslavia, totaled \$230 million. There was, however, in 1955 an increased tendency to improve trade relations with the non-Communist world. In 1954, Hungary maintained trade relations of one kind or another with 90 countries outside the Soviet orbit. On Jan. 14, 1955, Hungary's first trade agreement with Yugoslavia was signed since the latter's break with the Cominform in 1948. The agreement called for an exchange of goods valued at £5 million. Approximately one third of Hungary's exports consisted of various kinds of machinery, such as sea and river craft, cranes, turbines, trucks, tractors, sewing machines, bicycles, and radio equipment.

Transportation and Communications.—In 1951, Hungary had 7,099 miles of railways and 15,983 miles of state and municipal highways. As of Jan. 1, 1949, the country had 47,200 motor vehicles of all types. Hungary has 687 miles of navigable rivers, and at the end of 1947 she had 514 Danube vessels, with a gross tonnage of 118,717. As of Jan. 1, 1954, Hungary had 122,000 telephones and nearly one million radio receivers.

Principal Events, 1955. Purges and Amnesties.—Throughout 1955 the Hungarian government continued to persecute individuals and groups accused of having ties with the West. On July 9, 1955, Mr. and Mrs. Andre Marton, Hungarian correspondents of two American news agencies, were charged with espionage. On April 13, 1955, five persons were sentenced to death on charges of conspiracy to overthrow the government, and six others received prison terms of from 9 to 14

years. On February 12, 18 individuals, including two Roman Catholic priests, were sentenced to prison for terms ranging from 2½ years to life for seeking to set up a capitalist state. In March, Peter Gabor, the former head of the State Security Service, and several of his deputies were sentenced to life imprisonment for "crimes against the people and the state."

On April 2, 1955, on the occasion of the tenth anniversary of liberation from Axis rule, the government issued a limited amnesty in individual cases for political prisoners and Hungarian citizens living abroad. On July 16, József Cardinal Mindszenty was conditionally released from life imprisonment, and on October 13, Archbishop József Groesz and four other priests were amnestied.

Government and Party Changes.—On April 14, 1955, the Central Committee of the Hungarian Workers (Communist) Party released Imre Nagy from his positions as premier and as a member of the Politburo.* He was succeeded as premier on April 18 by András Hegedüs, and as a member of the Politburo by István Kovacs. The Central Committee also dismissed Mihály Farkas from the Politburo because of his continuous support of Nagy's "wrong opinions." He was replaced in the Politburo by József Mekis, who was also made a deputy premier. Nagy's dismissal came as a result of the Central Committee's allegations that his policies thwarted the development of socialism. In particular, he was charged with: (1) emphasizing the political role of the PPF at the expense of party strength; (2) preventing speedy industrialization, particularly in the field of heavy industry; and (3) preventing the development of agricultural collectivization. It became clear that the government had reversed its basic policies of the past two years and embarked upon a more aggressive program of consolidating the unchallenged power of the Communist hierarchy; of concentrating on heavy industry (at the expense of consumer goods); and of relying on various coercive techniques as a method of collectivization.

On April 4, 1955, the government sponsored a mass celebration of the tenth anniversary of Hungary's liberation by the Soviet Army. Present at the celebration was a Soviet delegation headed by Kliment E. Voroshilov, president of the Presidium of the Supreme Soviet of the USSR.

Foreign Relations.—During 1955, Hungary

* On November 15, Nagy was removed from the National Assembly, thus depriving him of the last remnant of power he had held.

continued to follow subserviently the Soviet Union's international policies, and very little effort was made to improve diplomatic relations with the West. Hungary was one of the signatories of the treaty of friendship, cooperation, and mutual assistance concluded in Warsaw on May 14, 1955, by the Soviet Union and her European satellites. Hungary was also designated as one of the beneficiaries of the decision of the Soviet government to give various satellite countries necessary scientific, technical, and material assistance in the building of experimental bases for research in nuclear physics and in the industrial employment of atomic energy.

Following the signing of the Soviet-Yugoslav agreement in Belgrade on June 2, 1955, the Hungarian government quickly announced its determination to improve relations between itself and Yugoslavia. On July 27, however, Marshal Tito accused Hungary of continuing its policy of intrigue against Yugoslavia and of failing to admit its guilt in the previous persecution of individuals accused of Titoist tendencies. Negotiations with Yugoslavia regarding the settlement of Hungarian debts, including reparations, broke down on Sept. 24, 1955, when Hungary announced that Yugoslavia's claims were "too great" for Hungary's economy to sustain.

The relations between Hungary and the United States showed little improvement during 1955. On September 1, the United States requested the Hungarian legation in Washington to terminate all information and propaganda activities outside the legation building. At the same time, the United States government sent a note to Hungary protesting against the molesting and intimidation by the Hungarian police of individuals who called at the American legation in Budapest to receive American publications, as well as of Hungarians employed by the American legation. In October, however, the situation was somewhat improved when the U.S. Department of State announced that it would henceforth issue passports to its citizens who wished to travel to Hungary.

On December 14, Hungary, along with 15 other countries, was elected to membership in the United Nations.

ICELAND. An island republic in the North Atlantic just below the Arctic Circle. Estimated area, 39,770 square miles; pop. (est. Dec. 31, 1954), 155,000. Reykjavik (pop. 1953, 60,024) is the capital.

Government.—Iceland's Althing has 52 members; the majority are popularly elected, the remainder are ap-

pointed according to set rules to render party seating more truly reflective of popular votes received. The Althing selects 17 from among its members to constitute the upper house; the remaining 35 form the lower house. The president is elected by popular vote for a four-year term. President Asgeir Asgeirsson took office on Aug. 1, 1952. Olafur Thors, Conservative, heads a Conservative-Progressive cabinet formed on Sept. 11, 1953. Under the United States-Iceland defense treaty of 1951, the United States has the use of an airbase near Keflavik and other facilities.

Education and Religion.—Illiteracy is virtually nonexistent. In 1950 there were 214 primary schools (16,218 pupils); 60 secondary schools (5,490); 50 technical schools (3,999); 4 teacher-training schools (152); and

a university at Reykjavik (620). The state-supported Evangelical Lutheran Church is predominant.

Finance.—Revenue in 1953 totaled 510 million krónur; expenditure, 507.5 million (data include transactions of state enterprises). The króna equals 6.14 cents in United States currency at the official exchange rate.

Production.—Iceland's fish catch—chiefly herring and cod—is the mainstay of her economy. Fish landings in the first 9 months of 1955 totaled 343,500 metric tons. Small farms in the coastal regions yield hay, potatoes, and other vegetables. Sheep raising and dairying are important. The number of sheep at the end of 1953 was 544,000, and has been increasing rapidly in recent years. Chief manufactures are processed fish products, woolen cloth, blankets, shoes, fishing equipment, glass products, and other small items. Output of electric power has risen considerably since 1952 with the construction of new hydroelectric power plants. Installed capacity increased from 45,000 kw. in 1952, to 102,000 at the end of 1954. A \$7 million fertilizer plant began operations in 1954.

Foreign Trade.—Exports in 1954 totaled a record 845,912,000 krónur; imports, 1,130,397,000. Fish and fish products comprise the bulk of exports. Imports are mainly fuels, foodstuffs, and a variety of manufactured goods. The United States, Iceland's chief trading partner, took 17% of Iceland's 1954 exports and provided 20.2% of imports. Soviet Russia and Great Britain ranked next in order.

Transportation and Communications.—Iceland has about 4,350 miles of roads (1954); 12,107 registered motor vehicles, including 7,133 passenger cars (1955); 25,457 telephones (1955); 36,000 licensed radio receivers (1952); and 5 daily newspapers with a total circulation of 65,000 (1952). Keflavik Airport is used by international airlines.

Principal Events, 1955.—Iceland's long-standing fishing dispute with Britain was placed in the hands of a commission of the Organization for European Economic Cooperation in early 1955. The conflict, which arose out of Iceland's extension of her exclusive fishing limits, resulted in a British boycott of Iceland's trawlers and a consequent diversion of much of Iceland's trade to the USSR since 1953. A six-week general strike of 7,000 workers was settled on April 29 with a pay rise of 10-15% and a state-subsidized unemployment fund. Inflation once again became a threat in 1955, as the cost of living rose over 9% during the year.

IDAHO. Northwestern state, United States; admitted to the Union, July 3, 1890. The "Gem of the Mountains State" ranks 12th in area and 43d in population (1955) among the 48 states.

Area and Population.—Area: 83,557 square miles (land, 82,769; inland water, 788), divided into 44 counties. Population: (1950) 588,637; (est. July 1, 1955) 606,000. Urban places with 1950 populations above 7,500 are: Boise City, the capital, 34,393; Caldwell, 10,487; Coeur d'Alene, 12,198; Franklin-Whitney Airport, unincorporated, 7,809; Idaho Falls, 19,218; Lewiston, 12,985; Moscow, 10,593; Nampa, 16,185; Pocatello, 26,131; and Twin Falls, 17,600.

Executive.—Chief state officers in 1955:

Governor: Robert E. Smylie (Republican)
Lieutenant Governor: J. Berkeley Larsen
Secretary of State: Ira H. Masters
Treasurer: Ruth G. Moon
Attorney General: Graydon W. Smith
Supt. of Public Instruction: Alton B. Jones

Constitution and Judiciary.—The present constitution went into effect in 1890. The Supreme Court comprises five justices; chief justice in 1955 was C. J. Taylor.

Legislature.—The Idaho Legislature (Senate, 44 members; House of Representatives, 59) meets in odd-numbered years commencing the first Monday after January 1.

In its 1955 session, the Legislature made the budget director the director of administration; established a Governor's Advisory Council; shifted civil defense activities to the adjutant general's office; and created a Legislative Budget Committee, a Department of Commerce and Development, a Turnpike Commission, and a Board of Health. The state's share in the minimum education program was increased from \$12 million to \$15 million and bonding limits of school districts were almost doubled. Restrictions against aliens owning real property in the state were removed and Indians were permitted to purchase liquor.

Extensive tax legislation included the adoption of 7½% surcharges on state income and liquor taxes; repeal of a 1953 reduction of 15% on the income tax; doubling of corporation license fees; an increase of one cent per pack on cigarettes; an increase of motor truck registration fees from \$55 to \$100 and of auto license fees from \$5 to a sliding scale of \$7.50-\$17.50; and re-instatement of the ton-mile tax.

Finances.—State treasury receipts (1954-55 fiscal year), \$98,305,475.12; expenditures, \$104,868,902.77; treasury balance, \$19,235,924.76; long-term indebtedness, \$2,000,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$39,046,635.93, including \$7,634,017.79 from licensing; \$5,384,579.61 from individual income taxes; \$2,678,483.25 from corporate income taxes; and \$2,199,194.28 from property taxes. The state has no general sales tax or poll tax.

Banking.—As of June 30, 1955, the state's 11 national banks had \$413,886,000 in assets, \$259,484,000 in demand deposits, and \$128,857,000 in time deposits; the state's 25 other banks had \$127,691,436.10 in assets, \$81,439,727.93 in demand deposits, and \$37,813,040.93 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$27,089,529.22 (\$220.40 per pupil) for public elementary and secondary education in the 1953-54 school fiscal year comprised \$19,182,990.06 from local school districts, \$7,063,365.14 from the state, and \$843,174.02 from the federal government. Expenditures for construction and improvements totaled \$7,452,780.54. Teachers' salaries averaged \$3,-

* Enrollment is included in elementary and senior high figures.

359.95. (High school teachers, \$3,657.40; elementary school teachers, \$3,161.10.)

Social Welfare.—Public assistance expenditures from federal and state funds (excluding institutional costs) for the biennium ending June 30, 1954, totaled \$17,157,683, including \$11,645,667 for old-age assistance, \$5,245,244 for dependent children, and \$266,772 for the needy blind; a monthly average of 11,094 persons received public assistance during the 12 months ending June 30, 1954. Appropriations of \$6,860,711 were made for the 1955-57 biennium for the operation of health and welfare institutions and \$2,080,835 for the operation of correctional and penal institutions.

¹ Aug. 30, 1955. ² Oct. 31, 1955. ³ Oct. 28, 1955. ⁴ Jan. 1, 1955. ⁵ Nov. 4, 1954.

Labor Force.—On July 31, 1955, the state's labor force numbered 245,800, including 73,800 agricultural workers. Nonagricultural employment was 137,100 and for the full year 1954 averaged 132,317. There were 6,000 unemployed workers in July 1955, and \$4,560,120.37 in unemployment compensation was paid during the year ending July 1955.

Manufacturing.—In 1954 there were 1,138 manufacturing establishments with 23,932 employees who received \$95,344,639 in wages. Investment in new plant and equipment was \$16,818,000 in 1953. Earnings of production workers in manufacturing averaged \$78.28 for an average work week of 41.2 hours in 1954, and \$86.96 for 43.7 hours in the first six months of 1955.

Leading manufactures in 1954 included lumber and timber products, with 12,892 employees earning \$53,990,676; food products, 6,438 (\$22,223,257); primary metal products, 1,147 (\$5,214,121); printing and publishing, 1,053 (\$4,108,266); chemicals and allied products, 779 (\$3,614,231); machinery and equipment, 634 (\$2,665,349); cement and allied manufactures, 385 (\$1,409,787); and other manufactures, 604 (\$1,938,952). A total value of \$175,000,000 was added by manufacture.

Mining.—Idaho ranked first in 1953 among the states in its output of cobalt and silver, and second in lead and zinc. Idaho stood 29th in total output value (0.47% of national total). Employment in the mineral industry averaged 4,500 in 1954.

(Source: U.S. Dept. of Agriculture.)

The state's 38,735 farms (14,164,739 acres; harvested cropland, 3,727,452) averaged 365.7

acres and \$31,685 in value of land and buildings per farm in 1954. Farms with electricity numbered 37,311; with telephones, 26,133. Livestock on farms on Jan. 1, 1955, included 1,328,000 cattle, 1,105,000 sheep, and 1,795,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 86,784 family and hired workers engaged in farming.

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$17,524,046, and newly completed construction and reconstruction aggregated 389.9 miles.

Highways and roads on Dec. 31, 1954, totaled 39,707.1 miles (21,603.8 surfaced). Registered motor vehicles numbered 351,068, including 224,143 passenger cars. There were 9 railroads operating 3,019.388 line miles, and (1955) 3 regularly scheduled airlines and 192 airports and airfields (83 commercial and municipal, 1 military, 42 private, and 66 other).

Communications media included (1955) 24 AM and 3 FM radio stations and 5 VHF operating television outlets; 14 daily newspapers (circulation, 132,819) and 79 other newspapers (circulation, 107,478); and (Jan. 1, 1955) 45,646 business and 118,316 residential telephones.

Principal Events, 1955.—Water and gas mixed in Idaho news during 1955. Two multimillion dollar dams were dedicated a day apart: Lucky Peak on the Boise River on June 23, and Albeni Falls on the Pend Oreille River on June 24. Controversy continued between proponents of federal and private power over the Hell's Canyon project, and a U.S. Senate subcommittee held hearings on the question on April 4 in Boise and Lewiston. On August 4 the Federal Power Commission granted a 50-year license to the Idaho Power Company which, on November 9, signed a construction contract with the Morrison-Knudsen Company. Equipment started moving the next day to the site for the Brownlee Dam. (See also DAMS.)

Issuance of a franchise for the distribution of natural gas in southern Idaho caused a legal controversy in 1955. In February the state Public Utilities Commission granted exclusive rights to the Idaho Natural Gas Company, but in October the Idaho Supreme Court ordered either a rehearing of applications or the giving of the franchise to the Intermountain Gas Company. The same court also reversed a lower court decision which had granted a petition of the Mountain States Telephone and Telegraph Company for a sizable rate increase, thus causing the company to refund over \$2 million to subscribers.

On July 17 the town of Arco became the first in the United States to be lighted exclusively (on a noncommercial basis for one hour) by electricity produced from nuclear energy.

The 150th anniversary of the Lewis and Clark Expedition was celebrated at Lewiston during the three-day period of October 7-9.

Executive.—Chief state officers in 1955:

Governor: William G. Stratton (Republican)
Lieutenant Governor: John W. Chapman
Secretary of State: Charles F. Carpenter
Treasurer: Warren E. Wright
Supt. of Public Instruction: Vernon L. Nickell

Constitution and Judiciary.—The present constitution went into effect in 1870. The Supreme Court comprises seven justices; chief justice in 1955 was Harry B. Hershey.

Legislature.—The General Assembly convenes in odd-numbered years commencing the first Wednesday after the first Monday in January. A major enactment of the 1955 legislative session was the reapportionment of the state into 58 senatorial districts (24 in Cook County and 34 in the remaining 101 counties) and into 59 representative districts (30 in Cook County and 29 in the remaining counties). Reapportionment increased the House of Representatives by 24 members and the Senate by 7. Appropriations were made for the enlargement of the House chambers to accommodate the increased membership and for renovation of the state capitol.

Other enactments included creation of an interim commission to draft a constitutional amendment providing for annual legislative sessions; revision of the Bank and Banking Act and of the Building and Loan Act; new laws governing adoption and divorce; and approval of "Land of Lincoln" as the official state slogan. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$1,251,144,776; expenditures, \$1,350,301,413; treasury balance, \$724,186,733; long-term indebtedness, \$280,071,800.

Taxation.—State tax revenue (1954-55 fiscal year): \$551,823,000, including \$447,137,000 from the general sales tax and selective sales and gross receipts taxes and \$89,058,000 from licensing. The state has no individual or corporate income tax or poll tax.

Banking.—As of June 30, 1955, the state's 389 national banks had \$11,287,762,000 in assets, \$7,804,-539,000 in demand deposits, and \$2,612,772,000 in time deposits; the state's 525 other banks had \$4,488,-219,727.88 in assets, \$2,794,379,373.30 in demand deposits, and \$1,395,567,373.02 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary education in the 1953-54 school fiscal year totaled \$396,492,681 (\$288.81 per pupil). Expenditures for construction and improvements totaled \$125,635,730.68. Teachers' salaries averaged \$4,000.83 (elementary school teachers, \$3,368.44; high school teachers, \$4,429.75).

ILLINOIS SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary (k-8)	1,923	14,434	393,803
Public senior high (9-12)	298	5,848	120,066
Public elementary and senior high (1-12)	325	31,145	880,834
Private and parochial elementary and secondary	1,098	9,496	385,474
State teachers colleges (1954-55)	4	715	8,771

Social Welfare.—Public assistance expenditures from federal and state funds (excluding institutional costs) for the 1954-55 fiscal year totaled \$109,272,000, including \$68,841,000 for old-age assistance, \$32,100,000 for dependent children, \$2,762,000 for the needy blind, and \$5,872,000 for the disabled; a monthly average of 187,268 persons received public assistance. Operating expenditures for welfare institutions were \$52,585,-492.11; for correctional and penal institutions, \$3,161,088.

Labor Force.—On July 15, 1955, the labor force numbered 4,203,200, including 320,000 agricultural workers. Nonagricultural employment totaled 3,314,200, and for the 12 months ending July 1955 averaged 3,289,200. There were 166,000 unemployed workers on July 15, 1955, and \$133,369,000 in unemployment compensation claims was paid to workers during 1954.

Manufacturing.—Establishments covered by the state's unemployment insurance program in 1954 numbered 12,786 and had 1,199,229 employees who received \$5,386,238,256 in wages. Investment in new plant and equipment (1953) totaled \$602,058,000. Earnings of production workers in manufacturing averaged \$76.34 for an average work week of 40 hours in 1954, and \$81.99 for 41.4 hours in the first six months of 1955.

Mining.—In 1953 Illinois stood first among the states as a producer of fluorspar and tripoli; third

in crushed stone; and fourth in bituminous coal and lime. The state ranked 8th in the value of its mineral products, with 3.21% of the United States total. The value of mineral production in 1954 was \$507,697,000. Average monthly employment in 1954 in mining, quarrying, and petroleum production stood at 31,777, and wages totaled \$139,230,354.

¹ Estimated production for 1954: 41,775,800 tons (\$162,-925,400). ² Values for processed materials are not included in the total. ³ 1954 estimate: 66,940,000 bbl. (\$200,820,000). (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income in the first half of 1955 totaled \$817,487,000, and for the full year 1954 comprised \$1,129,086,000 from livestock and livestock products, \$784,958,000 from crops, and \$7,682,000 from government payments.

Receipts from principal crops and livestock in 1954 included: hogs, \$474,461,000; cattle, \$368,-870,000; corn, \$338,024,000; soybeans, \$235,-322,000; dairy products, \$159,949,000; eggs, \$75,049,000; and wheat, \$86,626,000. Greenhouse and nursery products yielded \$39,771,000.

The state's 175,542 farms (30,398,517 acres; harvested cropland, 20,549,929) had 173.2 acres and \$40,871 in value of land and buildings per farm in 1954. There were 129,400 farms with telephones and 169,161 with electricity. Livestock on farms (Jan. 1, 1955) included 3,846,000 cattle, 717,000 sheep, 6,778,000 hogs, and 21,-398,000 chickens (not including commercial broilers). During the week of Oct. 24-30, 1954, there were 290,954 family and hired workers engaged in farming.

ILLINOIS CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.)	3,082	2,260	1,500
Broomcorn (tons)	1,860	1,400	1,600
Corn (1,000 bu.)	462,296	458,568	523,992
Hay (1,000 tons)	4,111	4,577	4,636
Oats (1,000 bu.)	138,432	137,172	177,408
Peaches (1,000 bu.)	1,684	1,210	90

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads in 1954 totaled \$132,875,000, and newly completed construction and reconstruction aggregated 742 miles.

Highways and roads on Dec. 31, 1954, totaled 102,-258 miles (90,653 surfaced). Registered *motor vehicles* numbered 3,188,849, including 2,688,944 passenger cars. There were (1955) 56 *railroads* operating (1953) 11,-404 road miles, and (1955) 15 regularly scheduled *airlines* and 656 *airports and airfields* (123 commercial and municipal, 3 military, and 530 private).

Communications media included (1955) 89 AM and 28 FM *radio stations* and 17 operating *television outlets*; 96 daily *newspapers* (circulation, 3,680,792) and 668 other newspapers; and (Jan. 1, 1955) 1,097,-110 business and 2,391,405 residential *telephones*.

Principal Events, 1955.—When the Illinois General Assembly adjourned its biennial session on June 30, the lawmakers concluded one of the most hectic sessions in history. Probably the main underlying reason for the general confusion was legislative reapportionment, a task last done in 1901. A 1954 constitutional amendment had set up a new plan for legislative districts, and the lawmakers had to draw new districts (which they did) or have a nonlegislative body do it for them. (See also above, *Legislature*.)

The legislature enacted several significant financial measures, and the biennial state budget reached a record high of \$1,750 million. To help provide the funds, the state sales tax was increased from 2 to 2½ cents. At the same time, the financial plight of the cities was eased by the deletion of the referendum requirement before a city could impose a state-administered ½ cent tax. By the end of 1955, about 150 cities had taken advantage of the new provision. Cities were also given permission to impose a consumers utility tax.

The voters will have another opportunity to overhaul the state's revenue system in 1956. A new revenue article for the state constitution was the only amendment passed by the legislature. A similar revenue article was defeated at the 1952 general election.

Other important new legislation established a state Department of Personnel. The Broyles loyalty oath for state and certain other public employees was adopted, but its constitutionality was being tested in the courts at the end of 1955.

In September the University of Illinois welcomed a new president, David Dodds Henry. The university's educational television station commenced operations late in the summer, although litigation to prohibit its operations was in progress. The Festival of Contemporary Arts was re-instituted after a year's interruption, and brought great artists and art works to the campus.

The state's Toll Highway Commission, after weathering numerous attacks and personnel difficulties, was ready to start building roads in northern Illinois at the end of 1955. The program, authorized by the 1953 legislature, was subject to several court suits and during the legislative session, a full-fledged investigation was undertaken. The toll road bonds were offered for sale on the open market late in the year, although the litigation had not been completely resolved.

The little central Illinois town of Bement (pop., 1,500) conducted a centennial which received nationwide notice. During the summer a number of distinguished Americans participated in its lecture series on the subject "Can the World Survive—Half Slave and Half Free?" The participants, holding widely diversified views, included Norman Thomas, Everett Dirksen, James Farley, and Carl Sandburg.

IMMIGRATION, EMIGRATION, AND NATURALIZATION. *Immigration and Emigration.*—Total arrivals in the United States had leveled off at 118 million

in the year ended June 30, 1954; but in 1955 the upward trend picked up again, and the figure rose to over 123 million. As has been true in the past, 97% of these were border crossings made by aliens and citizens across the Canadian and Mexican borders. The remainder included immigrants, crewmen, and other nonimmigrants admitted for temporary visits, and citizens arriving from countries other than Canada and Mexico.

More than 237,000 immigrants were admitted to the United States for permanent residence during the year ended June 30, 1955, an increase of 14% over the preceding year. The 237,790 immigrants admitted in 1955 include 29,002 refugees admitted under the provisions of the Refugee Relief Act of 1953. (See also REFUGEES AND DISPLACED PERSONS.) This fact, and the continued rise in Western Hemisphere immigration were chiefly responsible for the increase noted above. Table 1 shows the major countries of birth of the immigrants admitted.

(Source: U.S. Department of Justice, Immigration and Naturalization Service.)

The upward trend in quota immigration noted in 1954 was broken in 1955, when 82,232 quota immigrants were admitted. This 13% reduction in quota immigration may be explained in part by the fact that a number of immigrants who would have entered under the quota were admitted as nonquota immigrants under the provisions of the Refugee Relief Act of 1953.

With the exception of Great Britain, Ireland, and Sweden, countries of northern and western Europe almost filled their quotas in the past year. Quota immigration from a number of southern and eastern European countries, however, was low because the quotas of these countries have been mortgaged under the provisions of the Displaced Persons Act; for example, quota immigration from Lithuania, Yugoslavia, Poland, and the USSR equaled about one half of their annual quotas.

Not since 1927 have so many nonquota immigrants been admitted to the United States—155,558 in the year ended June 30, 1955. Principal groups in this category are spouses and children of United States citizens, of whom 30,882 were

admitted; natives of independent countries of the Western Hemisphere, and their spouses and children, with 94,274 admitted; and persons admitted under the provisions of the Refugee Relief Act of 1953, 29,002 admitted.

A 17% increase in nonquota immigration from the Western Hemisphere is due primarily to a rise in immigration from Mexico and the West Indies. Immigration from Mexico during the past five years has increased from 6,372 in 1951 to 50,772 in 1955.

¹ Admitted under Refugee Relief Act of 1953. ² Admitted under Displaced Persons Act of 1948, as amended. (Source: U.S. Department of Justice, Immigration and Naturalization Service.)

Nonimmigrants are aliens who enter the United States for temporary periods, or resident aliens returning from temporary stays abroad. Nonimmigrant admissions have tripled since the end of World War II, and in the year ended June 30, 1955, reached a new high of 620,946, a 10% rise over the preceding year. Over half of the nonimmigrants admitted were temporary visitors for pleasure, of whom approximately 40,000 more visited the United States in 1955 than during 1954. This increase is due in no small part to the steps undertaken by the Immigration and Naturalization Service, the Departments of State and Commerce, other agencies, and foreign governments to facilitate international travel.

The principal countries or regions of birth of the nonimmigrants admitted during 1955 were: the West Indies (103,339); Mexico (76,155); England, Scotland, and Wales (67,266); South America (51,750); Asia (40,718); and Germany (33,226).

During 1955, 665,800 aliens departed from the United States. Included were 50,012 resident aliens who departed for temporary visits abroad; 584,543 tourists, transits, government officials, and others departing after temporary visits in the United States; and 31,245 emigrants departing after residences in the United States exceeding one year, with the intention of remaining abroad.

The admissions of aliens, exclusive of border crossers, crewmen, and agricultural laborers, are summarized in Table 3.

Apprehensions and Expulsions of Aliens.—In

(Source: U.S. Department of Justice, Immigration and Naturalization Service.)

June 1954 was begun a concentrated drive to apprehend and expel Mexicans illegally in the United States. As a result, for the first time in more than a decade, illegal crossing over the Mexican border was brought under control. The control of the border has been maintained throughout 1955, and was a major factor in the reduction in the number of expulsions. In the year ended June 30, 1954, over 1 million aliens were expelled from the United States, but during 1955 the number was down to 247,797. Of these, 232,769 were voluntary departures, of which 221,381 took place at the Mexican border; and 15,028 were deportations under orders of deportation. Included among the aliens deported were 47 of the subversive class and 666 racketeers and other criminals. (See also LAW.)

Naturalizations.—Naturalizations granted during the year ended June 30, 1955, numbered 209,526, an increase of 78% over 1954. Efforts on the part of the Immigration and Naturalization Service to complete the naturalization of as many persons as possible culminated in special ceremonies throughout the country on Veterans' Day, Nov. 11, 1954, when over 55,000 persons were granted citizenship.

Table 4 shows the principal former nationalities of persons naturalized during the year ended June 30, 1955.

INCOME. U.S. National Income and Product*.—National economic activity in the United States registered expansion to a new record high in

* National income is the sum of the net earnings of labor and property which arise from the current production of goods and services by the nation's economy. It

Personal Income From Farm and Nonfarm Sources

INDEX, 1947-49 = 100 (ratio scale)

1955. This marked a strong recovery from the 1953-54 business readjustment. For the first three quarters of 1955, national income was at an annual rate (seasonally adjusted) of \$319.6 billion, and the gross national product amounted to an annual rate of \$384 billion. Both of these comprehensive measures of national output were 7% above the 1954 calendar-year totals.

(The annual rate data represent the average of estimates for the first three quarters which have been adjusted for seasonal influences and multiplied by four to facilitate comparison with previous annual totals.)

Higher prices accounted for only a small part of the 1954-55 rise in national income and product; the bulk of it represented increased physical volume. The quantity of goods and services produced in the United States in the first nine months of 1955 was at a rate larger than in any other year. It was one third higher than in 1946, the first full postwar year, and, as compared with 1929, was more than twice as high in the aggregate and three fifths greater on a per capita basis.

In the first nine months of 1955, personal income was at an annual rate of \$300 billion, and disposable income—personal income less personal taxes—totaled almost \$267 billion. (See Table 1.) Both of these aggregates were about 4½% higher than in the calendar year 1954. Real disposable income per capita—which makes allowance for changes in consumer prices and in measures, therefore, the total factor cost of the goods and services produced by the economy. Earnings are measured in the forms in which they accrue to residents of the nation, before deduction of taxes on those earnings.

Personal income is the current income received by persons from all sources, including transfers from government and business but excluding transfers among persons. It differs from national income by the inclusion of transfers (such as relief, veterans pensions, and unemployment compensation) which are not in return for current productive services, and by the exclusion of earnings (such as social insurance contributions and undistributed corporate income) which are not actually received by persons in the current period.

Gross national product or expenditure measures the market value of the output of goods and services produced by the nation's economy, before deduction of depreciation charges and other allowances for durable capital goods used up in the productive process. Other business products used by business in the accounting period are excluded.

population—advanced 3% over the period, attaining an all-time high.

Pattern of Economic Recovery.—After showing a continued uptrend in the first half of 1953, national income and product moved downward until the spring of 1954, changed little through the summer, and then advanced strongly over the course of the next year. In terms of the gross national product measure, the business decline was from \$369 billion (annual rate) in the second quarter of 1953 to a level of about \$358 billion in the second and third quarters of 1954; and the subsequent upswing, one of the most vigorous on record, carried to the unprecedented magnitude of \$392 billion by the third quarter of 1955. Early in the fourth quarter, it was evident that the economic momentum was still upward, and that the United States was on the threshold of a \$400 billion economy.

The 1953-54 decline in national output primarily reflected a downturn in purchases by the federal government for national security purposes and a shift by business from inventory accumulation to liquidation. In the subsequent recovery, reversal of the shift in inventory investment proved a factor of significance, but national security purchases stabilized at their reduced level. The upsurge in "final purchases" (gross national product less change in business inventories) was wholly civilian in character. It reflected a diversified rise in consumer spending, private construction and equipment outlays, and state and local government expenditures.

Gross National Product.—Personal consumption expenditures rose to an all-time high of \$251 billion in the first three quarters of 1955—a rate \$14 billion, or 6%, above the 1954 total. (See Table 2.) Outlays for nearly all types of consumer goods and services increased. Extensive use was made of consumer credit, with the 1954-55 rise in personal spending outstripping that in disposable personal income.

Gross private domestic investment—comprising the change in business inventories and "fixed" investment in new construction and producers' durable equipment—was at an annual rate of \$58.3 billion in the first three quarters of 1955. This record level compared with \$51.4 billion in 1953 and \$47.2 billion in 1954. In the latter year, there was a sizable inventory liquidation by business so as to adjust stocks more

closely to current sales levels. In the 1955 period, the business system resumed accumulation of inventories, and private outlays for producers' equipment and for industrial, commercial, and nonfarm residential construction expanded markedly. Residential building leveled off in the spring quarter, whereas the other types of "fixed" investment showed continued gains.

Government purchases of goods and services declined from \$77 billion in 1954 to approximately \$75½ billion (annual rate) in the first three quarters of 1955. The decrease was wholly in the federal segment, as state and local government purchases showed a further advance of \$2 billion.

Outlays for purposes of national security, accounting for nine tenths of total federal purchases, reached a postwar peak rate of \$53 billion in the second quarter of 1953, dropped by one fourth over the next year and a half, and were relatively stable at a rate of about \$41 billion in the first three quarters of 1955. Such outlays absorbed 10% of the gross national product in the third quarter of 1955, as compared with 14% in the second quarter of 1953 and 6% in the second quarter of 1950, just prior to the Korean War.

National Income.—By industry, the largest gain in national income in 1955 occurred in manufacturing, which, together with the related mining and transportation industries, had been most affected by the 1953-54 business downturn. However, all other industrial divisions of the economy contributed to the expansion except agriculture, where income was moderately lower than in 1954 because of general stability of costs and a further down-drift in farm prices.

Shifts among industries were principally responsible for the changes in national income by distributive shares, or types of earnings, from 1953 to 1955. As a major example, the economic readjustment and recovery of this period primarily affected the profits of corporate, rather than noncorporate, enterprises because corporations account for a very large bulk of all business in the manufacturing, mining, and transportation industries. As shown in Table 3, corporate earnings fell sharply from 1953 to 1954—although profits after taxes were stable—and then rebounded strongly in 1955. The changes in employee compensation were much less volatile.

On the other hand, the contraction of agri-

cultural income in 1955 had its principal impact on the income of unincorporated businesses, which account for almost all income originating in farming. While noncorporate business income in the aggregate changed little from 1954 to 1955, this overall stability reflected an appreciable drop in the net income of farm operators which was approximately offset in the total by an

upturn in the income of business and professional proprietors.

Personal Income by States.—The flow of income to individuals was relatively stable throughout the nation in 1954, the latest year for which official estimates were available in 1955.

By regions, aggregate income in 1954 was about the same or slightly higher as compared with the previous record year 1953. (See Table 4.) In 34 states and the District of Columbia personal income in 1954 was within 2% of the 1953 total. In most of the remaining states the income change was 4% or less.

As compared with the national average of \$1,770, per capita personal income in 1954 ranged from \$2,414 in Nevada to \$873 in Mississippi. Others in the top rank—all with per capita incomes of \$2,000 or more in 1954—included Delaware, Connecticut, the District of Columbia, New Jersey, New York, California, Illinois, and Michigan.

Although per capita incomes varied widely by states in 1954, the relative differences were considerably smaller than those which existed a quarter of a century ago. The percentage by which per capita income exceeded the national average dropped in the Middle East from 34 in 1929 to 13 in 1954, and in New England from 25 to 9. The margin of per capita incomes in the Far West above the national average also was reduced appreciably, from 29% to 18%. On the other hand, the three regions with comparatively low income levels—the Southeast, Southwest, and Northwest—showed substantial relative improvement over the period.

INDIA, Portuguese. See **PORTUGUESE TERRITORIES**.

INDIA, Republic of. This sovereign democratic Asian republic (constituted Jan. 26, 1950) remains by earlier agreement a full member of the Commonwealth of Nations, occupying an area of 1,176,860 square miles, with a population estimated on June 30, 1954, at 376,750,000, the world's largest next to China. In 1955 the Indian Union comprised 26 states (excluding Jammu and Kashmir, which remains in dispute between India and Pakistan), plus the territory of Andaman and Nicobar Islands, and the protectorate

of Sikkim (the latter constituted a protectorate on Dec. 5, 1950, and administered as a Part D territory). (See also KASHMIR.) In addition, it was announced on Jan. 6, 1955, that the former French settlements of Pondichéry, Karikal, Yanaon, and Mahé (area, 193 square miles; 1952 est. pop., 318,400) would in the future constitute a single state under the name of Pondichéry State. (See also below, *Government*.) Components of India, their areas, populations (1951 census figures), and capitals are shown in the accompanying table.

¹ Figures after partition. ² Exclusive of Part B tribal areas. ³ Excluding Jammu and Kashmir (see KASHMIR), in dispute between India and Pakistan. ⁴ Exclusive of a portion of the Bellary District transferred from Madras in the forming of Andhra State. ⁵ Includes Bilaspur, merged with Himachal Pradesh in 1954. ⁶ Under a chief commissioner. ⁷ Under a nominated Dewan. ⁸ Excluding the former French dependencies of Pondichéry, Karikal, Yanaon, and Mahé (193 sq. mi.; est. pop., 318,400).

The capital and seat of government is New Delhi (1951 pop., 276,314; Old Delhi, 914,790). Major seaports (with 1951 pop.) are: Calcutta (2,548,677), Bombay (2,839,270), and Madras (1,416,056). Other cities with populations (1951) above 475,000 are Ahmedabad (788,333), Bangalore (778,977), Hyderabad (1,085,722), Kanpur (705,383), Lucknow (496,861), and Poona (480,982).

The People.—From early times India has been an agricultural country; some 70% of the population currently depend for their living on agricultural pursuits. Nearly 300 million, or more than 83% of the people, live in villages. Of the 64.4 million houses occupied in 1954, 54.1 million were in rural areas; only 10.3 million houses

were in India's 3,018 towns. The average density of population is 313 persons per square mile.

Some 303,186,986 persons, or about 85% of the population, are of the Hindu faith. In 1951 there were also 35,400,117 Moslems, 8,157,765 Christians, and large numbers of Buddhists, Jains, and Sikhs. The latest census enumerated a total of 845 languages or dialects, including 63 non-Indian languages. The official language specified by the constitution is Hindi. English is to remain the language in official use for a period of not more than 15 years from the beginning of independence, and is being replaced as the medium of instruction in universities and secondary schools.

Government.—India's system of government is constitutional and parliamentary. The executive power, including supreme command of defense forces, is vested in an elected president (Dr. Rajendra Prasad, sworn in May 13, 1953).

The legislature consists of the president and two houses: a 250-member Council of States (238 elected indirectly); and a House of the People, consisting in 1955 of 499 members (492 elected). The Indian National Congress Party (363 seats) continued to outweigh by far all others (Praja Socialist Party, 26 seats; Communist Party, 17; independents, 41).

A Council of Ministers, headed by an appointed prime minister (Jawaharlal Nehru, who assumed office May 13, 1952, and who also serves as minister for external affairs), is composed of a 15-member cabinet, 24 ministers of cabinet rank, and 9 parliamentary secretaries. The states have their own elected legislatures (bicameral in Bihar, Bombay, Madras, Punjab, Uttar Pradesh, West Bengal, and Mysore), and each has its own high court. A chief justice, B. K. Mukherjee (appointed Dec. 23, 1954), and 7 other justices compose India's Supreme Court.

Reorganization of States.—A plan made public in October 1955 and based on the recommendations of a 3-man commission and supported by the Congress Party, proposed a reorganization of the Indian states within a year. While taking into account the demands of various groups for the creation of new states on the basis of language, the commission nevertheless proposed a reduction in India's component areas, which would number 16 states instead of 29 as at present (exclusive in both cases of disputed Jammu and Kashmir). The plan grew out of the need for greater economic and administrative efficiency, and is related to national security factors. Under the plan the central government would administer three principal territories, together with the Andaman Islands. Delhi (including the capital) would lose its statehood and be turned into a federal district.

On Nov. 9, 1955, the Congress Working Committee, the executive body of the Congress Party, approved the following additional changes in the organization of the Indian states: (1) the state of Bombay is to be divided into three states—Gujarat, Maharashtra, and the city of Bombay—instead of into two states as recommended in October by the commission; and (2) Hyderabad will be merged with Andhra.

Finance.—The 1955-56 budget, presented to parliament on Feb. 28, 1955, was the largest in India's history, and indicated an aggregate deficit on current and capital account of Rs.3,400 million, which would be reduced by Rs.217 million from increased taxation (1 rupee = U.S.\$0.21). On current account, revenue in 1955-56 at existing taxation rates was estimated at Rs.4,687,600,000; expenditure at Rs.4,989,300,000. Of the total expenditure, defense accounted for Rs.2,026,800,000, and civil expenditure for Rs.2,962,500,000.

Capital expenditure by the central government was estimated at Rs.2,233 million for 1955-56, including defense (Rs.223.8 million) and civil works (Rs. 320.0 million). In addition, capital estimates included Rs.3,550 million for loans to the state governments, mostly for development purposes.

The government anticipated foreign aid in 1955-56 amounting to Rs.740 million from the United States and Commonwealth countries, but there would still remain a gap of about Rs.3,400 million in available resources to balance the budget. The external payments situation was satisfactory, and India's sterling balances had risen by Rs.40 million during 1954-55. Per capita income in 1953-54 was Rs.283.9.

In July 1955 the government took over the 34-year-old Imperial Bank of India, undertaking to pay the shareholders about \$42 million in compensation. Payment of \$46.72 million to the International Monetary Fund was scheduled, representing the completion of liquidation of loans amounting to \$99.98 million, which the fund had advanced to India since 1948.

The United States had allotted \$274,090,000 in aid to India between the inception of the various foreign aid programs in 1948 until March 31, 1955. For the fiscal year 1956, the U.S. Congress had authorized \$50 million in development assistance to India, although the International Cooperation Administration decided in mid-November 1955 to hold back \$10 million of this amount for a newly created emergency reserve fund.

Education.—There were 60 million literate persons in India, according to 1955 educational statistics. The country's educational facilities in 1953 included 221,082 primary schools (19,296,840 students); 18,497 secondary schools; 7,062 high schools (an increase of about 77% over 1948); 11,435 middle schools (5,906,666 students in 1955); 30 universities; and 679 colleges (269,918 students). Technical and professional institutions had 98,567 students in 1953. Under the Five-Year Plan, Rs.1,610 million was made available for the expansion of educational facilities.

Defense.—About four rupees in every 10 of India's current expenditure went to the army, navy, or air force. The process of Indianization of the army continued in 1955 under its commander in chief, Lieut. Gen. S. M. Shrinagesh (succeeded Gen. Maharaj Rajendrasinhji, Jan. 27, 1955). The naval forces, consisting of two cruisers and other units of the former Royal Indian Navy, with personnel comprising about 700 officers and 7,000 ratings, are to continue for two years more under a British admiral (Vice Admiral S. H. Carlill, succeeded Vice Admiral Sir Mark Pizey, July 1955).

The air force is now entirely staffed by Indian officers. Thirty-four military camps, giving basic training to volunteers between the ages of 18 and 40 years, were opened on May 1, 1955, as the first step toward the training of a citizens' army of 500,000 within five years to augment India's small Regular Army. Permanent new buildings of the National Defense Academy and Joint Services Wing, built to accommodate 500 cadets a year and occupying 6,500 acres at Khadakvasla, near Poona, were opened on Jan. 16, 1955.

Second Five-Year Plan.—India's second Five-Year Plan was scheduled to begin in April 1956. A draft framework of the plan, prepared jointly by the Ministry of Finance and the Planning Commission and made public in July 1955, disclosed two chief objectives: (1) an increase in national income of 5% per year beyond the 15% gain in real terms registered between 1948-49 and 1953-54; (2) to meet increasing unemployment, especially in urban areas, by the creation of new jobs for 11 million persons over the plan period.*

Taking account of India's growth of population at the rate of 4.5 million per year, and the fact that the level of living remains extremely low (with 185 million persons spending less than Rs.13 per month on consumer goods), the plan listed as principal goals the further development of basic heavy industries; acceleration of factory production of consumer goods; increased productivity in agriculture through more equitable distribution of land to peasant cultivators; and expansion of household and hand industries and construction work. Better housing and health

services, and wider educational opportunities, especially for the poor, were also planned. Hydro-electric projects begun under the first Five-Year Plan were to be continued on an increasing scale. Planned net investment covering both public and private sectors totaled Rs.56 billion for the period of the plan (compared with Rs.32 billion appropriated to the first Five-Year Plan). Proposed investment outlays were visualized as follows:

	Millions of rupees	Percentage of total
Agriculture and community development.....	9,500	17.1
Power projects.....	5,000	8.9
Transportation and communications.....	9,000	16.1
Industries and mining (including small-scale).....	14,000	25.0
Construction (housing, schools, hospitals).....	13,500	24.0
Stocks and miscellaneous.....	5,000	8.9
Total.....	56,000	100.0

Agriculture.—For India as a whole, agricultural production has risen by over 18% since the inauguration (1950-51) of the Five-Year Plan. In the year ending June 30, 1955, production of cereals (55.3 million tons from 209 million acres) exceeded planning targets, but fell short of the 1953-54 record of 57.9 million tons from 215 million acres. Wheat production reached a new high of 8.5 million tons; millets and other minor cereals (22.6 million tons) also exceeded their quotas. Rice production at 24.2 million tons fell 3.4 million tons below the 1953-54 figure. Other crops include tea, which in 1954 reached a high of 636.5 million pounds; peanuts (4,282,000 short tons, unshelled, from 12,647,000 acres, in 1954-55); and sesame seed (est. 635,000 tons, from 5,861,000 acres, in 1954-55). Cattle were estimated in 1955 at 220 million; water buffaloes, 50 million; and sheep and goats, 50 and 60 million, respectively.

Mining.—Production of all minerals in 1954 was valued at Rs.830 million (\$174 million), compared with Rs.828 million in 1953, according to provisional data released by the chief inspector of mines late in 1955. Output of certain principal minerals in 1954, with comparative figures for 1953 in parentheses, was as follows: coal, 36.82 million tons (35.98 million); iron ore, 4.24 million tons (3.78 million); gold, 239,000 fine ounces (222,000); copper ore, 342,000 tons (238,000); manganese ore, 1.38 million tons (1.86 million); dressed mica, 103,000 cwt. (128,000).

Industrial Production.—All of India's major private industries recorded increases of production in 1954, when the general index of industrial production rose to 146.4 from 135.3 in 1953. These gains included cloth manufacture, totaling 4,950 million yards (4,880 million yards in 1953); yarn, 1,520 million pounds (1,505); hand-loom products, 1,450 million yards (1,300); jute, 950,000 tons (910,000); diesel engines, 8,100 (3,716); plywood, 12.5 million square feet (11.5); finished steel, 1.23 million tons (1.02); pig iron, 1.9 million tons (1.77); and aluminum, 4,731 tons (3,758).

India's program for industrial development under government auspices involves the expenditure of Rs.1,730 million, including Rs.1,400 million on large-scale industries and transport. A steel production target of 6 million tons (installed capacity) has been set for the end of the second Five-Year Plan in 1961. In 1955 India signed agreements with the Soviet Union for the construction of a 1 million-ton steel plant in Madhya Pradesh; and with the German combine, Krupp-

* Gulzarilal Nanda, minister of planning, conceded in New Delhi on Sept. 1, 1955, that these expectations had been placed too high and would have to be revised.

Demag, for a 500,000-ton steel plant at Rourkela in eastern Orissa. India also accepted proposals by a British steel mission to build a 750,000-ton steel plant, at an estimated cost of \$231 million.

External Trade.—The government announced in April 1955 that India's adverse balance of trade had been reduced in 1954 to Rs.290 million from Rs.330 million in 1953. Exports amounted to Rs.5,570 million (Rs.5,320 million in 1953), including tea, Rs.1,310 million; jute, Rs.1,210 million; and cotton manufactures, Rs.720 million. Imports, aggregating Rs.5,860 million, including mineral oils, Rs.870 million; machinery, Rs.800 million; and raw cotton, Rs.580 million, were reduced by Rs.210 million from the 1953 figure.

Communications.—Total route mileage of India's railways, the country's principal means of transport, was 34,500 in 1954. More than half of the allocations of Rs.4,970 million for communications development under the Five-Year Plan goes to the railways, including Rs.20 million for the construction in 1954-55 of the Ganga Bridge, linking northern and southern Bihar, and Rs.120 million for the new west coast port being built at Kandla to offset the loss of Karachi, now the capital of Pakistan. Gross earnings of national railways totaled Rs.2,723,100,000 in 1953, against working expenses of Rs.2,199,300,000. Some 1,018,700,000 passengers and 98,360,000 tons of goods were carried. There are 248,914 miles of roads outside cities, 118,000 miles of which are all-weather roads, and there are approximately 5,500 miles of navigable waterways. The Indian government operates internal and international air services and maintains 78 airfields.

THE YEAR 1955 IN INDIA

In internal affairs, continued progress was made in 1955 against the most difficult problems facing the country. Economically, it was a good year in spite of disastrous floods which hit the Punjab and western Uttar Pradesh in mid-October. Production was up, sterling balances were almost stable, and international trade was rising and becoming increasingly more favorable to India. Most of the targets in the public sector of the First Five-Year Plan had been met. The Second Five-Year Plan, to run 1956-61, contemplated an outlay of Rs.63,000 million (\$13,230 million) to spur an anticipated 25% increase in national income. In contrast to the first plan, the second will emphasize public spending on industrialization—30% of the total investment, compared with the earlier 9%. To meet the needs of credit in the countryside, a new state bank took over the functions of the old Imperial Bank of India and planned to open 400 branches to serve rural and semirural areas.

At its Avadi session in January 1955, the Indian National Congress resolved that India should strive for a "socialistic pattern of society," although there was considerable disagreement concerning the precise meaning of the term. However, major changes are under way toward alteration in the basic economic structure. On May 2, a joint select committee presented a report to the Indian Parliament recommending the abolition of the pyramiding corporation system, in which a few managing agencies control and administer a vast number and variety of individual firms. Under the proposed law, which showed all likelihood of passing through the legislature, all current managing agents would cease to

hold office on April 15, 1960, unless they are re-appointed with the consent of the central government. Even then, the share of profits and the number of holdings available to any one agency would be sharply limited.

The pace of government acquisition and control of landholdings increased. In a number of states, confiscation of large properties reached the final stages, including the abolition on April 15 of the much-maligned, 162-year-old zamindari system in Bengal, which involved some 25,000 estates and 1,300,000 intermediary interests in the land.*

In internal politics, the party in power scored a surprising landslide victory in the newly formed state of Andhra (March 9). The United Congress Front won 146 seats in the state legislature, the Communists 15, and the Praja Socialists 13. Although the Communists won almost a third of the popular vote, the election was hailed as a triumph for the Congress in one of the areas of greatest Communist strength.

On October 10, the report of the Commission on the Reorganization of the Indian States was released, recommending the reduction of the number of states from 27 to 16 and the creation of three new states in southern India: Kerala, Karnataka, and Vidarbha. Of the existing states only Uttar Pradesh, Orissa, and Jammu and Kashmir remain unaffected. All 9 of the Part C states disappear, as do 5 of the Part B states. On

* Inevitable court contests were cut short by the passage of the Fourth Amendment to the Constitution on April 12 in the Lok Sabha (House of the People). It removed from juridical review all questions concerning compensation for state-acquired property, and directed that the amount of such compensation be set by state legislatures.

Rioting breaks out in Bombay, India, following "peaceful resistance" march into Portuguese Gao, Aug. 15, 1955.

UNITED PRESS

November 9, the Congress Working Committee acceded to the demands from the Marathi-speaking section of Bombay to separate, leaving Gujerat in the north, Maharashtra to the south, and an enclave of metropolitan Bombay as a separate state. The announcement of the plan was followed by a wave of agitation, unrest, and rioting most marked in Bombay city, Vindhya Pradesh, and in the Sikh center of Amritsar.

In social developments, the Untouchability (Offences) Act, in force from June, provided a fine of Rs.500 and/or imprisonment of six months for enforcing disabilities associated with untouchability. On May 5, long-debated changes in the Hindu family law easily passed in Parliament. The most important provisions were the grant of permanent inheritance rights to women and the extension of civil divorce.

On the world scene, India solidified its position. V. K. Krishna Menon's role as a mediator with Chou En-lai in the release of American airmen (see CHINA) was widely hailed in Asia. India took a leading role in setting up the Asian-African Conference (q.v.) at Bandung, Indonesia, on April 18-24. A preliminary caucus in Rangoon was attended by Nehru, Chou En-lai of the Chinese People's Republic, Premier Nu of Burma, and Premier Nasser of Egypt. Although many Western observers reported a loss of leadership for India at the conference itself, at home both the conference and India's role in it were widely praised.

In late May, Nehru toured the satellite countries of eastern Europe, followed by a two-week visit to Moscow (from June 7). Throughout the tour, Nehru was greeted with ovations and elaborate ceremonies of welcome. The state visit was returned by Soviet Premier Bulganin and Communist Party Secretary Nikita Khrushchev, who arrived in New Delhi on November 18 for a goodwill tour (November 18-30 and, following a visit to Burma, December 7-12). The Soviet leaders spoke of the "common cause of peace" shared by the two countries and attacked the policies of the Western powers in speeches on several occasions, including addresses before an informal meeting of the Indian Parliament. Their conduct was described by Sir Winston Churchill on December 5 as a "surprising spectacle."

The outstanding foreign policy issue in 1955 was the quarrel with Portugal over the tiny enclave of Goa, midway up the western coast of India (see PORTUGUESE TERRITORIES). Portugal refused to negotiate with India over the transfer of the colonial outpost to India, and on August 15 troops fired upon invading demonstrators crossing the border from India. Protest meetings flared up all over India, ending in large-scale violence in clashes with police in Bombay. Diplomatic relations were severed with Portugal on August 8, and all rail traffic from India to Goa was stopped. The Indian government announced in September that it would use only nonviolent means to resolve the conflict.

On December 2, U.S. Secretary of State John Foster Dulles and Dr. Paulo Cunha, the Portuguese foreign minister, issued a joint statement in Washington to answer the charges against Western policies made by the touring Russian leaders, including their violent attack on Portuguese rule of Goa. The Western diplomats asserted that the Russians' speeches were stirring up discord between East and West. Their reference to Goa, however, as a Portuguese province, caused widespread indignation in India.

In the long-standing problems with neighbor-

ing Pakistan (q.v.) some progress was made, but many issues were still stalemated. A prime ministers conference in May found no solution for the Kashmir dispute, and the quarrel over the distribution of the canal water from the rivers of the Punjab was postponed under *ad hoc* arrangements mediated by the International Bank for Reconstruction and Development. On August 1, the rail link between Amritsar and Lahore, a distance of 25 miles, crossing the border between the two nations, was reopened for the first time since the partition of the subcontinent. It was again possible to travel from Calcutta to the North-West Frontier without a rail gap.

Executive.—Chief state officers in 1955:

Governor: George N. Craig (Republican)
Lieutenant Governor: Harold W. Handley
Secretary of State: Crawford F. Parker

Treasurer: John Peters

Attorney General: Edwin K. Steers

Supt. of Public Instruction: Wilbur Young

Constitution and Judiciary.—The present constitution went into effect in 1851. The Supreme Court comprises five justices; chief justice in 1955 was James A. Emmert.

Legislature.—The General Assembly (Senate, 50 members; House of Representatives, 100) meets in odd-numbered years commencing the first Thursday after the first Monday in January.

The 1955 session appropriated \$673,700,000 for the 1955-57 biennium. Other legislation extended the option of social security coverage to state employees; raised legislative salaries from \$1,200 to \$1,800 and those of Supreme Court and appellate court judges from \$13,500 to \$15,000; increased minimum teachers' salaries by \$252 and extended the non-degree teachers' salary range by \$278; and increased the state's contribution to the Teachers' Retirement Fund. Additional laws amended the Motor Vehicle Regulation Act and the narcotic control law; recodified part of the Traffic Code; adopted measures to improve physical and nursing facilities for mental patients; created commissions to study juvenile delinquency, expand Legislative Bureau assistance to the legislature, and to study laws on water rights and water management; increased unemployment compensation payments from \$27 to \$30 a week; authorized a bonus for Korean War veterans; and tightened laws concerning abandoned iceboxes.

Finances.—State treasury receipts (1954-55 fiscal year), \$1,016,620,748.11; expenditures, \$821,436,316.13; treasury balance, \$195,184,431.98. The state has no long-term indebtedness.

Taxation.—State tax revenue (1954-55 fiscal year): \$253,905,034, including \$192,122,232 from selective sales taxes; \$41,662,246 from licensing; and \$14,979,854

from property taxes. The state has no sales or individual or corporate income taxes.

Banking.—As of June 30, 1955, the state's 123 national banks had \$2,558,136,000 in assets, \$1,752,098,000 in demand deposits, and \$630,086,000 in time deposits; the state's 354 other banks had \$1,755,470,000 in assets, \$1,061,814,000 in demand deposits, and \$564,123,000 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$189,563,855 (\$270 per pupil) for public elementary and secondary education in the 1954-55 school year comprised (including funds from 1953-54) \$112,200,000 from local school districts, \$74,500,000 from the state, and \$700,000 from the federal government. Expenditures for construction and improvements totaled \$35,572,391. Teachers' salaries averaged \$3,950 (elementary school teachers, \$3,750; high school teachers, \$4,250).

There were 1,516 public elementary schools (grades 1-8) with 16,700 teachers and 609,641 pupils; 213 public senior high schools (grades 9-12) with 9,900 teachers and 194,011 pupils; and 624 public schools (grades 1-12) with 890,000 pupils.

Social Welfare.—Public assistance expenditures from federal and state funds (excluding institutional costs) for the 1954-55 fiscal year totaled \$31,679,570.69, including \$21,434,631.53 for old-age assistance, \$9,028,923.75 for dependent children, and \$1,216,015.41 for the needy blind; a monthly average of 60,929 persons received public assistance. Operating expenditures for health and welfare institutions in the 1953-54 fiscal year totaled \$17,948,960. In the 1954-55 fiscal year, \$5,848,544.21 was spent for the operation and limited improvements of correctional and penal institutions.

Labor Force.—Nonagricultural employment in December 1954 was 1,343,200, and for the full year 1954 averaged 1,318,800. There were 58,000 registered unemployed workers in December 1954, and \$60,645,339 in unemployment compensation was paid to workers during 1954.

Manufacturing.—Establishments in 1953 paid \$2,903,853,000 in wages to an average of 686,736 employees. Value added by manufacture totaled \$5,205,348,000, and investment in new plant and equipment was \$426,047,000. Earnings of production workers in manufacturing averaged \$76.27 for an average work week of 39.6 hours in 1954 and \$81.80 for 40.9 hours during the first six months of 1955.

Mining.—Indiana stands first among the states in production of limestone used for building purposes. The state ranked 20th in value of its min-

* Not including coke and pig iron. (Source: Indiana Department of Conservation Geological Survey.)

In 1953, production of coke totaled 8,886,502 short tons valued at \$159,966,820; of pig iron, 8,372,193 short tons (\$412,683,336).

Agriculture.—Cash farm income in the first half of 1955 totaled \$460,038,000, and for the full year 1954 comprised \$767,220,000 from livestock and livestock products, \$385,092,000 from crops, and \$6,120,000 from government payments. Receipts from principal crops and livestock included hogs, \$355,635,000; cattle, \$149,171,000; corn, \$124,404,000; dairy products, \$122,270,000; soybeans, \$113,328,000; and wheat, \$70,199,000.

The state's 153,593 farms (19,232,774 acres; harvested cropland, 11,333,161) averaged 125.2 acres and \$25,292 in value of land and buildings per farm in 1954. There were 110,756 farms with telephones and 148,392 with electricity. Livestock on farms (Jan. 1, 1955) included

2,054,000 cattle, 466,000 sheep, 4,556,000 hogs, and 19,097,000 chickens (not including commercial broilers). During the week of October 24-30, 1954, there were 244,537 family and hired workers engaged in farming.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$59,348,691, and newly completed construction and reconstruction aggregated 97,798 miles.

Highways and roads on Feb. 1, 1955, totaled 86,861.41 miles (76,521.81 surfaced). Registered motor vehicles numbered 1,854,544 in 1954, including 1,390,970 passenger cars. There were 31 railroads (1955) operating 12,770 line miles, and 9 regularly scheduled airlines and 189 airports and airfields (110 commercial and municipal, 5 military, and 70 private, and 1 seaplane base and 3 heliports).

Communications media included (1955) 51 AM and 17 FM radio stations and 11 operating television outlets; 88 daily newspapers (circulation, 1,547,793) and 248 other newspapers (circulation, 416,410); and (Jan. 1, 1955) 346,943 business and 1,006,499 residential telephones.

Principal Events, 1955.—The regular biennial session of the legislature convened in 1955. Like the 1953 session, it was, at least nominally, controlled by Republican Gov. George N. Craig, but the majority party was badly split. The governor's faction barely elected the speaker of the House, but Senate offices were held by persons unfriendly to the governor. Nevertheless, the chief executive was able to get through some significant legislation, notably on toll roads, mental illness, highway safety, and narcotics and gambling control (see above, *Legislature*).

One Indianapolis daily newspaper wrote editorially that among deplorable failures of the session were the killing of the (municipal) home rule amendment, failure to provide for construction of a state office building, and failure to act on legislative redistricting.

The state had a rash of strikes throughout 1955 involving nationally known corporations. Most were of short duration and were settled without much difficulty, usually with small wage increases and other benefits. The strike, however, which began on July 25 at the Perfect Circle plants in Hagerstown, New Castle, and Richmond, was prolonged, bitter, and, at times, violent. The hiring of nonunion employees; mass picketing; the wholesale arrest of pickets; the massing of an estimated 5,000 sympathizers at New Castle on October 5, where firing from within and the return of fire from outside the Perfect Circle foundry wounded eight persons; the calling out of national guardsmen by Governor Craig; and the placing of all or part of each of the three cities under martial law were only some of the events of the long drawn-out strike.

On October 26-28 a conference called by the governor, and held on the Bloomington campus of Indiana University, served as a "Report to the People" by the executive and administrative departments of the state government. State and local officials, students and educators, and the general public were invited to attend.

The quadrennial elections in cities and towns were held November 8. The trend in these elections was perceptibly in favor of the Democrats. In 1951 the Republicans had elected mayors in 70 cities; the Democrats in 30. In 1955 almost the exact reverse was true, the Democrats having elected 72 and the Republicans 30 mayors.

Principal Events by: P. S. SIKES,
Dean, the Junior Division, Indiana University.

INDIANS, American. In recent years the Bureau of Indian Affairs, in accordance with broad

departmental and congressional policies, has been successfully reducing its responsibilities to more manageable proportions and, concomitantly, encouraging the American Indian to take an increasingly active and positive interest in his affairs. In the fiscal year 1955 these policies were broadened and advanced in several important areas.

Indian Participation.—Of prime importance was the principle of partnership with Indian owners themselves in the management, conservation, and development of the 54 million acres of Indian land in federal trusteeship.* Owing to the combined efforts of many agencies and Indian groups, the bureau's 20-year soil and moisture conservation plan has progressed markedly in recent years. By 1955 approximately 53% of Indian lands had been incorporated in local soil conservation districts, 70% of which was covered by formal operating agreements. Substantial acreages under Indian irrigation projects had been made usable by land classification, leveling, and other corrective measures. In addition, Indians of several reservations continued to work closely with bureau technicians in making arrangements for improving forests and ranges with the view to increasing the income of Indian owners; consultations along these lines were also under way with other tribes.

Reduction of Bureau Responsibility.—By July 1, 1955, transfer of the entire Indian health program to the U.S. Public Health Service as authorized by Public Law 568 (passed on Aug. 5, 1954) had been completed. Representing the biggest reduction of program responsibilities in the history of the bureau, it included 3,600 employees and a real property inventory valued at \$40 million.

Bureau responsibility was further reduced by the enactment in 1954 of six laws providing for the gradual termination of federal trusteeship and special services in specific tribal jurisdictions comprising the Menominee Tribe in Wisconsin, two jurisdictions in Oregon (Klamath and western Oregon), two in Utah (four small Paiute bands and the mixed-blood population of the Uintah and Ouray Reservation), and one in Texas (the Alabama-Coushattas). All of the termination laws, except the one covering the Alabama-Coushattas (which provided for transfer of trust responsibilities to the state of Texas), authorized the initiation of special educational and training programs for tribal members to prepare them for the responsibilities they would assume after termination. Arrangements were made during 1955 with the state departments of education in Wisconsin and Oregon, and with the University of Utah for carrying on such programs at all five of the affected tribal jurisdictions.

Substantial progress was also made during 1955 in transferring to the states the responsibilities for agricultural extension and home demonstration work among the Indian peoples. In the field of education, contracts providing for about 36,000 Indian children were negotiated in 20 states and in the Territory of Alaska in 1955.

Indian Education.—One of the most important developments of 1955 was a major broadening of educational opportunities for Indian children. Under the Navajo Emergency Education Program, which moved into full swing in the fall of

* These lands are scattered on more than 300 reservations in 21 states, and include a substantial number of "off-reservation" allotments on the public domain.

1954, the total enrollment of Navajo children in federal, public, and mission schools, both on and off the reservation, increased from 16,215 at the close of the fiscal year 1954 to 23,679 at the end of 1955. The total school-age population was 27,106.

The Indian population of the United States and Alaska in 1950 was 455,500, of whom 66,900 were in Arizona, 54,000 in Oklahoma, 43,000 in New Mexico, and 33,900 in Alaska.

M. M. TOZIER,

Information Officer, Bureau of Indian Affairs.

INDOCHINA. A territory of the Southeast Asia Peninsula, comprising Cambodia, Laos, and Viet-Nam. Prior to World War II, the Indochinese states constituted a French colonial possession. In 1949, during the Indochinese war of 1946-54 between French Union forces and the Communist-led Vietminh, treaties were concluded granting Cambodia, Laos, and Viet-Nam the status of autonomous states within the French Union. In December 1950, a series of conventions were concluded at Pau, France, under which matters of common interest to the four states (principally communications, inland transport, customs, finance, and foreign trade) were assigned to quadripartite commissions. The Indochinese states then became known as the Associated States of Indochina. On Dec. 29, 1954, representatives of the three states and France signed agreements in Paris abrogating the 1950 conventions and providing for the replacement (beginning on Jan. 1, 1955) of the quadripartite agencies by bilateral arrangements as between independent states.

Meanwhile, the armistice agreements signed at Geneva, Switzerland, on July 21, 1954, had temporarily divided Viet-Nam approximately along the 17th parallel, assigning control of the north to the Communist-led People's Army of Viet-Nam, and that of the south to the forces of the French Union.

VIET-NAM

Viet-Nam, comprising the Communist-led Democratic Republic of Viet-Nam in the north and the State of Viet-Nam in the south, is bordered by China on the north and Laos and Cambodia on the west. The area of Viet-Nam is about 127,260 square miles; the population (mid-1954) is estimated at 26,000,000. The military demarcation line established by the Geneva armistice agreement of 1954 divides Viet-Nam roughly in half, with the north having somewhat the larger population. (No census has been taken since before World War II.) The Annamese constitute the predominant ethnic group. Chinese and French, chiefly in Saigon and other large cities, are the principal minority groups. Thai and other primitive tribes inhabit the north-west mountainous areas and the central highlands. Hanoi (est. 1953, 297,900) is the capital of the Democratic Republic of Viet-Nam, and Haiphong (188,600) is the chief port. Saigon is the capital of the State of Viet-Nam, the population of the Saigon-Cholon conurbation totaling about 1,614,200 in 1953; Hué (96,400) and Tourane (57,400) are coastal towns of some importance.

Government.—The State of Viet-Nam was created by the French in 1949, with Bao Dai, former emperor of Annam, as chief of state. Treaties of independence and association were initiated by the respective French and Vietnamese premiers on June 4, 1954. However, a definitive relationship between South Viet-Nam and France, including the position of South Viet-Nam within the French Union, had not been established by 1955.

Legislation until October 1955 had been by decree of the premier, who was appointed by the chief of state. Ngo Dinh Diem was named premier by Bao Dai in July 1954. On Oct. 18, 1955, Bao Dai (residing in France) ordered the dismissal of Premier Ngo Dinh Diem. The premier rejected the dismissal order and conducted a referendum on October 23 in which the voters of South Viet-Nam decided on the ouster of Bao Dai as chief of state. On October 26, Ngo Dinh Diem proclaimed South Viet-Nam a republic, with himself as first president and premier.

The Democratic Republic of Viet-Nam is based on a constitution formulated by a National Assembly elected in 1946. Legislative power is vested in the National Assembly. The president of the republic since its inception has been Ho Chi Minh, leader of the revolutionary movement against the French. On Sept. 20, 1955, the Na-

THE NEW YORK TIMES

INDOCHINA

Shaded area (diagonal markings) represents South Viet-Nam, which was proclaimed a republic on Oct. 26, 1955.

tional Assembly elected Pham Van Dong as premier, heading a 20-member cabinet. The Lien Viet, or National Union Front, is the dominant political force in North Viet-Nam. It embraces various nationalist parties and mass organizations and is controlled by the Communist Lao Dong (Workers' Party).

Education.—Viet-Nam in 1952 had 797,467 primary school pupils, 112 secondary schools with 38,763 pupils, 68 technical schools with 5,403 pupils, and one university with 1,728 students. Illiteracy has been estimated at over 50% of the population.

Religion.—The Annamite religion is a fusion of Taoism, Buddhism, and nature worship. The religious-political sect of Hoa Hao, a reform Buddhist movement of less than a million followers, holds sway in the area southwest of Saigon. The Cao Dai sect, which fuses Christianity and the chief Oriental religions, includes some three million persons in the area northeast of Saigon. Roman Catholics number over two million, concentrated mainly south of the Red River Delta.

Finance.—In the national budget of the State of Viet-Nam, revenue for 1954 was estimated at 5,323 million piastres; civil expenditure, 6,300 million; defense expenditure (first 8 months of 1954), 5,323 million. In late 1955 the Indochinese piastre was replaced by a national Vietnamese piastre of equal value (10 francs,

UNITED PRESS

Premier Diem (r.) with two of his National Army generals.

or about 2.9 cents in U.S. currency). Data on North Vietnamese finances were not available in 1955.

Production.—Rice cultivation is of prime importance in the north as well as in the south. The north, however, is a rice-deficit area, while the south is a major rice exporter. Production of rough rice in South Viet-Nam in 1954-55 (prelim.) totaled 4,600 million pounds. Output in the north approximates 1.4 million metric tons annually, as against consumption requirements of about 1.7 million. Corn and fresh-water fish are other important food staples. Minor crops include vegetables, sugarcane, groundnuts, cotton, tobacco, tea, coffee, quinine, cinnamon, pepper, jute, copra, kapok, and sesame. Rubber output in South Viet-Nam, produced mainly on French-owned plantations, approximated 55,000 metric tons in 1954.

The north exceeds the south in both mineral resources and industrial development. At Hanoi, Haiphong, and Nam Dinh, the industrial centers of the north, manufactures include textiles, cement, engineering products, chemicals, alcohol, bicycles, tobacco products, silk, and refined sugar. Coal output in 1954 totaled 996,000 metric tons. Minerals exploited on a lesser scale include iron ore, manganese ore, bauxite, tin, and zinc. Industries in the south, concentrated in the Saigon area, include rice and sugar milling, chemicals, tobacco products, soap, matches, and other light items.

Foreign Trade.—South Vietnamese exports averaged an estimated \$5.2 million monthly in 1954; imports, about \$22.2 million. Exports were mainly rice and rubber; imports: cotton textiles, petroleum products, metal goods, sugar and other foodstuffs, and other manufactures. France provided 72% of 1954 imports. North Vietnamese trade is largely with Communist China, although France continues to maintain commercial ties with North Viet-Nam. North Vietnamese exports are mainly coal, agricultural and forest products, and handicraft items; imports: chiefly machinery, manufactured goods, and foodstuffs.

Transportation and Communications.—Roads total some 16,000 miles, divided about equally between the north and the south. About 60% of the prewar railway system was destroyed during the Indochinese war of 1946-54. At the end of 1954, South Viet-Nam had about 561 miles of railroads in working order; North Viet-Nam, about 70 miles. In the summer of 1955, Haiphong was linked to southern China by the completion of a railway line running through Hanoi to the Chinese border. International airports are at Saigon, Hanoi, and Haiphong. Telephones in use in Viet-Nam totaled 14,832 in 1955.

Principal Events, 1955.—By May 16, 1955, within the deadline date set by the Geneva armistice agreement of 1954, all French Union forces had been withdrawn south of the military demarcation line and the Communist-led Vietminh forces had been transferred north of the line. In addition, some 800,000 North Vietnamese civilians removed to South Viet-Nam and a few thousand transferred from the south to the north. Transport of the northern refugees was accomplished by French air and sea craft and by the

U.S. Navy. The northern regime was charged by the International Supervisory Commission (India, Canada, and Poland) with having hindered the movement of refugees in certain instances.

The Geneva agreement had also called for talks between the northern and southern regimes to be held after July 20, 1955, on arrangements for national elections to be held in 1956. A request for such talks was issued by North Vietnamese Foreign Minister Pham Van Dong in a note to South Vietnamese Premier Ngo Dinh Diem on July 19, 1955. Ngo Dinh Diem rejected the request on August 10, declaring that free elections were impossible under the northern regime. The South Vietnamese government also emphasized on various occasions that it was not a signatory to the Geneva agreement and sponsored demonstrations opposing the presence of the International Supervisory Commission.

South Viet-Nam.—The principal development in South Viet-Nam in 1955 was the consolidation of power by the Saigon government under the leadership of Premier Ngo Dinh Diem. The premier, strongly anti-French as well as anti-Communist, was supported almost solely by the United States, which regarded him as the only mainstay against communism in South Viet-Nam. Diem made his first move against the divisive internal factions early in the year by closing Saigon vice houses and cutting off the revenue of the Binh Xuyen, a river pirate gang which formed the Saigon police force. After a number of minor clashes in Saigon between units of Diem's Vietnamese National Army and the Binh Xuyen, Diem on April 26 ordered the Binh Xuyen stripped of its police powers. The order precipitated large-scale fighting in Saigon on April 28, and within a few days the 8,000-man Binh Xuyen had been swept out of the city. Some 500 persons, including 200 civilians, were reported killed in the fighting.

Diem's campaign against the Binh Xuyen had been opposed by the French as well as by Chief of State Bao Dai, residing in France. During the fighting, Gen. Nguyen Van Vy, an emissary of Bao Dai, sought to take over control of the national army from the premier but was forced to flee the capital on May 1 by pro-Diem forces. On May 5 a People's National Revolutionary Committee comprising some 4,000 Diem supporters met in Saigon, demanding the ouster of Bao Dai and the convocation of a national assembly. At the same time some 50 provincial and municipal councillors met in the premier's palace and demanded that Bao Dai give up his powers in favor of the premier. The premier bided his time on the Bao Dai ouster, although on May 15 he abolished the chief of state's Imperial Guard and incorporated it within the national army.

Encouraged by his success against the Binh Xuyen, Premier Diem moved against the Hoa Hao, one of the military-religious sects which had sought to preserve its special position in the face of Diem's consolidation effort. On June 5 the national army began a large-scale offensive against the forces of Generals Bacut and Tran Van Soai southwest of Saigon. Within a month the premier reported that the Seven Mountains region along the Cambodian border had been brought under government control. Meanwhile the influence of the Saigon government was being increased by the incorporation within the national army of elements of the defeated Binh Xuyen, as well as of the Hoa Hao. In early Octo-

ber, Pham Cong Tac, pope of the Cao Dai (another military-religious sect) was stripped of his temporal powers by Cao Dai military leaders whose forces were also being integrated within the national army.

By early fall, Premier Diem felt himself strong enough to act against Chief of State Bao Dai, and announced that a referendum would be held to choose between the chief of state and his own continuance as premier. Bao Dai denounced the referendum as illegal and decreed the dismissal of Diem on October 18. Ignoring the dismissal order, Diem proceeded to hold the referendum on October 23. The result was a victory for the premier, who reportedly obtained 98% of the votes. The United States, France, and Britain quickly announced their recognition of the results of the referendum, and on October 26, Diem proclaimed South Viet-Nam a republic, with himself as first president, premier, and minister of defense.

A major factor in Premier Diem's success was the transfer of control to the Saigon government of United States aid hitherto channeled through the French authorities. Diem's control over the assistance funds, beginning on Jan. 5, 1955, afforded him a means of building up his own strength and securing the loyalty of the Vietnamese National Army. Diem also had the support of Gen. J. Lawton Collins, who served as a special envoy of President Eisenhower in South Viet-Nam for six months ending on May 14, 1955. In the fiscal year 1955, United States aid to South Viet-Nam totaled about \$320 million, of which 73% was for military purposes and the remainder for refugee aid and technical assistance. The military aid was largely in connection with the joint Franco-American program for the reorganization and training of the 220,000-man Vietnamese National Army. Lieut. Gen. John W. O'Daniel, who took charge of the program on February 12, was succeeded in November by Lieut. Gen. Samuel T. Williams as head of the U.S. Military Assistance Advisory Group in South Viet-Nam. The United States aid program for the fiscal year 1956 was estimated at \$195 million.

While the prestige and influence of the United States in South Viet-Nam mounted in 1955, that of France receded. The French Expeditionary Forces in Viet-Nam, which totaled about 150,000 men at the end of the Indochinese war in 1954, stood at some 30,000 by November 1955. Although the Vietnamese National Army was still nominally under the command of the French commander in chief, it actually operated under its own command in 1955. Gen. Paul Ely, French commander in chief in Viet-Nam, left Saigon on June 1 and was replaced by Gen. Emile Jacquot. Ely, however, had also served as French high commissioner, and the Diem government demanded that France henceforth be represented by an ambassador. Henri Hoppenot was subsequently sent to Saigon in the capacity of French ambassador-high commissioner.

North Viet-Nam.—The Communist-led Democratic Republic of Viet-Nam in 1955 was occupied in consolidating its political power in the areas newly gained from the French, in developing the institutions of civil rule, and in rebuilding its war-devastated economy. In late 1954 and early 1955 a congress of the Lien Viet, comprising 161 delegates of the front's political parties, was held in Hanoi, and a session of the republic's National Assembly was reported to have taken place in Hanoi from March 20-26, at which President Ho Chi Minh issued a call for the

unification of Viet-Nam. At a meeting of the National Assembly on September 20, Pham Van Dong, vice premier and foreign minister, was elected premier, succeeding Ho Chi Minh. Ho continued as president of the republic.

President Ho headed a North Vietnamese delegation to Peking, June 25-July 8, and concluded an agreement with the Chinese Communist leaders providing for about \$338 million in Chinese aid toward the rebuilding and expansion of North Vietnamese transport and production facilities. Both parties reiterated their demand for elections in Viet-Nam and accused the United States of using South Vietnamese Premier Ngo Dinh Diem to obstruct the Geneva provision for national elections. Ho then visited Moscow, July 12-18, and obtained a Soviet grant of 400 million rubles (about \$100 million at the official rate).

CAMBODIA

The Kingdom of Cambodia is situated on the southeast part of the Indochinese Peninsula facing the Gulf of Siam. Estimated area, 53,670 square miles; pop. (est. 1954), 4,100,000. The majority of the people are Khmers (Cambodians). Chief minorities are the Chinese (about 300,000), Vietnamese, and French. The national language is Khmer (Cambodian), although French is widely spoken among the educated groups. Phnom Penh (pop. 1946, 110,639) is the capital and chief city.

Government.—King Norodom Sihanouk proclaimed a constitution in 1947 providing for an elected National Assembly and a Council of Ministers responsible to the assembly. In June 1952 the king suspended parliamentary government and took over personal control through his own cabinet. On March 2, 1955, he relinquished the

UNITED PRESS

throne to his father, Norodom Suramarit. The former king then founded the Popular Socialist Community, which, in the elections of Sept. 11, 1955, won all 91 seats in the National Assembly. Norodom Sihanouk was named premier by the assembly on September 25. The newly elected assembly removed from the constitution all mention of association within the French Union.

Education and Religion.—In the 1953-54 school year there were 982 public elementary schools (173,421 pupils) and over 1,400 religious schools (75,000); 8 secondary schools (2,942); 19 teacher-training schools (800); and 204 private schools (17,117). The principal institution of higher education is the National Judicial, Political, and Economic Institute (165 students in 1952). Buddhism is the predominant religion. Roman Catholics number about 120,000.

Finance.—The 1954 budget totaled 1,670 million piastres (29% over 1953), of which 835 million represented defense expenditure. In October 1955 the Indochinese piastre was replaced by the Cambodian riel as the national currency. The riel equals 10 francs (about U.S.\$0.029).

Production.—The Cambodian economy is mainly agricultural, with rice and rubber the chief crops. Peasant smallholders comprise some 90% of cultivators. About 85% of cultivated land is devoted to rice. Output of rough rice in 1954-55 (prelim.) totaled 2,400 million pounds (3,086.4 million in 1953-54). Rubber production in 1954 amounted to 24,500 metric tons, a rise of about 45% over the pre-World War II level. Other crops are corn, sugarcane, pepper, kapok, coffee, cinnamon, aniseed, essential oils, and tobacco. Livestock raising is important. Forest products include softwood timber, bamboo, and hardwoods. Coastal and inland fisheries yield about 100,000 metric tons annually.

Industries are on a small scale and include distilleries, rubber plants, oil and rice mills, tanneries, lacquer plants, and pharmaceutical factories. Other industrial products are lumber, tile, brick, woven goods, rope, baskets, pottery, and jewelry.

Foreign Trade.—Exports in 1954 (prelim.) were estimated at \$60.5 million; imports, \$58.8 million. Chief exports are rice (295,700 metric tons in 1954), rubber (17,881), pepper, kapok, and other agricultural and forest products. Imports are mainly textiles and yarn, machinery and instruments, mineral products, and foodstuffs. Chief trading partners in 1954 were France and South Viet-Nam.

Transportation and Communications.—All-weather roads total about 2,000 miles; other roads are passable during the dry season. The only railroad, from Pnom Penh to the Thailand border, has a route length of 242 miles. Pnom Penh is linked to Saigon and Bangkok by international airlines. Telephones numbered 1,148 in 1954. In 1952 there were 5 daily newspapers with a total circulation of 7,000.

Principal Events, 1955.—Nearly three years after he had suspended parliamentary government in order to wrest leadership of the Cambodian nationalist movement from the Democratic Party, King Norodom Sihanouk sponsored a national referendum on Feb. 7-9, 1955, on the question: "Have I kept my promise to give you total independence?" The referendum returned a 99% affirmative vote for the young monarch, although voting was not secret and the government had taken steps to suppress the opposition. On March 2 the king surprised the world by relinquishing the throne to his father, Norodom Suramarit. The alleged reason for the abdication was the refusal of the International Supervisory Commission to accept the king's electoral law, which would have debarred his opponents from participation in the elections called for under the Geneva agreement of 1954.

Following his abdication, Norodom Sihanouk assumed a leading role in the election campaign, founding and heading the Popular Socialist Community. A major issue in the campaign was Cambodian relations with the United States. On Feb. 28, 1955, U.S. Secretary of State John Foster Dulles had conferred with Norodom Sihanouk in Pnom Penh, and on May 16 a United States-Cambodian agreement had been concluded in Pnom Penh, providing for United States military assistance and looking toward the establishment of an American military advisory group in Cambodia. The Democratic Party charged that Cambodia was becoming a satellite of the United

States. Norodom Sihanouk denied the charge, declaring that Cambodia would remain neutral and grant no military base to the United States.

The election of September 11 resulted in a strong victory for the former king, whose Popular Socialist Community obtained all 91 seats in the National Assembly. Only about half the electorate voted. At its first meeting on September 25, the assembly named Norodom Sihanouk as premier and altered the constitution to delete all references to Cambodia as an associated state within the French Union.

In early December, Premier Prince Norodom Sihanouk visited Japan, concluding a Japanese-Cambodian treaty of friendship and economic and cultural cooperation on December 9. Cambodia, along with 15 other nations, was elected to membership in the United Nations on Dec. 14, 1955.

LAOS

The land-locked Kingdom of Laos is bordered by Thailand and Burma on the west, China on the north, Viet-Nam on the east, and Cambodia on the south. Estimated area, 91,430 square miles; pop. (est. 1954), 1,360,000. Lao comprise about half the population; the remainder are chiefly mountain tribesmen of Chinese or Indonesian origin. Lao language and culture is related to that of Thailand. Lao is the official language, although French is widely used in commerce and government. Vientiane (est. 1953, 20,000) is the administrative capital. Luang Prabang (15,000) is the royal residence.

Government.—King Sisavong Vong proclaimed a constitution in 1947. The National Assembly is elected indirectly for a 4-year term. Premier Katay Sasorith has headed the Council of Ministers since November 1954. A treaty of friendship and association with France was signed on Aug. 22, 1953. France maintains a military base in Laos.

Education and Religion.—Less than half the population is literate. In 1953-54 there were 557 primary schools (33,357 pupils); a high school (226), 4 colleges (500), a teachers school (75), a French lycée (341), and a French primary school (220). Buddhism is the chief religion.

Finance.—Expenditure in 1954 was estimated at 632 million piastres; revenue, 358.1 million. Beginning in October 1955 the kip replaced the Indochinese piastre as the currency of Laos. The kip equals about 2.29 cents in United States currency.

Production.—About 95% of the population is agricultural and most nonagricultural goods are produced in the household. Output of rice, the chief crop, approximated 1,150 million pounds in 1953-54, but was reduced to about 775 million in 1954-55 (prelim.) by drought and insect damage. Corn is the second largest crop. Coffee, tobacco, tea, cotton, ramie, beans, potatoes, peanuts, pimento, and tung are produced in small quantities. The vast forests yield teak (5,890 cubic meters in 1951), lumber (16,782 in 1953), bamboo, sticklac, resins, and other products. Tin concentrates totaling 280 metric tons (metal content) was produced by the tin mine at Phontio in 1953. The few industries are mainly sawmills, rice mills, woodworking shops, and charcoal ovens. Handicraft products include silk cloth, leather and silver goods, and pottery.

Foreign Trade.—Imports in 1952 totaled 358 million piastres; exports, 76 million. Chief exports are forest products, livestock, tin, and tobacco; imports: textiles, foodstuffs, petroleum, metal products and other manufactures. Viet-Nam, Cambodia, and Thailand are Laos' principal trading partners.

Transportation and Communications.—Laos has no railroads. The road network in 1952 totaled 2,174 miles, including 1,192 of all-weather roads. Air Laos and Veba-Akat (a Franco-Lao company formed in 1955) provide internal and external air services. Passenger cars and trucks numbered 1,871 in 1955; telephones, 535.

Principal Events, 1955.—Talks between representatives of the Royal Laotian government and the Communist-led Pathet Lao regime (which controlled the northern provinces of Sam Neua and Phong Saly) failed to produce agreement on the extension of Laotian government control to

the two northern provinces and the holding of national elections as provided under the Geneva agreement of 1954. Such talks took place in northern Laos, January 18-19; at Rangoon, Burma, where Laotian Premier Katay Sasorith and Prince Souvanou Vong of the Pathet Lao group reportedly agreed on the principles of a cease-fire on October 11; and in Vientiane in November. Despite the lack of agreement, the Vientiane government conducted elections for the 39-member National Assembly on Dec. 25, 1955, in which the pro-Western coalition of National Progressives and Independents under Premier Sasorith was maintained in power. The elections were boycotted by the Pathet Lao and did not take place in the areas held by the Communist-led regime. Fighting between Royal Laotian forces and Pathet Lao troops took place in January, July, August, and December, mainly in the areas south of the towns of Sam Neua and Muong Peun.

At the Asian-African Conference (q.v.) at Bandung, Indonesia, in late April, Laos and North Viet-Nam signed a pact pledging non-interference in each other's internal affairs. Laos subsequently charged, however, that the Pathet Lao forces were being aided and built up by the Communist-led regime of North Viet-Nam.

Closer ties between Laos and Thailand were established following Premier Katay Sasorith's visit to Bangkok, February 19-22, and Laos commenced construction of road and river connections to the Thai border, where a Thai railroad was being built which would afford Laos an outlet to the sea via Bangkok. The Thai railroad, as well as the projects in Laos, were being carried on with United States aid. United States aid to Laos in the fiscal year 1956 was estimated at \$47 million, to consist of \$35 million in military aid and \$12 million in economic assistance. In September and October 1955, 1,000 tons of rice provided by the U.S. International Cooperation Administration was airdropped to famine-stricken mountain villages in northern Laos.

Laos, along with 15 other nations, was elected to membership in the United Nations on Dec. 14, 1955.

M. J. G.

INDONESIA, Republic of. The Republic of Indonesia occupies the island archipelago formerly known as the Netherlands East Indies, stretching 3,000 miles from east to west along the equator between the Indian and Pacific oceans. The western island of Sumatra is less than 50 miles across the Malacca Strait from Malaya; Kalimantan (Borneo) is separated by the Sulu Sea from the Philippine Republic; and the islands continue eastward to Netherlands New Guinea or West Irian (claimed by both Indonesia and the Netherlands), north of Australia. The hundreds of islands in the archipelago have a land area of 583,600 square miles (excluding West Irian), but four principal islands represent about 85% of this total: Sumatra (164,000 square miles), Java (51,000), Kalimantan (208,000—exclusive of British territory), and Sulawesi or Celebes (73,000).

Population.—A total population estimated at 81,100,000 (U.N. est., July 1, 1954) is divided approximately as follows: Java and Madura, 52,500,000; Sumatra, 11,800,000; Celebes, 6,000,000; Kalimantan, 3,700,000; and other islands, 7,100,000.

The growth of Indonesian cities has been rapid since World War II. Major urban centers are Djakarta (formerly Batavia), the capital (2,800,000), Surabaya (950,000), Bandung (775,000), Djogjakarta (500,000), Surakarta (350,000), Malang (420,000), and Semarang

(340,000), all on Java; Medan (520,000), on Sumatra; and Makassar (270,000), on Celebes. The island of Java, with about 1,000 persons per square mile, is one of the most densely populated areas in the world.

The vast majority of the Indonesian people share a common Malayan stock. Despite cultural diversity (the principal groups are the Javanese, Sundanese, Madurese, Buginese, and Minangkabau), the people are being increasingly united by the spreading use of the Indonesian language and by the sense of national identity consequent to achievement of independence. The principal alien minority groups are the Chinese (more than 2.5 million), Eurasians (150,000), Arabs (70,000), and Indians and Pakistanis (30,000).

Government.—Indonesian independence from the Dutch was proclaimed on Aug. 17, 1945, in the wake of the surrender of occupying Japanese forces, by Sukarno and Mohammed Hatta, who have served as president and vice president, respectively, since that time. Independence was confirmed Dec. 27, 1949, by the Round Table Agreements with the Netherlands. The present provisional constitution, adopted Aug. 17, 1950, replaced the original confederation with a unitary state. Executive authority is exercised by a cabinet responsible to a provisional Parliament, whose members are appointed by the president to represent major political parties and groups. In mid-1955, prior to the first national elections held in September, the parliamentary representation of the leading parties was: Indonesian Nationalist Party (PNI), 42 seats; Masjumi (Moslem Council), 40; Greater Indonesian Party (PIR), 22; Communist Party (PKI), 17; and Socialist Party (PSI), 15. Fourteen other groups and 15 nonparty members completed the roster of 231. (See below, *Principal Events*, 1955.)

The provisional constitution is to be replaced by an instrument establishing the final form of the Indonesian state following election of a constituent assembly on Dec. 15, 1955.

Education.—The Indonesian government estimates that 55% of the adult population is literate. Despite persistent governmental efforts, educational institutions accommodate little more than half the estimated 12 million children of elementary school age. The government maintains 26,000 elementary schools, and there are some 6,000 private schools. Higher education is provided primarily by the University of Indonesia (6,972 students in 1953) and Gadjah Mada University (5,370 students). More than 40,000 students are now enrolled in teachers colleges.

Religion.—More than 90% of the Indonesian population is Moslem. The constitution, however, guarantees freedom of religious practice. There are some 2.5 million Christians (about 1.5 million Protestants and 1 million Catholics) and from 1 to 2 million adherents of a modified form of Hinduism on the islands of Bali and Lombok.

Finance.—The Indonesian unit of currency is the rupiah, officially valued at U.S.\$0.088 and selling (June 30, 1955) at a black market rate of \$0.022. The original 1955 government budget anticipated expenditures of 14 billion rupiah and revenues totaling 11.5 billion. Continuing deficits (3.6 billion rupiah in 1954 and an anticipated 3.5 billion in 1955) perpetuated inflationary pressures. In mid-1955 treasury borrowings from the central bank totaled 5.7 billion rupiah against a currently authorized ceiling of 7.1 billion.

Economic Conditions.—Banknotes in circulation increased from 5,938 million rupiah in June 1954 to 8,184 million in June 1955. Retail food prices (1948 = 100) rose from 223 in January 1954 to 254 in January 1955, with indications that continuing inflation stimulated further increases through the year.

Indonesian exports reached a postwar high in 1954, providing an export trade balance, of 2,565 million rupiah. Gold and foreign exchange holdings increased in the wake of larger exports, rising from 2,474 million rupiah in September 1954 to a high of 3,136 million at the end of March 1955.

Both exports and imports are subject to complex regulations, designed to curtail unnecessary imports and to stimulate exports while deriving the maximum possible revenue from trade. In August 1955 the government completely overhauled the import system, establishing a new Foreign Trade Exchange Bureau to issue exchange and import permits, under control of the Foreign Exchange Institute. The government, however, faced the continuing dilemma that restriction of imports contributes to inflationary pressures, and relaxation of such restrictions im-

mediately revives the earlier international payments problem. In the net, the domestic economic situation deteriorated in the first half of 1955, characterized by the persisting budgetary deficit, commodity shortages, and declining exports.

Production and Foreign Trade.—But for the occurrence of severe floods in parts of central Java, Indonesia would have achieved its goal of self-sufficiency in rice during 1955. Imports were unlikely to total more than 175,000 tons, as compared with 250,000 in 1954. Total rice production was 7.4 million tons in 1954, as compared with 6.8 million in 1953, and increased slightly in 1955. Production of secondary food crops and the annual fish catch also indicated increases.

Rubber production increased approximately 8%, from 703,000 metric tons in 1953 to 757,000 in 1954. Production of other commercial crops included tea, 46,474 tons; coffee, 13,749; cinchona bark, 1,662; cocoa, 1,131; sugar, 713,571; palm oil, 168,325; palm nuts, 43,287; and hard fiber, 29,958.

Crude oil production reached an all-time high of 10,814,000 tons in 1954, a 5% increase over 1953. Tin production increased by 6%, to 35,862 tons; coal remained stable at 894,000 tons; and bauxite increased by 10%, to 166,000 tons.

Rubber remained the principal source of export earnings in 1954 (31.1%), followed by petroleum products (26.4%), tobacco (7.6%), tin (7.1%), copra (6%), coffee (4.7%), palm and vegetable oils (3.2%), and sugar (2.7%). Total exports were valued at 9,777 million rupiah. Principal customers were Singapore (26.3%), the Netherlands (18.3%), and the United States (16.8%).

In the face of additional Indonesian restrictions on "non-essential" imports, the United States lost its position as Indonesia's leading supplier in 1954, providing 14.4% of all imports, as against 17.9% in 1953. Major categories of imports were textiles (29.1%), machinery and vehicles (19.4%), and foodstuffs, beverages, and tobacco (16%).

Indonesia continued efforts to diversify its economy and to increase industrial production. Economic development is retarded by shortages of technicians, by limited foreign exchange and

credit, and by pressure for national control over economic activity.

Transportation and Communication.—Indonesia's railroads have been operated by the government since the termination of World War II. In 1954 there were two lines in operation: the State Railway (DKA), with 3,814 miles of track, and the Deli Railway in Sumatra, with 338 miles. In 1953 there were 46,601 miles of roads serving 164,327 motor vehicles. The bulk of Indonesia's shipments are by sea, but air service is becoming increasingly important. In 1954 there were two domestic airlines in operation: Garuda Indonesian Airlines and the Pioneer Aviation Company.

Principal Events, 1955. Domestic Affairs.—Developments within Indonesia in 1955 were dominated by preparations for national elections. The government of Ali Sastroamidjojo, of the Nationalist Party (PNI), fell in July in the midst of the campaign. It was overturned by criticism of economic conditions and by a recrudescence of the long-standing dispute over the degree of civilian control over the armed forces.

Difficulties within the army stemmed from the "October 17 (1952) affair" when certain army leaders had been accused of instigating a popular demonstration against alleged parliamentary interference with the armed forces. Since that time, suspicions remained within the army that some political leaders were desirous of using a settlement of the affair to establish direct political control over the armed forces. In February 1955, regional army commanders signed a charter of unity, stating their readiness to accept a governmental solution of the October 17 affair (thus hoping to avoid a settlement through court action). The government did not resolve the basic issue, and on May 12 the chief of staff, Maj. Gen. Sugeng, resigned over differences with Defense Minister Iwa Kusumasumantri. Regional commanders supported the acting chief of staff, Col. Zulkifli Lubis, in his refusal to acknowledge President Sukarno's appointment of Col. Bambang Utojo as new chief of staff. Iwa resigned on July 14, and on July 24, Ali's cabinet fell, thus confirming the position of the army as a powerful political factor in the country. (Col. Abdul Haris Nasution, a leader of the "October" army group, was appointed chief of staff in October.)

A new coalition government, headed by Burhanuddin Harahap of the anti-Communist Masjumi (Moslem) Party, took office on August 12. It represented 12 parties, excluding not only the Nationalists but also the Communists, who, although without representation in the former cabinet, had generally given parliamentary support to Ali.

The national elections of September 29 represented the first Indonesian experiment in mass participation in democratic government. Three fourths of the electorate—more than 35 million voters—cast ballots. Because of obstructionism by insurgent bands and difficult inland communications, the final results were delayed until the end of the year. Unofficial returns indicated that four major parties had emerged—the Nationalist, Masjumi, Nahdatul Ulama or Moslem Scholars, and the Communists—and that the new government would be a coalition based on two or more of these four parties.

International Relations.—The Asian-African Conference (q.v.), which met in the mountain city of Bandung in Java from April 18–24 was an event of world significance and the highlight of Indonesia's foreign relations in 1955. Bringing together governmental delegations from 29 coun-

Newly franchised Indonesian women vote in the country's first general election, which began on Sept. 29, 1955.

tries, the meetings signalized the desire of the Asian and African nations to assert themselves more effectively in world affairs. Despite basic disagreements between anti-Communist representatives and the Communist delegations, the conferees were able, in a large measure of harmony, to evolve a broad statement of principles expressing their desire for peace and independence, economic progress, and greater cultural contact.

The Bandung Conference brought other important developments in its train. During the sessions, Peking and Djakarta announced an agreement on the long-standing problem of dual nationality of overseas Chinese. It provided that within two years Chinese residents must choose between citizenship of Communist China and Indonesia. The agreement was the first in modern history in which a Chinese government abandoned claims to citizenship of all overseas Chinese by application of the principle of *jus sanguinis*. In the face of opposition from some Indonesian elements and from segments of the Chinese community loyal to the Republic of China on Formosa, the agreement was not submitted to Parliament for ratification. After the conference, Chou En-lai paid an official visit to Djakarta, where, on April 28, he and Ali signed a joint declaration pledging adherence to the five "principles of coexistence," first enunciated in the Indian-Chinese Communist agreement on Tibet in 1954. In May, Prime Minister Ali returned Chou's visit by going to Peking.

Indonesian relations with the Netherlands remained strained. The dispute concerning sovereignty over West Irian continues and, at the initiative of a group of Asian and Arab states, was inscribed on the agenda of the U.N. General Assembly for the second straight year. Debate on the protocol dissolving the Dutch-Indonesian Union, negotiated in 1954, continued in the Indonesian Parliament intermittently from February until June. On July 5, opposition groups boycotted a scheduled vote on ratification, which failed for lack of a quorum. Relations were further exacerbated by Dutch resentment over Indonesian handling of several Dutch citizens arrested in December 1953 and charged with conspiracy against the Indonesian state. Dutch charges (issued in a white paper in June) of illegal detention of prisoners and of other violations of civil rights of Dutch subjects were matched by Indonesian resentment of alleged Dutch interference in Indonesian internal affairs.

WILLIAM C. HAMILTON,
Researcher on Far Eastern Affairs.

INDUSTRIAL DESIGN. For the past quarter century the importance of industrial design in the American economy has rapidly risen to the point where it is now considered essential by industry in today's highly competitive market. With the coming of automation, the profession must meet the provocative challenge of accurately predicting consumer reaction to their specific products.

Most industrial designers are now seeking to learn more about motivation—why people buy and prefer certain products in lieu of other similar items. Consumer research must by necessity be concerned with the future—not just tomorrow, but a decade hence. It has now become self-evident that the one person with experience in correlating people with products is the industrial designer. Realizing that the demand for proficient industrial designers is steadily and rapidly increasing, many of America's institutions of

learning have either added or enlarged industrial design departments. Typical of this expansion is the functional modern building, completed in 1955, which houses the Illinois Institute of Technology's design school under the direction of Jay Doblin.

The demand for talented designers seems to be universal. In Germany, the Hochschule fur Gestaltung, a new school of design, was completed and opened its doors in October 1955. The school, which considers itself a continuation of the Bauhaus, founded in 1919 by Walter Gropius, intends to go further than its predecessor in conformity with postwar requirements.

The United States government launched an intensive program in 1955 to assist many underdeveloped countries by exporting American design techniques to provide technical assistance in product design and marketing. A function of the International Cooperation Administration, the program will assist countries rich in such crafts as rug making, weaving, pottery, leather working, wood and metal crafts. By late 1955 the agency had signed contracts with five United States industrial design firms, all members of the American Society of Industrial Designers (ASID), to assist in the program.

Also under the auspices of the International Cooperation Administration, 26 members of the Inter-European Industrial Design Study Group visited the United States to obtain a better understanding of American industry's use and application of design in all fields. Indicative of the universal interest in United States design was the number of exhibits held both in that country and abroad. The ASID exhibit, representing the work of 18 of its members, and arranged at the request of the Department of Commerce, was enthusiastically received at the Liège (Belgium) Fair. This display alone attracted more than 60,000 interested visitors. Later, most of the products were displayed in Paris ("Main Street U.S.A.") and in Barcelona's Samples Fair.

In the United States, industrial designers were elated over the rising level of consumer taste and the more enlightened role that the designer takes in company leadership. Certain design trends in 1955 may be influential in determining future product development. The increased popularity of frozen foods has stimulated sales of home freezers and refrigerator-freezer combinations (notable among the latter is Amana Refrigeration's combination unit).

The kitchen often is the deciding factor in home purchases, and sales of built-in major appliances continue to rise. While sales doubled in 1954, the industry anticipated an even greater increase in 1955. There is a definite trend, however, toward "wall-hung" major appliances and a consolidation of units into one package. Worth noting is the General Electric "Kitchen Center." Taking up only a few feet of space, the single unit contains a washer-dryer combination, a food waste disposer, automatic dishwasher, and electric range, all mounted together under a stainless steel counter top.

The new Frigidaire Holiday Kitchen is a complete kitchen—a package in which every basic unit is included, designed and engineered to grow as considerations require. Each unit is related to the others in complete harmony of styling, as well as being linked in usage. As units are added, they will have both plumbing and wiring sections provided, which require only interconnecting as they are erected. One of the many features to be noted is the built-in Pano-

(UPPER LEFT) FRIGIDAIRE (UPPER RIGHT) REINECKE AND ASSOCIATES; (LOWER LEFT AND RIGHT) INDUSTRIAL DESIGN MAGAZINE

(Upper left) Frigidaire's 1955 Kitchen of Tomorrow; (upper right) Amana Refrigeration's home freezer and refrigerator, combined into a single unit; (lower left) General Electric's Model 660 "Convertible" clock-radio; (lower right) teak cabinet, designed by Paul McCobb for Bell and Howell's high-fidelity radio-phonograph-tape recorder combination.

ramic refrigerator with a freezer drawer mounted directly below.

The consumer demand for color in appliances has risen from 5% in 1946 to 50% in 1954, and its popularity has not diminished. Manufacturers of machine tools, scientific instruments, and other industrial equipment have increasingly recognized the importance of design to their carefully engineered products and now turn to the industrial designer for professional advice.

Again in 1955, recreational products provided a field day for the designer. Radios, television sets, high-fidelity equipment, cameras and projectors, portable phonographs, pianos, toys, and a profusion of barbecue grills must now be highly styled and color-treated if they are to sell and maintain their position in today's market.

J. O. REINECKE,

Industrial Designer, Reinecke and Associates.

INDUSTRIAL HEALTH AND SAFETY. Emphasis on engineering control has resulted in a marked decrease in injurious exposures in industry. As the more obvious and easily diagnosed occupational diseases have been eliminated, more attention has been directed to the obscure and delayed effects which require specific and refined diagnostic procedures.

This is exemplified by investigations of silicosis and allied dust diseases. Although marked progress has been made in the control of silicosis, it has become more and more evident that our knowledge of the fundamental action of dust is

inadequate. Hence, emphasis is now being placed on basic laboratory investigations. Recent studies have shown the importance of particle size in regard to retention of dust in the various portions of the respiratory tract. Radioactive particles were used to study clearance mechanism and rate of removal of dust from the lungs. Increase in surface area of dust was found to parallel increase in physiological effects within certain limits. The effects of various crystalline and amorphous forms of silica were found to vary significantly.

Concurrent with increase in knowledge of the behavior of dust in the respiratory tracts, progress was made in developing better and more sensitive procedures for measuring physiological responses to dust. With earlier and more precise diagnosis, control measures can be defined with greater accuracy.

Industrial Cancer.—Marked increase in lung cancer in recent years has kept the industrial hygienist alert to guard against exposures in industry that might be associated with the development of cancer. The normal incidence of cancer, and the possible influence of air pollution and cigarette smoking make it difficult to evaluate the carcinogenic hazard of a particular substance. Animal screening tests are continually being conducted. While the results are not applicable to man without restrictions, because of species specificity, nevertheless they provide a warning of possible adverse effects. Animal data coupled with epidemiological studies provide more mean-

ingful information than either alone. Even though cancer has not occurred, evidence of potential carcinogenicity has resulted in improved control measures and stricter medical examinations to reduce to a minimum the possibility of cancer's occurring. (See also CANCER.)

Off-the-Job Safety.—As frequency and severity accident rates continue to decrease in industry, lost time owing to off-the-job accidents becomes more and more important. Companies have hesitated to undertake a program of off-the-job safety because of possible resentment of employees on the grounds that it was an invasion of their private lives and paternalistic, as well as because of the technical difficulties involved. However, companies which pioneered in this field have had encouraging results.

One company recorded a 20% improvement in one year in off-the-job performance, and found that its efforts were well received by the employees. Encouraged by these results, the Manufacturing Chemists' Association is planning an industrywide program to apply job safety know-how to off-the-job safety problems. The program will consist of a system of defining and reporting lost-time injuries, and off-the-job safety activities can be incorporated with the in-plant program.

Insecticides.—The widespread application of insecticides brings them in potential contact, either directly or through residues on foodstuffs, with almost everyone. Hence, there is a continuing stream of reports on the toxicity of these substances. The toxicity and mechanism of action of Dipterex and Systox, phosphorus-containing insecticides, were reported. Another report presented the results of a toxicity study of a series of organophosphorus compounds.

The Council on Pharmacy and Chemistry of the American Medical Association published several reports outlining available information on a number of fungicides and health hazards of electric vaporizing devices for insecticides. A study of drifting of parathion dust clouds from a mechanical duster showed airborne concentrations exceeding the threshold limit value at a distance 260 feet downwind from the machine. A report on mist spraying with parathion in apple orchards indicates that poisoning was not likely to occur if precautions were taken. Cases of poisoning which occurred occasionally were attributed to negligence. Labeling of pesticides to protect the public is required by law, and toxicity criteria used in judging the labeling of pesticides have been published.

Noise.—Emphasis, which in recent years was on the legal and compensation aspects of noise, has shifted to the technical and control problems. An outstanding milestone was the publication of a new journal, *Noise Control*, beginning in January 1955. The March issue was devoted to papers presented at the Fifth National Noise Abatement Symposium, which was concerned with reduction of noise in machinery. The First West Coast Noise Symposium was held in 1955, and covered physical properties of noise, measurement of noise, effects of noise on man, sources of noise in industry, and procedures for controlling noise. A number of standards relating to the noise problem were published by the American Standards Association.

Radioisotopes.—The rapid expansion of the industrial application of radioisotopes is exemplified by the more than 47,000 shipments of radioisotopes in the eight years of the Atomic Energy Commission's Isotopes Distribution Program.

These shipments went to 3,200 institutions, including 1,200 industrial companies. Use in process control—for example, in inspection of pipes and welds, and as thickness gages—may be expected to increase rapidly, requiring strict control measures to protect the users and the public. In 1955 the AEC approved proposed regulations establishing standards for protection of personnel and the public against radiation hazards. (See also ACCIDENTS; MINING.)

H. H. SCHRENK,
Research Director, Industrial Hygiene Foundation of America, Inc.

INDUSTRIAL PRODUCTION. The marked recovery in industrial production in the second half of 1954 continued during 1955. By the end of 1955, broad expansion in consumer and business demands resulted in a new record level of about 145% of the 1947-49 average for the monthly seasonally adjusted Federal Reserve index of industrial production. This compares with a previous high of 137 during the summer of 1953 and the mild recession low of 123 reached one year later.

During the year 1955 the Federal Reserve index rose from 132 in January to 145 (estimated) in December. For the year 1955 as a whole, the index has been estimated at 139—up 11% from the reduced level of the full year 1954. Output of all major types of consumer and business goods contributed to the advance. Military goods production remained a moderate proportion of the total, and in all likelihood changed little during the year.

Initially, recovery in industrial output during the latter part of 1954 stemmed from cessation of inventory liquidation as consumer buying remained generally stable and factory pipelines become unduly narrowed. Moreover, reductions in production of military goods by that time was becoming substantially less of a factor in business planning, and the decline in output of capital goods was leveling off.

By the end of 1954 consumer expenditures had begun a marked upsurge that continued through the year 1955 and stimulated expanded industrial output. Sharply advanced sales and output of autos were outstanding developments in the midst of generally advancing sales and activity. Production of household goods and of most nondurable goods rose rapidly.

Output of producers equipment turned at the end of 1954, and during 1955 showed steady increase. Expansion in orders for producers goods was at a moderate rate early in the year, and at exceptionally high rates in the second half. Order backlogs on equipment builders' books loomed large in the closing months of the year. In some cases (for example, railroad rolling stock) outstanding orders had accumulated to markedly high levels.

The broadly based nature of the expansion in industrial activity is shown in the accompanying table. The broadest divisions of the Federal Reserve index showed strikingly similar gains from 1954—estimated at 11% for durable manufactures, 9% for nondurable manufactures, and 10% for minerals. There was, as usual, considerable diversity in rates of increase among various industry groups, however, as is also shown in the table.

In part, this diversity reflects such special influences peculiar to the year 1955 as the upsurge in auto output; in part it reflects the particular impact of developments in 1954 on certain lines—for example, primary metals, where inventory

INFANT MORTALITY — INLAND WATERWAYS

induced curtailments had been especially sharp and the rebound correspondingly greater.

The very high levels of output reached in a number of lines by late 1955 approached capac-

Note: Based on indexes published by the Board of Governors of the Federal Reserve System. Annual figures for 1955 estimated from seasonally adjusted preliminary data for first 11 months of the year.

ity limitations. In the steel industry, included in primary metals in the table, activity at the year's end was at 99% of rated capacity, according to the American Iron and Steel Institute. (See IRON and STEEL.) In a number of other key lines capacity operations were virtually in effect.

With demands rising during the year, wholesale prices of industrial commodities advanced considerably. In the latter part of 1955, with further increases in output limited in the short run by supply considerations, prices advanced more rapidly than earlier, and increases spread from raw materials to various finished articles. These effects reacted in turn on activity and accounted in part for the sharply advanced new records reached by the Federal Reserve output index at the end of 1955.

The 30% increase in production of primary metals in 1955 relative to 1954 was the sharpest among durable goods industry groups, which usually fluctuate more sharply, by and large, than nondurable groups. Liquidation of steel product inventories by metal-consuming industries had been one of the features of the earlier reduction in industrial output and was largely responsible for the 18% production drop shown for primary metals from 1953 to 1954. The need initially to restore steel inventories and then to support the increasing finished metal goods production resulted in a dramatic upturn in steel output.

Metal fabricating industries generally showed gains in 1955. The most marked rise came in the transportation equipment group as auto output soared to new records (see AUTOMOBILES). It may be noted in the table that the transporta-

tion equipment group index for 1955 was 201% of the 1947-49 average—well above the 1953 average.

Declines in the building materials area had been very modest in 1954—2% for the stone, clay, and glass products group; 3% for lumber and products. So incessant were demands during 1955, however, that gains of 14% and 12%, respectively, were shown by these groups, bringing them to unusually advanced rates of output.

Having been considerably less influenced by the changes in military production that were a feature of the economic situation after mid-1953, nondurable goods manufacturing as a whole showed little change from 1953 to 1954. The 9% rise that occurred in 1955, therefore, brought this major division to a new record level, 126% of the 1947-49 average.

The sharpest increases in 1955 were in the textile, apparel, rubber products, and paper groups. In the case of paper, and also of chemicals, significant increases during 1955 were not from reduced levels during 1954, as the table shows. Indeed, in both these large industry groups, 1955 levels were new record levels by substantial margins, reflecting both (1) the development of new products and new uses for other products, and (2) generally sustained and pervasive business demands for intermediate processing into finished goods.

Notably in the case of the rubber products industry group, a large gain in output in 1955 was associated with much greater than average decline during 1954. To an important extent, however, the influences of developments in the auto industry were dominant, production for the 1955 model autos placing unusual demands on the industry for new equipment tires.

The marked amplitude shown by textile mill products output changes is consistent with the historical pattern. The decline in 1954 and the recovery in 1955 were both sharper than in the case of the apparel industries, which consume most textiles output. These differences reflect the inventory influences common to material-finished products industries.

Among minerals industries, which account for about 10% of industrial production, developments were largely associated with events in manufacturing. The sharp fluctuation in metal mining may be traced to production developments in the primary metals group where mined metal ores are converted to metals. The fluctuations in coal output had similar origins, together with an independent inventory course at consuming industries generally. Overall strength in the stone and earth minerals group reflects the continued strong demand for construction materials. Generally rising demand and output in the crude oil industry during 1955 represents not only strengthening industrial demands in that year, but also additional new users along the long-term rapid upward trend of this industry.

INLAND WATERWAYS. Freight movement on the 28,996 miles of inland waterways in the United States recorded considerable gains during the first six months of 1955. The total 1954 traf-

fic was estimated at 380 million tons or 80 billion ton-miles.

A spot check of water traffic in mid-1955 showed the following rates of growth:

Channel	Total 1954 tonnage	Percentage gain 1st half of 1955
New York State Barge Canal System.....	3,859,335	27
Tennessee River.....	8,400,000	14
Mississippi River.....	82,404,001	3
Illinois Waterway (Grafton to Lockport).....	15,354,052	..
Gulf Intracoastal Waterway.....	36,982,000	..
Atlantic Intracoastal Waterway.....	6,564,852	20
Ohio River.....	55,076,677	..
Cumberland River.....	2,232,000	10
Missouri River.....	289,000	500
Warrior-Tombigbee Waterway.....	3,010,000	10
Chicago Waterways.....	22,963,824	..

Some 1,732 companies, including railroads now operate freighting equipment on the inland waterways. They own and operate 20,000 tow-boats, tugboats, barges, scows, cargo boats, and lighters. Principal commodities carried by barge include petroleum, coal, sand and gravel, grain, steel and iron products, chemicals, machinery and machinery parts, automobiles, and trucks.

Each of 46 rivers and canals carried more than one million tons of barged freight in 1954. Inland waterway or shallow draft (under 14 feet) vessels carried more than 50% of the total waterborne commerce in 37 of the 74 ports having more than one million tons of inland waterway traffic in 1953. The navigable rivers and canals now carry about 7% of the nation's total freight load. The Great Lakes carry an additional 11%.

New type barges may have a capacity of up to one million gallons of liquid cargo or 3,000 tons of dry cargo. A multiple-barge tow may deliver 10 million gallons or 35,000 tons of crude oil or petroleum products in a single shipment. Tows operating on the Mississippi and Ohio rivers are usually longer than the largest ocean luxury liner, largest Great Lakes ship, or ocean tanker or freighter.

Innovations introduced by the barge and towing industry during 1955 included an integrated tow for moving molten sulfur long distances; through barge service between Florida and the North Central states; addition of another foot to the channel depth of the Missouri River; and completion of many new ports, harbors, and terminals on the inland waterways.

Inland waterways most recently added to the national system are the Pearl River, Harlingen (Texas) Barge Canal, Port Mansfield Channel, Port Palacios Channel, and the Guadalupe River. (See also CANALS.)

CHESTER C. THOMPSON,

President, The American Waterways Operators, Inc.

INNER MONGOLIA. A region of northern China, separated by the Gobi Desert from Outer Mongolia (Mongolian People's Republic) to the north. The Inner Mongolian Autonomous Region had a population of 6,100,104, according to the 1953 census. The Mongol population is largely nomadic, raising sheep, camels, cattle, and horses. Crops, cultivated mainly by the Chinese, include wheat, rye, and potatoes. Paotow is being expanded as a new industrial and railroad center, featuring an iron and steel combine and other heavy machinery plants. On May 3, 1955, it was reported that Ulanfu (Yun Tse), a Mongol Communist leader and a deputy premier of the Peking government, had been re-elected chairman of the

regional government. Peking radio reported on September 5 that a new phonetic version of the Mongolian language, based on the Cyrillic alphabet, would be introduced in the region.

INNITZER, Theodor, Austrian cardinal: b. Vejperty, Bohemia, Dec. 25, 1875; d. Vienna, Austria, Oct. 9, 1955. Primate of the Roman Catholic Church in Austria during the Nazi and Soviet occupations of his country, he attracted worldwide attention at the time of the German seizure of Austria in 1938 by his unsuccessful attempt to appease the new Nazi regime.

After his ordination in 1902, he continued his studies at the University of Vienna, from which he received a doctorate in theology in 1906. For many years he taught at the university, where he was successively professor of New Testament exegesis, dean of the theology faculty for several terms, and, in 1929-30, rector. In the latter two years he was minister of social welfare in the cabinet of Johann Schober. Named archbishop of Vienna in 1932, he was elevated to the cardinalate on March 13, 1933.

A strong conservative and nationalist, Cardinal Innitzer gave active support in the 1930's to the governments of chancellors Engelbert Dollfuss and Kurt Schuschnigg, whose primary aim was to maintain the independence of their country against Nazi pressure to incorporate Austria in the German Reich. After the Nazi-inspired murder of Dollfuss in 1934, Innitzer incurred the permanent hatred of the Nazis by refusing to intercede for the chancellor's murderers.

When the German Army occupied Austria in March 1938, Cardinal Innitzer, in an apparent reversal of his position, urged his fellow countrymen to obey their new masters. The cardinal's support of Nazi rule was made even more direct several weeks later. In a letter to a Nazi leader, which accompanied a declaration of the Austrian bishops favoring an affirmative vote in the plebiscite to ratify German absorption of Austria, Innitzer added to his signature, "Heil Hitler." Pope Pius XI then called the cardinal to Rome and asked him to issue a second declaration, which in substance withdrew support of the plebiscite. Nazi attacks on the church soon followed. Later in 1938 the cardinal's residence was sacked by a Nazi mob, and on several occasions he was subjected to Nazi abuse during public appearances.

INTER-AMERICAN AFFAIRS. Hemispheric Solidarity.—The "Geneva spirit" of 1955 called upon the inter-American community to replace with new objectives those formerly relating to the threat of Russian aggression. Appreciation of America's enormous military responsibilities in Europe and Asia did not alleviate the Latin American feeling of neglect, even though, as U.S. Secretary of State John Foster Dulles had noted in his 1955 Pan American Day address on April 14, the entire continent was being protected thereby.

In an effort to revive enthusiasm in and give purpose to the inter-American system, Vice President Richard M. Nixon departed on Feb. 6, 1955, for a 29-day goodwill mission to the Caribbean and Central America. He used the occasion to dramatize the need for completing the Inter-American Highway, while at home the Eisenhower administration was successful in securing

U.S. Secretary of State Dulles addresses the Organization of American States on Pan American Day, April 14, 1955.

WIDE WORLD

legislative approval for an appropriation of \$62,-980,000 for Central American highway projects. The \$109.5 million program (including Central American contributions) was begun Sept. 10, 1955, and by the end of 1958 would transform the Inter-American Highway into a broad artery from the Texan frontier to the Panama Canal. The Latin Americans were also heartened by the appointment on Dec. 16, 1954, of Nelson A. Rockefeller as an administrative assistant to President Eisenhower in the field of foreign policy.

Having sown dragons' teeth with their disarmament policies, the Latin Americans reaped the inevitable harvest. British and American jet aircraft were purchased in increasing quantities; more than 20 F-86F Sabre jet fighters were ordered from the United States by both the Dominican Republic and Venezuela, thereby giving them overwhelming air superiority over their Caribbean neighbors.

The increasing effectiveness of the air and naval forces strengthened the spirit of nationalism during the year. On Aug. 15, 1952, Peru, Chile, and Ecuador had declared their "exclusive jurisdiction and sovereignty" over waters contiguous to their coasts "up to a minimum distance of 200 nautical miles," and had reaffirmed the principle in a treaty signed Dec. 4, 1954. On Nov. 15-16, 1954, Peruvian naval and air units even bombed and machine-gunned whaling vessels of the A.S. Onassis fleet, which was 300 to 345 miles off the coast. These vessels, under Panamanian registry, were released only after \$3 million in fines were paid by Lloyd's of London (90%) and American insurance companies (10%). Again, on March 27, 1955, Ecuador seized two American fishing vessels some 14 to 25 miles west of an Ecuadorian island. Fines of more than \$49,000 were imposed on these vessels, but the amount would be paid by the U.S. Treasury, which had been authorized by Congress on Aug.

27, 1954, to insure these illegal losses for American shippers.

Inter-American Peace.—Conditions in the Western Hemisphere in 1955 favored pacific settlements. Disputes were keyed at a relatively low tension level, and the peace machinery was highly developed and manned by alert statesmen, while United States military power was available to enforce collective decisions. The tragic death on Oct. 19, 1955, of Carlos Dávila, secretary general of the Organization of American States (OAS), however, deprived the peace system of one of its key figures during the year.

The Nicaraguan dictator, Anastasio Somoza, precipitated the year's first threat to peace. Emboldened by the purchase of 25 P-51 fighter planes from Sweden and still resentful of the attempt on his life, which he had attributed to President José Figueres of Costa Rica, Somoza permitted a well-trained band of 600 men to invade Costa Rica on Jan. 11, 1955. The Council of the OAS, which two days earlier had declared any action would be "premature," hurriedly sent an investigating commission under the dynamic leadership of Luis Quintanilla to the trouble area. Assisted in its mission by United States military planes, the commission filed its first report on January 14. Two days later the council invoked for the first time in its history the military assistance provisions of the 1947 Treaty of Rio de Janeiro by requesting the United States to sell four F-51 Mustang planes to Costa Rica. Subsequently the investigating commission was successful in persuading both aggressor and defender to accept a 3-by-18-mile land and air buffer zone. Hostilities ceased on February 5. The final report of the investigating commission, presented to the OAS Council on February 18, declared there had been a violation of the territorial integrity, sovereignty, and political independence of Costa Rica and recommended, *inter alia*, that a commission of investigation and conciliation, as provided in the 1948 Pact of Bogotá, be established. A five-man commission, headed by the American representative, John C. Dreier, was selected on March 8 to re-establish complete amity between the two governments.

An emergency session of the OAS Council was again convoked on Sept. 8, 1955, when Ecuador formally charged Peru with massing 20,000 to 30,000 troops on her frontier and declared that Peruvian naval forces were menacing the Ecuadorian coastline. The council, however, awaited the report of the guarantors of the 1942 boundary treaty between Peru and Ecuador. The guarantors, who included the diplomatic representatives of the United States, Brazil, Argentina, and Chile in Rio de Janeiro, authorized their military attachés in the Peruvian and Ecuadorian capitals to inspect the border regions by air. The latter reported no unusual build-up, thereby allowing Ecuador to withdraw her appeal to the OAS Council on September 27. (See also ORGANIZATION OF AMERICAN STATES.)

Faltering steps were taken to revive the Organization of Central American States (known as ODECA from its Spanish initials), which was founded in 1951. The Communist-dominated Arbenz regime in Guatemala had curtailed its development until 1954, while the conflict between Nicaragua and Costa Rica during 1955 resulted in the postponement of a reorganization meeting in Antigua, Guatemala, until Aug. 17, 1955. With Panama attending as an observer, the meeting of the five Central American foreign ministers was frequently on the verge of dissolution until a

last minute agreement secured the appointment of the Salvadoran foreign minister as the first secretary general of the new organization.

Political Stability.—Revolutions against authoritarian regimes and elections in democratic countries interrupted Latin American governmental processes and handicapped inter-American relations. From the time of Perón's first attack on the Roman Catholic Church in November 1954, until he sought asylum on a Paraguayan gunboat, Sept. 19, 1955, Argentina was politically restive. The successor government of Maj. Gen. Eduardo Lonardi needed time to cope with the confusion resulting from the wreckage of an 11-year dictatorship; but the Lonardi government was itself overthrown on November 13 and was replaced by a junta headed by Maj. Gen. Eugenio Aramburo.

In Guatemala, the year-old Castillo Armas government, faced with the problems inherited from its Communist predecessor, was troubled by lack of political know-how; by exploitative monopolies in corn, beans, and wheat at the hands of speculators; by army resentment, which broke out into a one-day revolt on Jan. 19, 1955; and by numerous coercive controls deemed necessary, pending the writing of a new constitution.

The caretaker government of João Café Filho in Brazil underwent periodic cabinet changes while attempting to ameliorate worsening economic conditions and to provide for fair national elections on Oct. 2, 1955. The election of Juscelino Kubitschek as president, and of João Goulart as vice president, for terms beginning Jan. 31, 1956, was momentarily accepted by the Brazilian Army, but a growing struggle with a parochial, labor-oriented administration could be anticipated. In an "anti-coup" on November 11, designed to thwart a threatened coup by anti-Kubitschek elements, the army seized control from Acting President Carlos Luz, who had replaced President Café on November 8 after the latter suffered a heart attack and had to be hospitalized.

An exceptionally ugly eruption of a domestic power struggle was evidenced when Panama's First Vice President José Ramón Guizado was implicated in the assassination of President José Antonio Remón on Jan. 2, 1955. Spiraling inflation in Chile stimulated labor and political unrest; after 33 months in office, President Carlos Ibáñez reshuffled his cabinet for the 41st time on Aug. 18, 1955.

Elsewhere, stability was the rule. Ecuador, unaffected by an abortive military revolt in December 1954, continued to enjoy its longest period of political tranquility since 1925. The progressive Bolivian regime of President Víctor Paz Estenssoro, strengthened by American aid, successfully stamped out a revolutionary plot on April 18, 1955. Orderly congressional elections on July 3, 1955, characterized the Mexican scene, while the assumption of absolute personal power by Acting President Julio Lozano Díaz in Honduras on Dec. 6, 1954, was unchallenged by political opponents. In Colombia, President Gustavo Rojas Pinilla employed both censorship and coercion to maintain his power and subdue the revived guerrilla forces. A welcome stretch of internal peace in Cuba resulted in the return of the exiled former President Prío Socarrás on Aug. 5, 1955. Paraguay's stability was unaffected by an abortive army plot in January 1955, and no one challenged the dictatorial regimes in the Dominican Republic, Nicaragua, and Venezuela.

Communist strength on the continent was

weakening. Brazilians convened the unofficial Second Congress Against Soviet Intervention in Latin America on Aug. 22, 1955, in Rio de Janeiro, with representatives of all 20 republics in attendance. The underground Communist Party in Brazil, however, claimed 130,000 members and supported the winning candidate in the presidential elections. In Cuba, the Batista regime outlawed the party on Jan. 19, 1955, and instituted an official inquiry into its activities on April 23. Trade relations with Communist bloc countries had also worsened; anticipated trade of \$500 million in 1955 was to have been three times greater than that of the previous peak of 1948, but deliveries from the Soviet Union failed to materialize.

Economic Conditions.—The underdeveloped Latin American countries were increasingly dependent on hemispheric cooperation for economic and technical assistance. Their declining export prices, internal inflation, and slackening rate of capital investment had slowed their annual increase of per capita production from 2.9% before 1951 to 0.6% thereafter. Furthermore, Latin America's 1954 gross product of \$43.6 billion was increasing more slowly than the \$362 billion total for the United States. Colombia was exceptional, however, in that favorable coffee prices had permitted living standards to rise more rapidly after 1951 than during the early postwar years.

Persistent government credit expansion imposed a galloping inflation upon a discontented public and checked the importation of developmental goods to the Latin American countries. Since 1951 the cost of living had increased 24% per year in São Paulo, Brazil, and in Chile living costs were 37% higher in June 1955 than they had been the previous January. Mexico's mid-1955 price index was 23% above the previous year, while Perón had increased Argentina's per capita money in circulation by 500% and had expanded production only 3½% during the past decade. Among the major exporting countries affected by decreasing production, only Cuba was free from inflation.

Latin America also suffered from inadequate growth of its export production. Agricultural exports in 1954 had increased only 7% above their prewar level, and mining products, except for oil and iron ore, failed to match developments in other industries. Nevertheless, the countries to the south profited by a partial return to the fa-

avorable terms of trade which they had enjoyed until 1951. The United States, for example, was paying 43 cents a pound for Chilean copper in August 1955, as compared with 30 cents a pound the previous year. The price of coffee, on the other hand, had dropped. With the exception of Brazil, which would recover its trading losses by larger exports, the coffee states were expected to lose 20% to 30% of their exchange receipts in 1955. Latin America's 1954 favorable trade balance with the United States of \$160 million would not be exceeded in 1955. By June 30, 1955, the average annual rate of Latin American exports to the United States was \$3.2 billion, while imports from the latter totaled \$3 billion. This favorable balance fell below the \$500 million needed annually to pay the United States for transportation, insurance, interest, and dividends.

Economic growth requires a continuing high-level investment. Gross capital formation in Latin America in 1954, however, was \$6.4 billion, or 14.8% of the gross product, as compared with \$7.1 billion in 1952. Local sources provided about five sixths of the total, while the rest was supplied by foreign loans. United States private investments in Latin America had doubled in the postwar decade and by January 1955 totaled \$6.5 billion. New investments, however, had decreased from \$500 million in 1951 to \$222 million in 1954. New credits extended by the Export-Import Bank of Washington (q.v.) between January and June 1955 totaled \$167 million, while the International Bank for Reconstruction and Development (q.v.) had earmarked \$14.5 million for electric power in Colombia and \$18 million for irrigation in Peru during 1955. The 1956 budget for United States technical aid to Latin America was increased to \$38 million, while the OAS was administering its own assistance program with a 1955 budget of \$1.5 million.

INTERIOR DECORATION. Once regarded as a purely domestic or residential design problem, interior decoration in 1955 continued to expand into commercial, industrial, and institutional planning and rehabilitation. This "contract work," as it is called, formed a large part of the work done by professional interior decorators. Moreover, a great many architects and industrial designers have undertaken to design for interiors and to select furnishings for their buildings. Interior decoration in 1955 was more concerned with structural and installation problems in connection with air conditioning, lighting, high fidelity, and television, than with superficial improvements like refurbishing slipcovers and lampshades.

In general, furniture, fabrics, wall and floor coverings, lamps, table and house ware, and "domestics" (bath, table, kitchen, and bed linens) have never been so well made nor so widely available at popular prices. Manufacturers of low- and medium-priced furniture, for example, have watched the design tendencies in the custom-made luxury lines and have imitated them on a mass-produced basis wherever possible. In 1955, for the first time, new sources previously available only through decorators, became available through retail stores. Fabrics and furniture, based

on the designs of Frank Lloyd Wright, also reached the public at large through this medium.

A new attitude on the part of the American buying public became significant when buyers realized that furnishings—whether for home, office, or even such staid institutions as banks—are "expendable" or, in other words, suitable for here and now, but replaceable in half a decade as needs and fashions change.

Since, for several decades, ancient and exotic art objects have been used in modern interiors, it was inevitable that traditional interiors be discovered as effective foils for contemporary art objects. In 1955 this "antique" setting for modern art was fully exploited for the first time.

The two dominant styles in interior decoration and furniture during 1955 were the modern and the Early American, except in the expensive "antique" category, which showed a preference for the painted Venetian furniture of the 18th century. The major design directions in furniture were a handcrafted (not rustic) look in mass-produced furniture, not unrelated to an emphasis on American traditions and the influences of Scandinavian and Oriental designs. Out of these three inspirations (the latter occasioning quite an upsurge in lacquer furniture finishes) came an emphasis on regionalism in interior design: Oriental on the west coast, Early American in the Southeast (Williamsburg influence), and Scandinavian in the Middle West (owing to the national origins of many residents of that area).

Walnut, cherry, and mahogany were the most frequently used woods in furniture. The most popular choice of finish was a gray-taupe called "driftwood." Appearing in high-style furniture for the first time in 1955 was a colored glaze or transparent color stain which does not obscure grain. Satin-finished brass continued to be the most commonly used metal in hardware and for furniture leg tips, lighting fixtures, and hard floor covering insets.

Color in 1955 "exploded" in all areas of living, from the family car to the appliances in kitchen and laundry (predominantly pink). Strong sharp shades were avoided in wall colors, with a marked preference for analagous, muted tones, such as a subtle gray-green. The newest colors were "mustard," "spice," and "olive-green," with blues and beiges (especially "faun" and "sandalwood") rising in fashion.

Except for the continued expansion into synthetics and "documentary sources" for traditional fabrics, there was little that was new in 1955. Leather remained prominent as a decorating material. Developed during the year, a printed process was introduced which gives fabrics the appearance of chintz or imported damask and which is also colorfast and scuffproof. Allied with this development was the rise of more patterned, printed, and colorful "domestics" in sophisticated colors like "antique gold," "mustard," and "nutmeg."

There were few changes in curtains, blinds, and draperies during 1955. Vertical Venetian blinds (to repel dust) were first used in residential interiors as well as in offices. A nylon net was developed which permits cutting and hanging without hemming. Informal "café curtains" were made in unexpectedly rich fabrics, like satin, and used with wooden shutters in place of glass curtains and draperies.

Wall-to-wall carpets, which had become unfashionable in recent years, came back into style, promoted by assiduous advertising campaigns.

Cotton squares with adhesive backing to be set in stripes or diaper pattern sections for the "do-it-yourself" method came on the market. Accent rugs remained popular among professional interior decorators and were striking on parquet floors, which are also being revived. Most of these rugs were importations of native rugs from Israel, the Arab Middle East, and Latin America. Handsome vinyl tiles, cork, linoleum (in charcoal gray and pink), and travertine were popular floor coverings in 1955. (See also FURNITURE INDUSTRY; INDUSTRIAL DESIGN.)

INTERNATIONAL AFFAIRS. See references under the Index entry, *World Politics*.

INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT. The International Bank, or World Bank as it is often called, is an international cooperative financial institution owned and operated by its member nations. It makes loans for productive projects in member countries, either to governments or to private enterprises with government guarantee. On June 30, 1955, the bank had 56 members and its subscribed capital was \$9,028 million.

Between June 30, 1954, and June 30, 1955, the bank made 20 loans in 14 countries, totaling \$410 million. This brought the number of loans since the start of operations in 1946 to 124 in 37 countries and raised the gross total of commitments to \$2,324 million.

A loan of \$54.5 million to Australia was to finance a wide range of imported goods and equipment needed for agriculture, transportation, electric power development, and manufacturing.

Two loans totaling \$22 million were made to help finance two hydroelectric power projects in southern and western Austria, which will increase supplies of power both for domestic consumption and for export to Italy and Germany.

To assist in financing four inland waterway projects and the completion of the Baudouin Lock at the Port of Antwerp, a loan of \$20 million was made to Belgium. Completion of these projects will assist the movement of a large portion of Belgium's domestic and foreign trade.

Ceylon received a loan of \$19.1 million to help carry forward the Aberdeen-Laksapana hydroelectric plan, which will supply additional power to southwestern Ceylon, the most productive and populous part of the country.

Three loans, totaling \$25.4 million, were made to Colombia to help in the development of agriculture and electric power, and to extend the Magdalena Valley Railroad another 190 miles, completing the link between central Colombia and Caribbean ports.

A loan of \$11.1 million to El Salvador will help complete an all-weather highway along the Pacific coast. The new road will provide an artery through the entire coastal region, and will serve to help open the country's last major land reserve to cultivation and settlement.

The Bank of Finland borrowed \$12 million which it is relending to companies carrying out projects to expand and modernize wood-products plants and to provide additional supplies of electricity.

In India two loans totaling \$26.2 million are financing the foreign exchange costs of a thermal electric power plant in Bombay and providing

CARL ULLRICH, INC.

the foreign exchange capital for the development of private industry.

The Cassa per il Mezzogiorno, a government agency administering large-scale development projects in southern Italy, received the bank's largest loan during the year, \$70 million, to increase agricultural production, industrial output, and electric power services. The Cassa is carrying out its investment program to raise living standards in Italy's most depressed regions.

The Pacific Railroad of Mexico borrowed \$61 million to purchase equipment for an extensive rehabilitation and modernization program. The railroad serves the northwest coast of Mexico and traverses one of the country's most rapidly growing and important agricultural areas.

A loan of \$25 million was made to Norway for the importation of capital goods required to continue the development of the nation's economy.

Some \$13.8 million was loaned to the Karachi Electric Supply Corporation, Ltd. for the development of electric power in Pakistan. The project will double the electric power available to the metropolitan area of Karachi, where there is an acute shortage.

Three loans totaling \$25.5 million were made to Peru for financing an irrigation project, agricultural development, and construction of a cement plant.

To modernize and expand the railroads, harbors, and road transport in Kenya, Uganda, and Tanganyika, a loan of \$24 million was made to the East Africa High Commission. Improvement in transport is vital to the expanding economy of East Africa.

During the fiscal year 1954-55, the bank added \$368 million to its lendable funds. Of this amount, \$97 million was derived from sales to other investors of parts of the bank's loans. The latter amount nearly equaled the sum so raised in the whole of the eight preceding years

of the bank's existence and was evidence of greater readiness on the part of private capital to enter the field of international investment. The equivalent of \$75 million net was obtained from the bank's borrowing operations. The remaining additions to the bank's lending resources came from releases of the 18% of members' capital subscriptions, loan repayments, and from operations.

The bank continued during the fiscal year 1954-55 to give advice to member governments on forward steps in development. Three general survey missions—to Nigeria, Malaya, and Syria—completed their work during the year, and another—to Jordan—was organized. Other developmental assistance covered specific matters such as agricultural improvements in Japan, scientific and industrial research in Ceylon, and electric power development in Mexico.

W. A. B. ILIFF,
Assistant to the President.

INTERNATIONAL CONFEDERATION OF FREE TRADE UNIONS. In its sixth year, the ICFTU had 111 trade union affiliates in 78 countries, with a membership of some 55 million workers. During 1955 the ICFTU undertook an intensive campaign to organize trade unions in the underdeveloped areas of Asia and Africa in order to: (1) hasten an improvement in wage and living standards; (2) prevent the success of communism and strengthen democratic institutions; and (3) speed the independence of colonial peoples. This campaign, fully supported by the American Federation of Labor, the Congress of Industrial Organizations, the British Trades Union Congress, and the other national labor organizations affiliated with the ICFTU, was one of the major decisions of the ICFTU's fourth biennial World Congress, held in Vienna, Austria, May 20-28, 1955.

In its efforts to foster trade unionism in underdeveloped colonial countries, the ICFTU was successful in helping to establish a national trade union federation in French Morocco. Although it condemned any "resort to violence from whatever source," the ICFTU urged the French government to free Moroccan trade unionists from jail, forced residence, or the threat of deportation. The ICFTU also strongly supported trade unionism in East Africa and asked that its Committee on Forced Labor investigate allegations of detention without trial and of forced labor in Kenya.

In almost all instances where colonial policies have been criticized, the ICFTU spoke out against these policies or undertook investigations of the charges. It fully supported the demand for self-determination by the people of Cyprus, charging that Cyprus "is under foreign occupation, contrary to the will of the people."

Another important event growing out of the World Congress was the convening of an ICFTU Conference on the Peaceful Uses of Atomic Energy. The congress, whose purpose was to develop a labor program on the atomic question, called for the association of free trade unions with the production and use of atomic energy and for the creation of international agreements which would seek to discontinue atomic weapon experiments. It further asked for the "free and unimpeded access of all nations" to fissionable materials to be used for peaceful purposes and for the provision of financial and technical assistance to weaker countries for the development of an atomic energy industry in order to raise living standards. In order to promote worldwide efforts for the peaceful use of the atom, it was sug-

gested that an International Atomic Energy Agency be established as part of the United Nations.

The ICFTU continued its program of opposition to communism and fascism. The World Congress, which is the ICFTU's ultimate authority, equally condemned both types of dictatorship and warned against the admission of Spain into United Nations agencies. It also criticized two international trade secretariats for admitting Yugoslav unions into their ranks, and rejected an invitation by the Communist World Federation of Trade Unions to form a united front. In addition, the ICFTU upheld the necessity of the free world's building its military strength in the face of communism's continued threat to world peace.

As the year 1955 came to a close, the ICFTU Executive Board met in New York City in December, directly following the merger convention of the AFL and the CIO.

INTERNATIONAL FINANCE CORPORATION. An affiliate of the International Bank for Reconstruction and Development (IBRD), designed to promote private enterprise and investment in underdeveloped countries. The corporation, which was still in the process of formation in 1955, was to have essentially the same membership as the IBRD but would have its own president and would be financially independent of the larger organization. The IFC can begin operations when a minimum of 30 governments have subscribed a total of at least \$75 million. On Dec. 5, 1955, the United States completed action on its membership. By December 16, five countries (Canada, Iceland, United States, Ecuador, and Egypt) had completed action on membership, with total capital subscriptions of \$39,404,000.

INTERNATIONAL GEOPHYSICAL YEAR. See **Index** entry.

INTERNATIONAL LABOR ORGANIZATION.* The International Labor Organization began the year 1955 with the accession to membership of Honduras, bringing total ILO membership to 70 countries. The organization paid particular attention in 1955 to the launching of a labor-management relations program. The subject was featured in the report by the director-general, David A. Morse, to the annual conference in June, and recommendations on a proposed program were presented to the director-general by David L. Cole, former director of the U.S. Federal Mediation and Conciliation Service.

As well as adopting a resolution authorizing work in labor-management relations, the 38th session of the International Labor Conference, held in Geneva, June 1-23, adopted several international instruments, including a convention calling for the abolition of criminal penalties for breaking employment contracts, and formal recommendations on rehabilitation of "the disabled

* The spelling generally used in American publications appears in this article. In Europe, the British-style spelling, International Labour Organisation, is commonly used.

and on the protection of migrant workers in underdeveloped countries. This brought the total number of conventions adopted since the first conference in 1919 to 104, and the total number of recommendations to 100. The conference adopted a 1956 budget of \$7,395,729.

Meetings in 1955 included 3 sessions of ILO's Governing Body (executive council), the first European Regional Conference of the ILO, and meetings of the Petroleum and Textiles committees, the Committee on Work on Plantations, the Permanent Agricultural Committee, and the Joint Maritime Commission. Committees of experts also met to discuss occupational safety and health, the social aspects of European economic cooperation, and family living studies.

The ILO's technical assistance program, financed both by the ILO's regular budget and by the United Nations Expanded Program of Technical Assistance, continued to offer expert advice on training, manpower, and other problems, at the request of the governments of the less industrially developed countries. INTERNATIONAL LAW. See Index entry.

INTERNATIONAL MONETARY FUND. The Board of Governors of the International Monetary Fund held its Tenth Annual Meeting in Istanbul, Turkey, Sept. 12-16, 1955. At that time, the Board of Executive Directors presented its *Annual Report* recording the activities of the fund for the fiscal year ended April 30, 1955.

In commenting on the world payments situation in 1954-55, the *Annual Report* stated that further progress had been made in the direction of freer and less discriminatory trade, on the basis of freer and increased multilateral payments. Benefits had accrued from the widening freedom in international payments recorded in the previous year. Many countries, especially the European industrial countries, had found it possible to reduce the use of restrictions for balance of payments reasons, and in a few cases virtually to abandon them. Though the advances toward liberalization of trade and convertibility of currencies in the fiscal year 1955 had been less rapid than in the previous year, they had still been of considerable significance. Prospects for continued improvement in the international payments situation were good.

Convertibility of currencies is accepted as one of the principal purposes of the fund, because widespread convertibility would be in the best interests of all the members and indicate the growing strength of the world economy, as well as be an important means for consolidating and increasing that strength.

The fund's general policy regarding the use of its resources was restated in the *Annual Report*, and may be summarized as follows. Unless there are overwhelming reasons for not doing so, the fund will invariably grant members' requests for gold tranche* drawings. Although no comparable principle applies to drawings beyond the gold tranche, more substantial assistance is readily available in case of need to countries pursuing policies consistent with the objectives of the fund. In practice, the fund's attitude toward applications for drawings within the first credit tranche is liberal. Several transactions have been

approved beyond the first credit tranche and, should there be need and substantial justification, drawings on subsequent tranches will be permitted. Finally, the fund's stand-by arrangements have been applied often enough to show that they are valuable to members.

During the year ended Sept. 30, 1955, demands for the fund's resources were very light. The following purchases were made by members for equivalent amounts of their currencies during the 12-month period: Colombia, \$25,000,000; Iran, \$8,750,000; and the Philippines, \$10,000,000. The stand-by arrangement with Belgium continued in effect, and those with Mexico and Peru were renewed. The first two permitted drawings up to \$50,000,000, and the third up to \$12,500,000. No drawings were made during the year under any stand-by arrangement. Sales of currency by the fund since the beginning of exchange transactions, March 1, 1947, through Sept. 30, 1955, included U.S.\$1,000,205,000, £67,800,000, 500,000,000 Belgian francs, and 18,480,000 Deutsche marks, totaling approximately \$1,207,700,000.

Both the number and the total amount of repurchases were much higher than in any previous reporting year. During the 12-month period ended Sept. 30, 1955, repurchases of their currencies by Australia, Austria, Ceylon, Denmark, Ethiopia, Finland, the Federal Republic of Germany, India, Iran, Mexico, Paraguay, and Turkey totaled \$125,641,925. As of that date, total repurchases by members since the beginning of exchange transactions amounted to \$731,810,472. All repurchases were made in gold or dollars.

During the period under review, Nicaragua changed its par value from 5 to 7 cordobas per United States dollar and Pakistan changed its par value from 3.30852 to 4.76190 rupees per United States dollar. Afghanistan, China, Greece, Indonesia, Israel, Italy, Korea, Thailand, and Uruguay have not yet agreed on initial par values with the fund. In addition, some members do not effectively maintain the par values agreed upon. (See also EXCHANGE RATES.)

During the fiscal year 1955, the staff paid numerous visits to member countries for the purpose of engaging in consultations and furnishing technical assistance. These consultations, along with general developments in exchange restrictions are described in the *Sixth Annual Report on Exchange Restrictions*, published by the fund in June 1955. On June 22, 1955, the Executive Board adopted a policy decision which, in part, requested the full collaboration of all members to reduce and eliminate as rapidly as practicable reliance on bilateralism.

Pursuant to a resolution adopted by the Board of Governors on Sept. 28, 1954, Czechoslovakia ceased to be a member of the fund at the close of business on Dec. 31, 1954, because of its failure to supply the fund with required information and enter into consultations with the fund under the provisions of the Articles of Agreement.

On July 14, 1955, and Aug. 26, 1955, Afghanistan and the Republic of Korea became members of the fund, with quotas of \$10,000,000 and \$12,500,000, respectively. As of Sept. 30, 1955, the total membership was 58, and total quotas amounted to \$8,750,500,000.

FRANK A. SOUTHARD, JR.,
U.S. Executive Director.

* A tranche is a component share or portion of a member-nation's drawing quota ordinarily amounting to 25% of the total quota.

INTERNATIONAL TRADE. World trade in 1955 was soaring once again to record levels. Total

exports for the first half of the year were \$80.7 billion on an annual rate basis, as compared with \$77.3 billion in 1954. Influenced by continuing prosperity in the industrialized countries and expanding development programs in most of the underdeveloped areas, the annual total was expected to approximate \$81.5 billion when year-end data became available. The United Nations index of the volume of world exports (current values adjusted for changes in prices) rose from 21% above the level of 1950 in the first half of 1954 to 31% in the first half of 1955.

All areas of the world were participating in the general rise in the volume of trade during 1955, except the nonsterling countries of the Middle East. However, because of lowered world prices for certain foodstuffs, notably coffee, the value of exports from the Latin American republics dropped below comparable 1954 levels. Outstanding increases in trade volume were registered by continental western Europe and the sterling area countries, particularly the United Kingdom and the Middle East.

This generally booming world trade was benefiting the manufacturing countries (western Europe, North America, and Japan) more than the countries producing primary products. In the first half of 1955, world imports from the primary producing countries had risen only slightly above levels of a year earlier, but trade between the manufacturing countries was 14% higher. There was a general increase in world trade in manufactured goods. In the first six months of 1954, exports of manufactures rose 7% above the year before; in the second half, the rate of increase had risen to 8%; and by the first half of 1955, it showed a further gain to 13%.

Among the significant happenings in the world trade picture in 1955 was the extension by the U.S. Congress of the Reciprocal Trade Agreements Act. The new law extended the president's power to negotiate for three years, until June 30, 1958. As a result of the passage of this extension to the act of 1934, a new round of tariff negotiations was scheduled to take place between 25 of the contracting parties of the General Agreement on Tariffs and Trade (GATT) at Geneva, beginning Jan. 18, 1956. (See **TARIFFS**.)

With the growth in stability in the world economy, some further steps were taken during the year toward reducing general trade restrictions and making possible eventual convertibility of all currencies. Many countries also eased still further their restrictions against dollar imports. Dutch imports were practically freed from control

as to source. Even in the United Kingdom, where some dollar restrictions continued to be imposed for balance-of-payments reasons, most raw materials and foodstuffs could now be imported without discrimination.

The current boom in world trade can be linked more or less directly to the simultaneous expansion of the highly industrialized economies of North America and western Europe. In the latter area, in the first half of 1955 the volume of world trade was nearly 70% above prewar levels. Intra-European trade was soaring far above former levels, although Europe had not yet been able to regain its prewar position in all of its overseas markets. European imports from North America increased rapidly during the first six months of 1955, while exports rose less sharply, leaving a rising dollar trade deficit, nearly 75% higher than the level of the first six months of 1954.

Sparking the general upward movement of trade in Europe was the expansion of the German economy. It was certain that the value of the German Federal Republic's foreign trade in 1955 would reach a new postwar peak. Production of capital goods in the first half of 1955 was 25% above the level of a year earlier; consumer goods production rose by nearly 10% in the same period. In the first 7 months of 1955, demands for imports to sustain such large increases in production caused them to soar to levels 32% above those of 1954. There resulted a smaller favorable trade balance, as exports rose, too, but more moderately.

United States.—United States exports in 1955 were expected to exceed those of any postwar year since 1947, possibly totaling more than \$14 billion. The value of domestic exports through the first 8 months of 1955 was \$10.0 billion. This was an 11% gain over the comparable period for 1954. Imports were also rising steadily, following a decline in 1954 as a result of the temporary recession in United States industrial production. In the first 8 months imports were about 7% above 1954 levels for the same period, and were valued at \$7.4 billion. The upturn in industrial activity which came in the autumn of 1954 was quickly followed by a renewed demand for imports in most of the classes of goods which had been depressed.

Increased trade in 1955 produced a United States trade surplus of slightly larger proportions than that of 1954. Despite this, there occurred no deterioration in the gold and dollar reserves of the rest of the world as a whole. The

citizens, and a substantial rise in net foreign loans and nonmilitary grants by the United States government.

The largest increases in United States exports in January-August 1955 took place in trade with western European countries. The prosperity and rising industrial production in that area increased its demand for a wide variety of merchandise from the United States. Most important were steel, copper, metal scrap, machinery, chemicals, and fuels. In addition, a poor harvest on the continent increased the need for larger cereal imports. Rising United States exports to Europe in 1955 further showed the effect of the relaxation of controls over dollar imports which has been carried out in varying degrees by nearly all countries of western Europe.

United States trade with Canada, her principal trading partner, recovered from its lowered level of 1954, as both economies moved strongly ahead after earlier setbacks. United States exports to Latin America declined in 1955, as their earnings dropped, particularly because of the lowered value of coffee and cocoa imports by the United States. There were increased dollar earnings as a result of rising raw material imports into America, but these were not large enough to compensate for lowered food imports. With

other areas of the world—the Near East, Africa, and Asia—United States trade showed increases, although this, of course, was not true of trade with each country. One important exception was Japan, where United States exports dropped sharply from earlier levels. Japanese dollar earnings from United States military expenditures were greatly reduced. Earnings from exports to the United States in January-August 1955 were well above the rate for the comparable period of 1954, and partly offset the lowered military earnings.

A study of the commodity pattern of United States trade in 1955 showed that the rise in exports was concentrated in nonagricultural commodities. Compared with a year earlier, there were large percentage increases in shipments of coal, iron and steel, motor vehicles and parts, nonelectrical machinery, and chemicals. Advances in coal and iron and steel were principally to western Europe. The destinations of the others were widespread. Exports of many agricultural products were also higher, surplus disposal programs of the United States government being a major factor in this rise. Shipments of one of America's major agricultural exports, cotton, dropped significantly.

Among United States imports, those in the nonfood categories showed particular advances. There were major increases in the value of imports of iron ore, crude rubber, petroleum, sawmill products, textile manufactures, and machinery. The booming United States industrial economy accounted for these increases, most of which were accompanied by commensurate increases in quantity. There were some significant price changes, however. Prices of crude rubber rose in unit value from 18 cents per pound in January-August 1954 to 28 cents per pound in the corresponding period of 1955. Imports of coffee and cocoa, two of the major food imports, declined from previous levels. Only 1,578 million pounds of coffee were imported, at an average value of 54 cents per pound through August 1955, compared with 1,620 million pounds at 66 cents per pound in the like 1954 period.

The change in the United States balance of payments during the first half of 1955 reflected the worldwide rise in production. Exports of goods and services to all areas (omitting grants

year periods. In addition to changes in merchandise trade, these figures reflected sharp rises in military and travel expenditures abroad. The latter was a continuation of the rising trend evident for several years. United States military expenditures in January-June 1955 were \$100 million greater than in the corresponding months of 1954. Among the changes in capital movements was a fall of nearly 50% in private net capital going abroad, coupled with a change in government capital movement from a net inflow to a net outflow. These various balance-of-payments shifts allowed an accumulation of \$766 million in gold and United States dollars by foreign countries in the first half of 1955, about the same as in the first half of 1954.

The payments went more largely than a year earlier to continental western Europe and its dependencies, and to the nonsterling areas of Asia and Africa. The higher payments to Europe were accounted for by increasing American military expenditures, larger United States grants, and a larger capital inflow. A worsening in the position of Latin America vis-a-vis the United States was due principally to a decline in United States imports; dollar receipts by Latin America from third countries, however, helped to reduce the fall of gold and dollar receipts there. Compared with a year earlier, the positions of both Canada and the sterling area deteriorated, although the sterling area continued to receive a net payment.

Canada.—The trade of Canada showed a strong recovery in 1955 from its depressed 1954 levels. Both exports, totaling Canadian \$3.1 billion in the first nine months, and imports, valued at C\$3.0 billion in the first eight months, were at their highest peacetime levels. Each was about 12% above the level of 1954.

With the exception of food products, especially wheat, exports of all major commodities in January-September 1955 were well above those for the corresponding period of 1954. Increases in exports of newsprint paper, lumber, pulp, nonferrous metals, iron ore, petroleum, and chemicals more than offset the decline in grain exports. Clearances of wheat for overseas countries through October 1955 were about 155 million bushels, compared with 163 million in the same period of 1954 and 246 million in 1953.

Canadian imports were especially buoyant as a result of the demands of her expanding economy. Following the inventory recession of 1954, Canada's recovery had been so vigorous that industrial output in the latter part of 1955 was exceeding that of the previous peak of midsummer 1953 by 8%. This resulted in increased import requirements for foodstuffs, raw cotton and wool, building supplies, automobiles, aircraft, and electrical equipment.

Rising trade levels produced an increased trade deficit, totaling C\$232 million for the first 9 months of 1955. A major portion of this deficit was with the United States. In this connection, traders were especially interested in the fact that during October the United States dollar rose to a virtual par with the Canadian dollar, after almost three years of being at a discount amounting at times to 3 or 4 cents. This changed relationship was interpreted as being due largely to United States liquidation of Canadian securities, however, and not to the rising trade deficit with the United States. No loss of reserves was necessarily involved in this adjustment; at the end of September, Canadian reserves were at the relatively high level of U.S.\$1,937 million.

Especially noteworthy in the pattern of Canada's trade in 1955 was a 26% improvement in her exports to her second major partner, the United Kingdom. Losses in that market incurred in 1953 and 1954 were regained. This development was particularly significant because wheat exports to Britain, although improved, were still well below previous levels. To compensate, there were large increases in exports of nonferrous metals, forest products, and other agricultural products. Imports from Britain were slightly reduced, compared with January-September 1954; this was thought to be due, in large part, to the British dock strike.

Trade with the United States for the 9 months set a new high record, as the United States continued to be Canada's dominant trading partner, taking 59% of her exports and being the source of 74% of her imports. There were substantial increases in exports to the United States of asbestos, fertilizer, nonferrous metals, lumber, and iron ore; but agricultural products, particularly oats and barley, suffered a decline. Canada purchased more in the United States in every major commodity group than in 1954.

Latin America.—The first half of 1955 was a period of booming trade for certain republics of Latin America, but an unsatisfactory period in overseas trade for others. Among those major traders in the former group were Cuba, Mexico, and Venezuela. After a poor year in 1954, Cuban exports rose during the first half of 1955. Imports also increased, bolstered by a larger national income and increased business confidence. Following a rather depressed state after devaluation of the peso in April 1954, the Mexican economy recovered strongly in the early months of 1955. The value of exports was increased by 24% over 1954, while the trade deficit for the first 6 months was cut in half from the level of a year earlier. Nevertheless, it still totaled about \$100 million. American tourist trade, which was especially high in 1955, helped to bring about a balance on current account. Mexico's gold and dollar reserves rose

from a low, following devaluation, of U.S.\$100 million to an all-time high of U.S.\$372 million at the end of November 1955. The economy of Venezuela continued to prosper, as world demand for petroleum, her primary export, remained strong and imports continued without control. As in

Cuba and Mexico, the United States was by far the most important source of imports and destination for exports for Venezuela.

Of the other Latin American republics, 3 major trading countries were experiencing special trade difficulties in 1955. Argentine earnings from cereal exports were sharply cut—in the case of corn, by drought and consequent lowered supplies for export; and in the case of wheat, by reduced world demand and falling prices. At the end of August, 40% of the wheat available for export still remained unsold. In order to strike a balance in international payments, the only apparent alternative to cutting essential imports was to draw down reserves of foreign exchange which had been slowly accumulated through two years of tight import restrictions.

Declines in coffee and cotton exports from Brazil in the first half of 1955 brought about a \$70 million trade deficit, where normally a trade surplus paid for a deficit of invisibles in her balance of payments. The situation was so serious that Brazil found it necessary to obtain a \$75 million line of credit from the United States during the year to help meet current obligations.

Colombia was also suffering from an unfavorable trade balance as a result of the sharp drop in coffee prices. In an effort to meet this situation, a series of new import and exchange restrictions was issued early in the year. These had achieved a noticeable effect on trade by the middle of 1955, and since then, Colombia appeared to be making steady gains toward reaching a trade balance.

United Kingdom.—British trade for the first 9 months of 1955 was well above the level of the previous year. Imports rose to £2,884 million, or 15% above the like 1954 period, and domestic exports totaled £2,123 million, about 6% more than in 1954. The trade deficit averaged nearly £75 million per month, compared with £47 million a month in 1954. British export prices showed little change, and the increased value was therefore attributable almost entirely to greater trade volume. Prices of imports, however, rose in 1955 as compared with 1954, so that the increase in value represented only an 11% increase in volume. All of these comparisons were affected to some extent by the overspill into 1955 of trade delayed by the October 1954 dock strike

and the general retardation of trade caused by the more serious May-July 1955 dock strike.

Exports of many kinds of commodities rose in the first 9 months of 1955 over shipments in the comparable period of 1954. Noteworthy among them were machinery, both electric and non-electric, commercial vehicles, aircraft, ships and boats, nonferrous metals, iron and steel, and chemicals, especially synthetic detergents, pigments, medicines and plastic materials. There were important declines in exports of cotton and synthetic fiber goods, coal, and petroleum.

Even more substantial were increases in British imports. Of a total rise of £372 million during the 9 months of 1955, £153 million was accounted for by manufactured goods, and over half of this was in the iron and steel and nonferrous metals groups. Greater quantities of imports of black steel sheet, ingots, and other crude steel forms were responsible for much of the rise. The increase in the price of copper, and to a lesser extent, in lead and zinc, was the prime cause of the greater value of nonferrous metal imports. There was also a substantial rise in British food imports. The major portion of this was wheat and animal feed, but striking increases also occurred in imports of fruits, vegetables, and meats.

The area distribution of British trade changed in some respects from that of 1954. Trade with the sterling area was particularly affected by the dock strike, and had not entirely recovered by the end of the third quarter of 1955. New restrictions on imports by Australia adversely affected British trade with that area. Trade with the nonsterling world showed large increases, and reflected the high level of economic activity in many parts of the world, as well as the progress made in Europe and elsewhere in relaxing trade restrictions. Arrivals from the dollar area also registered big increases, and exports to that area were about 15% above the level of the year before. Whiskey, wool goods and fabrics, copper, and electrical goods

sold especially well in the United States. Trade with Canada, depressed during 1954 and early 1955, appeared to be on the upswing toward the end of the year. On the continent of Europe, increasing competition from Germany was causing Britain to lose part of her share in expanding European trade. Nevertheless, trade with the continent was at high levels.

The United Kingdom balance of payments on current account showed a small surplus of £17 million in the first half of 1955, a deterioration from the first half of 1954, when there was a surplus of £141 million. The change was more than fully accounted for by a swing in the British position with nonsterling countries from a surplus of £41 million to a deficit of £135 million between the two periods. The deficit with the dollar area rose from £3 million in January-June 1954 to £100 million in January-June 1955. Despite this, gold and dollar reserves of the sterling area fell by only £29 million in the first 6 months of 1955, due principally to the net surplus of the rest of the sterling area with nonsterling countries and the net inflow of capital into the United Kingdom. A further deterioration in Britain's balance of payments was, however, expected when the accounts for the second half of 1955 were complete.

Commerce, U.S. Dept. of Commerce.

INTERSTATE COMMERCE COMMISSION. This independent federal administrative agency, created in 1887, regulates approximately 21,000 common and contract carriers by rail, road, water, or oil pipeline, and freight forwarders, and also, as to safety, many thousand interstate private and exempt for-hire motor carriers. It is composed of 11 members appointed by the president, Commissioner Charles D. Mahaffie was succeeded by Everett Hutchinson, and Commissioner Hugh W. Cross succeeded Commissioner Richard F. Mitchell as chairman for the year ending June 30, 1956. After Chairman Cross' subsequent resignation from the commission, Commissioner Anthony F. Arpaia became chairman on Jan. 1, 1956, for the calendar year 1956.

The Defense Transport Administration was abolished and its remaining functions were transferred to the commission, under a Transport Mobilization Staff directed by Commissioner Owen Clarke, former defense transport administrator.

The railroads petitioned the commission to make permanent the last general increase (15%) in rail rates, authorized in stages in 1951 and 1952 and set to expire Dec. 31, 1955. Competitive and other conditions have caused the actual postwar average increase to be considerably less than the 79% in cumulative authorizations. Water carriers and freight forwarders were permitted the same increases. Motor carriers of general freight in various areas received authority during the year to advance their rate levels.

Floods, droughts, and labor disturbances affected traffic movements and required remedial measures by rail and other carriers. Beginning in May 1955, freight car shortages reached serious proportions. The building of freight cars fell to an extremely low level, while retirements continued at a substantial pace. Five service orders were issued to alleviate the car supply. Motor facilities were in ample supply, and there were substantial additions to the equipment of inland waterway carriers.

All forms of transportation continued to advance technologically. In the first six months of 1955, diesel locomotives accounted for 86% of road freight and 88% of road passenger service. Modern terminals and yards, improved equip-

ment and facilities, and more efficient operating practices came into use (see RAILROADS). Highway improvements were carried forward at a high level (see HIGHWAYS).

Rail ton-miles were 11% higher in the first half of 1955 than in the same period of 1954, and freight revenue rose 7%. Rail passenger-miles were 3% lower in the first six months of 1955 than in those months of 1954, and rail passenger revenue was down 4%. Net income (after income taxes) of Class I railroads was up 80% in a half-year comparison. Tons handled by the larger intercity motor carriers in the first quarter of 1955 were 12.4% higher than in the first quarter of 1954, operating revenue was up 13.7%, and net income (after income taxes) increased 149.1%. The traffic and earnings picture varied for other carriers. Certain branches of water transportation continued to face very burdensome costs. Traffic on inland waterways except the Great Lakes showed an overall increase (see INLAND WATERWAYS). Pipeline traffic expanded.

Railroads showed a continuing interest in expanding their "piggy-back" services—the transportation of loaded highway trailers on flat cars. Some roads instituted such service for the first time, using specially designed equipment to handle the trailers.

In the year ended June 30, 1954, carriers regulated by the commission had total revenue of \$17.1 billion. Railroads accounted for 60.4% of the total revenue, compared with 62.5% in the year ended June 30, 1953. Motor carriers of property accounted for 28.1%, compared with 26.5% in the previous year.

The commission again postponed, to March 1, 1956, the effective date of its order proscribing trip-leasing of motor vehicles as to certain specialized carriers. Legislation to set aside the trip-leasing ban was pending in Congress.

RICHARD F. MITCHELL,
Commissioner.

¹ Capital. ² Special census, 1954.

Executive.—Chief State officers in 1955:
Governor: Leo A. Hoegh (Republican)
Lieutenant Governor: Leo Elthon
Secretary of State: Melvin D. Synhorst
Treasurer: M. L. Abrahamson
Attorney General: Dayton Countryman
Supt. of Public Instruction: J. C. Wright

Constitution and Judiciary.—The present constitution went into effect in 1857. The Supreme Court comprises nine justices; chief justice in 1955 was Theodore C. Garfield.

Legislature.—The General Assembly (Senate, 50 members; House of Representatives, 108) meets in odd-numbered years commencing the second Monday in January.

The 1955 session appropriated approximately \$136.6 million a year for the 1955–57 biennium, including special funds of \$1,173,000 to the State Conservation Commission for water projects and \$5,220,750 for the renovation of institutions of the State Board of Education. Tax legislation increased the sales and use tax from 2% to 2½%, except on new cars and accessories, and extended it to cigarettes, beer, and gross receipts of bowling alleys; state income tax rates by about 7%; taxes on gasoline from 5 to 6 cents a gallon and on diesel fuel from 6 to 7 cents; and the corporation tax from 2% to 3%. Additional legislation established a legislative research bureau; approved the Uniform Reciprocal Enforcement of Support Act; raised salaries of Supreme Court judges from \$10,000 to \$12,000 and of district court judges from \$8,000 to \$10,000; increased workmen's compensation payments from \$28 to \$32 a week and unemployment compensation benefits from \$26 to \$30, extending the latter to 65,000 additional workers; approved a \$500 tax exemption for Korean War veterans and extended soldiers' preference to them in public employment; and repealed the 100-year-old Sunday "blue laws."

Finances.—State treasury receipts (1954–55 fiscal year), \$115,153,232; expenditures, \$136,535,561; treasury balance, \$39,973,401; long-term indebtedness (June 30, 1954), \$29,205,000.

Taxation.—State tax revenue (1954–55 fiscal year): \$197,850,000, including \$125,952,000 from a 2½% general sales tax and selective sales taxes; \$42,880,000 from licensing; and \$21,900,000 from individual income taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 94 national banks had \$922,513,000 in assets, \$667,771,000 in demand deposits, and \$188,618,000 in time deposits; the state's 562 other banks had \$1,911,830,624 in assets, \$1,221,678,620 in demand deposits, and \$530,817,219 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 18, inclusive. Operating expenditures of \$126,393,225.71 (\$272.47 per pupil) for public elementary and

tional costs) in the 1954–55 fiscal year totaled \$43,028,240, including \$32,564,894 for old-age assistance, \$9,102,601 for dependent children, and \$1,360,744 for the needy blind; a monthly average of 50,312 persons received public assistance. Expenditures for health and welfare institutions totaled \$10,119,611.09; for correctional and penal institutions, \$2,886,932.99.

Labor Force.—The labor force (July 15, 1955) numbered 1,108,120, including 330,095 agricultural workers. Nonagricultural employment was 753,105, and for the 12 months ending July 1955 averaged 746,829. There were 24,520 unemployed workers on July 15, 1955, and the state paid \$9,123,704 in unemployment compensation claims to workers during 1954.

Manufacturing.—Establishments numbering 3,736 in 1954 had 165,000 employees who received \$637,000,000 in salaries and wages. Value added by manufacture totaled \$1,179,513,000. In 1953, investment in new plant and equipment amounted to \$64,614,000. Earnings of production workers in manufacturing averaged \$71.01 for an average work week of 40.4 hours in 1954 and \$74.31 for 40.9 hours during the first half of 1955.

Agriculture.—Cash farm income in the first half of 1955 totaled \$1,067,829,000, and for the full year 1954 comprised \$1,844,090,000 from livestock and livestock products, \$452,242,000 from crops, and \$9,538,000 from government payments. Receipts from principal crops and livestock in 1954 included: hogs, \$905,972,000; cattle, \$605,165,000; corn, \$274,457,000; dairy products, \$142,221,000; soybeans, \$111,451,000; eggs, \$107,677,000; and oats, \$25,431,000.

The state's 192,933 farms (34,044,533 acres; harvested cropland, 22,444,290) had an average of 176.5 acres and \$36,077 in value of land and buildings per farm in 1954. There were 168,414

farms with telephones and 188,073 with electricity. Livestock on farms on Jan. 1, 1955, included 6,279,000 cattle, 1,307,000 sheep, 12,048,-000 hogs, and 30,378,000 chickens (not including commercial broilers). During the week of Oct. 24-30, 1954, 340,564 family and hired workers were engaged in farming.

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$61,780,678.20, and newly completed construction and reconstruction aggregated 1,636 miles.

Highways and roads on Dec. 31, 1954, totaled 101,339 miles (79,894 surfaced). Registered *motor vehicles* numbered 1,252,680 on Nov. 30, 1954, including 924,066 passenger cars. There were 13 *railroads* (1954) operating 8,515 line miles, and in 1955, 3 regularly scheduled *airlines* and 171 *airports and airfields* (94 commercial and municipal, 2 military, and 85 private).

Communications media (1954) included 60 *radio stations* and 12 VHF operating *television outlets*; 46 daily *newspapers* (circulation, 925,629) and 392 other newspapers (circulation, 614,022); and (Jan. 1, 1955) 192,615 business and 715,782 residential *telephones*.

Principal Events, 1955.—Leo A. Hoegh was inaugurated as governor on January 13. Leo Elthon, who had filled out the unexpired term of Gov. William S. Beardsley (killed in an automobile accident in November 1954, and the first Iowa governor to die in office), resumed his duties as lieutenant governor.

Among other actions in its 1955 session, the General Assembly voted a 0.5% increase in the general sales tax, raising it to a 2.5% level for two years. It also increased the income tax and advanced the gasoline tax by 1 cent per gallon. (See also above, *Legislature*.)

The assembly also created a Toll Road Authority with provisions that bonds to cover the cost of a new toll road would be sold and construction would be begun after either Illinois or Nebraska had completed financial arrangements for a similar superhighway to the Iowa border. Plans call for the Iowa toll highway to be 298 miles in length, to cost \$180 million, and to link Davenport on the Mississippi River with Council Bluffs on the Missouri.

During 1955 an extensive road-widening program under the aggressive leadership of Governor Hoegh made considerable advance, and primary road construction was also moving rapidly ahead. By late 1955, 338.74 miles of highways, using both bituminous and portland cement, had been built.

Receiving nationwide notice was the visit to Iowa in July of a 12-man delegation of Soviet farm experts. Meanwhile, as part of a 15-man American delegation, a group of Iowa farmers made an exchange visit to the Soviet Union.

The heaviest one-minute rainfall on record in the United States fell 11 miles north of Jefferson on July 10. For 1.4 minutes, precipitation was at the rate of .69 of an inch per minute. The

previous record of .65 of an inch had been set in California 30 years earlier.

Nevertheless the summer of 1955 was the driest in Iowa since 1936. Corn and bean yields were reduced by at least 50% in some areas, although other sections suffered only slightly, if at all. The corn crop in 1955, which exceeded in value that of any other state, was valued at \$693,-395,000, compared with \$818,470,000 in 1954. Other aspects of the state's economic life were accelerated during 1955 as 65 new industrial establishments began operations in the state.

Principal Events by: CLAUDE R. COOK,
Curator, Iowa State Department of History and Archives.

IRAN. A constitutional monarchy in southwestern Asia, Iran is bounded on the north by the Soviet Union, on the west by Turkey and Iraq, and on the east by Afghanistan and Baluchistan. Area (est.) 629,343 square miles; pop. (U.N. est., April 1, 1955), 21,037,000. Principal cities and populations (1949 est.): Teheran (Tehran), the capital (and district), 1,010,000; Tabriz 272,000; Abadan and Khorramshahr, 201,-000; Isfahan, 192,000; and Meshed, 191,000.

Living Conditions.—The majority of the people are Shi'ite Moslems of the Iranian language group, Persianized Turkic elements, comprising perhaps 35%, live mainly in the north. Nomadic tribes, numbering between 2 and 3 million, include the Kurds, Lurs, Bakhtiariis (Bakhtiariis), Qashqais, and Shah Savan; during the last decade many of these have been more or less autonomous within their territories. About 3 million live in cities and towns of over 20,000 population. The bulk of the remainder are farmers or peasants living in about 45,000 villages. The vast majority have a relatively low living standard. An estimated 85% of the population is illiterate. About nine tenths of the peasants are tenant farmers, the great majority of which are in debt to their landlords, many of whom are absentee. Rural areas have benefited little from modernization programs to build roads, establish schools, and extend health facilities. The infant mortality rate is appalling, said by many to be as high as 50%. In recent years great progress has been made in fighting malaria, and its elimination is almost within sight; but dysentery, trachoma, tuberculosis, and similar diseases are still widespread.

Government.—Executive power rests in the shah (Mohammed Reza Pahlevi, acceded 1941) and his Council of Ministers, which is responsible to Parliament. The lower house, or Majlis, consists of 136 deputies elected every two years. The Senate, consisting of 60 members (30 appointed by the shah), first came into existence in 1950. Hussein Ala is the present prime minister; he succeeded Gen. Fazlollah Zahedi on April 7, 1955.

Political parties in the Western sense do not exist. The Communist-led Tudeh (Masses) Party, which has been outlawed since 1949, still operates underground, although not so boldly or so effectively as previous to 1954. The Iran Party, chief in the nationalistic coalition under ex-Premier Mohammed Mossadegh, still exists but is in eclipse under the present regime. Most of the so-called parties of the country consist mainly of shifting parliamentary cliques formed around individual leaders.

The 18th Majlis was opened on March 18, 1954, and will sit for two years, by which time a new body should have been elected to succeed it. Under prevailing social and political conditions, elections offer little opportunity for expression of the popular will. Most of the candidates are powerful landlords or tribal chieftains; and, to a large extent, peasant votes are cast in a block, generally by the landowner. The elections for the current Majlis were notoriously "rigged" by the previous government of General Zahedi.

Education.—Education is free and compulsory between the ages of 7 and 13, according to law. Actually large sections of the country lack schooling. In 1949 there were 2,401 primary schools, 320 high schools, some maktabas (religious schools), technical schools, and schools for adults. The University of Teheran enrolls approximately 8,000 students.

Religion.—The official religion of Iran is the Ithna 'Ashariyah Shi'i sect, which recognizes 12 imams, or spiritual successors of the Prophet Mohammed. The Sunni Moslem sect, numbering some 850,000, is widespread among the Kurds. There are small minorities of Nestorian, Gregorian, Roman Catholic, and Protestant Christians.

Defense.—The Iranian Army reportedly numbers about 120,000. It is top-heavy with higher officers, many

of whom had been retired by ex-Premier Mossadegh in 1953, but returned to their posts of duty and influence during the Zahedi regime. A United States military mission has advised the army since 1942; and American weapons, supplied under the Mutual Security Program, will probably be increased with Iran's adherence to the Baghdad Pact (see below, *Principal Events, 1955*).

Finance.—For years there has been no annual budget; appropriations are voted by Parliament on a month-to-month basis. The unsound state of government finances was improved during 1955 by the restoration of oil royalties following the reactivation of the petroleum industry under the international consortium formed in April 1954.¹ A program of economic development, suspended during the oil nationalization dispute, 1951–54, has been aided by substantial loans from the United States (see below, *Principal Events, 1955*). No basic improvement in government finance and economic development can be expected without modernization of the country's tax structure and civil service, which no recent government has had the courage to tackle in any realistic and basic fashion.

Economic Development.—With the reactivation of the petroleum industry in Iran in October 1954, it was agreed that over the next five years \$500 million from the oil royalties should be earmarked for the economic development of the country. During 1955, in addition to outright grants-in-aid amounting to \$42,300,000, there were two loans made to Iran, the first by the Export-Import Bank for \$53 million, and the second by the Foreign Operations Administration (FOA) for \$32 million (at 2.41% interest, payable in 25 years). These sums fulfilled the obligations agreed to by the United States during 1954. Considerable dismay was evident in Teheran when in July the Point Four Program funds were reduced and about 2,000 employees in that organization were dismissed.

Agriculture.—The following estimates, drawn mostly from the U.S. Department of Agriculture's *Foreign Crops and Market* reports, indicate production of the main crops in 1954 (with figures for 1953 in parentheses): wheat, 82,500,000 bushels (78,000,000); rice, 580,000 tons (550,000); barley, 37,850,000 bushels (37,700,000); cotton, 57,500 tons (50,135); almonds, 8,800 tons (6,600); dried dates, 155,000 short tons; wool, 19,300 tons (18,750). Other crops of importance include sugar beets, apricots, tobacco, pistachio nuts, and opium. Livestock comprises chiefly sheep (17,750,000 in 1954), goats, and cattle (about 5,000,000 in 1953).

Industry.—Aside from petroleum, Iran's most important industry is rugmaking, which engages about 100,000 persons, or nearly a third of the country's industrial force. Other light industrial products include textiles, silk, jute, cement, cigarettes, refined sugar (largely from beets), canned fruit, matches, cardboard, soap, vegetable oils, and small arms ammunition.

Minerals.—Although Iran's natural resources have never been thoroughly surveyed, known deposits include coal, chrome, iron ore, copper, lead, sulfur, antimony, nickel, and red oxide. Coal production is relatively small, little more than 100,000 metric tons a year. Until nationalized on May 2, 1951, Iran's oilfields were one of the world's major sources of petroleum; the refinery at Abadan was the world's largest. Operations of the industry, including the refinery, were begun under a new agreement with an international consortium after Oct. 31, 1954. During the first ten months of 1954 crude production averaged 1,581,000 metric tons, and for the last two months, 1,355,000 metric tons. During the first five months of 1955 production averaged 1,103,800 metric tons, which was still less than half the monthly average (2,668,000) during

1950, the last full year before nationalization.

Foreign Trade.—The principal exports, with percentage figures for the ten months ending Jan. 20, 1955, were: cotton (21.4), dried fruits (14.9), rugs and carpets (12.3), wool (8.8), rice (7.6), and petroleum (7.5). In 1951 petroleum had led the list. The chief imports were: sugar (16.4), vehicles (10.0), cotton cloth (9.5), machinery (6.5), iron and metal products (6.3), tires and tubes (4.7).

During this same period the total value of exports was 8,237,000 rials; of imports, 16,766,000 rials. (The rate of exchange was 75 rials to the U.S. dollar as of October 1955.) This foreign trade was distributed among the major countries as follows (export percentages preceding import): USSR (16.3; 6.5), Germany (14.8; 17.2), France (10.4; 3.4), Japan (9.8; 10.3), United Kingdom (7.0; 7.9), and the United States (9.7; 25.4).

Principal Events, 1955. Internal Affairs.—After the shah's return from a trip to Europe and the United States during January and February, Gen. Fazlollah Zahedi resigned the premiership on April 5 and departed to Europe for medical treatment. In his place on April 7, the shah named Hussein Ala, an elder statesman who had been ambassador to Paris, London, and Washington, and his trusted minister of the court.

This move was generally interpreted to mean that the shah proposed to assume a more definite and personal role in governing the country. This became especially apparent with the early departure of Premier Ala to Europe to undergo medical treatment, which delayed his taking active command of the government by several months. Before departing, however, he had made it clear that one of the major efforts of his government would aim at the elimination of corruption among public servants. The cabinet he formed (April 9) showed little change in personnel until he shifted Dr. Ali Amini from the Finance to the Justice Ministry (May 23) and replaced (August 21) Gen. Abdullah Hedayat of the War Ministry by Gen. Ahmed Vossogh, so that the former could be immediately appointed by the shah as chief of staff in command of the combined army, navy, and air forces. On November 20 the government announced the appointment of Dr. Ali Amini as ambassador to the United States.

During the premier's absence in Europe, attention was deflected from any possible crusading reform by a widespread attack on the Bahai sect. This persecution was inaugurated and further formalized by the government's declaration of the sect's illegality on May 17, 1955, and was dramatized when the military governor of Teheran personally took charge of the demolition of the Bahai Temple in Teheran.

During the same week three prominent members of the Mossadegh regime—Bagher Kezemi, a former foreign minister; Amir Alai, a former minister of interior; and Abdullah Moazemi, speaker of the 17th Majlis—were placed under arrest. It appeared that the rigid control of affairs by the government, through its police and security forces, would continue. This policy was further emphasized when, on August 18, six more army officers, convicted of complicity in the Tudeh plot of the previous year to assume control of the military forces, were executed, bringing those so condemned to a total of 27.

In the usual Iranian tradition, at least in a token gesture thereto, a small minority of the Majlis continued to criticize the incumbent gov-

¹ See THE AMERICANA ANNUAL, 1955, p. 376.

ernment, although not in the numbers nor with the vehemence directed at Premier Zahedi. Yet when the premier pressed for a vote of confidence, the opposition was inarticulate: the initial vote in the Majlis on April 17 was 92 to 2, while that which was demanded on July 31 was 72 to 6. Although by the end of the year both the shah and Premier Ala were privately reported to be very discouraged with the lack of progress in governmental reform and economic development, there appeared to be no weakening of the government's determination or ability to continue the present general program of consolidating its power.

Foreign Relations.—During 1955 Iran moved steadily away from its traditional policy of neutrality into more overt cooperation with the Western powers. At the end of 1954 the USSR had signed an agreement to settle its differences with Iran in regard to World War II payments and disputed borders. On June 1, eleven tons of gold arrived in Teheran from Moscow, where it had been held ever since the height of World War II, and with it came the promise that £3,000,000 in Iranian goods received during the war would be repaid in kind. On July 13 the shah announced that he would accept the Soviet invitation to visit Moscow, the date to be announced later. By the end of the year, however, the time had yet to be announced, for in the meantime the improved relations with the Soviet Union had been clouded by subsequent events.

It was announced by the government on October 11 that Iran had decided to adhere to the Baghdad Pact (q.v.) inaugurated between Turkey and Iraq on February 24, joined later by Britain on March 30, and by Pakistan on June 30. The Iranian announcement followed shortly upon the visit to Teheran of President Celâl Bayar of Turkey, who apparently persuaded the shah and his government that the time was ripe for such a step. Just before Bayar's arrival on September 20, Premier Ala had told the Majlis that Iran could no longer remain neutral in the present world situation, and the visit of the Turkish president was notice that the Iranian government intended to adhere to the pact. The only surprise to many was the promptness of the announcement, which almost coincided with the news from Cairo that Egypt had contracted to buy arms from Czechoslovakia.

As early as March 8 the Soviet Union had warned Iran against any thought of joining the newly announced pact, adherence to which would be considered by Moscow as an unfriendly act and not permissible under the 1921 treaty of friendship between the two countries.² It was not surprising, therefore, that the USSR dispatched a note to Teheran on October 12 declaring that Iran's adherence to the pact was "incompatible with the interests of consolidating peace and security in the region of the Middle and Near East and contradicts the good-neighborly relations be-

tween Iran and the Soviet Union and certain treaty obligations."

Princeton University.*

IRAQ. An Arab monarchy in southwest Asia, Iraq is bounded on the north by Turkey, on the west by Syria and Jordan, on the east by Iran, and on the south by Saudi Arabia, Kuwait, and the Persian Gulf. Its area is 171,599 square miles, and its population is 4,948,000 (July 1, 1954, est.), of whom about 80% are Arabs, 15% Kurds, and the remainder mostly Iranians and Turks. Baghdad, the capital, has a population of 558,820 (1947 census). Other important cities are Mosul (273,389) and Kirkuk (147,806) in the north and Basra (219,167), the country's port, located in the south on the Shatt-al-Arab, the confluence of the Tigris and Euphrates rivers.

Government.—King Faisal II (b. May 2, 1935; acceded to the throne under a regency, April 4, 1939; attained majority, May 2, 1953) heads a constitutional hereditary monarchy. The king delegates executive power to a cabinet (the cabinet in office until Dec. 14, 1955 was formed Aug. 4, 1954, with Nuri as-Said as prime minister) which is responsible to the Parliament, but which may also be dismissed by the king. The bicameral legislature consists of a Senate, whose members are appointed by the ruler for 8-year terms, and a Chamber of Deputies, elected for a maximum term of 4 years by direct vote of adult male citizens.

Religion.—Some 96% of all Iraqis are Moslems. The villagers and townsmen of central and southern Iraq belong to the Shi'ite sect of Islam and form a slight majority of the population. The inhabitants of northern Iraq, the nomads, and the people of Baghdad and Basra are largely Sunnite Moslems. Christians of the Nestorian, Gregorian, Jacobite, Chaldean, Orthodox Armenian, and Uniate sects (numbering together 149,656 in 1947) are found in all principal towns and in some northern villages.

Education.—Although education is compulsory in its early stages, the law is difficult to implement. According to the 1947 census, 89% of the non-nomadic population over 5 years of age is illiterate. There were in 1952-53 only 1,573 government elementary and secondary schools with an enrollment of 255,769. Plans exist for the construction within 5 years of 400 elementary schools and 300 agricultural and 300 technical secondary schools. In Baghdad a university is in process of organization to incorporate the existing colleges of arts and sciences, engineering, and medicine. In the capital there are higher institutions of law, theology, economics and commerce, agriculture, pharmacy and chemistry, dentistry, education, and fine arts, and the Queen Aliyah College for Girls, the Royal Faculty of Medicine, a military college, and a police college.

Defense.—Defense units include an army of 3 divisions, an air force of 4 fighter squadrons with a fifth in process of formation during 1955, and a navy consisting of a river flotilla of 4 gunboats. Military training is legally obligatory for all males between the ages of 18 and 25 for a period up to 2 years.

Finance.—Iraq is a member of the sterling bloc, and the Iraqi dinar (ID) equals £1 or U.S.\$2.80. Currency in circulation in February 1955 amounted to ID42,541,522. Besides the Iraq National Bank, there are a number of domestic and foreign commercial banks and 4 state-owned long-term financing institutions. For the fiscal year 1954-55, the revised government budget called for receipts of ID48,512,000 and expenditures of ID57,609,370. The budget for 1955-56 called for revenues of ID50,972,000 and expenditures of ID51,546,010. These figures do not include the 70% share of the revenues from petroleum royalties which is assigned to the Iraq Development Board, or outlays for the board's economic development program. In January 1955 the condition of the board's budget was so favorable that Iraq cancelled the unused portion of a 15-year loan of \$12.8 million granted in June 1950 by the World Bank, and later in the year repaid the \$6.3 million already drawn under the loan agreement.

Development Program.—The Iraq Development Board is responsible, in cooperation with the Ministry of Development, for the planning and execution of economic development projects. On April 1, 1955, the 6-year plan (1951-57) for flood control and irrigation, and for improvements in agriculture, forestry, industry, transportation, community facilities, and public health was superseded by a 5-year plan (1955-60).

² The 1921 treaty stipulates that it would be considered an unfriendly act on the part of Iran if substantial forces of any third power hostile to the USSR were to be admitted into Iran. Before the Majlis would ratify this treaty, there was attached to it, by way of interpretation, an exchange of letters which made it quite clear that the third forces referred to meant only those opposed to, and seeking the overthrow of, the then (1921) ruling Soviet Bolshevik government. Despite the clear reference to the Deniken and Wrangle (Czarist) forces of the time, the Soviet government has continued to quote this treaty in application to much broader situations, including its invasion of Iran in August 1941. Iran has regularly answered that it does not consider this portion of the treaty to be relevant to the current situation.

The new program envisages expenditures of ID304,306,100, as compared with the planned (but never completed) investment of ID155,374,000 under the old program. The flood control project on the Euphrates at Ramadi was expected to be ready for use by the end of 1955, and the Wadi Tharthar project on the Tigris, by the spring of 1956. The government's \$25,000,000 oil refinery at Dora was officially inaugurated on Nov. 28, 1955. Bids were sought in the fall for a large sugar refinery near Mosul.

Agriculture and Manufacturing.—Iraq is primarily an agricultural country, although petroleum is its major source of revenue. It normally produces about 80% of the world's dates (320,000 metric tons in 1954). Barley (750,000 tons), wheat (750,000 tons), and rice (250,000 tons) are important crops. Other agricultural products include cotton (45,000 bales) and tobacco (10,000 metric tons), and corn, millet, sesame, and citrus fruits. In 1954 the wool clip was 10,000 metric tons. Crop damage, especially to barley, from the floods of March, April, and May 1954 proved less than expected; but the date crop was of poor quality and found little market. Manufactures, conducted in some 2,500 factories and shops, many of which are very small, include wool, cotton, rayon textiles, footwear, cement, bricks, tiles, petroleum products, vegetable oils, flour, beer, alcohol, soap, matches, glass, and cigarettes.

Petroleum.—Crude oil production totaled 30,678,000 metric tons in 1954 and 16,089,000 metric tons in the first 6 months of 1955. The Iraq Petroleum Company and its affiliates, owned jointly by British, Dutch, French, and American interests, control most of the country's oil production and pay to the government as royalties 50% of their profits before the deduction of foreign taxes. An agreement concluded in March 1955 and retroactive through 1954 resulted in an increased payment to Iraq of about \$0.98 a ton. Government oil revenues for 1954 amounted to about ID67,500,000 under the new formula, and were estimated at ID73 million for 1955 and ID76 million for 1956. Revenues are eventually expected to increase to ID100 million annually.

Foreign Trade.—Exports in 1954 were valued at ID155,600,000, and imports had an estimated value of ID72,800,000. The principal exports were crude petroleum (29,185,000 metric tons in 1954), cereals, dates, live animals, wool, cotton, and animal products. The major export countries, with 1953 export values in thousands of Iraqi dinars, are: Great Britain (5,971), India (1,573), Kuwait (1,473), Syria (958), and Italy (873). Principal imports were textiles and clothing, iron and steel, machinery, sugar, automobiles, tea, chemicals, and pharmaceuticals. The major suppliers are Great Britain (25,915), the United States (10,469), Japan (4,366), Ceylon (4,002), and West Germany (3,332).

Transportation and Communications.—The state-owned railway system comprises about 1,100 miles. A standard-gauge line (407.3 miles) from Baghdad through Mosul to the Syrian frontier at Tel Kotchek provides a direct rail link with Europe. Meter-gauge lines (691.7 miles) connect Baghdad with Basra, Kirkuk, and Khanaqin. Water transportation plays an important role in Iraq's economy, with the Tigris navigable from Basra to Baghdad. In addition, roads suitable for vehicular traffic total about 4,550 miles, and in 1953 there were 28,522 registered motor vehicles.

The state-operated Iraqi Airways serves Iraq and neighboring countries, and international lines

use the airport facilities of Baghdad and Basra. There were 179 telegraph and post offices in 1953, and 28,010 telephones as of Jan. 1, 1954.

Principal Events, 1955.—The government of Prime Minister Nuri as-Said moved ahead during 1955 with its program of linking Iraq with the West. In January the Iraqi legation in Moscow was closed and the Russian mission to Baghdad was withdrawn. On January 12, the prime minister announced that Iraq would shortly sign a mutual security treaty with Turkey. Despite bitter protests by Egypt, supported by Saudi Arabia and Syria, that such action would undermine Arab League collective security arrangements, the Turkish-Iraqi Treaty (later known as the Baghdad Pact) was concluded in the Iraqi capital on February 24 and ratified by the legislatures of both countries two days later. (See BAGHDAD PACT.) On November 21–22 the prime ministers of Iran, Pakistan, and Turkey, and the foreign minister of Great Britain met in the Iraqi capital under the chairmanship of Nuri as-Said to establish permanent machinery for implementing the pact. And on December 1 an Iraqi diplomat, Awni Khalidy, was appointed secretary general.

On Dec. 15, 1954, Nuri as-Said told Parliament that his government hoped to terminate, before its expiration in October 1957, the Anglo-Iraqi treaty of 1930 which gave Britain the right to maintain Royal Air Force bases in Iraq. On March 30, 1955, the British government announced its decision to adhere to the Baghdad Pact and to replace the 1930 treaty by new arrangements for Anglo-Iraqi cooperation. On April 4 a special agreement was signed by which Britain turned over to Iraq the Habbaniya and Shaiba airfields, but secured the right to maintain limited installations and to use certain Iraqi facilities for its visiting military aircraft. Britain also undertook to assist in the training of the Iraqi armed forces and to supply aid, including military assistance, if Iraq should be attacked. On May 2 the British airfields were formally transferred to Iraqi control.

An Iraqi delegation led by Dr. Fadhil al-Jamali, the former prime minister, participated actively in the Asian-African Conference (q.v.) held at Bandung, Indonesia, from April 18 to April 24. There the Iraqis defended, against Chinese and Indian objections, the concept and practice of collective security, and also supported the Arab states' successful effort to have the claims of the Arabs of Palestine recognized in the conference's final report.

The government which had held office since August 1954 was replaced on Dec. 17, 1955, by a new cabinet also headed by the veteran prime minister, Nuri as-Said. The reorganization of the cabinet apparently did not foreshadow any change in government policy.

PAUL L. HANNA,

Professor of Social Sciences, University of Florida.

IRELAND, NORTHERN. See NORTHERN IRELAND.

IRELAND, Republic of. With jurisdiction over 26 of the 32 Irish counties (the remainder constituting Northern Ireland), the Republic of Ireland is a sovereign state (area, 26,602 square miles) separated from England and Wales by the Irish Sea and St. George's Channel. Its capital, largest city, and chief port is Dublin, whose estimated population is 600,000.

Population.—The population, which totaled 8,175,000 in all of Ireland in 1841, is at present virtually stationary, the 1951 census of 2,960,593 showing an increase of only 0.2% over 1946. A report, issued in

1955 by a commission which since 1948 has studied the problem of Ireland's steadily decreasing population in the last hundred years, cited the drain of emigration on rural areas as the primary cause of this decline, but also blamed the low marriage rate. About one quarter of the population never marries, and the marriage rate of 5.5 in 1,000 of population (1946-51) is one of the lowest in the world. The aims of a government program designed to reverse this trend include an increase of agricultural and industrial production, reclamation of waste land, and afforestation.

According to the 1946 census, Roman Catholics numbered 2,786,033, and Protestants, 169,074.

Government and Political Events, 1955.—The national Parliament (Oireachtas) consists of the president (Sean T. O'Kelly, re-elected May 12, 1952, for a second term of 7 years); a 60-member senate (Seanad Eireann), elected by the Dail and county councils; and a 147-member House of Representatives (Dail Eireann), 138 members being popularly elected on the basis of proportional representation. General elections were held May 18, 1954, and John A. Costello, leader of the Fine Gael party, became prime minister of a coalition government, succeeding Eamon de Valera. Party membership in the Dail in January 1955 was as follows: Fianna Fail, 65; Fine Gael, 50; Labor, 19; Clann na Talmhan, 5; Clann na Poblachta, 3; Independents, 5.

Two members of the outlawed Irish Republican Army were sentenced to life imprisonment on Oct. 5, 1955, for a raid on a British Army camp on August 13. Earlier the prime minister deplored such methods of attempting to end the division of Ireland as "futile and dangerous."

On Dec. 14, 1955, Ireland, along with 15 other countries, was elected to membership in the United Nations.

Education.—Free elementary education was provided in 1953 at 4,880 national schools, with enrollment of 484,364. Estimated state expenditure on elementary education for 1954-55 was £8,262,490. Recognized secondary schools numbered 447 in 1953-54, with 54,019 pupils, and 4,170 teachers; £1,689,870 was expended on secondary education. There were also 224 permanent vocational schools; 603 nonpermanent centers (85,627 students, 2,300 teachers); and 6 state-aided training colleges in 1953. The National University of Ireland had 271 professors and lecturers and 5,084 students in 1953-54 in its constituent colleges (Cork, 1,086 pupils; Galway, 936; Dublin, 3,528; St. Patrick's, and Maynooth, 534). Students at the University of Dublin (Trinity College) numbered 1,995, with 121 professors and lecturers.

Finance.—For the fiscal year 1955-56, revenue was estimated at £110.5 million (an increase of £3.8 million over the previous year), and expenditure at £113.5 million, compared with £120.6 million in 1954-55. Capital expenditure was set at £34.07 million, of which £2.83 million was offset by loan repayments, leaving £31.24 million to be raised by borrowing. A final deficit of £1.63 million was recorded on the 1954-55 current budget, which estimated customs receipts at £37.09 million; income taxes at £25.63 million; and excise receipts at £16.8 million. Current expenditures were budgeted at £14.36 million for agriculture; £11.34 million for education; and £21.12 million for social welfare.

Economy.—Economic life revolves largely around agriculture, the principal industry; tourism, ranking second in terms of earnings; and manufacturing, which is slowly rising in output.

The total acreage of crops and pasture in 1954 was 11,615,822, including a 37.4% increase in the area seeded to wheat, bringing the total to 486,368 acres on which 489,000 tons were harvested. Acreages and yields of other leading crops were as follows: oats, 533,148 acres (475,000 tons); barley, 162,644 acres (176,000 tons); potatoes, 291,949 acres (2,248,000 tons); turnips, 120,292 acres (1,975,000 tons); and hay, 1,878,266 acres (3,724,000 tons). Pasturage comprised 7,929,366 acres, and fruit was grown on 11,698 acres. In June 1954, livestock included 329,054 horses, 4,504,026 cattle, 3,112,842 sheep, 958,321 pigs, and 16,062,050 poultry.

Major manufactures, in order of rank, are food processing (baked goods and beet sugar are important), tobacco, textiles, clothing, and building and construction. The index for industrial output (1936 = 100) rose to 188.5 in January-September 1954 from 183.7 in the same period a year earlier. Some 221,295 persons were em-

ployed in industries and services in 1952-53, including 139,829 in manufacturing. Unemployment, which has been a serious problem, has shown signs of easing. By August 1955, unemployment had dropped to 27,400, representing 5.8% of the labor force.

The output of electricity for domestic use, motive power, and public lighting, increased in 1954 to a monthly average of 117.2 million kw.-hr., compared with 103.8 in 1953.

The fisheries industry, of less importance than others, yielded £613,546 in 1954 from fish and shellfish landings.

Foreign Trade.—A major factor in the continued moderate prosperity of the republic during 1954-55 was the demand for cattle and meat by the United Kingdom (Ireland's principal trader). Imports (adjusted for balance of payment purposes) decreased from £180.4 million in 1953 to £177.4 million in 1954, including a decline of £8.5 million in imports from the dollar area, while exports and re-exports increased from £112.7 million in 1953 to £113.4 million in 1954.

Communications.—Including tracks partly situated in Northern Ireland, there are 2,711 miles of railways. The government-owned railway and road transport system operated with a reduced deficit of about £1 million in 1954, when 14 new diesel train sets were put into operation and proved instrumental in raising passenger revenue. Roads total 50,002 miles (main roads, 9,844 miles). Motor passenger services carried 295,915,277 passengers in 1954, and gross receipts from fares totaled £4,969,891. Aer Lingus, the government-owned air service, carried 293,422 passengers, 7,908,000 pounds of cargo, and 2,926,000 pounds of mail in 1952-53.

IRIAN, West. See NETHERLANDS NEW GUINEA.

IRON AND STEEL. Renewed expansion of the iron and steel industry, and development of iron ore deposits on a worldwide scale, were the outstanding events in the industry during 1955. Other important events were the progress in nationalizing and expanding the British industry, the attainment of iron and steel production records in the United States, production of pig iron in the experimental low-shaft furnace, and the wage settlement which terminated a "12-hour" strike in the United States industry.

United States.—On Jan. 1, 1955, the raw steel annual capacity of United States mills was 125,828,310 net tons. Production of raw steel during 1955 was estimated at 117 million tons, a record. Other records established in 1955 were: (1) monthly raw steel output of 10,501,050 tons in October; (2) weekly raw steel output of 2,421,000 tons for the week beginning December 12; and (3) monthly pig iron output of 6,965,273 tons in October. The needed increase in raw steel capacity was estimated to be 4 million net tons a year for the next 15 years, and to cost at least \$15 billion.¹

Part of the future iron ore requirements of the industry will come from beneficiated taconite. The investment in producing taconite concentrates from existing and planned plants was estimated to total \$1.5 billion by 1975.² It was expected that the remaining ore will be supplied by other deposits in the United States and by imports. During the first six months of 1955 a total of 10,096,681 tons of iron ore was imported from Brazil, British West Africa, Canada, Chile, Cuba,

¹ Steel, Sept. 5, 1955, pp. 41-44.

² New York Times, June 12, 1955, Sec. 3, p. F.

Dominican Republic, Liberia, Mexico, Peru, Sweden, United Kingdom, and Venezuela.

A strike of some 600,000 workers began and ended on July 1, 1955. Companies in the basic steel industry and the CIO United Steelworkers of America reached agreement within 12 hours on an increase of the minimum wage rate by 11.5 cents to a new minimum wage rate of \$1.685 an hour, and on an increase in the increment between job classes to 6 cents an hour from the previous increment of 5.5 cents. The 32 job classes affected ranged from \$1.685 for job class 1 to \$3.545 for job class 32. The weighted average increase in wage rates was estimated to be about 15 cents an hour.

After negotiating separate agreements on wages, some of the steel companies individually announced increases in the prices of their steel products. One company stated that its price increase was equivalent to about 5.8%, in comparison with the 7.5% increase in steel wages; and that the increase was made necessary by steadily mounting costs.

Republic Steel Corporation on Sept. 7, 1955, announced plans to increase steelmaking annual capacity by 16%, from 10,262,000 to 11,880,000 tons, at a cost of \$130 million.

Canada.—On April 25, 1955, H. G. Hilton, president of The Steel Company of Canada Limited, predicted that Canadian steel consumption by 1961 will be 25% higher than the average of 5.5 million ingot tons for the years 1951 to 1953. That company planned to develop an iron ore deposit at Bristol (60 miles northwest of Ottawa) and to beneficiate 500,000 tons of ore annually.

A study of the industry west of the Canadian Rockies indicated a total of about 11 million tons of possible reserves of magnetite ore in British Columbia and 35 million tons of iron "tailings" or concentrates, containing about 45% iron, at Kimberley, B.C. Plans for a new steel and cement industry for British Columbia, including a \$10 million steel plant of 50,000 tons annual capacity, were announced.

An iron ore deposit at Natashquan, Quebec, was reported to contain 5 billion tons of ore capable of yielding 200 million tons of concentrates containing 68% iron.

Canadian Javelin Company began the development of an iron ore deposit at Wabush Lake, Labrador. That company reported that three German steel companies would purchase a minimum of 2 million tons of high-grade ore from its deposit.

In May 1955, Bethlehem Steel Company began shipment of concentrates containing 65 to 67% iron which were produced from a low-grade magnetite deposit, averaging 37% iron, at Mamora, Ontario. That deposit was discovered in 1949 during an aeromagnetic survey by the Canadian government. Five years of development work, including the stripping of 20 million tons of limestone, preceded the mining of the ore.

Further development of the Steep Rock, Ontario, iron ore deposit was planned to yield 5 million tons of ore annually by 1959, for an investment of about \$12 a ton of annual capacity.

The \$6.2 million mill of Canadian Western Pipe Mills, Ltd., a subsidiary of Phoenix-Rheinische Roehrenwerke (a German company), was opened at Port Moody, British Columbia, on July 22, 1955, to produce pipe for the transmission of gas and oil.

Other Countries.—World production of iron ore, pig iron and ferroalloys, and crude steel in 1954 is shown in the table on page 384.

COURTESY OF GREAT LAKES STEEL CORPORATION

Great Lakes Steel Corporation's blast furnace on Zug Island in River Rouge, Mich., has a monthly capacity of 50,000 tons of pig iron.

By August 1955 about 65% of the annual capacity of England's iron and steel industry had been denationalized. Government control of both the nationalized and denationalized portions of the industry continued through the British Iron and Steel Board, which was created in 1953. Examples of that control are seen in the board's: (1) establishment of maximum prices for domestic sales of iron and steel products; (2) requirement that company expenditures of over \$280,000 for plant improvement be approved by the board; and (3) plans for the expansion of the industry.

The board established these cost ratios in setting product prices: metallic content, 30%; other materials, repairs, and maintenance, 13%; coal, coke, oil, and electric power, 20%; wages and salaries, 21%; inland transportation, 10%; and depreciation and obsolescence of fixed assets, 6%. To those costs the board added a "fair" profit to establish the sales price.

The board's plant expansion program includes annual capacities of pig iron and steel ingots of 15.2 million tons and 22.5 million tons, respectively, by 1958. Since 1945 the expansion program cost \$1.1 billion; by 1958 it will total \$1.7 billion. Nineteen iron ore boats are being built to carry iron ore from Liberia, Labrador, Venezuela, Sweden, Norway, North Africa, and French Guiana. It was planned to import 17 million tons of iron ore in 1958, and to expand the output of domestic high-phosphorus ore to 17.5 million tons in 1958.

An appraisal of the world's reserves of iron ore was recommended in a report prepared by a panel of seven members for the Economic and Social Council of United Nations and released on April 3, 1955. The panel members contended that more accurate information on iron ore reserves is needed for economic planning. The members were uncertain about the 1955 estimate of world reserves of 84.58 billion metric tons of ore; that is a revision of the 1950 United Nations

estimate of 54 billion metric tons. The 1955 estimate included the following continental distribution of iron ore reserves, in billion metric tons: Asia and the Middle East, 28; South America, 19.7; Europe, 16.48; and North America, 14.1.

On July 12, 1955, a hot-strip mill capable of rolling 2 million tons of steel a year began op-

erating at August Thyssen Steel Works in Duisburg, West Germany. This was the first such built in West Germany since World War II; it replaced one dismantled by the British Occupation Authority after the war.

During 1955 the construction or modernization of iron and steel plants was planned or begun also in Argentina, Austria, Brazil, Chile, China, India, Lebanon, Luxembourg, Malaya, Mozambique, Pakistan, Southern Rhodesia, Turkey, and the USSR.

Technical Developments.—Results reported on the experimental low-shaft furnace at Liège, Belgium, indicated the successful production of low-silicon pig iron from raw materials not readily usable in conventional blast furnaces because of fineness or other reasons. Experiments were directed by Belgian National Center of Metallurgical Research with the cooperation of the local steel industry and assistance of research workers from France, Italy, and Luxembourg.

The British Iron and Steel Research Association developed a water-cooled periscope for insertion in an open hearth furnace to permit visual examination or photographing of the bath, walls,

and roof. This is a significant tool in the improvement of steelmaking, furnace design, and maintenance.

Casting machines in which molten steel solidifies in a continuous strand were reported during 1955 in Argentina, Austria, Canada, France, West Germany, Italy, Japan, Sweden, Switzerland, the United Kingdom, and the United States.

Great Lakes Steel Corporation began operating a new blast furnace, having a rated capacity of 50,000 tons of pig iron a month, at its plant on Zug Island in River Rouge, Mich. The hearth diameter of 30 feet 3 inches was reported to be the world's largest.

ISHAM, Ralph Heyward, American collector of rare manuscripts: b. New York, N.Y., July 2, 1890; d. New York, N.Y., June 13, 1955. He spent over 20 years of his life in the search for and acquiring of the complete papers of James Boswell, author of the great *Life of Samuel Johnson* (1791).

Isham was educated at Cornell (1908-09) and Yale (1910-11) universities, and after a brief period in business, went to England, where in 1916 he enlisted in the British Army. During World War I, he served with distinction on the staffs of Field Marshall Sir William Robertson and Lord Haig, attaining the rank of colonel. On his return to the United States after the war, he took over the presidency of the Trumbull Securities Corporation and the vice presidency of the New England Water Power Company. He also began to collect rare manuscripts, and not long afterward became deeply involved in one of the most fascinating literary quests in the annals of English literature: the search for the papers of the prolific Scottish author, James Boswell (1740-95).

The century-old myth that Boswell's papers had been burned was exploded by Professor Chauncey B. Tinker of Yale University in 1925, when he discovered part of them in an ebony cabinet in Malahide Castle, Ireland. Unable to obtain their release, however, Professor Tinker returned to the United States empty-handed. At this juncture Colonel Isham took up the quest. He went to Ireland, entered into negotiations with Lord Talbot de Malahide (a descendant of Boswell), secured the papers in 1928, and published them in a private edition known as the *Malahide Papers*. In 1930 another cache of the papers was found in a croquet box in a cupboard of the castle, and in the same year two large boxes containing more of Boswell's papers were discovered at Fettercairn House, near Aberdeen, Scotland. After protracted litigation and private transactions, Colonel Isham was given the opportunity to purchase all the new material.

In 1937 Isham revisited Malahide Castle, and found what he thought was the last of Boswell's literary legacy. In 1940, however, Irish soldiers found in an outbuilding loft at the castle still another cache, which contained a great part of the Scottish author's correspondence with such notable contemporaries as Sir Joshua Reynolds and Oliver Goldsmith. After the war, Colonel Isham took the material back to the United

Israeli troops patrol Gaza strip where Israeli-Egyptian fighting in 1955 threatened to break into general war.

States; in 1950, with the purchase of another newly discovered lot of Boswell's papers, he completed his collection.

Since these acquisitions had depleted his fortune, the colonel sold the entire collection on July 23, 1949, to Yale University, which in 1950 arranged with the McGraw-Hill Book Company, Inc., to edit and publish the papers. It is expected that the material will eventually fill 50 volumes.

ISLAM. See Index entry, *Moslems*.

ISLE OF MAN. This United Kingdom dependency (area, 141,263 acres; pop., 1951, 55,213) lying off the coast of Cumberland, has close attachments to the crown and a distinctive relationship to government, not being bound by acts of Parliament unless specially mentioned in them. Chief towns are Douglas, the capital (pop., 20,288), Ramsey, Peel, and Castletown.

Local laws are administered by the ancient Court of Tynwald, consisting of a lieutenant governor (Sir Ambrose D. F. Dundas, assumed office Sept. 6, 1952), a Legislative Council, a 24-member elected House of Keys, and (since 1946) a 7-member Executive Council appointed to act with the governor on all matters of government. A bill abolishing double taxation for residents deriving their income from the United Kingdom was approved in February 1955. Queen Elizabeth II presided over a meeting of the Court of Tynwald in August 1955 while making her first visit to the Isle of Man. Revenue totaled £2,943,111 in 1953-54; expenditure, £2,779,359. In 1954 there were 31 primary schools, with 4,479 pupils. Principal crops are oats, wheat, and barley; and stock raising is a valuable industry.

ISOTOPES. See Index entry.

ISRAEL. A republic of the Middle East, bordered by Egypt on the south, Syria and the Hashemite Kingdom of the Jordan on the east, and Lebanon on the north. Area, 8,048 square miles; pop. (Dec. 31, 1954), 1,717,834, including 191,818 non-Jews, chiefly Arab Moslems. Chief cities and populations (est. Dec. 31, 1954): Jerusalem (the capital), 144,000; Tel Aviv-Yafo, 358,500; Haifa, 154,500; and Ramat Gan, 51,000. Hebrew is the official language, although Arab citizens have the right to use Arabic in their dealings with the government.

Government.—The State of Israel came into being on May 14, 1948. The president, whose functions are largely titular, is elected by the Knesset (Assembly) for

a 5-year term. Itzhak Ben-Zvi, Israel's second president, took office on Dec. 10, 1952. The Knesset, Israel's unicameral legislature, has 120 members elected for a 4-year term by proportional representation. In the elections of July 26, 1955, 876,085 citizens (83% of the electorate) voted. The Mapai (Israel Labor Party) obtained 40 seats (32.3% of the popular vote); Herut (rightist nationalists), 15; General Zionists, 13; Mizrachi and Hapoel Mizrachi (religious parties), 11; Ahdut Avodah (neutralist Socialists), 10; Mapam (pro-Soviet Socialists), 9; Agudat Israel and Poalei Agudat Israel (religious parties), 6; Communists, 6; Progressives, 5; and Arab lists (affiliated to Mapai), 5. David Ben-Gurion (Mapai) headed a coalition cabinet approved by the Knesset on Nov. 3, 1955.

Education.—School attendance is free and compulsory for children between 5 and 14. In 1953-54 there were 1,340 kindergartens (65,000 pupils) and 929 elementary schools (232,205). High school students numbered 32,000, including 10,000 in technical and agricultural schools. There are also many Arab schools, adult and continuation classes, teacher-training colleges, and other special schools. Higher institutions include Hebrew University in Jerusalem (3,258 students in 1954-55), the Israel Institute of Technology at Haifa (1,721), the School of Law and Economics at Tel Aviv, and Bar Ilan University at Ramat Gan (inaugurated in 1955).

Religion.—Observance of the rabbinical code varies among the Jewish population, and controversy exists over kosher food laws, religious education, and military service for women. There is no established church, and freedom of worship exists. Moslems number 131,500; Christians, 42,800.

Immigration.—From May 15, 1948, to Dec. 31, 1954, Jewish immigrants numbered 735,394, of whom 46.4% came from Europe; 34% from Asia; and 16.3% from Africa. In the year 1954, 17,471 immigrants entered Israel (16,896 in the first 7 months of 1955).

Finance.—The budget for the fiscal year 1955-56 was estimated at I£631 million (I£571 million in 1954-55), including I£192.5 million for development (I£189.4 million in 1954-55). Of the 1955-56 revenue, an estimated I£295.6 million was to come from taxes, customs, and other ordinary sources, and about I£262.5 million from counterpart funds of German reparations, United States grants-in-aid, independence and development loans, and other special sources. At the principal exchange rate, I£1.80 = U.S. \$1.00 (or I£1.00 = U.S. \$0.56).

Production.—Israel's growing economy is featured by diversified light industries and a highly intensive agriculture. National income in 1954 was estimated at I£1,426 million, representing a rise in aggregate real income (corrected for price changes) of about 20% over 1953, and a rise in per capita real income of about 12%. Of Israel's labor force of 561,400 (June 1954), 135,900 were in manufacturing, 102,200 in agriculture, and 68,500 in commerce and banking. Israel's chief industries are foodstuffs, clothing and textiles, building materials, woodwork, leather and shoes, printing and paper, machinery, metals and metal products, electrical apparatus, chemicals, glass products, diamonds, plastics, au-

UNITED PRESS

tomobiles and tires, rubber products, and ceramics. Cement output in 1954 totaled 563,099 metric tons, a rise of 21% over 1953. Electric power production in 1954 was 895.6 million kw.-hr. (18% over 1953), and the nation's generating capacity of 237,000 kw. was being expanded in 1955 by the construction of two large power stations. Minerals exploited include phosphates, potash, bromides, glass sand, and clays.

Israeli agriculture is largely on collective or cooperative lines. Area under cultivation in 1954 approximated 925,000 acres, of which 200,000 was under irrigation. Chief crops are grains, fodder, vegetables, grapes, bananas, olives, and peanuts. Some 400 million eggs and 150 million liters of milk were produced in 1954. Cultivation of cotton, flax, agave, kenaf, and other industrial crops is in the experimental stage. Israel's citrus crop provides the nation's chief export. The citrus yield in 1954-55 (prelim.) totaled 9.3 million boxes (11.4 million in 1953-54).

Foreign Trade.—Exports in 1954 were valued at \$88.1 million; imports, \$289.7 million. Citrus fruit exports accounted for 39.3% of the 1954 total; diamonds, 18.5%; motor cars, 7.6%; and textiles, 4.0%. Consumer goods accounted for

only 18.5% of 1954 imports, the remainder constituting production and investment goods and fuels and lubricants. The United Kingdom purchased 22.9% of Israel's 1954 exports; the United States, 16.9%; and Turkey, 14.9%. The United States provided 27.4% of imports; West Germany, 18.0%; and the United Kingdom, 9.5%. In 1954, Israel was visited by 38,661 tourists. Income from tourism amounted to \$9.5 million.

Transportation and Communications.—Main railway lines in operation at the end of 1953 totaled 210 miles; branch and extension lines, 120 miles. Israel's road network at the end of 1954 totaled 1,635 miles, of which 1,278 was asphalt-surfaced. Israel's merchant fleet as of Dec. 31, 1954, comprised 34 vessels aggregating 137,000 gross tons. El Al Israel Airlines operated 24 scheduled weekly flights to 15 countries in 1955. Licensed motor vehicles included 12,745 passenger cars and 17,303 trucks in 1954; telephones, 58,200 (1954); radio sets, 244,622 (end of 1953). Of the nation's 24 daily newspapers (1954), 16 were in Hebrew.

Principal Events, 1955.—Israel's eighth year of nationhood was the most crucial for the young republic since the conclusion of the Arab-Israeli War in 1949. Border violence appeared at times as but a prelude to full-scale warfare. Czechoslovakia's shipment of arms to Egypt beginning in October posed a new threat to the life of Israel. Israelis, nevertheless, continued to pour their energies into building their nation, and important domestic achievements were recorded during the year.

Foreign Affairs.—Following a six-month period of intermittent Arab raids and sabotage in the western Negeb, an Israeli armed force struck at Egyptian positions in the Gaza strip on February 28, killing 38 Egyptians, with a loss of 8 Israelis. Israel was condemned for the action by the Egyptian-Israeli Mixed Armistice Commission on March 6, and by the U.N. Security Council on March 29, although Maj. Gen. E. L. M. Burns, chief of staff of the U.N. Truce Supervision Organization in Palestine, stated that increased infiltration from the Gaza strip had been one of the main causes of the border tension. In connection with the Gaza attack, Israeli leaders stated that Israel wished to abide by the 1949 armistice but would retaliate severely against terrorism and warlike actions by the Arab states. On March 30 the Security Council called upon both Israel and Egypt to cooperate in strengthening border controls. Scores of incidents occurred in the spring involving clashes of border patrols, raids on Egyptian and Israeli villages, and the blowing up of Israeli vehicles by land mines placed in Israeli territory.

An effort by U.N. Secretary General Dag Hammarskjöld to arrange high-level Israeli-Egyptian talks failed in June, following Egypt's rejection of the proposal. On June 28, however, after 53 Egyptians and 23 Israelis had been killed since the beginning of the year, truce talks began at the Gaza border between Israeli and Egyptian representatives, with General Burns as chairman. The talks, which aimed at an arrangement to reduce border incidents, failed to produce any significant agreement. Israel sought direct contact between local commanders, while Egypt demanded contact through a United Nations intermediary. Following a clash near the Gaza border on August 22, Egypt broke off the talks. The subsequent two weeks were marked by further border clashes, deep sorties into Israel

Israelis vote in the general election of July 26, 1955.

ISRAELI OFFICE OF INFORMATION

by organized terrorists, the shooting down of two Egyptian Vampire jets over Israeli territory by Israeli fighters, and an Israeli reprisal attack on an Egyptian post at Khan Yunis on September 1, killing 40 Egyptians. Between August 22 and September 4, when both sides accepted a cease-fire appeal by General Burns, 16 Israelis and at least 47 Egyptians had been killed. In a report to the Security Council on September 5, General Burns proposed the establishment of a one-kilometer demilitarized zone and the erection of a physical barrier along the Gaza strip. The council on September 8 directed both Egypt and Israel to cooperate in the Burns proposals.

Beginning in October the scene of violence shifted to the Sinai Peninsula border, particularly the El 'Auja demilitarized zone, where each nation charged the other with maintaining illegal military positions. On October 27 an Israeli attack upon an Egyptian camp at El Kuntilla, said to be in reprisal for the Egyptian seizure of an Israeli police post in the El 'Auja zone on October 25, resulted in 5 Egyptians killed and 20 taken prisoner. A night-long Israeli attack on November 2 against Egyptian positions allegedly encroaching upon the demilitarized zone resulted in 50 Egyptians killed and 40 taken prisoner. The action of November 2 was the largest since the 1948-49 war.

Incidents involving other Arab states continued in 1955, though on a diminished scale. The killing of 2 Israeli youths by Jordanians in February was followed by the Israeli killing of 5 Jordanians west of the Dead Sea on March 4. Marauders from Lebanon attacked the Israeli village of Alma in Galilee on September 13, and 3 Israelis were killed in an ambush of a bus near Meiron, in northern Israel, on September 22. Following several alleged violations by Syrians, an Israeli force struck at a Syrian unit near Aalmine, Syria, on October 22, killing 3 Syrian soldiers and taking 5 prisoners. A major encounter occurred on December 11, when Israeli forces struck at Syrian shore positions overlooking the Sea of Galilee. Fifty-six Syrians and 6 Israelis were killed, and the incident was taken up by the U.N. Security Council in late December.

Despite the mounting violence, Israeli foreign policy in 1955 continued to be based on the hope of a permanent Arab-Israeli peace. On October 24, in the midst of the crisis with Egypt, a Knesset resolution decisively rejected the idea of a preventive war to forestall the Egyptian arms buildup. Prime Minister Ben-Gurion on November 2 offered to meet with Arab leaders to ease tensions, but on November 15 rejected a British offer of mediation which implied a cession of Israeli territory. To counterbalance the Czechoslovak arms shipment to Egypt, Israeli policy in late 1955 was directed toward obtaining arms and support from the Western powers, especially the United States.

An incident which shocked the Israeli people on July 27 was the wanton shooting down of an El Al Israel Airlines Constellation by Bulgarian fighter planes near the Bulgarian border village of Petrich, with the loss of all 58 aboard. The Bulgarian government subsequently expressed its regret and offered to pay part of the compensation.

Domestic Affairs.—The Mapai, Israel's dominant political party, maintained its leadership of the nation in 1955, though suffering a loss in strength. A source of embarrassment to the party was the case of Dr. Israel Kastner, an official in several Mapai ministries, who was publicly ac-

cused of having collaborated with the Nazis in sending the Jews of Budapest to their death in 1944. When the General Zionists, members of the government coalition, refused to support the government on a no-confidence motion on the Kastner case, Prime Minister Moshe Sharett ousted them from the cabinet on June 29. In the elections of July 26, the Mapai obtained 32% of the popular vote (37% in 1951) and 40 seats in the Knesset (45 in 1951). The General Zionists obtained only 13 seats (a loss of 7) and lost its

ISRAEL

Border clashes took place in 1955 between Israeli and Syrian forces in October (1); between Israeli and Egyptian forces on September 1 at Khan Yunis (2); and between Israeli and Egyptian forces on November 2 at El Sabha (3) near the demilitarized zone of El 'Auja.

second place position to the rightist Herut. The Herut, which demanded more forceful action against the Arabs, won 15 seats (a gain of 7) and became the principal opposition party. David Ben-Gurion, having returned to the government as defense minister in February after a 15-month retirement on a Negeb farm, resumed the premiership on November 3. The new Mapai-led coalition included for the first time the Mapam (pro-Soviet Socialists) and the newly formed Abduh Avoda (neutralist Socialists), as well as other parties.

A major development in Israel's national life was the inauguration on July 19 of the 66-inch irrigation pipeline extending from the Yarkon River, at Rosh Haayin, 65 miles southward into the Negeb. The giant line, which cost \$40 million and took two and a half years to complete, will add some 50,000 acres to the 200,000 al-

ready under irrigation in Israel. Work on a second pipeline extending into the eastern Negeb was begun in 1955, with completion scheduled for 1958. Also begun in 1955 was a five-year, \$53 million project for the reclamation and development of some 250,000 acres in the Negeb, Judea, and Galilee. The program, which included the planting of 25 million trees, was undertaken by the Jewish National Fund of the World Zionist Organization. After several years of hopeful prospecting, an oil gusher was brought forth on September 22, at Heletz, in the western Negeb, giving rise to hopes that Israel may one day provide its own fuel.

Announcement was made on February 13 of the Israeli government's purchase from the Syrian Archbishop Metropolitan in Jerusalem of four Biblical scrolls known as the "Dead Sea Scrolls" and reputed to be the oldest known Biblical manuscripts.

M. J. G.

ITALIAN LITERATURE. There were several interesting attempts in 1955 to appraise and define the trends of Italian literature of the postwar decade. The more discerning critics held that the confusion characteristic of the early postwar years still existed in 1955. With the end of World War II, it was natural that writers should stress the political and economic aspects of the national and international chaos. Today the confusion still exists, but there is more than a sprinkling of other elements to add to its complexities. The technological, psychological, biological, mystical, and spiritual aspects of human relationships are as much a part of the enigmatic picture as the former dominant Marxist and political colorings.

The late Ugo Betti (1892-1953) was perhaps among the most outstanding of Italian authors to give dramatic expression to the belief that there is no simple or singular explanation for the actions, beliefs, and hopes of men. In man's inability to penetrate the inner mysteries of peace and war, of plenty and want, and of love and hatred, Betti saw the chief reason for the world's current troubles.

In 1955, Alberto Moravia, the Italian author best known in the United States, added another novel, *Il disprezzo*, to his works dealing with the knotty problem of conjugal love. This work is the story of a wife who at first is strongly attracted physically to her husband, but who soon realizes she does not understand him. Neither does she understand her own uncertainty or her own emotional instability. It does not take long before she betrays him and scorns him with the same intensity of passion with which she first was attracted to him. Moravia depicts this struggle with unerring literary skill, with detached serenity, and with keen psychological insight.

G. Dessi's *I passeri* (*The Sparrows*) is a work that aims to reveal how certain individuals, through an elegiac contemplation of their past, can find a realistic approach to present and future problems of existence. The author seems to convey the notion that through crisis and sorrow man often finds his salvation and happiness.

Giuseppe Cassieri's *Dove abita il prossimo* (*Where Does My Neighbor Live?*) is another in the long series of realistic novels which expose the miseries and difficulties encountered by any enterprising young man from the south of Italy who attempts to find work in a large northern city. The hostile reception of the big city, the many futile and discouraging trials, the misery, the solitude, and the reluctance to return home a

failure all lead to inevitable desperation, starvation, and death. The author's intensity of feeling, however, is marred by a sporadic if not uncertain literary style.

Perhaps the most talked-about book in Italy in 1955 was Goffredo Parise's *Il prete bello*, which was translated into English as *Don Gastone and the Ladies*. In this novel, Parise depicts with obviously maturing literary skill the elemental forces that impel life in the crude, raw, and impoverished districts around Venice and Vicenza, where many of the inhabitants are as hungry for love, passion, and gossip as they are for food. The story revolves around the life and torments of a handsome young priest who arrives to take over a new parish, where he becomes the prized target of many of the love-starved ladies of the parish. The role of two vividly portrayed street urchins as go-betweens gives the novel an unusual fascination. The story ends tragically, not only for Don Gastone and the ladies, but for the boys as well. But while Parise gives the reader a very tragic portrayal of the destructive power of human passions, there is much solace and comic relief throughout the novel.

A literary event of major importance in 1955 was the publication by Dall'Oglio of Milan of the *Opere* of Italo Svevo (1861-1928). In one large volume, for the first time, are contained the major works of Trieste's greatest modern author. The analytic evocative nature of Svevo's *Coscienza di Zeno* paved the way for many a present-day author who is motivated by the psychological approach.

I classici nella storia della critica, by Walter Binni, represents a noteworthy contribution in 1955 to the long list of handy scholarly texts designed to acquaint the student of literature with the history of the vicissitudes of literary taste over the centuries.

ITALIAN SOMALILAND. See SOMALILAND.

ITALY. A republic of southern Europe, Italy projects into the central Mediterranean in the form of a boot-shaped peninsula; it also includes two large islands, Sicily and Sardinia. With the 81 square miles of Zone A of Trieste transferred to Italian administration in 1954, the republic has an area of 116,305 square miles. It is divided into 19 regions, 91 provinces, and 7,896 communes. Under United Nations trusteeship, Italy administers Somaliland (q.v.).

Population.—On Jan. 1, 1955, the estimated population of Italy was 47,138,335. In 1954 there were 850,837 births and 436,576 deaths, resulting in a net increase of 414,261. Between 1951 and 1954 the birth rate decreased from 18.5 to 17.9 per 1,000 inhabitants, and the death rate from 10.3 to 9.2 per 1,000. The infant mortality rate decreased from 115.06 per 1,000 live births in 1943 to 52.8 per 1,000 in 1954.

In the poorer southern regions of Italy the population increased from 35.29% of the total in 1931 to 37.43% in 1951. The growth that has taken place in the north and center has been due chiefly to migration from the south. Emigration has not helped appreciably to ease Italy's population pressure. From 1946 to 1954 the net loss through emigration was 1,219,571 persons; for the year 1954 the loss was 132,108.

Between 1921 and 1955 the population of Rome, the capital, increased almost threefold, from 691,314 to 1,790,638. The two next largest cities, Milan and Naples, had populations of 1,288,301 and 1,044,586, respectively, in 1953. Other major cities, with their 1951 census populations, are Turin (712,596), Genoa (680,563), Palermo (483,777), Florence (376,383),

Bologna (339,195), and Venice (316,228).

The great majority of the Italian people are Roman Catholics. In addition, there are about 65,000 Protestants, 40,000 Jews, and several thousand members of the Greek Orthodox Church.

Government.—The Italian Constitution of 1948^a provides for a National Assembly (Parliament), consisting of a Chamber of Deputies, with one deputy for each 80,000 inhabitants, and a Senate elected on a regional basis. The Chamber is elected for five years, and the Senate for six. The president of the republic is elected for a seven-year term at a joint session of Parliament in which three delegates from each region also participate. Giovanni Gronchi (q.v.) was elected to that office in April 1955. In July 1955, Antonio Segni (q.v.) succeeded his fellow Christian Democrat, Mario Scelba, as premier. (See below, *Principal Events, 1955.*)

Education.—In 1952-53, the latest school year for which statistics are available, there was general improvement as compared with 1951-52. The number of kindergartens rose from 12,995 in 1951-52 to 13,561 in 1952-53, and attendance from 990,103 to 1,012,238. In the same period the number of elementary schools increased from 40,138 to 40,550, and the number of pupils from 4,443,168 to 4,477,299. Figures for the various types of elementary schools were as follows in 1952-53:

Type of school	Number	Pupils	Teachers
Government schools.....	35,251	4,138,950	160,547
Approved schools.....	537	67,479	2,213
Private schools.....	2,393	238,885	8,211
Subsidized schools.....	2,369	31,985	2,369
Total, elementary schools..	40,550	4,477,299	173,340

In 1952-53 there were 6,217 secondary schools with 1,317,172 students. In that year the lower secondary schools enrolled 65.6% of the total secondary school student body; the higher secondary schools, 19.5%; and the technical and vocational schools, 14.9%.

In 1953-54 the Comitato Centrale per l'Educazione Popolare intensified its campaign against illiteracy by increasing the number of its courses to 23,983 and attendance to 479,605.

The number of schools for technical and vocational training rose from 935 in 1947-48 to 1,015 in 1952-53, and the number of pupils from 131,837 to 195,930.

The total number of students registered in 1952-53 in all Italian universities and other institutions of higher learning was 138,814, as compared with 142,722 in 1951-52. In addition, there were 84,813 special students. The largest registrations were in the faculties of law (20.5%), medicine (16.3%), and the mathematical, physical, and natural sciences (15.2%). Women comprised 27.3% of all university students.

Budget.—As approved by the cabinet on Jan. 29, 1955, the record 1955-56 Italian national budget provided for expenditures of 2,726 billion lire (625 lire = U.S.\$1), 371 billion more than in 1954-55, and revenues of 2,446 billion, or 287 billion more than in 1954-55. The expected deficit of 280 billion lire was 5.7% less than that of 1954-55.

Italy is endeavoring to increase the proportion of revenue derived from direct taxes and decrease that from indirect taxes. In January 1955, Parliament approved a bill providing prison sentences for tax evaders. On March 31, 4,076,885 returns were filed, as compared with 3,486,000 when the first sworn declarations were filed in 1953.

Economic Conditions.—The Italian government has achieved an encouraging success in the three principal objectives of its economic policy: currency stabilization, increased production, and wider foreign trade.

National Income.—Although crops were poor in 1954 (see below, *Agriculture*), the overall Italian economy made progress. The value of all

UNITED PRESS

Premier Scelba (resigned June 22, 1955) casts ballot during parliamentary elections, April 29, in which Giovanni Gronchi (seated at right) was chosen president of Italy.

available resources was 13,447 billion lire, or 5.3% more than in 1953. The national economic balance for 1953 and 1954 is shown in the accompanying table.

ITALY'S ECONOMIC BALANCE, 1953 AND 1954 (In billions of lire)

	1953	1954
Gross national income.....	11,093	11,797
Importation of goods and services.....	1,677	1,650
Total resources.....	12,770	13,447
Private consumption.....	8,317	8,723
Public consumption.....	832	862
Total consumption.....	9,149	9,585
Gross investments.....	2,284	2,443
Total domestic consumption.....	11,433	12,028
Exportation of goods and services.....	1,337	1,419
Total resources.....	12,770	13,447

In recent years about 20% of the gross national income has gone into investments. Gross investments increased from 2,284 billion lire in 1953 to 2,443 billion in 1954, or about 7%. In billions of lire, gross investments were allocated as follows in the two years:

	1953	1954
Agriculture.....	310	337
Industry.....	740	750
Transportation and communications.....	358	386
Building and public works.....	726	803
Miscellaneous.....	120	132
Total.....	2,284	2,443

Wages.—Although wages increased 3.3% in 1954, the average hourly wage (including additional pay for overtime and work on holidays and at night) of the Italian worker was only 180.78 lire, or less than 29 cents. Moreover, what increases occurred were offset by a rise in the cost of living, so that real wages remained unchanged at about one third more than before World War II. The per capita share of the gross national income was only \$393 at the end of 1954.

Prices.—From December 1953 to December

1954 the cost-of-living index (1938 = 1) rose from 56.78 to 58.82. The increase resulted principally from rising prices for food, due in part to higher duties on imported livestock, meat, and fish; and in part to a reduced domestic supply because of poor crops. The wholesale price index (1938 = 1), which was fairly stable during 1953 (52.50 in June and 52.59 in December), fluctuated in 1954 from 53.36 in March to 52.51 in July and 53.50 in December.

Unemployment.—Unemployment remains Italy's chief problem. In 1954 the average number of unemployed was 2,197,299 (1,456,699 men and 740,600 women), or 16,069 more than in 1953. In addition, there was about an equal number of underemployed persons who barely earned a living wage. On Dec. 29, 1954, Minister of the Budget Ezio Vanoni introduced a plan under which 4 million new jobs would be created by public and private investments over a 10-year period. The Vanoni Plan would cost about \$6.4 billion. A 4-year plan (1955-58) to accomplish its first stages was published in May 1955.

In 1954 the highest percentage of unemployment was in industry (42.5%), followed by agriculture, hunting, and fishing (22.4%), and unskilled labor (20.9%). The largest numbers of unemployed were in Emilia, Campania, Lombardy, and Apulia. As compared with 1953, unemployment increased chiefly in Emilia, Sicily, Sardinia, and Campania, and decreased in Lombardy, Latium, Abruzzi, and Calabria.

Standard of Living.—Despite low wages and unemployment, the standard of living in Italy is higher than ever before. In 1954, Italians spent 126 billion lire on recreation, and the consumption of such foods as meat and fruit increased. Bank deposits, retail sales, and the number of motor vehicles in circulation also rose.

Industrial Production.—In 1954 the general industrial production index (1938 = 100) averaged 171, or 9.6% higher than in 1953. Comparative indices for various branches of industry in the two years are as follows:

Industry branch	1953	1954	% increase
Mining	175	197	12.6
Metalliferous minerals	102	116	13.7
Nonmetals	208	234	12.3
Manufactures	150	165	10.0
Food	150	155	3.3
Textiles	113	114	0.9
Wood	59	70	18.6
Paper	129	134	3.9
Metallurgy	149	170	14.1
Mechanical	156	164	5.1
Transportation	161	172	5.3
Chemical	212	260	22.6
Rubber	160	194	21.3
Electric and gas	202	217	7.4
General index	156	171	9.6

Industrial activity continued to increase in 1955, and in March the general index was 201.

Advances in the chemical, rubber, iron and steel, and construction industries have been especially significant. In 1954, 1,100,000 residential rooms were built, as compared with 900,000 in 1953 and 150,000 in 1938. During the year a record 1,300,000 metric tons of pig iron and 4,150,000 tons of crude steel were produced. Electric power production also rose, from 32,619 million kw.-hr. in 1953 to an estimated 35,500 million kw.-hr. in 1954. Automobile production increased 24.3%, from 174,308 in 1953 to 216,700 in 1954. Of the total 1954 production, 44,136 cars, or 20.4%, were for export, principally to Austria, West Germany, Sweden, Switzerland, and the Netherlands.

As of Jan. 1, 1955, the Italian merchant marine included 4,269 units with an aggregate ton-

nage of 4,037,405. This was an increase of 314,934 tons, or 8.46%, since Jan. 1, 1954.

Italy is the chief European producer of natural gas, 1955 production averaging 10 million cubic meters daily. A project for piping the gas across the Brenner Pass into West Germany and Austria is being studied.

Agriculture.—The satisfactory progress of industry in 1954 was partly offset by a bad year for agriculture, due chiefly to unfavorable weather. The general index of agricultural production (1938 = 100) decreased 6.3%, from 120.1 in 1953 to 112.5 in 1954, and farm income, despite higher prices, declined by about \$100 million. Comparative indices for various branches of agriculture in the two years are as follows:

Agriculture branch	1953	1954	% difference
Cereals	110.9	91.3	-17.7
Legumes	108.2	105.5	-2.5
Potatoes and green vegetables	136.6	144.2	+5.6
Industrial plants	127.6	122.3	-4.2
Fruits	171.7	157.4	-8.3
Vegetable products	136.5	120.8	-11.5
Animal products	107.5	115.5	+7.4
Forest products	108.9	99.9	-8.3
General index	120.1	112.5	-6.3

Production of the chief crops in 1954, in thousands of metric tons with 1953 figures in parentheses, was as follows: wheat, 7,184 (9,041); barley, 278 (312.6); oats, 545.7 (602.1); rye, 115.1 (129.6); sugar beets, 6,513.5 (6,233.8); potatoes, 3,177.4 (3,134.3); and tomatoes, 1,532.4 (1,368.1).

There has been considerable improvement in the mechanization of agriculture. On Dec. 31, 1954, Italy had 144,757 tractors and other agricultural machines, or 25,528 more than on Dec. 31, 1953. Of those in use at the end of 1954, 60% were less than five years old.

Agrarian Reform.—By March 1955, the Italian land reform program, which involves the eventual redistribution of up to 3,500,000 acres of land to landless peasants, was approximately one third completed. The program has been highly successful. Many peasant families have been able to acquire farms of their own; large tracts of land have been brought under cultivation; farmhouses, roads, irrigation canals, and other facilities have been built; and modern farming methods have been introduced in many areas. Of the \$2 billion which the program will have cost by 1962, a total of \$787,200,000 has been appropriated. Of this sum, 71% has been devoted to the development of agriculture, 26.9% to industrial installations, and 2.1% to tourism.

Thus far 1,446,000 acres have been expropriated (plus 180,000 acres in Sicily, under a separate regional law), and 865,000 acres have been voluntarily relinquished by their owners or acquired by other means. By June 30, 1955, 1,222,932 acres had been distributed to 93,247 peasant families; the average size of the individual farm is slightly over 13 acres. Two thirds of the land under the program is in southern Italy and Sicily and Sardinia, the poorest sections of the country.

By June 30, 1955, the Cassa per il Mezzogiorno (Fund for the South) had approved 46,614 projects, with an aggregate cost of more than 577 billion lire; had contracted for 46,303 projects costing over 514 billion lire; and had completed projects costing 183 billion lire. On June 1, the International Bank for Reconstruction and Development approved a loan of \$70 million to the fund, to be used for irrigation work, industrial enterprises, and electric power in Sicily.

Foreign Trade.—Italian exports increased from \$1,506,862,000 in 1953 to \$1,635,979,000 in

1954, or 8.6%. In the same period imports declined 0.8%, from \$2,420,298,000 to \$2,400,977,000. The divergent trend in exports and imports resulted in a decrease in the trade deficit of 16.3%, from \$913,436,000 in 1953 to \$764,998,000 in 1954.

The slight decrease in imports in 1954 resulted mainly from reduced purchases of cereals and machinery, which more than offset larger purchases of iron and steel scrap and fuel. Exports of textiles declined from \$360 million in 1953 to \$346 million in 1954, but shipments of agricultural products and chemicals increased substantially.

Italy's trade by monetary areas in 1953 and 1954 is shown in the accompanying table. The principal increase in Italian imports in 1954 was from the area of the European Payments Union (EPU), with the exception of the sterling area, from which imports declined slightly. The decrease in Italian purchases from the dollar area continued in 1954, though to a lesser degree than had occurred between 1952 and 1953.

ITALY'S FOREIGN TRADE, BY MONETARY AREA,
1953 AND 1954
(In millions of dollars)

Area	Imports		Exports	
	1953	1954	1953	1954
United States.....	\$ 324.8	\$ 292.1	\$ 145.3	\$ 129.7
Other dollar area....	93.2	59.5	62.7	85.7
Sterling area.....	655.7	637.3	301.6	313.4
Other EPU area.....	966.0	1,023.0	682.6	776.4
Other countries....	380.6	389.0	314.7	331.5
Total.....	\$2,420.3	\$2,400.9	\$1,506.9	\$1,636.7

Italian exports showed a slight increase to the sterling area in 1954 and a larger increase to other EPU countries, especially West Germany and Switzerland. Although total exports to the dollar area rose to a small degree, those to the United States declined.

In 1955, Italy's trade with the United States rose once more. Imports from the United States in the first six months of the year amounted to \$180.4 million, as compared with \$147.3 million in the same period in 1954; and exports to the United States to \$86.3 million, as compared with \$65.7 million. The chief Italian exports to the United States are cheese, wine, vermouth, olive oil, tomatoes, textiles, office machinery, sewing machines, and motor scooters.

Principal Events, 1955. Domestic Affairs.—On April 29, Giovanni Gronchi (q.v.), a left-wing Christian Democrat, was elected president of Italy, succeeding Luigi Einaudi, at a joint session of the Chamber of Deputies and Senate. He lacked the support of the other three center parties of the government coalition—the Liberals, Republicans, and Democratic Socialists—and the votes of the Communists and left-wing Socialists were necessary to give him the required number of votes. Four ballots were cast; results of the fourth and final one were as follows: Gronchi, 658; Einaudi, 70; blank, 92; other candidates, 11; invalid, 2.

Although Gronchi is free from Communist leanings, he favors what is termed an "opening to the left." Speaking at his inaugural on May 11, he stated that he believed the extreme left-wing parties should share in the government in the "fundamental interest of Italian democracy." A younger man than his predecessor, he has indicated that he intends to play a more active role in Italian politics. In Italy the president's powers are more extensive than in most other countries

WIDE WORLD

Antonio Segni is interviewed in Rome, following his acceptance of the Italian premiership on July 2, 1955.

with a cabinet form of government. The president can dissolve Parliament before the expiration of its normal term, veto legislation, and authorize government bills.

On June 5, elections were held for the third regional Parliament of Sicily. A total of 2,736,185 persons, or 86.85% of the eligible voters, went to the polls. As compared with the preceding regional elections, held in 1951, the Christian Democrats improved their position considerably. They obtained 38.6% of the votes and 37 seats, as compared with 31.2% of the votes and 30 seats in 1951. Their gains were made at the expense of the minor parties, such as the Liberals, Republicans, and neo-Fascists. The Communists and their allies, the left-wing Socialists, continued to hold 30 seats.

Despite these regional gains, internal divisions in the Christian Democratic Party weakened the position of Premier Mario Scelba. On June 20 the members of his cabinet resigned so that he might reshuffle the offices. He was unable to form a new cabinet, however, and on June 22 he resigned after 16 months in office. Following consultations with party leaders, President Gronchi, on July 2, formally designated Antonio Segni, a left-of-center Christian Democrat, to form a new government. On July 5, Segni announced that he had formed a coalition government composed, as was that of Scelba, of 14 Christian Democrats, 4 Democratic Socialists, and 3 Liberals (like its predecessor, the government has the support in Parliament of the fourth center party, the Republicans). The new cabinet, which was sworn in on the following day, contained 12 ministers who served under Scelba, and most of the principal posts remained in the same hands.

In policy, Segni's government is committed, as was Scelba's, to continued collaboration with the Western countries, especially the United States. Its internal and social policies have a marked left-wing slant. The government was confirmed by the Chamber of Deputies, by a vote of 293 to 265 with 12 abstentions, on July 18, and by the Senate, by a vote of 121 to 100 with 3 abstentions, on July 22.

On August 26, the neo-Fascists (Italian Social Movement) and most of the Monarchists announced that they would in the future act as a single unit both in Parliament and in the labor unions. The new alliance is somewhat like that which joins the Communists and left-wing Socialists. Although its chief aim is stated to be fighting

Communist and left-wing subversion, its opposition to the Christian Democrats will mean in practice that it will vote with the extreme left.

During the year there was a substantial weakening of the Communist hold on Italian labor. In elections held on March 29 at the Fiat automobile plant in Turin, candidates of the democratic unions won an overwhelming victory over those of the Communist-controlled Italian General Confederation of Labor, who obtained 39% of the votes, as compared with 63% at the previous elections. A similar result was obtained in elections for shop stewards held on April 21 at the Falck factories in Sesto San Giovanni, a suburb of Milan. As reported on July 27, final results of the 1955 Italian shop steward elections indicated that, although the Communist-controlled unions still commanded 54% of the votes, they had lost about 14% of their strength since the previous year, while the non-Communist unions had increased theirs by over 36%.

There has been an increase in the number of strikes, from 1,407 in 1953 to 1,984 in 1954, and the trend continued in 1955. The principal cause of the work stoppages was labor's demand for a new system of computing industrial wages, resulting in additional costs for industry of 90 billion lire annually. On May 28, 1955, 91,600 teachers in secondary schools struck for higher salaries. They asked for a beginning salary of \$105 per month, as compared with the current average of \$80. The government promised to study their grievances.

Foreign Affairs.—International cooperation in the fields of economics, finance, and trade continued to be a pillar of Italian foreign policy in 1955, in harmony with the policies of other western European countries. On January 10-12, Premier Pierre Mendès-France paid an official visit to Rome. On February 14, Premier Scelba and Foreign Minister Gaetano Martino visited the headquarters of the North Atlantic Treaty Organization (NATO) near Paris and then, on February 15-20, consulted with the British government in London. On their return to Italy, they expressed satisfaction with the strengthening of friendly relations with other Western countries. The Chamber of Deputies had voted on Dec. 23, 1954, to ratify the Paris agreements reorganizing the Western European Union (WEU) and admitting West Germany to NATO. Following wild demonstrations in Rome for and against the WEU, the Senate also ratified the agreements, by a vote of 139 to 82, on March 11, 1955.

Relations with the United States also were close. On January 7, Italy signed an agreement with the Foreign Operations Administration (FOA), and on February 11, Mrs. Clare Boothe Luce, United States ambassador to Italy, informed the Italian government that the FOA had

assigned \$15.5 million as a contribution to the Cassa per il Mezzogiorno. In addition, \$37.5 million in accumulated Trieste counterpart funds would be turned over to Italy to use in assisting the economy of the territory.

On March 25-27, Premier Scelba and Foreign Minister Martino visited Canada and then, from March 27 to April 8, paid an official visit to the United States. In their speeches and in their conversations with President Dwight D. Eisenhower and Secretary of State John Foster Dulles, they urged that NATO be developed into an economic, social, and political organization.

Under an agreement signed in Rome on May 23, Italy was to receive \$50 million worth of United States cotton, wheat, and tobacco. The agreement also provided for loans to aid in the redevelopment of southern Italy and the islands.

The forthcoming conclusion of the Austrian State Treaty and withdrawal of the occupying forces led to negotiations with Italy on the transfer to Italy of some of the United States troops previously stationed in Austria. In May, Foreign Minister Martino said that Italy had no objection to the transfer, and that the country would comply with any decision the North Atlantic Council might take. There were many protests by Communists and left-wing Socialists, but the independent Italian press indicated that the United States troops would be welcome. (The United States had previously had troops stationed in Leghorn to maintain a supply line in Austria.) On September 29 the first combat troops were transferred from Austria to Italy. They were stationed at Vicenza, the site of two of the three barracks turned over to the United States by the Italian government. By October 25, a total of 5,500 troops entered Italy. They formed a new NATO force known as the Southern European Task Force (SETAF).

The Chamber of Deputies, on September 28, and the Senate, on October 12, approved Italy's policy of collaboration with the West and her continued active membership in NATO. On October 22, Secretary Dulles, en route to the Big Four conference in Geneva, visited Rome. In talks with President Gronchi and Premier Segni, he discussed relations between the two countries and international problems. Although the Italians reaffirmed their determination to remain loyal to NATO, they stated that they believed Italy should play a more important role in decisions affecting Western affairs.

On December 14, Italy, along with 15 other countries, was elected to membership in the United Nations.

HOWARD R. MARRARO,
Professor of Italian, Columbia University.

IVORY COAST. See FRENCH WEST AFRICA.

JAMAICA. This British West Indian colony, lying 90 miles south of Cuba in the Greater Antilles, has an aggregate area of 4,674 square miles and a population provisionally estimated at 1,546,584 in 1954. It comprises the island of Jamaica (area, 4,411 square miles; 1954 est.

pop., 1,531,933); the Morant and Pedro cays; and the two dependencies of Turks and Caicos Islands (170 square miles; est. pop., 7,000), and Cayman Islands (93 square miles; est. pop., 7,651). On Jamaica are United States leased naval and air bases. Kingston (pop., 142,464 in 1953) is the capital and chief seaport. Most of

the inhabitants are of Negro stock. The colony's legislature has adopted the plan for a British Caribbean Federation (see **BRITISH WEST INDIES**).

Government.—The governor, Sir Hugh Mackintosh Foot (assumed office April 1951), gave effect to constitutional changes in 1953 and again in 1955, providing for 9 elected ministers from the 32-member House of Representatives, who serve on the 14-member Executive Council and have executive responsibilities. N. W. Manley, leader of the People's National Party, which at elections held in January 1955 won 18 seats in the House of Representatives, is the chief minister. A 15-member Legislative Council constitutes with the House of Representatives a bicameral legislature.

Finance.—Government expenditure in 1954-55 totaled £16,249,385; revenue, £16,533,802. Estimated revenue for 1955-56 was £17,018,270; expenditure, £18,149,576. The British Treasury is contributing £4,229,000 to a 5-year development program estimated to cost £30 million.

Education.—In 1954 the 698 government primary schools had 218,611 pupils; 26 secondary, 7,000; and 10 vocational, 2,260. Government expenditure on education totaled £2,550,000. The University College of the West Indies, at Mona, St. Andrew, has faculties of medicine, natural science, and art.

Production and Trade.—Acreage and production in 1954 of principal crops were as follows: sugarcane, 147,500 acres (363,304 tons of sugar); bananas, 110,000 acres (14,500,000 stems); coconuts, 120,000 acres (9,013 tons of copra); cocoa, 2,480,000 cocoa trees (2,700 tons of cocoa exported); and coffee, 17,600 acres (2,100 tons exported). Rum manufactured in 1954 totaled 1,935,000 gallons.

Production of bauxite, in which an estimated £22 million is invested, rose from 200,000 tons in 1952 to an aggregate in 1953 of 1 million tons shipped from the island to continental smelters.

The total value of exports in 1954 was £29,983,473, including sugar, £10,984,250; fruit and nuts, £5,421,489; rum, £859,391; and tobacco, £409,981. Imports were valued in 1954 at £37,467,252. In 1954, Jamaica's net dollar position from all transactions showed a surplus of £9,325,000, representing an increase of 20 per cent over 1953.

Communications.—Railways aggregate 250 miles, and highways, 6,992 miles. Palisadoes Airport, near Kingston, and Montego Bay Airport are operated by the government. Nine airlines, including British West Indies Airways, serve the colony.

Turks and Caicos Islands.—Grand Caicos is the largest island of this dependency, lying 450 miles northeast of Jamaica. On Grand Turk (pop., 1,800), the principal island, are the capital and an important cable relay station. A guided missile observation station was completed on Grand Turk in 1953 (see **BAHAMAS**), and a naval facility in 1954. A commissioner (E. G. Lewis) heading the administration is assisted by an 11-member Legislative Board. The government operates 12 schools and has doctors on Grand Turk and South Caicos.

Salt of the finest quality is produced by solar evaporation; other exports include sisal to Jamaica, crawfish to Miami, Fla., and conchs to Haiti and Miami. Many of the islanders are employed in lumberyards in the Bahamas.

Cayman Islands.—Grand Cayman, Cayman Brac, and Little Cayman are principal islands of this dependency, lying 178 miles northwest of Jamaica. On Grand Cayman are Georgetown (pop., 1,462), the capital; West Bay (1,886); and Boddentown (618). A commissioner (A. M. Gerrard) is assisted by a 54-member Legislative Assembly. In 1955 there were 11 government elementary schools, and two private secondary schools.

Principal local industries are turtle and shark fishing, and the manufacture of thatch rope.

There is an international airport at Grand Cayman, from which regular passenger, mail, and freight services of British West Indies Airways and Líneas Aéreas Costarricenses link the dependency with Miami, Fla., Jamaica, and Central America. Grand Cayman is also connected by air with Cayman Brac.

JAMES, Marquis, American author: b. Springfield, Mo., Aug. 29, 1891; d. Rye, N.Y., Nov. 19, 1955. A journalist with a romantic attachment to the American frontier, he was awarded the Pulitzer Prize for biography in 1930 for *The Raven: A Biography of Sam Houston* (1929), and again in 1938 (shared with Odell Shepard) for his two-volume biography of Andrew Jackson (1933-38).

Before he was three years old, Marquis James moved with his parents to "a raw prairie claim" near Enid, Okla., about which he later wrote in his autobiographical work, *The Cherokee Strip* (1945). Following a brief period of study in Enid at Oklahoma Christian University (now Phillips University), he worked from 1910 to 1913 as a reporter for a number of newspapers in the Midwest, the South, and the East, supplementing his income by writing for the pulp magazines. Subsequently he became a copyreader for the *Chicago Tribune* (1914), an assistant city editor of the *Chicago Daily Journal* (1915), and finally a rewrite man for the *New York Tribune*.

With the entry of the United States into World War I, James served for 19 months in France, emerging as a captain of the infantry. After the war he became national director of publicity for the American Legion, and helped found the *American Legion Monthly*. In 1923 he was named the magazine's editor, a post he held until 1932. His contributions to the magazine, mostly of a historical nature, began to attract attention, and in 1925 he was appointed to the writing staff of *The New Yorker*. He left this position in the following year to begin work on his biography of Sam Houston.

Besides his colorful and meticulously documented historical works, he wrote several books on institutions and personalities prominent in the American business world, among which are *Alfred I. DuPont: The Family Rebel* (1941); *Metropolitan Life: A Study in Business Growth* (1947); and *The Texaco Story: The First Fifty Years, 1902-1952* (1953).

JAPAN. A constitutional monarchy of eastern Asia, Japan consists of four main islands—Hokkaido, Honshu, Kyushu, and Shikoku—and numerous small ones, with a total area of 142,798 square miles. Administratively it is divided into 45 prefectures and the region of Hokkaido.

Population.—In May 1955 the population was estimated at 88.9 million, an increase of almost 1 million over the previous year. The net population increase declined from 12.6 persons per 1,000 in 1953 to 11.9 per 1,000 in 1954, but Japan still faces the necessity of developing an economy to provide for 100 million persons by 1965. Population density is about 622 persons per square mile, and the density of 3,890 persons per square mile of cultivated land is the highest in the world. By 1955 the land reform program had added 1,332,500 acres to the cultivated area, and projects were under way to drain large new tracts near Nagasaki and Okayama.

Greater Tokyo had a population of 7,736,113 on Aug. 1, 1954. Other major Japanese cities, with their 1950 census populations, are Osaka (1,956,136), Kyoto (1,101,854), Nagoya (1,030,635), Yokohama (951,189), and Kobe (765,435).

Government.—Executive power rests in a cabinet responsible to the Diet, or Parliament. The latter is divided into a 250-member upper chamber, the House of Councillors, half of whose

members are elected every 3 years for 6-year terms; and a 467-member House of Representatives, for which elections are held every 4 years unless it is previously dissolved. Under the Constitution of 1947, Emperor Hirohito's powers are restricted largely to ceremonial functions.

Defense.—For the fiscal year 1955 (ending March 31, 1956), Japan adopted a defense budget of 132.7 billion yen (360 yen = U.S.\$1), which involved a reduction of 17.8 billion yen in the Japanese contribution to United States forces in Japan. Of the total, 86.8 billion yen was for the Defense Board, 38 billion for the support of United States forces in Japan, and 7.9 billion for the expansion of facilities.

Legislation to establish a National Defense Council, consisting of the prime minister, foreign minister, director general of the Defense Board, and head of the Economic Counsel Board, passed the House of Representatives on July 27, 1955, but died when the House of Councilors failed to act before adjournment. Because of the failure of this legislation to be enacted, Arata Sugihara, head of the Defense Board, resigned and was replaced on July 31 by Shigemasa Sunada. Pending creation of a National Defense Council, Sunada established on August 2 an unofficial consultative body of former generals and admirals, known as the Cabinet Defense Deliberation Council, to assist in defense planning.

During the fiscal year 1955 the ground self-defense force (Japan's armed forces are known as self-defense forces) was scheduled to reach a strength of 130,000. The naval self-defense force, with a goal of 20,000 men, launched a number of its own ships for the first time and received from the United States its first planes. The air self-defense force received its first planes in January 1955; its strength was set at 12,000 men.

Education.—Education in Japan is compulsory and free for 6 years of elementary school and 3 years of junior high school; attendance in these grades is almost 100%. As of May 1, 1954, there were 22,036 elementary schools with 11,750,923 pupils, 12,650 junior high schools with 5,664,066 pupils, 3,257 senior high schools with 2,544,966 students, and 227 colleges and universities with 491,543 students. In addition, there were 251 junior colleges.

Religion.—Since many Japanese are believers in both Buddhism and Shintō, of a population estimated at 84 million in 1951 there were more than 43 million adherents of 207 Buddhist sects (7 of them having over 1 million followers each) and 70 million members of 201 Shintō sects. In addition, there were 415,000 Christians (225,000 Protestants, 157,000 Roman Catholics, and 33,000 members of the Japan Orthodox Church).

Economic Conditions.—National income in 1954 totaled 6,197 billion yen; for 1955 it was estimated at 6,323 billion yen. Per capita income increased from 68,582 yen in 1953 to 70,149 yen in 1954. Since 1953 real per capita income has exceeded the prewar (1934-36) level, but it is still roughly one tenth that of the United States, one fourth that of Great Britain, and less than half that of West Germany.

A budget for the fiscal year 1955 of 991,457 million yen, or slightly less than the 999,879 million yen total of the combined regular and supplemental budgets for the fiscal year 1954, was passed by the House of Representatives on June 7, 1955, and by the House of Councilors on July 1, after the nation had operated on provisional budgets for three months. Members of the opposition Liberal Party had demanded a bond

issue with funds to be applied to tax reductions, and the budget was passed only after the Democratic government compromised to the extent of selling bonds to city banks in order to raise investment funds originally included in the budget. At the same time, welfare expenditures were increased.

Japan's balance-of-payments position and the economy as a whole continued throughout 1955 to show the favorable effects of a deflationary program instituted late in 1953. The overall payments position for the first six months of 1955 showed a surplus of \$140 million, as compared with a deficit of \$176 million for the same period in 1954. Special United States procurement orders continued to account for the favorable payments position, but whereas such orders constituted 38% of Japan's total receipts in 1953 and 26% in 1954, they amounted to only 22% of receipts in the first half of 1955. As of March 31, 1955, foreign exchange holdings totaled \$1,106 million, as compared with \$802 million in March 1954.

Prices also reflected the stabilizing effects of the deflationary program, with the consumer price index (1952 = 100) for July 1955 standing at 117.1, as compared with 118.7 at the beginning of the year and 119.9 in July 1954. The wholesale price index (1952 = 100) was 97.3 for July 1955, as compared with 97.6 a year earlier. The number of totally unemployed, however, reached a postwar high of 840,000 in March 1955, before declining to 680,000 in June.

Production.—Partly as a result of deflationary fiscal measures, Japanese industry experienced a general deflation during 1954, but business began to revive in the last quarter of the year, and this trend carried over into 1955. The industrial index (1934-36 = 100) was 185.8 in July 1955, as compared with an average of 173.5 for 1954.

Electric power output in 1954 totaled 50,108 million kw.-hr. (40,338 million of hydroelectric and 9,770 million of thermal power), an increase of 6% over 1953. A five-year power development plan envisages an increase of 5,120 million kw.-hr. by March 31, 1958. Meanwhile, coal mining efficiency, as the result of narrow seams, increased drainage, and pit extension, remained at 55% of the prewar level; 42,717,855 metric tons of coal were produced in 1954, as compared with 46,530,638 tons in 1953.

The year 1954 was one of the best in the history of the Japanese steel industry, partly because of the European steel boom. Pig iron production totaled 4,608,262 metric tons, and steel ingot production 7,740,317 metric tons, as compared with 4,515,676 and 7,652,800 tons, respectively, in 1953. Production of other commodities in 1954, with 1953 figures in parentheses, was as follows: paper pulp, 1,632,000 (1,512,000) metric tons; cement, 10,633,000 (8,768,400) metric tons, an all-time record; and cotton yarn, 1,023,878,000 (861,237,000) pounds.

The 1955 rice crop was forecast at 11,100,000 metric tons, the best in Japan's history (9,113,000 metric tons in 1954). Other forecasts were: wheat, 1,469,000 metric tons (1,516,000 in 1954); and barley and naked barley, 2,407,000 metric tons (2,583,000 in 1954). There were 440,000 fishing vessels aggregating 1,210,000 tons in Japan in 1953; the year's catch amounted to 4,250,000 tons, as compared with an average prewar catch of 3,700,000 tons.

Foreign Trade.—Japanese exports in 1954 totaled \$1,629.4 million and imports \$2,399.6 million, as compared with \$1,274.8 million and

\$2,409.6 million, respectively, in 1953. The increase in exports was accounted for by easy credit terms, the linkage of import profits to export subsidies, an increased emphasis on barter trade, and export incentives through foreign exchange retention provisions, all of which coincided with a general improvement in world business conditions. At the same time, imports were held down through the deflationary program, a prohibition of luxury imports, and a reduction in the stocks of imported raw materials. This trend continued in the first half of 1955, in which exports totaled \$892 million and imports \$1,222 million, as compared with \$719.6 million and \$1,412 million, respectively, in the corresponding period of 1954.

The principal exports in 1954 (in millions) were cotton fabrics, \$252; iron and steel, \$166; chemicals, principally fertilizers, \$79; ships, \$52; and canned and frozen fish, \$44. The more important imports were raw cotton, \$432; rice, \$251; petroleum, \$199; machinery, \$177; wheat, \$168; and wool, \$147. Japan's most important customers (in millions) were the United States, \$284; Indonesia, \$120; Brazil, \$78; Hong Kong, \$77; South Korea, \$69; Formosa, \$66; and Thailand, \$65; imports were obtained chiefly from the United States, \$851; Canada, \$123; Australia, \$117; Saudi Arabia, \$111; Mexico, \$92; Brazil, \$74; and Thailand, \$69.

Transportation and Communications.—Japan has about 17,200 miles of railways (12,400 government operated), of which 28% are electrified. There are approximately 86,000 miles of national and prefectural roads, and as of April 1954 the number of registered motor vehicles was 1,122,000. Scheduled air transportation is provided by 3 Japanese and 11 foreign airlines. There are 2.8 million telephones (September 1954), 10.5 million radio receiving sets (March 1953), and 5 television stations and approximately 50,000 sets (1955). (See also BRIDGES.)

Domestic Affairs, 1955. Elections.—When conservative Democratic Prime Minister Ichiro Hatoyama formed his first cabinet on Dec. 10, 1954, with Socialist support, he was able to do so only by promising to hold general elections by the following March. Accordingly, the 21st regular session of the Diet was convened as a formality on Jan. 21, 1955, only to be dissolved three days later, and Japan's sixth postwar general elections were scheduled for February 27. Despite more stringent restrictions on electioneering than had applied to any previous election, 37,338,182 persons, or 75.8% of the eligible voters, went to the polls; this was the second highest percentage in the postwar period.

As a result of the elections, the positions of ex-Prime Minister Shigeru Yoshida's Liberals, for most of the postwar period Japan's largest party, and that of Hatoyama's Democrats were virtually reversed. Liberal seats in the House of Representatives dropped from 183 to 112, while the Democrats improved their position from 122 seats to 185, receiving 36.5% of the popular vote, as opposed to 26.6% for the Liberals. Both Socialist parties gained seats at the expense of the conservatives, with the Left Socialists for the third straight election improving their position with respect to the Right Socialists. The Left Socialists won 15.4% of the popular vote, and the Right Socialists, 13.9%. Total Communist strength remained the same, even though the Communist Party increased the number of its seats from 1 to 2, since their satellite Labor-Farmer Party dropped from 5 to 4 seats.

Inasmuch as the Liberal Party had been in power for a number of years and there was considerable sentiment that it was time for a change, it is difficult to pinpoint the issues that led to Hatoyama's success. A major campaign issue was the question of closer relations with nations of the Communist bloc, the Democrats calling for a "more independent" foreign policy, while the Liberals pointed to the danger of jeopardizing Japan's close relations with the United States. With respect to constitutional revision, both conservative parties favored revising not only Article 9, which is interpreted by many persons to forbid rearmament, but other articles as well, generally in the direction of a more centralized control of government; the Socialists vehemently opposed such revision. Rearmament itself was an issue, with the Socialists opposing acceptance of United States military assistance, while the conservatives advocated gradually rebuilding a modest military force for Japan's self-defense. Finally, there was a series of scandals with which the conservatives as a whole, and the Liberals in particular, had been charged in 1954.

Although the position of the conservative parties did not greatly deteriorate—they maintain roughly a two-to-one edge over the Socialists—the latter now hold over one third of the seats in the House of Representatives and therefore can effectively block constitutional revision, for which a two-thirds vote of both houses is required prior to a popular referendum. The Socialist gains were widely credited to their ability to win over new voters, some 2 million of whom had come of age.

The accompanying table indicates the number of seats each party held in the lower house before and after the elections and as of Oct. 10, 1955. The distribution of seats in the upper house as of that date also is shown.

Party	House of Representatives Before election	House of Representatives After election	Oct. 10, 1955	House of Councillors Oct. 10, 1955
Liberal ¹	183	112	117	90

¹ Merged on November 15. ² Merged on October 14.

When the Diet was convened on March 18, Hatoyama was elected prime minister. He immediately formed a Democratic cabinet, approved on the following day, in which Mamoru Shigemitsu continued as deputy prime minister and foreign minister.

On April 23 and 30, Japan's first local elections since 1951 were held. As in the case of the Diet elections, the Democrats gained at the expense of the Liberals, although the latter maintained their edge in most of the prefectural assemblies, and the Left Socialists gained at the expense of the Right Socialists. Conservative independents were elected governors of Tokyo and Osaka by narrow margins over their Socialist opponents.

Political Developments.—As compared with 1954, little major legislation was enacted at the session convened in March 1955, even though the Diet prolonged its activity until July in order to pass the budget. A bill to establish a Constitutional Research Council as a first step toward

UNITED PRESS

Japanese Foreign Minister Shigemitsu greets Gen. Douglas MacArthur in New York City, Sept. 2, 1955, on the 10th anniversary of Japan's surrender.

constitutional revision was passed by the lower house on July 28, but died in the same manner as the bill to create a National Defense Council (see above, *Defense*) when the upper house failed to act before adjournment. Much of the Diet's activity was devoted to partisan politics. A no-confidence motion against a leading Democratic politician, Ichiro Kono, minister of agriculture and forestry, was passed by the House of Representatives Budget Committee in June (Liberals joining with the Socialists in opposition to the Democrats), but was not submitted to a plenary session. A Socialist-sponsored motion against Defense Board head Sugihara for his refusal to disclose the contents of the defense plan was defeated on the floor of the lower house in July.

Outside the Diet, political attention was focused on efforts to merge the two major conservative parties and to reunite the two Socialist parties, which had split in 1951. On April 12, Bukichi Miki, chairman of the Democratic Executive Board, startled political circles when he announced that both he and Hatoyama would step aside in the interests of a conservative merger. Since differences over personalities rather than issues have been the major stumbling blocks in the effort to create a single majority conservative party, this announcement, subsequently endorsed by the prime minister, gave rise to renewed activity in the direction of a merger. A joint Democratic-Liberal policy committee began talks in July to form a common program, and the chiefs of both parties—Miki and Nobosuke Kishi for the Democrats and Bamboku Ono and Mitsujiro Ishii for the Liberals—also began meeting regularly. Starting in Tokyo on September 28, a series of joint speech rallies were held in major cities at which Hatoyama and Taketora Ogata, president of the Liberal Party, appeared on the same platform for the first time, and declared a conservative merger necessary in order to stabilize the political situation. Finally, on November 14, the two parties were dissolved, and on the following day were replaced by a new Liberal-Democratic Party. Hatoyama resigned as premier on November 21. He was re-elected on November 22, and formed a new cabinet consisting of 9 former Democrats and 7 former Liberals.

As an election promise, the Socialist parties on January 18 had unanimously passed a resolution calling for an early merger and an all-out

struggle against the conservatives. Accordingly, a Socialist unification negotiating committee began meeting on May 6, and leaders of the two parties met together periodically thereafter. In September conventions of both parties accepted a draft platform for a unified party, and on October 14 the party was reunited at a joint unification convention.

Communist Party.—In 1955 the Communist Party in Japan publicly de-emphasized its underground activity and stressed nonviolent, open political action. Thus, a number of clandestine periodicals ceased publication during the year. Yoshio Shiga, a member of the Central Committee who had gone underground with other top leaders in 1950, surfaced on Jan. 21, 1955, to run for the Diet from Osaka; he was elected as one of the two successful Communist candidates, both from that city. As Communist candidates had done in the elections of April 1953, 39 of the 99 party candidates withdrew at the last minute, either because they would have run a poor last or to aid other left-wing candidates.

One of the political surprises of 1955 was the unexpected appearance at a Communist rally on August 11 of Sanzo Nosaka and two other party leaders. The three were seized by the police, but they were released on August 16, and on the next day Nosaka was named first secretary of the party. Since it was announced on July 29 that Kyuichi Tokuda, former secretary general, had died in Peking, the only member of the Central Committee remaining underground was Ritsu Ito, who had been purged by the party in 1953.

Labor.—Japanese labor is organized into two major federations—Sohyo (General Council of Japanese Trade Unions), with 3,000,000 members, and Zenro (Japanese Trade Union Council), with 800,000 to 900,000 members—and a number of independent unions with a total membership of 1,500,000 to 2,000,000. The Teachers Union, which belongs to Sohyo, with 565,000 members is Japan's largest union.

At Sohyo's annual convention in August 1955, Minoru Takano, pro-Communist secretary general, was replaced by Akira Iwai. Takano remained in control of much of the federation's organization, however, and Sohyo continued to engage in political activity on a large scale. Its leadership of the sometimes violent protest movement against extension of certain United States air bases in Japan was criticized in the Diet as a violation of the labor union law.

Foreign Affairs, 1955.—During 1955, Japan continued to work in close cooperation with the United States at the same time as it attempted to restore relations with the USSR and Communist China and to reassert its position as an Asian nation. Despite the emphasis placed during the election campaign on the necessity of Japan's "balancing its relations with the United States," Foreign Minister Shigemitsu declared in a major foreign policy speech before the Diet in April, "It is and shall be our immutable policy to maintain close cooperation with the United States so that Japan's international position is assured," and Prime Minister Hatoyama gave repeated assurances that Japan remained aligned with the free world.

United States.—United States interest in Japan in 1955 was symbolized by the visits to Japan of a number of government officials: Adm. Arthur W. Radford, chairman of the Joint Chiefs of Staff, in January; Harold E. Stassen, head of the Foreign Operations Administration, and As-

sistant Secretary of Defense H. Struve Hensel, in March; and Under Secretary of State Herbert Hoover, Jr., and John B. Hollister, director of the International Cooperation Administration, in October.

Foreign Minister Shigemitsu visited Washington, together with Democratic Party Secretary General Kishi and Agriculture and Forestry Minister Kono, on August 29-31. The joint communiqué issued at the close of this visit emphasized the unity of views of the two countries. It was agreed that Japan should, "as rapidly as possible, assume primary responsibility for the defense of its homeland and be able to contribute to the preservation of international peace and security in the Western Pacific." The two countries concurred that when these conditions had been achieved, "it would be appropriate to replace the present Security Treaty with one of greater mutuality."

An agreement was initiated in Washington on June 21, providing the basis for future cooperation between the United States and Japan in the field of atomic energy. Pursuant to an agreement reached on May 27 under the authority of the Agricultural Trade Development and Assistance Act of 1954, Japan is to purchase \$85 million worth of agricultural commodities, paying 25% in yen, with the remainder converted into a long-term Export-Import Bank loan. A second agreement, for \$65.8 million worth of such commodities, was initiated in Washington on September 30.

Asian Nations.—On Jan. 25, 1955, Japan received an invitation to its first postwar international political conference, the Asian-African Conference (q.v.) held at Bandung, Indonesia, on April 18-24. It sent to the conference a delegation led by Tatsunosuke Takasaki, head of the Economic Counsel Board, and participated actively in all committee meetings. Japan's desire to participate in regional economic development programs in Asia was exemplified by its attendance at a conference of Colombo Plan members held at Simla, India, in May; and at the meeting of the Colombo Plan Consultative Committee held in Singapore in October. In addition, Tokyo was chosen as the site of the 11th session of the U.N. Economic Commission for Asia and the Far East (ECAFE), held on March 28-April 7.

Considerable progress was made in 1955 toward settling Japan's wartime obligations to its Asian neighbors, although these remained among the most difficult problems for Japanese foreign policy. Instruments of ratification of the peace treaty and the reparations and economic cooperation agreement signed with Burma on Nov. 5, 1954, were exchanged in Tokyo on April 16. Following the visit to Japan in April of Prince Wan Waithayakon of Thailand, a settlement of \$41.6 million was reached with respect to Thai accounts blocked in Japan during World War II. In addition, a Japan-Thailand cultural agreement was signed on April 6.

After prolonged negotiations in Manila and Tokyo, a formal proposal was made by the Philippines in August to settle its reparations claims against Japan for a total of \$800 million. Of this sum, \$500 million would be in capital goods, \$30 million in services (\$230 million of the combined total being payable in 10 years and \$300 million in 10 to 20 years), \$20 million in cash, and \$250 million in development loans. Inasmuch as the opposition Liberal Party strongly opposed certain features of the proposal, and in view of past difficulties in negotiating with the Philippines, how-

ever, there was no guarantee that the agreement would go into effect.

Although Takasaki had an opportunity to talk to Indonesian officials at the Bandung Conference, little progress was made in settling reparations claims with Indonesia.

Relations with the Republic of Korea, with which negotiations for the restoration of normal diplomatic relations had been broken off in 1953, remained strained in 1955. The South Korean government continued to seize Japanese fishing vessels within a unilaterally proclaimed Rhee Line; Takeshima, two tiny islands in the Sea of Japan, in dispute between the two countries, remained in the hands of South Korea, which had seized them in 1954; the Japanese would not agree to the release of a number of Koreans detained at Omura unless the Republic of Korea would accept them; and each country continued to maintain property claims against the other. Rumors of Japanese intentions to trade with North Korea, and the accidental sinking of a Japanese vessel by a Korean frigate in February further exacerbated relations. In August the Republic of Korea decided to sever trade relations with Japan, and on November 17 it was announced that any Japanese fishing vessel crossing the Rhee Line would be fired on.

The USSR and Communist China.—Toward the end of 1954 both the USSR and Japan had hinted broadly that they were prepared to enter into negotiations leading to the restoration of relations between the two countries. On December 11, following the first meeting of Hatoyama's first cabinet, Shigemitsu stated, "Let it be remembered that we desire to cultivate friendship with all the nations of the world irrespective of ideology. We are, therefore, willing to restore normal relations with Russia and China on mutually acceptable terms, without prejudice, however, to our basic collaboration with the free nations." Following receipt by Hatoyama of an unsigned note from the chief of the unofficial Soviet mission in Tokyo, the Japanese Cabinet decided on Feb. 4, 1955, to open negotiations with the USSR. An exchange of notes thereupon ensued, with the USSR requesting that talks be held in Tokyo or Moscow, and Japan suggesting New York as the site. London was finally decided on as a compromise, and talks between Russian Ambassador Jacob A. Malik and Japanese Ambassa-

Prime Minister Hatoyama (in light suit) is cheered after Japanese parliamentary elections on Feb. 27, 1955, in which his Democratic Party won 36.5% of the popular vote.

UNITED PRESS

dor Shunichi Matsumoto commenced on June 1.

Progress at the talks was slow, since the Japanese insisted that such issues as the repatriation of Japanese still held in the USSR and territorial questions be settled at the outset, while the USSR held that it was necessary to end the state of war between the two countries and exchange diplomatic missions before discussing other questions. A Russian draft treaty submitted on June 14 bore a striking resemblance to the Soviet proposals submitted at the San Francisco Conference in 1951; among the more unacceptable provisions was the prohibition of passage through the straits leading to the Sea of Japan by warships of nations other than the USSR. Japanese counterproposals, more nearly in conformity with the San Francisco Treaty, were submitted on August 16, but failed to elicit a favorable response.

A 38-man Communist Chinese trade mission visited Japan, where it concluded on May 4 an unofficial agreement with trade representatives and members of the Diet League for the Promotion of International Trade. The agreement called for \$84 million worth of trade in each direction, but since it would require government sanction for implementation, its effect was limited.

Additional groups of Japanese Diet members, labor leaders, and academicians traveled to both the USSR and Communist China during 1955, but few tangible benefits from this intercourse were forthcoming. Both countries continued to seize Japanese fishing vessels, and even though Communist China agreed to the repatriation of at least two groups of Japanese during the year, a total of 71,165 Japanese were still in Communist hands, 52,167 in Communist China and 13,037 in the USSR and Outer Mongolia, according to a Ministry of Welfare announcement made in May.

Prime Minister Hatoyama had called recognition of "two Chinas" the best possible solution, claiming that Japan could play a role between East and West. On August 17, however, cold water was thrown on any hopes for an early settlement with Communist China by a stiff statement by Chou En-lai, in which he called Japanese repatriation demands "groundless" and demanded normalization of relations and the development of trade.

In December, Japan's hopes for entry into the United Nations were shattered by Soviet insistence on coupling Japan's admission with that of Outer Mongolia. (See also UNITED NATIONS.)

ALBERT L. SELIGMANN,
U.S. Department of State.

JAPANESE SOUTH SEA ISLANDS. See PACIFIC ISLANDS.

JARDINE, William M., American educator and public official: b. Oneida County, Idaho, Jan. 16, 1879; d. San Antonio, Texas, Jan. 17, 1955. Although he spent the major portion of his life in the field of education, he gained national prominence as secretary of agriculture (1925-29) under President Calvin Coolidge, and as minister to Egypt (1930-33) under President Herbert Hoover.

After graduating from the Utah State Agricultural College in 1904, Jardine taught in the agronomy department of the college until 1906. In the following year he was appointed assistant United States cerealist in charge of dry-land grain investigations, a position he held until 1910 when he accepted a post as agronomist at the Kansas State College of Agriculture. He was

named dean of agriculture in 1913 and president of the university in 1918.

His career as educator was interrupted in 1925 when President Coolidge, in his second term, appointed him secretary of agriculture. In this capacity, Jardine expanded the Department of Agriculture by establishing a cooperative marketing division as a research bureau to aid in the organization of cooperative-farm projects. He gained national prominence in his opposition to the McNary-Haugen farm relief bill and for his support of a program providing for the development of farmer-owned commodity cooperatives which were to be governed by a Federal Farm Board.

After President Coolidge's term expired, Jardine remained in Washington as a representative of the Federated Fruit and Vegetable Growers Association. On July 11, 1930, President Hoover appointed him minister to Egypt, where he remained until shortly after the election of Franklin D. Roosevelt. After a brief period as state treasurer of Kansas, he was elected president of the Municipal University of Wichita in 1934, and remained there until his resignation in 1949. He was the author of numerous papers and bulletins on various subjects in the fields of agriculture, economics, and education.

JARVIS. One of the Line Islands in the Central Pacific about 1,350 miles south of the Hawaiian group. Area, 2.2 square miles. Jarvis has no permanent population. The island is under the U.S. Department of the Interior. It has a small airfield and weather station.

JAVA. See INDONESIA.

JEHOVAH'S WITNESSES. This Christian body has been doing ministerial work since 1884 under the direction of the Watch Tower Bible and Tract Society with headquarters at 124 Columbia Heights, Brooklyn, N.Y. Each member is a minister who preaches publicly and from house to house. In 1955 there were 78 branches with 642,929 Witnesses in 159 lands.

The major activity for 1955 was a series of "Triumphant Kingdom" assemblies held in 13 major cities of the world. Beginning in June, these 5-day assemblies had a combined attendance of 403,682 and conducted the baptisms of 13,016 newly ordained ministers. The largest of these meetings was held in Nürnberg, West Germany, where 107,423 persons gathered in Hitler's Zeppelinwiese. The Watch Tower Society arranged to transport more than 4,500 American and Canadian delegates to the European series of assemblies, attended by delegates from more than 60 nations.

An extensive building program was carried on by the society during the year. New offices and printing plants were under construction in Toronto, El Salvador, Costa Rica, and Brooklyn, N.Y., where the society is constructing a 13-floor plant for the publication of *The Watchtower* and *Awake!* magazines. The cost of this construction during the year was approximately \$2,750,000.

The society's president is Nathan H. Knorr; vice president, Fred W. Franz; and secretary-treasurer, Grant Suiter.

N. H. KNORR,
President, Watch Tower Bible and Tract Society.

JET PROPULSION. See INDEX entry.

JEWELRY. Personal consumption expenditures for jewelry and watches reached \$1,606 million in 1954, the highest it had ever been. In 1955

total jewelry retail sales were expected to equal or surpass the previous year's figure, after a rather slow start at the first of the year. A slight loss in sales was noted by large chain jewelry stores, while a gain was noted in department store sales of fine jewelry and watches in 1955.

It is evident that costume jewelry is more popular now than at any time in history. Costume jewelry sales in 1955 gained 15% over the previous year. A boom was also being recorded in the sale of cultured pearls. Japan, which sends about 60% or 70% of its total output of high-grade cultured pearls to the United States, doubled its exports in 1955 over 1954. There was also a good increase in men's jewelry sales.

Diamond sales remain the best part of the United States jewelry business. Watches and clocks are second, followed by sterling flatware, filled and novelty jewelry, china and crystalware, sterling hollowware, plated silverware, and appliances.

The international diamond situation is excellent. Controlled sales of the DeBeers diamond syndicate in 1955 were expected to exceed the previous all-time high, established in 1952, of \$195 million.

Biggest news of the industry was General Electric's mid-1955 announcement that it had succeeded in producing synthetic diamonds. G.E.'s first stone was about the size of a grain of sugar and cost over a million dollars to make. There seemed little likelihood that the manufactured product would pose a serious threat to the jewelry market because the high cost of producing the synthetics (about twice today's market price for industrial diamonds) is too prohibitive to warrant measurable competition with the natural stones. (See also MINERALOGY.)

ORVILLE R. HAGANS,

Editor and Publisher, "American Horologist and Jeweler."

JEWISH AFFAIRS. In 1955 the world Jewish population was estimated at approximately 11,900,000. The division by continents was as follows: North America, 5,450,000; South America, 630,000; Europe, 3,442,000; Asia, 1,684,000; Africa, 660,000; and Australia-New Zealand, 58,000. The United States had the largest Jewish population, with approximately 5,250,000 Jews. The Jewish population of other countries was: the USSR, 2,000,000; Israel, 1,550,000; Great Britain, 450,000; France, 300,000; Argentina, 360,000; Morocco, 240,000; and Canada, 230,000.

The year's major event in the United States was the national observance of the American Jewish Tercentenary (Sept. 12, 1954-June 1, 1955), commemorating the arrival in New Amsterdam of the first group of 23 Jews in 1654. The theme of the observance was "Man's Opportunities and Responsibilities under Freedom."

Jewish organizations in the United States continued their programs in the areas of religion, education, social welfare and recreation, overseas aid (especially to Israel), Zionism, and fraternal, benevolent, and community relations. (For a discussion of the religious, educational, and cultural programs, see the section *Judaism* under RELIGION.)

Jewish welfare agencies were organized locally in federations and welfare funds for purposes of joint fund-raising, evaluation of needs, and coordination of local programs. These central local groups, which conducted their activities in

communities inhabited by 95% of the total Jewish population, were in turn associated in the Council of Jewish Federations and Welfare Funds. They reached an estimated total of over 1,000,000 contributors, and provided financial support to about 150 overseas and national agencies and to over 800 local agencies. In the larger and intermediate communities, networks of local agencies provided service on the operating level, while in the smaller communities the Jewish federation frequently provided more limited service directly.

Jewish federations supplied about \$31,400,000 in 1954 (\$31,500,000 in 1953) to local services. Health and hospital programs were the largest single category of local federation beneficiaries, receiving over 90% of the allocations in the largest cities (with Jewish population of over 40,000). Other allocations locally went to recreation, family and child care, Jewish education, care for the aged, refugee aid, and community relations.

The National Jewish Welfare Board (JWB) was the largest of the national service agencies in the field of recreation and welfare. It coordinated the programs of the 345 Jewish community centers throughout the United States in 216 cities, with a total membership of more than 550,000. The rise in center membership was due in a large measure to the broadening of the center program to include activities for youth and for the aged. In 1954-55 new center buildings were dedicated in Milwaukee, Savannah, Wilkes-Barre, East New York (New York City), Syracuse, Utica, Plainfield, N.J., Youngstown, and Philadelphia.

Six national agencies worked primarily in the field of community or intergroup relations. These were the American Jewish Committee, the American Jewish Congress, the Anti-Defamation League, the Jewish Labor Committee, the Jewish War Veterans, and the National Community Relations Advisory Council. The last-named served as a coordinating and clearance agency for programs in this area.

Extensive programs of aid to Israel and to Jews in other lands were conducted. Financial aid was channeled mainly through the United Jewish Appeal and the Israel Bond Drive. A major development in Israel programs supported by philanthropic funds was the resumption of large-scale immigration in 1954 resulting from the pressure for emigration of Jews from North Africa, especially Morocco, which was the scene of unsettled political conditions. To help Israel admit and resettle some 30,000 immigrants from North Africa in 1954, American Jews made available approximately \$119,000,000 in philanthropic funds, as well as sizable sums raised through the sale of Israel bonds.

The principal instrumentality for the disbursement of the funds was the Jewish Agency for Palestine, which expended I£ 94,200,000 in the fiscal year ending Sept. 30, 1954, compared with I£ 69,834,000 in the previous year. In the six-month period October 1954 through March 1955, expenditures were I£ 54,595,000. The Joint Distribution Committee (JDC), the greatest of the American relief agencies, spent \$20,600,000 in 1954, mainly for its "Maiben" program of service to sick, aged, and handicapped immigrants in Israel. JDC also appropriated \$3,100,000 in 1954 for relief, health, and educational programs in Moslem countries.

American Jews also extended moral support for Israel's cause. They believed it was within the framework of its legitimate national self-interest

* See THE AMERICANA ANNUAL, 1955, page 395.

for the United States to maintain a policy of continued friendship toward Israel and to work for the establishment of peace between Israel and the Arab countries. They urged the United States to sell arms to Israel in order to balance Egypt's increase in armed strength resulting from that country's purchase of arms from Czechoslovakia.

After more than two years of negotiations, the Committee for Jewish Material Claims on Austria and the Austrian government reached an agreement in June 1955 for the indemnification by Austria to its victims of nazism. Austria agreed to pay some \$21,000,000 over 10 years as compensation to Austrian persecutees living in other countries. This sum, it was estimated, would provide some benefits to 15,000 families, most of them in the United States, England, and Israel.

MORRIS FINE,

Editor, "American Jewish Year Book."

JORDAN, Hashemite Kingdom of the. An Arab constitutional monarchy in southwestern Asia, Jordan (known as Transjordan until 1949) is bordered on the west by Israel, on the north by Syria, on the northeast by Iraq, and on the east and south by Saudi Arabia. Its area, of which 90% is desert, is about 37,500 square miles, including the section of Palestine annexed on April 24, 1950. The population of 1,403,000 (July 31, 1954, est.) includes nearly 500,000 Arab refugees displaced as a result of the Palestine War in 1948. Over 80% of the people are Arab Moslems of the Sunni sect. There are about 90,000 Christian Arabs; 10,000 Moslem Circassians, Chechens, and Turkomans; and a few Iranian Bahais. The capital is Amman, with a population of 170,000 (1953 est.). Jerusalem (the Old City) and Nablus are important cities in West Jordan. 'Aqaba, on the Red Sea, is the country's only port. Well-known Biblical sites, such as Bethlehem, Hebron, and Jericho, are in Jordan territory, as are Jerash, one of the cities of the Roman Decapolis, Kerak, with its Crusader fort, and the remarkable ruins of the rock city, Petra, now part of Wadi Musa.

Government.—King Hussein I (b. Nov. 14, 1935; acceded to the throne under a regency, Aug. 11, 1952; enthroned May 2, 1953) rules under a constitution of the British type. The Legislature consists of a Senate (House of Notables) of 20 members appointed by the king for 8-year terms; and a House of Representatives of 40 members (20 from East Jordan and 20 from West Jordan, the annexed section of Palestine) elected for a maximum term of 4 years by direct vote of adult male citizens. The king delegates executive authority to a cabinet responsible to the House of Representatives (see below, *Principal Events, 1955*).

Education.—In 1954 there were 119,904 students enrolled in 776 primary and secondary schools operated by the government, by charitable and missionary groups, and (for the children of refugees) by the U.N. Relief and Works Agency (UNRWA). Jordan has a trade school, a teacher-training institution, two intermediate agricultural schools, and an agricultural college.

Defense.—The major Jordan military force is the Arab Legion, commanded since 1939 by the British officer, Lieut. Gen. John Bagot Glubb. The legion is financed by annual grants (£7 million in 1955-56) from the British government. Jordan has a small air force (augmented in March 1955 by a gift from Turkey of 3 military aircraft, and in August by purchases of planes in Britain) and a volunteer national guard (Desert Patrol) for frontier defense. In February 1955, Britain announced a grant of £350,000 for support of the national guard for the fiscal year 1955-56. Under terms of the Anglo-Jordanian Treaty of March 15, 1948, the British maintain airfields at Amman and Mafrq and a small military garrison at 'Aqaba.

Finance.—The unit of currency is the Jordan dinar (JD). Jordan is a member of the sterling bloc, and the dinar is valued at £1 or U.S.\$2.80. Government expenditures habitually exceed local revenues. Annual grants-in-aid since 1953 of £750,000 from the British Treasury, plus British loans and American aid, have permitted budgets to be approximately balanced. In 1954-

55 revenues amounted to JD16,599,986 and expenditures, JD16,896,329.

Development Program.—A Jordan Development Board, established in 1952, supervises a 5-year program of irrigation, agricultural development, road and railway construction, enlargement and improvement of the port of 'Aqaba, hydroelectric development, and industrial expansion. The United States provided about \$11,000,000 for technical assistance and \$13,000,000 for economic development during the period 1951-55; and Britain extended interest-free loans of £500,000 in 1953-54, £1,600,000 in 1954-55, and £1,750,000 in 1955-56. During 1955, Eric Johnston, special envoy of President Eisenhower, continued his efforts to secure Arab and Israeli agreement for a comprehensive development plan for the entire Jordan River area, and a World Bank mission conducted an economic survey to determine Jordan's eligibility for a development loan. In October, Saudi Arabia established a credit of £2,000,000 for the projected rebuilding of the Hejaz Railway south of Ma'an.

Production.—The majority of the people of Jordan are engaged in agricultural or pastoral occupations. The chief crops are wheat (225,000 metric tons in 1952), barley (92,500 tons), maize (24,600 tons), millet, sesame, beans, tobacco, animal fodder, figs, grapes, and olives. Goats (358,000 in 1952), sheep (226,000), and cattle (81,000) are significant in the economy. Drought during the summer of 1955 caused serious crop damage in some areas. Small operations exist for the mining of phosphates, manganese, kaolin, marble, and gypsum. The Dead Sea contains valuable mineral salts. Manufactures, conducted in some 400 factories and workshops, most of which are small, include cement, flour, olive oil, cigarettes, wine and spirits, soap, shoes, textiles, and furniture.

External Trade.—Exports (1953 est., JD2.3 million) include fresh vegetables and fruits, cereals, olive oil, raw wool, skins and hides, live animals, and phosphates. Most exports go to the neighboring states of Lebanon, Syria, Iraq, and Saudi Arabia. Imports (JD18.4 million in 1953) include sugar, cereals, cotton and cotton textiles, rice, petroleum products, automobiles, cement, tea, coffee, iron and steel, and various manufactured goods. Major suppliers are Great Britain (\$8,555,258 in 1954), Syria (\$6,166,947), and the United States (\$5,367,953). The balance of trade is consistently unfavorable.

Communication.—Jordan has about 2,200 miles of roads, of which 950 miles (1952) are all-weather roads. The principal roads link Amman with the major towns of the country and with the road systems of neighboring states. On Dec. 1, 1954, motor vehicles of all types numbered 7,045 privately owned and 661 government-owned.

A railway, which traverses Jordan's entire length and is part of the Hejaz Railway, extends from the Syrian border through Amman, Ma'an, and Naqb Nashtar to Qal'at Saman on the Saudi Arabian border. International air service terminals are located at Amman and Jerusalem. Jordan has national and international mail and telegraph service, and on Jan. 1, 1954, there were 6,536 government-owned telephones.

Principal Events, 1955.—The friction between Jordan and Israel, which resulted in serious frontier clashes in 1954, was somewhat reduced in 1955. Minor raids and reprisals from both sides of the frontier, however, continued to take their toll of life and property. On April 18, 1955, following the killing of an American student by a

Jordanian guard in the Jerusalem "no man's land," arrangements were made to prevent hostile acts in the Jerusalem area and to permit direct telephone communications between the senior officers of both sides. On August 4 these arrangements were extended to the entire frontier. Border clashes between Egypt and Israel (q.v.) in 1955 brought forth expressions of Jordanian support for the Arab cause against the Jewish state, but the Israel-Jordan border remained relatively peaceful.

Exploratory negotiations looking toward a revision of the Anglo-Jordanian Treaty of 1948, due to expire in 1963, were begun in London from Dec. 21 to 23, 1954, on the initiative of the Jordan government. On Feb. 9, 1955, however, it was announced that the two governments had decided the time was not appropriate to consider changes in the treaty.

In April a Jordanian delegation led by Wahid Salah, the foreign minister, attended the Asian-African Conference (q.v.), which went on record as supporting Jordan's admission to the United Nations. Cabinet dissension made itself evident during April and May in the government of Prime Minister Tewfik Abul Huda, and on May 29 the ministry resigned. The king requested Said al-Mufti, prime minister in 1950, but not currently a member of Parliament, to form a government. On the following day the new premier announced a cabinet composed of 5 former ministers and 6 persons entering the ministry for the first time.

On April 19, King Hussein was married at Amman to Princess Abd al-Hamid Dina, a cousin of the king and daughter of Sherif Abd al-Hamid al-Aoun of Saudi Arabia. Princess Dina, a graduate of Girton College, Cambridge, once served as lecturer in English literature at the University of Cairo.

A dispute in the cabinet over British proposals that Jordan join the Baghdad Pact (q.v.) and that the 1948 treaty be revised led to the resignation of Said al-Mufti on December 14. A new government, formed on the following day by Hazza al-Majali, a supporter of the pact, fell on December 19 after riots in Jerusalem, Amman, Jericho, and other cities, directed against the pact and against the West in general. Parliament was dissolved, and a new caretaker government, headed by Ibrahim Hashim, was sworn in on December 21, and the new prime minister announced that his government would not "bind itself to any treaties or obligations" until elections had been held for a new House of Representatives. Meanwhile, on December 14, Jordan was one of the 16 new countries elected to membership in the United Nations.

PAUL L. HANNA,

Professor of Social Sciences, University of Florida.

JOURNALISM. The newspaper business in the United States rode the wave of general economic prosperity and enjoyed the greatest degree of public support—in dollar volume—in its history. Total revenue from circulation sales and advertising space exceeded \$4 billion.

Newspaper Statistics.—The 1,765 daily newspapers had an aggregate sale of 55,072,480 copies (*Editor & Publisher International Year Book*), and 8,428 weekly papers claimed a total circulation of 17,396,936 (*National Directory of Weekly Newspapers*). In the daily field, there were 317 morning papers (a decline of 10 from 1954) with total circulation of 21,705,436 (a

gain of 1.3%); 1,448 evening papers (a decline of 10 from 1954) with total circulation of 33,367,044 (a gain of 1%); and there were 544 Sunday papers with total circulation of 46,176,450 (a gain of ½%). A total of 211 weekly newspapers, published in communities of 20,000 or less population, had a paid circulation of more than 5,000. Highest on this list was the LaGrange (Ill.) *Suburban Life* with 19,100.

Despite the establishment of many new less-than-daily edition newspapers in rapidly expanding suburban areas, there was a net loss of 121 weeklies, as compared with 1954. Still the largest newspaper in daily and Sunday categories was the *New York News*, with slightly more than 2 million sales weekdays (morning) and nearly 4 million sales on Sundays. The paper with the largest circulation in the evening was the *Philadelphia (Pa.) Bulletin* (over 700,000).

Approximately one fourth of the nation's dailies were published on five-day schedules, eliminating either Saturday or Monday, and Sunday, because of slim advertising revenue on those days.

The prevalence of the 7-cent weekday and 20-cent Sunday editions accounted for the record circulation receipts of \$1,256,075,000 by daily and Sunday papers. The 3-cent paper went the way of 1- and 2-cent papers under the pressure of need for greater revenue to meet expenses of labor, newsprint, and capital investment. As the price of newsprint rose above \$130 a ton and average wages for newspaper employees came nearer to \$100 a week, the nickel price for a daily paper also began to disappear rapidly.

New Ventures and Casualties.—New York, Boston, Chicago, and San Francisco were the only cities having four or more newspapers of general circulation. Los Angeles dropped from this list with the demise of the *Los Angeles News*. A major casualty in New York was the *Brooklyn Eagle* (130,000 circulation), which went out of business during a strike begun by the Newspaper Guild and supported by members of the craft unions. More than 600 employees lost their jobs. The publisher said he could not pay the \$135-a-week scale demanded for guild members of top experience.

In Jackson, Miss., a group of local business men pooled assets of approximately \$1 million and put the daily-Sunday *State-Times* into business in a completely new plant and in competition with two papers merged under one ownership—the *Clarion-Ledger* (morning) and the *Jackson Daily News* (evening), with a combined Sunday edition. The *State-Times* achieved a circulation of more than 28,000 in six months and published a large volume of advertising. Not so fortunate as new ventures, also in state capitals, were the Montgomery (Ala.) *Examiner* and the Tallahassee (Fla.) *Capital Post*, both of which failed for lack of adequate capital and popular support. The Meadville (Pa.) newspapers combined into a single morning operation and the Williamsport (Pa.) dailies abandoned the morning field to concentrate on evening editions. The Gary (Ind.) *Post-Tribune* and the Fort Worth (Texas) *Press* added Sunday editions, and the latter changed to tabloid-size format. More than a dozen papers added a ninth column to their pages, while scores of others reduced their page widths (in eight columns) by from one half inch to a full inch to conserve newsprint.

Sales Promotion and Advertising.—In their efforts to boost sales, newspapers started a puzzle craze among readers. Crossword puzzles, a rage

in the 1920's, zoomed back into sensational popularity under the impetus of sizable monetary rewards. Puzzles based on historical, geographical, and Biblical information were also resorted to. As a consequence, summertime circulation slumps were overcome.

Advertising lineage placed in daily newspapers was 10% greater than the 1954 figure, second highest in history. Space was bought to the tune of \$2,750 million, which represented nearly one third of the country's total advertising budget. The bill for one agate line in all evening papers was \$182.62, or about \$3 more than in 1954. The Chicago *Tribune* reported that advertisers had purchased more than \$61 million worth of space. An average of 375 papers showed advertising content of 60% and news content of 40%. Largest regular edition of any newspaper was that of the New York *Times*—500 pages on Sunday, September 11. The Lansing (Mich.) *State Journal* celebrated its 100th anniversary with a 336-page edition on April 28.

Ownership Transfers.—Owners of the Augusta (Ga.) *Chronicle* acquired the Augusta *Herald* for \$1,500,000; Samuel I. Newhouse paid \$6,250,000 for the St. Louis (Mo.) *Globe-Democrat* and \$18,700,000 for the Birmingham (Ala.) News Company; the Knight family bought the Charlotte (N.C.) *Observer* for \$7 million; and Robert S. Howard obtained the Chester (Pa.) *Times*

for \$2,500,000. Owner Eugene Meyer gave \$500,000 worth of stock in the Washington (D.C.) *Post and Times-Herald* to employees.

Other Business Developments.—The Philadelphia *Bulletin* invested more than \$10 million in a new plant, including 64 press units; two Chicago papers initiated a \$26 million improvement program; and the employee-community-owned Cincinnati *Enquirer* paid off \$1 million of a \$7 million debt seven years ahead of schedule.

Court Actions.—The Kansas City (Mo.) *Star* was found guilty by a jury of pricing advertising and circulation in restraint of trade. The U.S. Supreme Court refused to upset a \$175,000 jury verdict in favor of Quentin Reynolds, author, against Westbrook Pegler, columnist, in a libel case. (See also CENSORSHIP.)

Associations.—The American Newspaper Publishers Association re-elected Richard W. Slocum (Philadelphia *Bulletin*) as president; the American Society of Newspaper Editors elected Kenneth S. MacDonald (Des Moines *Register and Tribune*) as president; and the American Newspaper Guild re-elected Joseph F. Collis (Wilkes-Barre *Record*) as president.

JUVENILE DELINQUENCY. See Index entry.

KANSAS. Central state, United States; admitted to the Union, Jan. 29, 1861. The "Sunflower State" ranks 13th in area and 29th in population (1955) among the 48 states.

Area and Population.—Area: 82,276 square miles (land, 82,108; inland water, 168), divided into 105 counties. Population: (1950) 1,905,299; (est., July 1, 1955) 2,021,000. Urban places with 1950 populations above 10,000 are as follows:

Arkansas City.....	12,903	Kansas City.....	129,553
Atchison.....	12,792	Lawrence.....	23,351
Chanute.....	10,109	Leavenworth.....	20,579
Coffeyville.....	17,143	Manhattan.....	19,056
Dodge City.....	11,262	Newton.....	11,590
El Dorado.....	11,037	Ottawa.....	10,081
Emporia.....	15,669	Parsons.....	14,750
Fort Scott.....	10,335	Pittsburg.....	19,341
Garden City.....	10,905	Salina.....	26,176
Great Bend.....	12,665	Topeka (capital).....	78,791
Hutchinson.....	33,575	Wichita.....	168,279
Independence.....	11,335	Winfield.....	10,264
Junction City.....	13,462		

Executive.—Chief state officers in 1955:

Governor: Fred Hall (Republican)

Lieutenant Governor: John McCuish

Secretary of State: Paul R. Shanahan

Treasurer: Richard T. Fadely

Attorney General: Harold R. Fatzer

Supt. of Public Instruction: A. F. Throckmorton

Constitution and Judiciary.—The present constitution went into effect in 1861. The Supreme Court comprises seven justices; chief justice in 1955 was W. W. Harvey.

Legislature.—The Legislature (Senate, 40 members; House of Representatives, 125) meets annually commencing the second Tuesday in January. (See also below, *Principal Events, 1955*.)

Finances.—State treasury receipts (1954–55 fiscal year), \$366,619,175.90; expenditures, \$360,750,979.85; treasury balance, \$191,727,385.80. The state became debt-free on July 1, 1955.

Taxation.—State tax revenue (1954–55 fiscal year): \$160,183,143.34, including \$126,761,370.64 from a 2% general sales tax and selective sales and gross receipt

taxes; \$2,097,448.15 from licensing; \$12,865,258.44 from individual income taxes; \$3,776,634.26 from corporate income taxes; and \$6,136,429.83 from property taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 170 national banks had \$1,179,620,000 in assets, \$953,380,000 in demand deposits, and \$143,150,000 in time deposits; the state's 434 other banks had \$951,870,290.30 in assets, \$531,656,499.59 in demand deposits, and \$154,068,991.20 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$95,847,684 (\$266.86 per pupil) for public elementary and secondary education in the 1953–54 school year comprised \$68,971,610 from local school districts, \$23,615,870 from the state, and \$3,260,204 from the federal government. Expenditures for construction and improvements totaled \$39,875,000. Teachers' salaries (1954–55) averaged \$3,099 (elementary school teachers, \$3,366; high school teachers, \$3,810).

KANSAS SCHOOL STATISTICS, 1953–54

Type of school	No.	Teachers	Students
Public elementary (1–8).....	3,050	12,578	284,791

Homes for dependent children	1	104
Soldiers and sailors homes	1	299
Training schools for delinquent boys	1	125
Training schools for delinquent girls	1	82
Reformatories for males	1	438
Reformatories for females	1	65
Prisons	1	1,628

* As of June 30, 1955, unless otherwise indicated.

Labor Force.—Nonagricultural employment of wage and salary workers in 1954 averaged 542,300, against 546,400 in 1953. There was an average of 36,200 unemployed wage and salary workers in 1954 to whom the state paid \$12,361,706 in unemployment compensation.

Manufacturing.—Establishments numbered 3,200 in 1955, and in 1954 employed an average of 132,517 workers who received \$562,034,308 in salaries and wages. Expenditures for new plant and equipment in 1953 totaled \$58,714,000. Earnings of production workers in manufacturing averaged \$78.48 for an average work week of 41.8 hours in 1954 and \$78 for 41.5 hours during the first half of 1955.

KANSAS MANUFACTURES, 1953

Product or industry	No. of employees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ² (thousands of dollars)
All manufactures	137,572	\$567,027	\$1,000,724
Transportation equipment	54,095	247,323	335,434
Food and kindred products	23,435	84,432	172,919
Chemicals and allied products	10,924	45,311	137,118

Paper and allied products	2,293	8,838	18,455

¹ Average per year. ² Value of products less cost of material, supplies, fuel, electric energy, and contract work. (Source: *Annual Survey of Manufactures, 1953.*)

Mining.—Mineral production in Kansas established a new record in 1954, 8% greater in value than the previous high of 1953. Kansas is the second largest producer of helium. The state stood 9th in value of its mineral output in 1953, with 2.87% of the United States total. An average of 18,400 workers were employed in mining and quarrying in 1954.

KANSAS MINERAL PRODUCTION, 1954¹

(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.) ²	8,600,000	\$ 21,500,000
Clays ³	323,000	437,000
Coal	1,293,000	5,200,000
Helium (cu. ft.)	37,576,000	571,700
Lead	3,300	897,600
Natural gas (1,000 cu. ft.)	400,000,000	45,000,000
Natural gasoline (bbl.)	3,200,000	9,000,000

Agriculture.—Cash farm income in the first half of 1955 totaled \$412,621,000, and for the full year 1954 comprised \$492,265,000 from livestock and livestock products, \$450,442,000 from crops, and \$8,638,000 from government payments.

Receipts from principal crops and livestock in 1954 included: wheat, \$352,335,000; cattle, \$305,404,000; dairy products, \$65,167,000; hogs, \$58,626,000; eggs, \$35,956,000; sorghum grain, \$31,977,000; and corn, \$22,848,000.

The state's 120,167 farms in 1954 (50,015,438 acres; harvested cropland, 21,432,132) had an average of 416.2 acres and \$34,757 in value of land and buildings per farm. There were 89,936 farms with telephones and 111,650 with electricity. Livestock on farms on Jan. 1, 1955, included 4,341,000 cattle, 898,000 hogs, 609,000 sheep, and 11,917,000 chickens (not including commercial broilers). During the week of Sept. 26–Oct. 2, 1954, there were 200,345 family and hired workers engaged in farming.

KANSAS CROP STATISTICS

Crop (and unit of production)	Average 1944–53	1954	Est. 1955
Apples (1,000 bu.)	366	206	220
Barley (1,000 bu.)	5,022	9,868	12,384
Corn (1,000 bu.)	67,224	39,558	30,856
Hay (1,000 tons)	2,978	3,291	3,344
Oats (1,000 bu.)	24,098	36,238	32,202

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954–55 fiscal year totaled \$55,124,117, and newly completed construction and reconstruction aggregated 1,134 miles.

Highways and roads on June 30, 1955, totaled 125,449 miles (57,710 surfaced). Registered motor vehicles numbered 1,008,972 on Dec. 31, 1954, including 758,923 passenger cars. There were 17 railroads (1955) operating 8,732.35 miles and there were 5 regularly scheduled airlines and 173 airports and airfields (70 public, 96 limited, and 7 military).

Communications media (1955) included 45 AM and 2 FM radio stations and 6 VHF operating television outlets; 52 daily newspapers (circulation, 1,610,494) and 298 other newspapers (circulation, 384,316); and (Jan. 1, 1955) 169,715 business and 532,203 residential telephones.

Principal Events, 1955.—It was a cold day on Jan. 10, 1955, when Fred Hall, Republican of Dodge City, was inaugurated governor of Kansas on a "do-something" platform. Kansas politics have been far from cold since. Despite differences with some members of the state legislature, Governor Hall pushed through much of his program. A right-to-work bill, which Hall opposed, perhaps generated the most heat. Although the legislature passed this measure to prohibit the closed shop, there were insufficient votes to override the governor's veto.

Major bills enacted into law provided a special allocation of \$6.5 million for high school aid and nearly \$6 million for construction at higher institutions; imposed regulations for small loans; created a state Water Resources Board and a state Park Authority; expanded the highway patrol by 45 men; required higher license fees for trucks, in lieu of the ton-mile tax; increased tax levies for the educational and eleemosynary building funds; and remodeled the chambers of the House of Representatives to include automatic vote recorders. Kansas' Supreme Court held that the legislature's repealer of the motion picture censorship law was improperly passed.

The most publicized political tussle of 1955 developed over the governor's dismissal of Eugene W. Hiatt, state purchasing director, and the latter's appeal to the Civil Service Board. Before the board had time to act, Governor Hall removed two of the three members for neglect of duty and then filled the vacancies. The reconstituted board found no single charge to be "of sufficient importance to justify such drastic action" as Hiatt's removal, but ruled that "sufficient friction has developed in the department so that the good of the state would not be served were Mr. Hiatt reinstated in his former position."

Construction continued in 1955 on the Kansas Turnpike from Kansas City via Topeka and Wichita southward to the Oklahoma line, expected to be ready for use in October 1956, and on a 12-story state office building, to be completed early in 1957.

Drought conditions prevailed in the central and western areas of Kansas. Below-normal production of wheat and corn resulted, although barley and oat yields were above average.

On May 25 tragedy struck Udall, a south-central Kansas community of nearly 600 residents. A tornado tore through the town, leaving in its wake 77 dead, some 200 hospitalized, and the town virtually destroyed. Within two weeks rebuilding of the town had been begun.

KAROLYI, Count Mihály, Hungarian political leader: b. Budapest, Hungary, March 4, 1875; d. Vence, France, March 18, 1955. Descended from an aristocratic Magyar family that dates back to the 13th century, he led a stormy political career, punctuated by alternate periods of eminence and exile, during which he became president of the first Hungarian Republic.

Count Károlyi entered public life in 1905 when, as a member of the Liberal Party, he was elected to the Hungarian Parliament. In 1909 he became president of the Hungarian Agricultural Society, and worked to establish an agrarian party of the center. Coming under the influence of the writings of Karl Marx, he resigned his post to become leader of the radical wing of the Independence Party. In this capacity he headed the parliamentary opposition before and during World War I against Count István Tisza, the prime minister, who severely wounded him in a duel in 1913. Intent on breaking up the Austrian-Hungarian entente, he negotiated secretly with the French government and visited the United States to arouse American-Hungarian opinion against the Austrian-Hungarian government. In France at the outbreak of the war, he was interned briefly, but was released on the condition that he return to Hungary and advocate the swift conclusion of a separate peace with the Allies.

Shortly before the termination of hostilities, Count Károlyi founded the National Council, a body composed of his personal adherents and leftist elements. On Oct. 30, 1918, the National Council, with the aid of several companies of army troops, staged a bloodless revolution which culminated in the mysterious assassination of Károlyi's old enemy, Count Tisza, and the appointment of Károlyi as prime minister by King Charles IV. On November 8, the new prime minister met Gen. Louis Franchet d'Esperey, commander of the Allied expeditionary force at Salonika, to negotiate an armistice for Hungary.

With the collapse of the empire, the Hungarian People's Republic was proclaimed on Nov. 16, 1918, and full powers were delegated to Károlyi's cabinet. On Jan. 11, 1919, he was formally installed as president of the new republic.

Failing to achieve unity, however, he was forced to relinquish the reins of government on March 21, 1919, to the disciple of Lenin, Béla Kun, who headed a united front party composed of Communists and Socialists. In July 1919 he fled the country. He was later convicted *in absentia* of high treason.

During World War II, Károlyi emerged as the leader of the Free Hungarian Movement in London, and from 1944 to 1946 he served as organizing secretary of the Hungarian Council in Great Britain. In November 1945 he was elected to the Hungarian Parliament despite his absence, and on May 7, 1946, after 27 years of exile, he returned to Hungary. On July 2, 1947, he was appointed minister to France, but on June 2, 1949, he resigned his post on the grounds of age. His affiliations with Hungary were severed for the last time in October 1949 when his plea for a revision of the death sentence in the trial of László Rajk, former Communist foreign minister, was rejected and condemned by the Hungarian government. Károlyi's autobiography, *Fighting the World*, was published in 1926.

KASHMIR (JAMMU AND KASHMIR). This former native state of India (area, 84,471 square miles; pop., 4,370,000, est. 1954), bordered by India, Pakistan, Tibet, and the Sinkiang Province of China, has continued in dispute between the Republic of India and Pakistan since the partition of India. Its people are predominantly Moslems, except in Jammu. Srinagar (pop., 207,787 in 1941) is the capital and seat of government; the city of Jammu is the winter capital. In Azad Kashmir (Free Kashmir), the Pakistani-controlled area, Muzaffarabad is the seat of government.

Under an elected ruler (Yuvraj Karan Singh, sworn in Nov. 17, 1952), and a Constituent Assembly, headed by Bakshi Ghulam Mohammed, leader of the Kashmir National Conference, Indian Kashmir is administered as a republic. Up to January 1955 the Indian government had expended some \$100 million on development work, including the opening in the period 1953-55 of 500 new primary schools, and improvements in 1954-55, facilitating the trucking of Kashmir timber exports to India over the Banihal Pass. In addition, \$5 million had been expended on a hydroelectric power project, opened in 1955 on the Sind River at Gandarbal. Some 193,000 peasant farmers have received grants of land under a state redistribution system.

In Azad Kashmir, 23% of total revenue was allocated to education in 1954-55; facilities include 20 high schools, 13 middle schools, and 180 primary schools (opened in 1954-55), with an aggregate pupil enrollment of about 125,000. The government spent Rs.650,000 in 1954-55 on development projects; an additional Rs.400,000 was allocated to construction of new roads.

A 4-day conference was begun at New Delhi on May 14, 1955, between the Indian Prime Minister Jawaharlal Nehru and the then Pakistani Prime Minister Mohammed Ali, soon after the occurrence of fighting at the Jammu border village of Nekowal, where on May 7, six Indian soldiers, two Pakistani policemen, and six Indian civilians were killed. An investigation of the incident was undertaken by observers of the United Nations. The prime ministers agreed that final demarcation of the cease-fire boundary should be completed within three months, and that the number of border forces and the arms carried by them should be reduced. Though described as "cordial and full," the discussions produced no substantial advance toward a plebiscite (the subject of two United Nations resolutions passed on Aug. 13, 1948, and Jan. 5, 1949,

and to which both India and Pakistan subscribed) to determine the final allegiance of Kashmir. On Dec. 10, 1955, while visiting Srinagar, USSR Communist Party Secretary Nikita Khrushchev backed India's claims to the disputed state.

KEFAUVER, ESTES, United States senator: b. Madisonville, Tenn., July 26, 1903. A leading contender for the 1952 Democratic presidential nomination, he announced his candidacy for the office in 1956 at a press conference held in Washington on Dec. 16, 1955.

Educated at the University of Tennessee (B.A., 1924) and Yale Law School (LL.B., 1927), Kefauver was admitted to the Tennessee bar in 1926 and practiced law in Chattanooga. He was a member of the U.S. House of Representatives from 1939 to 1949, when he became a senator. In 1950-51, as head of the Senate Crime Investigating Committee, he held televised hearings on syndicated crime which attracted national attention. Although he won a number of lightly contested primary elections in 1952, he secured only 275½ votes for the presidential nomination on the third ballot at the Democratic National Convention.

In 1954 Kefauver was re-elected to the Senate. Early in the following year he opposed administration policy on China, attempting unsuccessfully to amend the Senate resolution authorizing the use of force in defense of Nationalist territory to exclude Quemoy and Matsu islands, and voting against ratification of the United States-Nationalist China mutual defense treaty. As chairman of the Senate Antimonopoly Subcommittee, he held hearings on the Dixon-Yates contract on June 27-July 13, 1955, in which he criticized particularly the role played by Adolphe H. Wenzell, whom he charged with violation of conflict-of-interest laws. With other senators, he visited the USSR in September.

With Levin Jack, Kefauver wrote *Twentieth-Century Congress* (1947). He also edited *Crime in America* (1951), an account of the Senate crime investigations.

KEITH, Sir Arthur, Scottish anthropologist: b. Old Machar, Aberdeen, Scotland, Feb. 5, 1866; d. Downe, Kent, England, Jan. 7, 1955. A militant disciple of Charles Darwin, he was internationally recognized as one of the foremost authorities on the origins of man.

Educated at Aberdeen University, University College of London, and Leipzig University, Keith became an expert on the reconstruction of prehistoric man from bone fragments or fossil remains. He held a wide variety of important positions during his lifetime. Besides being curator of the museum and director of laboratories of the Royal College of Surgeons from 1907 to 1933, he was secretary of the Anatomical Society of Great Britain (1899-1902), president of the Royal Anthropological Institute (1912-14), secretary (1922-26) and treasurer (1926-29) of the Royal Institution, and president of the British Association (1927). From 1917 to 1923 he was Fullerton professor of physiology at the Royal Institution, and from 1930 to 1933 he was rector of Aberdeen University. From 1933 until his death he was master of the Buckston Browne Research Farm, a surgical experimental station in Downe, Kent, owned by the Royal College of Surgeons. He was knighted in 1921 for his contributions to anthropology.

Sir Arthur dedicated much of his life to corroborating Darwin's theory of evolution, maintaining consistently that the evidence for its

validity was overwhelming and undeniable. His social views were often the subjects of controversy. He maintained, for example, that the concept of immortality could not be supported scientifically. In 1931, echoing the opinion of Herbert Spencer and other neo-Darwinists, he declared that war is a condition of progress. "Nature," he said, "keeps her human orchard healthy by pruning. War is her pruning hook." He also asserted that racial prejudice was important to a nation's vitality.

His published works include *Introduction to the Study of Anthropoid Apes* (1896); *Human Embryology and Morphology* (1901; 6th ed. 1949); *Ancient Types of Man* (1911); *The Human Body* (1912); *Antiquity of Man* (2d ed. 1925); *Engines of the Human Body* (2d ed. 1925); *Nationality and Race* (1920); *Religion of a Darwinist* (1925); *Concerning Man's Origin* (1927); *New Discoveries Relating to the Antiquity of Man* (1931); *Darwinism and Its Critics* (1935); *Essays on Human Evolution* (1946); *A New Theory of Human Evolution* (1948); *An Autobiography* (1950).

KELLY, Grace (Patricia), American actress: b. Philadelphia, Pa., Nov. 12, 1929. A relative newcomer to the screen, on March 30, 1955, she received the Motion Picture Academy "Oscar" for best actress of 1954 for her performance in *The Country Girl*. On Jan. 5, 1956, her engagement to Prince Rainier III of Monaco was announced.

Grace Kelly, the second daughter of John B. Kelly, a former Olympic oarsman and wealthy Philadelphia businessman, was educated at the Ravenhill convent school and the Stevens School in Germantown, Pa. On graduation, she enrolled in the American Academy of Dramatic Arts, where she studied acting for two years. During this period she worked as a photographer's model, did television commercials, and acted in several television plays and summer-stock productions. Her Broadway debut came in 1949, when she appeared as the daughter in August Strindberg's *The Father*, which starred Raymond Massey.

Her first Hollywood assignments were a bit part in *Fourteen Hours* (1951), starring Paul Douglas, and a leading role in *High Noon* (1952), starring Gary Cooper. Aware of her limitations as an actress, she returned to New York for further study with Sanford Meisner at the Neighborhood Playhouse. Nevertheless, she

Grace Kelly in a scene from *The Country Girl*. Her role won her the 1955 Academy Award for best actress.

PARAMOUNT PICTURES CORPORATION

KENTUCKY

was signed to a seven-year contract by Metro-Goldwyn Mayer, and was given a feature role in *Mogambo* (1953). Her performance won her an Academy Award nomination for the best supporting role of that year. There followed major roles with Ray Milland in *Dial M for Murder* (1954); with James Stewart in *Rear Window* (1954); with Bing Crosby in *The Country Girl* (1954); with Stewart Granger in *Green Fire* (1954); with William Holden in *The Bridges of Toko-ri* (1955); and with Cary Grant in *To Catch a Thief* (1955).

KENTUCKY. South Central state, United States; admitted to the Union, June 1, 1792. The "Bluegrass State" ranks 36th in area and 20th in population (1955) among the 48 states.

Area and Population.—Area: 40,395 square miles (land, 39,864; inland water, 531), divided into 120 counties. Population: (1950) 2,944,806; (est., July 1, 1955) 2,948,000. Urban places with 1950 populations above 10,000 are as follows:

Ashland.....	31,131	Louisville.....	369,129
Bowling Green.....	18,347	Madisonville.....	11,132
Covington.....	64,452	Middlesborough.....	14,482
Fort Thomas.....	10,870	Newport.....	31,044
Frankfort (capital).....	11,916	Owensboro.....	33,651
Henderson.....	16,837	Paducah.....	32,828
Hopkinsville.....	12,526	Richmond.....	10,268
Lexington.....	55,534		

Executive.—Chief state officers in 1955:

Governor: Lawrence W. Wetherby (Democrat)
Lieutenant Governor: Emerson Beauchamp
Secretary of State: Charles K. O'Connell
Treasurer: Pearl F. Runyon
Attorney General: J. D. Buckman, Jr.
Supt. of Public Instruction: Wendell P. Butler

Constitution and Judiciary.—The present constitution went into effect in 1891. The highest court, the Court of Appeals, comprises seven justices; chief justice in 1955 was Brady M. Stewart. Among other actions in 1955, the court declared the Highway Authority Act unconstitutional.

Legislature.—The General Assembly (Senate, 38 members; House of Representatives, 100) meets in even-numbered years commencing the first Tuesday after the first Monday in January.

Finances.—State treasury receipts (1954-55 fiscal year), \$233,639,761.95; operating expenditures, \$217,137,921.56; net nonguaranteed indebtedness, \$67,325,915.

Taxation.—State tax revenue (1954-55 fiscal year): \$161,209,238.33, including \$81,682,912.91 from selective sales and gross receipt taxes; \$18,682,912.91 from licensing; \$33,232,891 from individual income taxes; \$10,590,815.27 from corporate income taxes; and \$12,901,516.18 from property taxes. The state has no general sales or poll tax.

Banking.—As of June 30, 1955, the state's 89 national banks had \$757,199,000 in assets, \$551,421,000 in demand deposits, and \$140,601,000 in time deposits; the state's 282 other banks had \$1,211,811,536.25 in assets, \$671,148,029.94 in demand deposits, and \$424,130,614.97 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 15, inclusive. Operating expenditures of \$75,540,126 (\$144.86 per pupil) for public elementary and secondary education in the 1953-54 fiscal year comprised \$40,036,266.78 from local school districts, \$31,726,852.92 from the state, and \$3,777,006.30 from the federal government. Expenditures for construction and improvements totaled \$10,989,-

407. Teachers' average salaries approximated \$2,550.

Social Welfare.—Public welfare expenditures from federal and state funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$38,748,136, including \$23,533,421 for old-age assistance, \$13,940,425 for dependent children, and \$1,274,290 for the needy blind; a monthly average of 107,778 persons received public assistance. Operating expenditures for health and welfare institutions totaled \$875,534.14; for correctional and penal institutions, \$2,252,437.95.

KENTUCKY WELFARE INSTITUTIONS

(As of June 30, 1955, unless otherwise indicated)

Type of institution	No.	Pop. *
Hospitals for mentally deficient and epileptic.....	1	782
Hospitals for the mentally ill.....	4	7,700
Sanatoriums for the tubercular.....	6	750
Schools for the blind.....	1	150 ¹
Schools for the deaf.....	1	335 ²
Hospitals for crippled children.....	3	212 ³
Homes for dependent children.....	1	209 ⁴
Training schools for delinquent boys and girls.....	1	499 ⁵

¹ September 1955. ² Oct. 1, 1954. ³ Sept. 12, 1955. ⁴ April 30, 1955. ⁵ Comprises 350 boys and 149 girls. ⁶ Part of prison and reformatory for males.

Labor Force.—The labor force in August 1955 numbered 1,015,000, including 245,000 agricultural workers. Nonagricultural employment in August 1955 numbered 702,400, and for the 12 months ending June 30, 1955, averaged 582,400. There were 67,300 unemployed workers on Aug. 15, 1955, and \$36,622,547 in unemployment benefits was paid during the 12 months ending June 30, 1955.

Manufacturing.—Establishments numbering 2,269 in 1954 employed 149,738 workers who received \$553,438,000 in salaries and wages. In 1953 value added by manufacture was \$1,213,002,000, and investment in new plant and equipment amounted to \$109,007,000. Earnings of production workers in manufacturing averaged \$66.17 for an average work week of 39.8 hours in 1954 and \$71.81 for 41.2 hours during the first half of 1955.

MAJOR KENTUCKY MANUFACTURES, 1954

Product or industry	No. of employees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ²

¹ Average per month. ² Figures are for 1953. Value of products less cost of materials, supplies, fuel, electric energy, and contract work.

Mining.—In 1953 Kentucky ranked third among the states in production of coal and fluor-spar. It stood 10th in the value of minerals produced in that year with 2.66% of the United States total. Employment in mining in 1954 averaged 37,590 persons who received \$137,818,000 in wages. Production of the state's two leading minerals in 1954 yielded 58,821,115 tons of coal (\$293,105,572) and 13,910,980 barrels of petroleum (\$40,063,363.20).

KENTUCKY SCHOOL STATISTICS, 1953-54

Agriculture.—Cash farm income in the first half of 1955 totaled \$216,971,000, and for the full year 1954 comprised \$255,495,000 from livestock and livestock products, \$303,496,000 from crops, and \$6,374,000 from government payments.

Receipts from principal crops and livestock in 1954 included: tobacco, \$250,340,000; cattle, \$84,109,000; dairy products, \$68,365,000; hogs, \$50,717,000; and eggs, \$27,926,000.

The state's 193,487 farms (18,034,380 acres; harvested cropland, 4,541,381) in 1954 had an average of 93.2 acres and \$8,096 in value of land and buildings per farm. There were 50,086 farms with telephones and 173,483 with electricity. Livestock on farms (Jan. 1, 1955) included 1,861,000 cattle, 1,129,000 hogs, 688,000 sheep, and 11,229,000 chickens (not including commercial broilers). During the week of Sept. 26–Oct. 2, 1954, there were 303,348 family and hired workers engaged in farming.

Tourists.—The Kentucky Chamber of Commerce estimated in 1955 that income from tourists in the state had reached an annual rate of \$523 million. To encourage even larger tourist expenditures, the state was getting ready in late 1955 to spend \$3,500,000 toward further expansion of its park system, on which \$9,150,000 had already been spent in the previous eight years.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954–55 fiscal year totaled \$66,999,000, and newly completed construction and reconstruction aggregated 763 miles.

Highways and roads on June 30, 1955, totaled 63,000 miles. Registered motor vehicles numbered 902,858, including 718,574 passenger cars. There were 36 railroads which in 1953 had 3,824 track miles, and in 1955, 9 regularly scheduled airlines and 37 airports and airfields (16 commercial and municipal, 3 military, 14 private, and 4 other).

Communications media included (1954) 57 AM and 14 FM radio stations and 4 operating television outlets; (1955) 30 daily newspapers (circulation, 697,429) and 153 other newspapers (circulation, 358,510); and (Jan. 1, 1955) 152,643 business and 423,362 residential telephones.

Principal Events, 1955.—Kentucky underwent some marked changes in 1955. Politically the ad-

ministration which had been in power for 12 years was handed a setback when A. B. ("Happy") Chandler defeated Judge Bert T. Combs in the Democratic primary of August 6. Campaign issues centered largely around the question of taxation, with a marked opposition to the sales tax being expressed in the heavy vote. Chandler went on to win the largest vote majority in the history of the Kentucky governorship when he defeated Edwin Denney, the Republican candidate, in the general election of November 8. He took office on December 13, committed to more adequate schools and roads, more effective state institutions, and economy in government. In the general election, voters also ratified two constitutional amendments. One lowered the voting age from 21 to 18 years, and the other exempted household goods from property taxation.

Kentucky schools showed an appreciable increase in enrollment, and the problem of retaining adequately trained teachers in the state almost reached the point of frustration. Neighboring states, which are able to pay teachers larger salaries, drain from Kentucky teachers who are trained in its own colleges.

Possibly the most exciting school issue in 1955 was that of desegregation, which was expected to take place in most parts of Kentucky without too much confusion or resistance. In cities like Louisville and Lexington it may possibly occur by the end of 1956. By late 1955, 24 of the state's 224 school districts had been desegregated.

In the field of agriculture, with burley tobacco growers voting to decrease acreage, allotments of acreage for Kentucky's principal crop were reduced. The growing season was favorable, and the quality of tobacco was high, although the poundage was light.

Industry showed further evidences in 1955 of gaining on agriculture. Measured by income, Kentucky was no longer a predominantly agrarian state. Industry has expanded particularly around areas where water and an abundance of power are available. The Ohio Valley area of Kentucky was continuing to experience an almost phenomenal industrial growth. At Louisville, for example, the Ford Motor Company had completed its new plant to make that city a major automobile center. Also, eastern Kentucky had recovered somewhat in 1955 from its serious economic setback. Coal production stood at 58,821,115 tons for both eastern and western fields in 1954. Moreover, further state employment was being promised in a modernization of the arterial highways of the state.

Principal Events by: THOMAS D. CLARK,
Professor of History, University of Kentucky.

KHRUSHCHEV, Nikita Sergeyevich, Soviet political leader: b. Kalinovka, Ukraine, Russia, April 17, 1894. As first secretary of the Central Committee of the Communist Party, he is one of the most powerful men in the USSR. During 1955 he was a frequent spokesman for his country, and the tenor of his speeches served as a barometer of East-West relations.

The son of a miner, Khrushchev joined the Communist Party in 1918, and by 1935 had risen to the post of first secretary of the Moscow Oblast (Region) Committee. Except for a short period in 1947, he was first secretary of the Central Committee of the Ukrainian Communist Party from 1938 to 1949, and in World War II served as a lieutenant general in command of a Ukrain-

ian guerrilla army. In the decade after the war he enjoyed a spectacular political ascent. After resuming his former post with the Moscow committee in 1949, he was named a secretary of the Central Committee of the Communist Party, and on Sept. 13, 1953, became first secretary, the first formal successor to Joseph Stalin in that post. He is also a member of the Presidium of the Supreme Soviet.

After Premier Georgi M. Malenkov's resignation on Feb. 8, 1955, it was Khrushchev who nominated Marshal Nikolai A. Bulganin (q.v.) for the premiership. He accompanied Bulganin to Yugoslavia (May 26–June 3), where the outcome of their discussions with Marshal Tito was the resumption of normal relations between the two countries, and he was present at the Geneva Conference (q.v.). With Bulganin, he made a goodwill tour of India, Burma, and Afghanistan (November 18–December 18), during which he made a number of speeches criticizing very sharply the policies of the Western powers. On December 29, in a speech before the Supreme Soviet, he attacked President Dwight D. Eisenhower, describing his Christmas message of hope for the freedom of the Soviet satellites in eastern Europe as "crude interference."

KONEV, Ivan Stepanovich, Soviet army officer: b. Ladeino, Archangel Region, Russia, Dec. 27, 1897. One of the Soviet Union's foremost military leaders in World War II, he was named supreme commander of the eight-nation European Communist bloc, officially established on May 14, 1955, in Warsaw, Poland, as a counterforce to the North Atlantic Treaty Organization.

Konev spent his youth as a lumberjack in the Archangel Region, and in 1916 was conscripted into the army. With the outbreak of the Russian Revolution in 1917, he participated with the Bolsheviks in the March and October insurrections. Following their victory in November 1917, he politically organized his native district, and took part in the suppression of anti-Bolshevik uprisings.

Konev enlisted in the newly created Red Army in 1919, and served in campaigns against Admiral Kolchak's White Russian troops on the eastern front and against the Semenov-Japanese forces in the Far Eastern Republic. In 1921 he was elected to the 10th Congress of the Communist Party of the Soviet Union. Following a two-year period at the Frunze Military Academy in Moscow (1925–27), he served as an officer of the Red Army for eight years before returning to the academy, where, in 1934, he completed a special faculty course with highest honors. In the meantime he had been elected to the All-Union Central Executive Committee, serving from 1931 to 1934. He was a divisional commander from 1934 to 1938.

When Germany invaded the Soviet Union in 1941, Konev was in command of the tank forces on the Moscow front. After his recapture of Kalinin in December 1941, he was named commander in chief of the Moscow front armies, and in August 1942, with Marshal Georgi Zhukov, he launched the great Soviet counteroffensive west of Moscow. In August 1943 he was elevated to the rank of army general and appointed commander of the Steppe Front Troops which liberated Orel, Belgorod, and Poltava in quick succession. In the winter campaign of 1943–44 he led the 2d Ukrainian Front Troops, which invaded Germany and Czechoslovakia, and units of which eventually met the United States forces at the Elbe River. For his military achievements, he

was named marshal of the Soviet Union in February 1944. After the war, Marshal Konev was appointed Soviet representative to the Allied Control Council for Austria, and from 1946 to 1948 he commanded the Soviet occupation forces in that country.

Konev is considered third in rank in the military hierarchy of the Soviet Union, preceded only by Marshal Zhukov, defense minister, and Marshal Alexander M. Vasilevsky, first deputy defense minister.

KOREA. Projecting from the Asian mainland toward Japan, which lies about 120 miles across the Korea Strait, the Korean peninsula has an area of 85,248 square miles and a coastline of some 5,400 miles. It borders for 11 miles on Siberia, and for approximately 800 miles on Manchuria. Its western shore is washed by the Yellow Sea, and its eastern by the Sea of Japan. The mountainous northern half of the country, endowed with rich mineral resources, timber, and water power, has most of the heavy industries, mines, and hydroelectric power plants. The less rugged south is predominantly agricultural, with light industries.

Accurate current census figures for Korea as a whole are not obtainable. According to 1949 estimates, roughly two thirds of the 30 million population resided south of the 38th parallel. The estimated population of Seoul, the capital, was 1,446,000; of Pusan, 474,000; and of Pyongyang, now the northern capital, 500,000. As of July 1, 1954, the population of South Korea was officially estimated at 21,687,000.

SOUTH KOREA

Government.—To implement the Cairo Declaration on Korea's independence, and to receive the surrender of Japanese troops after V-J Day, Soviet forces occupied Korea north of the 38th parallel and United States forces the south in 1945. The crystallization of this temporary arrangement into a permanent division of the racially homogeneous and economically integrated nation resulted in a devastating war that began on June 25, 1950, and ended in a stalemate on July 27, 1953.

The foreign ministers of the United States, the USSR, and the United Kingdom, meeting in Moscow in December 1945, put Korea under a four-power trusteeship for "a period of up to five years." This agreement failed to be implemented because of a United States–Soviet deadlock on Korean representation.

Finally the United States took Korea's case to the United Nations. On Nov. 14, 1947, the U.N. Temporary Commission on Korea was created by the U.N. General Assembly to facilitate the establishment of a Korean national government through general elections. The Soviet Union boycotted the commission and kept it from entering North Korea. The Interim Committee of the General Assembly authorized the commission to observe the election of May 10, 1948—held in South Korea alone—of 200 legislators for 2-year terms. Thus a Constituent Assembly was created which, on July 12, adopted a constitution providing for a unicameral National Assembly and for a president with wide powers, and on July 20 elected Dr. Syngman Rhee to that office for a 4-year term. With the formal proclamation of the Republic of Korea on Aug. 15, 1948, United States military government in South Korea ended.

In the 1950 election, National Assembly membership was increased to 210. In July 1952, President Rhee, seeing no chance for his re-election by a hostile assembly, forced that body to amend the constitution to provide for the creation of a bicameral National Assembly and the election of the president and vice president by direct popular vote. The new legislature was to consist of a House of Representatives whose members would serve 4-year terms, and a House of Councillors whose members would serve 6-year terms, one third being elected every two years.¹ Dr. Rhee was re-elected by popular vote on

¹ Despite the president's request, the National Assembly has not enacted legislation for election of councillors.

Aug. 5, 1952, and began his 2d term on August 15.

The third assembly election was held on May 20, 1954, to fill 203 seats, no provision having been made for 7 constituencies in territory south of the 38th parallel which the 1953 armistice agreement had assigned to the Communists. President Rhee's Liberal Party secured 114 seats, and some opposition candidates withdrew from the race for reasons of personal safety.

The structure of the government was altered once again by a law passed by the assembly on Jan. 22, 1955, and promulgated by the president on February 7. The stated purpose of the law was "to determine the principles of the administrative organization of the Government in order that the affairs of state may be performed uniformly and efficiently." The increased powers which elimination of the premiership by the constitutional amendment of Nov. 29, 1954,² had given the president were expanded by this law, which allows him to "suspend or repeal administrative orders or dispositions of the Cabinet Ministers in case such orders or dispositions are deemed improper or illegal." The former ministries of Social Affairs and Public Health were combined into a Ministry of Health and Welfare, while a new Ministry of Rehabilitation (Reconstruction) was established with "jurisdiction over matters concerning overall plans for industrial and economic rehabilitation, and administration, coordination and implementation of these plans."

Education.—The Korean War caused havoc in the educational system. Schools and their facilities were destroyed, and teachers were scattered or killed. Although instructors are being trained and schools are being rebuilt, these steps take time. Meanwhile, some schools are still conducted in shacks, textbooks are scarce, and many students cannot even afford paper and pencils. Libraries are almost nonexistent, and some institutions are supported solely by tuition fees. Over 80% of secondary school costs are borne by parents. Yet the desire for education is intense.

With the help of UNESCO, the U.N. Korean Reconstruction Agency (UNKRA), and other organizations, some rehabilitation is in progress. A national textbook printing plant capable of producing 30 million books a year was completed in September 1954. UNKRA has allocated materials for building and repairing more than 3,800 classrooms in 1,100 schools. Emphasis is placed on training the technicians and skilled craftsmen needed in economic reconstruction. In 1954 there were about 2,703,500 pupils in 4,082 elementary schools; 431,600 students in 810 middle schools; approximately 40,000 graduates from 271 high schools; and 66,400 students in 13 universities, 31 colleges, 7 junior colleges, and 15 vocational and specialized schools; 1 private and 17 national normal schools were engaged principally in training elementary school teachers.

Religion.—There are no accurate statistics on the adherents of various faiths in Korea. Confucianism and Buddhism predominate over Chuntoism (Chondo-kyo), Christianity, and Tankun-kyo (the religion of Tankun, mythical founder of Korea). According to the 1953 *Korean Year Book*, there are approximately 2,460 Presbyterian churches with 700,000 members, 625 Methodist churches with 120,000 members, 190 Baptist churches with 59,700 members, and 150 Roman Catholic churches with 300,000 members.

² This amendment bill, forced through the assembly despite the lack of a two-thirds majority vote, also permitted Dr. Rhee (but no subsequent president) to run for re-election for life; authorized national referendums on "national crisis" legislation and future constitutional amendments; called for the election of half the members of the House of Councilors every three years, and gave that house the right to confirm the appointment of the chief justice, the prosecutor general, and other government officials; authorized nonconfidence votes by the House of Representatives against individual ministers, requiring immediate resignation (instead of the previous right to force the resignation en bloc of the State Council by a nonconfidence resolution); reduced government control over national resources and the economic system and encouraged a free enterprise system; and established the constitutional legality of court-martial procedures.

Economic Conditions.—Korea is basically an agricultural nation. In 1944 production of major food crops totaled 149,803,176 suk (1 suk = 5.119 bushels), of which 93,305,830 suk were produced in the south. About 75% of the nation's industrial production and 85% of its mineral production were credited to the north. This complementary economic system was disrupted by the division of the country in 1945, and the subsequent war left the economy in chaos.

Because of favorable weather conditions, South Korea harvested bumper crops in 1953 and 1954, but a prolonged drought in the spring of 1955 curtailed the food supply. In 1954, 157,000 metric tons of wheat and 270,000 metric tons of potatoes were produced. The 1954 rough rice crop was estimated at 2,143,252 metric tons (2,019,425 in 1953). The fish catch totaled 248,864 metric tons in 1954, as compared with 258,045 metric tons in 1953, and in the first four months of 1955 it declined 21% below that of the same period of 1954.

The index of industrial activity (1949 = 100) rose from 143 in 1953 to 151 in 1954. In the same period the output of cotton yarn increased from 13,320 to 20,830 metric tons. Coal production rose from 867,000 metric tons in 1953 to 891,000 metric tons in 1954, but that of tungsten declined from 7,741 to 2,831 metric tons because of the termination of the United States purchase agreement on March 31, 1954. Although the output of electric power increased from 732 million kw.-hr. in 1953 to 898 million kw.-hr. in 1954, the consumption of power by industries and homes is still rationed.

Korean foreign trade has been declining. In 1954, exports amounted to \$24.2 million, and imports to \$93.9 million, as compared with \$39.6 million and \$153.6 million, respectively, in 1953. For the first 4 months of 1955, exports totaled \$4,641,700, and imports \$22,444,400.

The price of rice, the principal food, has more than doubled since June 1954. The general wholesale price index (1948 = 100) rose from 4,132 in June 1954 to 8,602 in June 1955. Although average wages in Seoul increased 87% over 1954, the cost of living also rose. In June 1955 the cost-of-living index (1948 = 100) stood at 11,432, as compared with 5,322 in June 1954.

Largely because of increased government overdrafts and expanding bank loans, the money supply rose from 33.3 billion hwan in April 1954 to 47.6 billion hwan in April 1955. (For a discussion of the hwan-dollar exchange rate, see below, *United States-South Korean Relations*.) In the fiscal year 1955 the net budgetary deficit was 28.96 billion hwan.

The budget for the fiscal year 1956, as passed by the National Assembly on July 31, 1955, amounted to 169.87 billion hwan. Major allocations were as follows: Ministry of Home Affairs, 23.18 billion hwan; Ministry of Education, 23.44 billion; national defense, 91.12 billion. Revenue was estimated at 147.79 billion hwan. The State Council later decided that the budget should be revised to meet President Rhee's emergency measures.

Relief and Rehabilitation.—In the fiscal year 1955, \$307.4 million was made available for economic rehabilitation programs in Korea—\$280 million from the United States and \$27.4 million from the United Nations. The actual amount of aid goods brought in during the year, however, was valued at \$205.1 million.

According to the International Cooperation Administration (ICA), \$460 million in United

States aid was slated for South Korea in the fiscal year 1956. This sum included \$180 million for direct forces support, \$272 million for defense support, and \$8 million for technical cooperation. At the date of writing, the U.S. Department of Defense had not published figures on expenditures for Korean military forces in the fiscal year 1956, but in the preceding fiscal year military aid reportedly amounted to over \$420 million.

Political Developments.—There were a number of cabinet changes during 1955. The most important was occasioned by the resignation on July 30 of Pyun Yung Tae, foreign minister since 1951. He was replaced by Cho Chung Hwan.

Opposition parties do not thrive in Korea. The Korean Democratic Nationalist Party had been a major political force since the early days of United States occupation, but it gradually became impotent after the launching (1951) by President Rhee of the Liberal Party, of which he is chairman. Nevertheless, an undercurrent of opposition in the National Assembly and among the public remained. On Sept. 19, 1955, a new organization, the Democratic Party, was formed by 34 assemblymen, the entire Korean Democratic Nationalist Party membership, and other dissidents. Some 1,700 sponsoring delegates from different parts of South Korea met at the Municipal Theater in Seoul to inaugurate the party, whose main planks are denunciation of all forms of totalitarianism, support for a republican form of government with representatives elected in a free atmosphere, and cabinet responsibility.

On September 20, the new party's Central Committee elected Song Kyung Won chairman and Pak Sun Chon vice chairman. Members elected to the Supreme Committee were Shin Ik Hi, former speaker of the National Assembly; Chough Pyung Ok, former minister of home affairs; Chang Myun, former premier; Kwak Sang Hoon, vice speaker of the assembly; and Paek Nam Hoon.

United States—South Korean Relations.—After nearly two months of discussions in Washington, United States and South Korean officials agreed to change the official exchange rate to 500 hwan to \$1, effective Aug. 15, 1955. The agreement stated that this would be "the rate for all foreign exchange transactions of the Government of the Republic of Korea and its agencies," and would "be applicable to United States aid furnished for the importation of goods and services into Korea," with minor exceptions. Two months later the rate in the open market reportedly rose to 1,200 hwan to \$1.

A serious dispute over the taxation of foreign businessmen in South Korea occurred during 1955. On May 19, the Ministry of Finance complained that of 103 foreign firms known to be doing business in the country, 69 had applied for and received licenses, 4 had applied for licenses which were not granted, and 30 had not even filed. Moreover, only 9 firms had registered with the Seoul District Court in accordance with law. On June 17, the ministry warned that exit visas would be denied to all such delinquents. On August 27, the American Chamber of Commerce in Korea charged the South Korean government with holding as "a virtual prisoner" one of its members whose company allegedly owed \$140,000 in retroactive taxes. Two days later all foreign business firms closed their doors in a one-day protest.

On August 30, the chamber appealed to the United States ambassador and sent to its Washington headquarters an urgent message, which

was forwarded to the secretary of state on September 7. The message scored the "arbitrary imposition" of "exorbitant sums labeled tax but not implied by Korean tax laws and assessed with caprice," and complained that "approximately forty members are held as individual hostages for their corporations." The Ministry of Commerce and Industry declared on September 3 that "all foreign individuals or companies" could "leave Korea as quickly as possible with the understanding that payment of taxes due will be waived." Subsequent talks were held, and on November 21 a compromise settlement was reached.

(See also JAPAN.)

NORTH KOREA

The Korean Democratic People's Republic was set up in North Korea in September 1948. After elections held independently of the U.N. Temporary Commission on Korea, it proclaimed itself the government of all Korea. It is headed by Kim Il Sung as premier and Kim Doo Bong as chairman of the Presidium of the 572-member Supreme People's Assembly.

For the most part, trends in North Korea remain the subject of rumor, unverified reports, and propaganda. It is reported that in 1954 there were 3,670 people's schools, 1,253 high schools, 78 technical and junior colleges, and 16 universities and colleges, and that universal compulsory education will be enforced in 1956.

The Pyongyang radio has claimed that over 20,000 chungbo (1 chungbo = 2.45 acres) of wasteland have been reclaimed, that the mining industry has overfulfilled its production target by 29%, and that by the end of July 1955 the machine industry had met its production target by 107%. It is stated that since the armistice 230 factories have been or are being rehabilitated, and that 60 new ones have been built.

Despite these claims there are apparently some difficulties. *Minju Chosun* said editorially on Oct. 6, 1955, that some factories "are still having difficulty in the fulfillment of production quotas because of a lack of strong leadership on their part." According to the Soviet newspaper *Izvestia*, grain production in 1954 increased only 3% over 1953, and coal output was only half the 4 million metric tons of 1949.

Rehabilitation in North Korea has been backed by the Communist bloc of nations. In September 1953, the Soviet government "assigned gratuitously" 1 billion rubles (\$250 million) for the rehabilitation of the North Korean economy. The Communist Chinese government promised to grant North Korea 8 trillion yuan (equivalent to 800 million new yuan, or \$338 million) for economic rehabilitation under the terms of a 10-year economic assistance agreement signed on Nov. 23, 1953. Other nations, among them Poland, Czechoslovakia, Rumania, Bulgaria, and East Germany, reportedly have furnished various goods and services. North Korea has published no figures on the amount of military aid received.

POST-ARMISTICE DEVELOPMENTS, 1955

The Korean Armistice Agreement signed on July 27, 1953, provided that a political conference be called to work out the reunification of Korea. A conference was held at Geneva, Switzerland, on April 26–July 21, 1954, but it ended in a deadlock on the subject of free elections. Meanwhile, the truce has been maintained, however precariously, despite numerous charges of

violations. On Nov. 29, 1955, the U.N. General Assembly adopted a United States-sponsored resolution expressing a desire to continue the armistice agreement and requesting that the question of Korean unification and independence be taken up again at its 11th session in 1956. (See also UNITED NATIONS.)

Troop Withdrawals.—Apparently both the United Nations and Chinese Communist commands are trying to build up Korean forces so that their own troops can be withdrawn. This will eventually restore the situation which existed in Korea before the Korean War. It is impossible to ascertain the accurate strength of the North Korean forces, but the U.N. Command has charged that the Communists are building up their air force illegally. Meanwhile the South Korean Army reportedly totaled some 661,000 men, including 20 active and 10 reserve divisions, as of June 1955. There were about 13,000 men and 40 ships in the navy. The small South Korean Air Force received its first F-86 Sabre Jet planes in June 1955.

By the end of 1955 the U.N. Command had greatly reduced its forces in Korea. In January the 1st Royal Thailand Battalion sailed for home, leaving only one company behind. Canada withdrew the Queen's Own Rifles Battalion in March, leaving only one destroyer and an ambulance field unit. The last Philippines units left in May, and those of Belgium in June. Greek forces completed their withdrawal in September. There remained only two United States divisions and a skeleton British Commonwealth division. The Chinese Communists announced the withdrawal of 6 more divisions from North Korea in October, bringing the total withdrawal to 19 divisions since the autumn of 1954.

U.N. Command.—On April 1, 1955, retiring Gen. John E. Hull turned over his posts as commander in chief of the U.N. Command and of the U.S. Far East Command to Gen. Maxwell D. Taylor, whose posts of commander of U.S. Forces, Far East, and of the U.S. Eighth Army were assumed by Gen. Lyman L. Lemnitzer. On June 30, General Taylor succeeded Gen. Matthew B. Ridgway as U.S. Army chief of staff, and General Lemnitzer assumed General Taylor's dual command role. Gen. Isaac D. White then succeeded General Lemnitzer in his subsidiary command posts.

The Korean Communications Zone was inactivated at the end of June 1955, the U.S. Eighth Army assuming logistical responsibilities for United States and United Nations forces, and the South Korean Second Army for Korean supply requirements. On July 25, it was announced that Eighth Army headquarters would be returned to Korea from Japan.

Dispute over the Neutral Nations Supervisory Commission.—The Neutral Nations Supervisory Commission (NNSC), which was created by the armistice agreement as a subsidiary to the Military Armistice Commission (MAC) to inspect military activities at 10 Korean ports of entry and to investigate alleged violations in other specified areas, has had a controversial career from the outset. It has often been deadlocked between the Polish and Czechoslovak members on the one hand and the Swedish and Swiss members on the other.

On Jan. 27, 1955, the Swedish and Swiss governments sent identical notes to the United States and Communist Chinese governments, asking that they consider terminating the NNSC, or at least reducing the personnel of the four na-

tions represented on it. On March 2, Washington endorsed abolition, but Peking, on March 5, favored the more "acceptable" alternative. On August 29, the MAC agreed to reduce the number of ports of entry to 6, withdrawing inspection teams from Chongjin and Hungnam in North Korea and Kangnung and Taegu in South Korea. The remaining teams were each cut from four to two members.

Meanwhile, on August 6, the South Korean government, which had long considered the Polish and Czechoslovak members as spies, ordered the NNSC to leave Korea before August 13. It staged a series of violent demonstrations against the Communist truce inspectors, especially at Inchon and Kangnung, where United States troops protected them.

On August 10, U.S. Secretary of State John Foster Dulles noted: "Under the terms of the Korean Armistice Agreement there is an obligation upon the U.N. Command to give protection to the members of these teams. That is an obligation which we expect to carry out, and we do not believe that it is an obligation which the South Koreans ought to try to challenge by force, as they are now seeming to do." A few hours before the August 13 deadline, President Rhee announced that it would no longer be in effect, but insisted that he was not abandoning his objective. Demonstrations against the Polish and Czech members continued, but on December 10, Rhee asked that they be halted.

YONGJEUNG KIM,
President, Korean Affairs Institute.

KRESS, Samuel Henry, American businessman and art collector: b. Cherryville, Northampton County, Pa., July 23, 1863; d. New York, N.Y., Sept. 22, 1955. Founder and chairman of S. H. Kress & Co., one of the largest department-store chains in the United States, he was also prominent as a collector and donor of great art works.

Educated in the public schools of Slatington, Pa., Kress became a teacher in 1880. In 1887 he acquired a small stationery and novelty store in Nanticoke, Pa., and in 1890 a wholesale stationery and toy business in nearby Wilkes-Barre. Following in the footsteps of Frank W. Woolworth, he opened his first five-and-ten-cent store in Memphis, Tenn., in 1896. Four years later, after he

had established 11 other stores, he moved to New York, which became the chain's headquarters. By 1955 the organization he had founded was operating 264 stores in 29 states and Hawaii and employing over 22,000 persons. In 1954 its sales totaled \$169,416,847.

Relinquishing the presidency of the company to a younger brother, Claude, in 1924, Kress turned to art collecting. He became particularly interested in Italian art of the 13th to the 18th century and began spending large sums in the acquisition of paintings, sculptures, velvets, and brocades, which collectively came to constitute one of the largest private art collections in the world.

Kress' philanthropy was no less spectacular than his purchases. In 1929 he established the Samuel H. Kress Foundation, which by 1955 had acquired nearly 2,000 art treasures valued at \$75 million, and had donated hundreds of paintings and sculptures to the Metropolitan Museum of Art in New York, the National Gallery of Art in Washington, and other museums. The foundation also allocated funds for medical science, including a sum exceeding \$8 million for post-graduate medical education to the New York University-Bellevue Medical Center in 1949.

In 1939, Kress gave 375 paintings and 18 pieces of sculpture, mostly Italian, to the National Gallery of Art, then being erected. Valued at \$25 million, these included *The Adoration of the Shepherds* by Il Gorgione, *Allegory* by Titian, *Madonna and Child* by Giotto, and works by Giovanni Bellini, Andrea Mantegna, Fra Filippo Lippi, and Fra Angelico. By the time of his death, Kress had donated over 600 paintings and sculptures to the gallery. He was president (from 1945) and trustee of the National Gallery and trustee (from 1936) of the Metropolitan Museum of Art. In his will he left the larger part of his estate to the National Gallery and to charity.

KRISHNA MENON, V(engalil) K(ishnan), Indian diplomat: b. Calicut, India, May 3, 1897. India's chief delegate to the United Nations and Prime Minister Jawaharlal Nehru's personal adviser on international affairs, he is an advocate of self-determination and neutrality for the peoples of Asia and Africa and of "peaceful coexistence" of the East and West, as well as a severe critic of Western policy in Asia.

A graduate of Presidency College, Madras (B.A., 1916), he went in 1924 to England, where he studied at the University of London (B.S., 1927, London School of Economics; M.A., 1930, University College; M.Sc., 1934, London School of Economics) and was admitted in 1934 to the bar at the Middle Temple. Meanwhile, he worked vigorously for a free India, serving from 1929 to 1947 as secretary of the India League and writing prolifically on Indian independence.

During World War II, Krishna Menon served as Nehru's unofficial spokesman in Great Britain, and in 1946 he became the Indian leader's "personal representative" at large. As such, he visited a number of European countries to arrange for the establishment of diplomatic relations after India became independent. When the subcontinent was partitioned in 1947, Nehru appointed him high commissioner for India in Great Britain, a post he held until 1952, when he became a member of and spokesman for the Indian delegation at the U.N. General Assembly. It was his resolution on the repatriation of war prisoners which broke the deadlock in negotiations between Com-

munist China and the U.N. Command in Korea and paved the way for the conclusion of an armistice. In 1953 he was elected to the Indian Council of States.

Since then, Krishna Menon has been Nehru's unofficial ambassador at large, in which capacity he attended the 1954 Geneva Conference and the 1955 Asian-African Conference (q.v.). In April 1955, Communist Chinese Premier Chou En-lai invited him to Peking to discuss the Formosa question. Soon after the Peking talks of May 11-21, he visited London (June 3-8), where he met with Prime Minister Sir Anthony Eden and Foreign Secretary Harold Macmillan; and Washington (June 14), where he conferred with President Dwight D. Eisenhower and Secretary of State John Foster Dulles. With U.N. Secretary General Dag Hammarskjöld, he is credited with having influenced Communist China to release imprisoned United States airmen. In November, at the tenth session of the U.N. General Assembly, he devised a compromise which enabled France to resume its seat in the assembly.

KURIL (KURILE) ISLANDS. A chain of some 30 large and numerous smaller islands and reefs, extending from the tip of the Kamchatka Peninsula of Siberia to within a few miles of the coast of Hokkaido, Japan. Area, 5,700 square miles; pop. (1940), 17,549. In 1945 the Soviet Union took over the islands under the Yalta agreement. Since 1947 the Kurils have been part of the Sakhalin Oblast of the Russian Soviet Federated Socialist Republic. Russian settlers largely displaced the Japanese, who were repatriated. Chief occupations are whaling, fishing, lumbering, sulfur mining, and hunting. Under the Japanese Peace Treaty of 1951, Japan renounced all claim to the Kurils, although the islands were not specifically assigned to the USSR.

KUSCH, Polykarp, American physicist: b. Blankenburg, Germany, Jan. 26, 1911. Winner with Willis E. Lamb, Jr. (q.v.), of the 1955 Nobel Prize in physics, he was cited "for the precision determination of the magnetic moment of the electron."

Taken to the United States in 1912, Kusch was naturalized in 1922. He was educated at the Case Institute of Technology (B.S., 1931) and the University of Illinois (M.A., 1933; Ph.D., 1936). Since 1937, with the exception of several years at Westinghouse (1941-42) and the Bell Telephone Laboratories (1944-46), he has taught and done research at Columbia University, where he became a full professor in 1949.

Both Kusch and Lamb carried on experiments on atomic structure at Columbia under I. I. Rabi, also a Nobel Prize winner. The results of their independent but related work, published in 1947, showed that the electron theory advanced by the English physicist, P. A. M. Dirac, for which he received the Nobel Prize in 1933, did not agree with the experimental evidence. Kusch was able to measure with great accuracy, by passing atomic beams through a magnetized vacuum (the molecular beam method), the magnetic moment or strength of electrons moving around nuclei of hydrogen atoms. His measurements showed that the magnetic moment was 0.125% greater than the value predicted by Dirac. The experiments of Kusch and Lamb have brought about important modifications in theoretical physics by extending knowledge of the structure of the atom.

KUWAIT. See ARABIA.

LABOR. Throughout 1955 American labor enjoyed steady employment, record earnings, and high purchasing power. Business gains and a favorable outlook for 1955 lessened employer resistance to bargaining for wage increases (immediate or deferred), income guaranties, and more liberal fringe benefits.

"The American Federation of Labor and Congress of Industrial Organizations," a single federation headed by AFL President George Meany, was formed in a joint convention of the AFL and CIO at New York City, in December. This merger closed a 20-year breach in labor's ranks. The new constitution recognizes both craft and industrial unions.

Membership in the 199 national and international unions with headquarters in the United States was estimated by the Bureau of Labor Statistics at about 18 million, at the beginning of 1955. This figure, based on union reports to the bureau and bureau estimates, was distributed as follows: AFL, 10.9 million; CIO, 5.2 million; and the 58 national or international independent unions, 1.8 million. The 18 million total included more than a million workers outside the continental United States, chiefly in Canada.

Most labor-management contracts negotiated in 1955 provided for wage increases. Industrial wage increases approached 10 to 12 cents an hour. Secretary of Labor James P. Mitchell stated in September, compared with 5 to 9 cents in 1954. At U.S. Steel Corporation, the CIO Steelworkers won a 15-cent-an-hour increase. The United Mine Workers (Ind.) announced a \$2-a-day raise for soft-coal miners.

Supplemental unemployment benefit plans were included in about 100 settlements through September, commencing with June agreements reached by the CIO Auto Workers with Ford and General Motors. The UAW-CIO contract with the Ford Motor Company, one of the most significant collective bargaining settlements in recent years, represented a compromise over the union's guaranteed annual wage proposal. The union's preparations for the 1955 negotiations began more than 4 years earlier.

Approximately two thirds of a group of 556 settlements concluded in the first 6 months of 1955 which also increased pay rates likewise changed one or more supplementary benefits, the Bureau of Labor Statistics found. Health and welfare plans were modified or initiated most often. Over a million workers were affected by pension plans inaugurated or amended. Gains were also made through collective bargaining on union security, vacations, and holidays.

In the 84th Congress, the minimum hourly wage under the Fair Labor Standards Act was raised to \$1, effective March 1, 1956; and pay raises were granted to federal classified and postal field-service employees. In the state legislative sessions, Utah enacted a "right-to-work" law. Fair employment practice laws were adopted by three states, and state workmen's compensation and unemployment insurance systems were substantially improved.

Organized labor continued to be critical of the Republican administration and Congress. It also criticized National Labor Relations Board appointments and policies.

American labor was alert to developments abroad. In discussions preliminary to the 38th International Labor Conference, the American delegation was successful in urging International Labor Organization (q.v.) investigation of enforced

labor. At the Fourth World Congress of the International Confederation of Free Trade Unions, the AFL, CIO, and United Mine Workers (Ind.) joined in support of strengthened regional programs which offer a challenge to communism in underdeveloped areas of the free world.

Labor and the Economy.—By the beginning of 1955, employment and production in the United States appeared to have regained about one half of the 1953–54 loss, according to the Congressional Joint Committee on the Economic Report. By June 1955, gross national product reached a seasonally adjusted annual rate of \$384.8 billion, compared with \$364.5 billion for 1953, the previous most prosperous year. In June, the Federal Reserve index of industrial production was 139% of the 1947–49 average. Steel production and demand continued high, and the coal industry's outlook improved.

Unemployment had receded, by early 1955, approximately 23% below May 1954. From 2.8 million in February, Bureau of the Census estimates (seasonally adjusted) fixed unemployment at 2.1 million in September, 96% of 1947–49. This was about 1 million below the previous year and represented 3.2% of the civilian labor force. When the year opened, 44 major employment areas were classified by the Bureau of Employment Security (q.v.) as having "substantial labor surplus," that is, showing as unemployed 6% or more of the workers covered by unemployment insurance. By the end of September, such areas numbered 26.

Nonfarm employment, the Bureau of Labor Statistics estimated, rose by 1.6 million to 49.3 million in the first half year; by September, the 50.3 million (in a 64.7 million civilian labor force) was 60,000 above the September peak reached in 1953. Factory jobs rose each month. Total accessions exceeded separations; quit rates increased substantially over mid-1954; and lay-offs dropped.

The factory workweek, at 41.0 hours in September 1955, was 1.3 hours above the September 1954 figure and higher than in any other post-war September except in 1952. Gross weekly earnings (including overtime and other premium pay) averaged \$77.90 in September (compared with \$71.86 a year earlier), an all-time peak.

The Consumer Price Index in June (114.4) showed the first monthly change of more than 0.1% since December 1954. In September, factory workers possessed greater buying power than ever before—7.8% higher for single workers in comparison with September 1954, and 7.1% greater for family workers. The take-home pay of the single factory worker, after Social Security and federal income tax deductions, was \$64.23 a week in September (in 1947–49 dollars), up \$4.68 over the year before. Comparable figures for the factory breadwinner with 3 dependents were \$71.55 and \$4.77. (See also COST OF LIVING; INCOME; INDUSTRIAL PRODUCTION; LABOR FORCE, WORLD.)

Labor Union Developments.—On December 5, in joint convention at New York City, the AFL and CIO merged to form the American Federation of Labor and Congress of Industrial Organizations. The constitution, following closely an historical merger agreement signed by AFL and CIO presidents on Feb. 9, 1955, relies on voluntary mutual efforts by affiliates to solve jurisdictional conflicts. State and local central bodies will have two years in which to arrange mergers. The CIO had been formed in 1935 by a group of AFL

George Meany (left), president of the AFL-CIO, which merged on Dec. 5, 1955, and Walter Reuther, head of the labor organization's Industrial Union Department.

unions, holding its first convention in 1938. (See also AMERICAN FEDERATION OF LABOR; CONGRESS OF INDUSTRIAL ORGANIZATIONS.)

The no-raiding pact, signed by AFL and CIO leaders on Dec. 16, 1953, as a foundation for efforts toward unity, was ratified by 108 affiliated unions. Exceptions were, notably, the AFL Teamsters and three CIO unions—the Lithographers, Shipbuilders, and Mechanics Educational Society of America.

A trend toward mergers among smaller unions in 1954 was followed in 1955 by other manifestations of agreement. AFL Machinists and Iron Workers settled past differences. Among examples of joint bargaining, the CIO Steelworkers and AFL Aluminum Workers concluded successful negotiations with Alcoa, as did also the CIO Packinghouse Workers and the AFL Meat Cutters, jointly, with Armour.

Organized labor in the United States continued its firm stand against communism. Throughout the year, AFL and CIO executive bodies scanned proposed jurisdictional changes and organizing activity closely, to prevent any Communist-dominated groups from gaining admittance. Four unions, expelled with 7 others from the CIO in 1949–50 for Communist ties, exist as unaffiliated unions, but their combined membership is approximately one third of the 850,000 to 900,000 estimated for all 11 when they were expelled.

Labor-Management Relations.—Man-days idle in 1955 (28.0 million) from work stoppages were below postwar years other than 1951 and 1954.

Wage increases were won through collective bargaining in basic steel and steel products, aluminum, farm implements, autos and auto parts, electrical equipment, petroleum, rubber, interstate trucking, local transit, textiles, construction, mining, dockloading, and other industries.

Wage increases of 9 to 11 cents an hour were reported for over a third of the 2,300,000 workers covered by 556 contracts negotiated in the first half of 1955 and studied by the Bureau of Labor Statistics. Deferred increases were contained in at least 76 of these contracts, affecting about 1 million workers. A substantial number of the contracts gave extra increases to skilled workers.

The CIO Steelworkers, at U.S. Steel Corpora-

tion, obtained a wage increase averaging about 15 cents an hour. (See also IRON AND STEEL.) Extra wage increases for skilled workers, higher annual improvement factor wage increases, as well as improved pension and welfare benefits and a more liberal escalator clause, were provided in the agreements concluded by the CIO Auto Workers with Ford and General Motors. (See also AUTOMOBILES.) The UMW (Ind.) announced the first increase for soft-coal miners in three years, a \$2-a-day raise (part on Sept. 1, 1955, and the rest on April 1, 1956), bringing the basic daily rate to \$20.25.

The CIO Auto Workers gained a form of the guaranteed wage in the Ford agreement of June 6 and the generally similar General Motors agreement of June 13, providing for employer contributions of 5 cents a man-hour toward supplemental unemployment benefits. Hourly rated workers with at least one year's seniority, will, if laid off, be guaranteed payments (not earlier than June 1, 1956) which, with state unemployment insurance benefits, would give them a maximum of 65% of their weekly straight-time take-home pay (after taxes) for 4 consecutive weeks and 60% for the next 22 weeks. The UAW-CIO settlement with Allis-Chalmers guaranteed 65% for 26 weeks. The CIO Steelworkers signed agreements with the American Can Company and the Continental Can Company to bring combined unemployment benefits for workers with 3 years' seniority up to 65% for 52 weeks. By the end of September 1955, about 1 million workers in various industries were covered by such plans, most of them negotiated by the UAW-CIO.

Implementation of these plans was conditioned on favorable rulings in major employing states, to permit a worker to receive both state unemployment insurance and company supplemental benefits—a ruling given first in Michigan and next in Massachusetts and Connecticut. The U.S. Department of Labor ruled that employer contributions to supplemental unemployment benefit funds, such as that negotiated between the CIO Auto Workers and Ford, may be excluded in computing "wages" for purposes of overtime pay, under the Fair Labor Standards and Public Contracts acts. The U.S. Internal Revenue Service informed Ford and General Motors that such contributions are deductible for income tax purposes, as business expenses.

For the first time, contracts between the CIO Auto Workers and General Motors and Allis-Chalmers granted the full union shop.

Some of the larger work stoppages, in terms of workers concerned, area affected, or period of time, involved the AFL "nonoperating" railroad unions and the Louisville and Nashville Railroad system; CIO Communications Workers and Southern Bell Telephone and Telegraph; AFL Hotel and Restaurant Employees and several Miami, Fla., area hotels; CIO Textile Workers and New England cotton and rayon mills; AFL Teamsters and southern New England truckers (later, west coast truckers); CIO Auto Workers and International Harvester (also, Kohler Corporation); the independent Mine, Mill and Smelter Workers and Phelps Dodge, Kennecott, and American Smelting and Refining; and the CIO Electrical Workers and Westinghouse.

Labor Legislation.—New federal laws concerning labor had these effects:

The increase in the minimum wage payable under the Fair Labor Standards Act, from 75 cents to \$1 an hour (March 1, 1956) directly affects some 2 million workers, mostly in the South.

Half a million postal field-service employees received a 6% salary increase, starting March 1, 1955, and through job reclassifications would obtain an additional 2.1% within 180 days after that date. A retroactive 7.5% increase was also given to about 1 million federal classified employees, as well as to employees of the legislative branch. (See also CIVIL SERVICE.)

Amendments to the Railroad Retirement Act, administered by the Railroad Retirement Board, resulted in increased benefits for about 80,000 wives of retired railroad employees and about 7,000 survivors (principally aged widows) of deceased railroad workers.

In addition, a renewed Mexican farm labor agreement gave the Department of Labor authority to carry on its program of services to immigrant farm laborers for 3½ years beyond Dec. 31, 1955.

Organized labor characterized the record of the 84th Congress as "generally disappointing," although recognizing at the same time the "constructive" minimum wage and federal pay legislation. The Labor Management Relations Act of 1947 (Taft-Hartley Act) was not changed. Labor had also unsuccessfully backed extension of the Fair Labor Standards Act to additional employee groups and liberalization of federal old-age and survivors insurance requirements. "Once labor is united," AFL President George Meany declared on Labor Day, "we are resolved to intensify the political activities of labor." Organized labor called for federal assistance in solving problems presented by unemployment in chronically depressed areas, shifting industry, and automation.

Department of Labor.—At the Department of Labor, the assistant secretaryship left vacant by the resignation of Harrison Hobart in 1954, remained unfilled. Amid objections from labor, Newell Brown, New Hampshire director of employment security, was confirmed by the Senate on Aug. 2, 1955, as administrator of the Wage and Hour and Public Contracts Divisions (q.v.). Ewan Clague, nearly a year after his appointment had expired, received Senate confirmation, on July 30, 1955, for a third 4-year term as commissioner of labor statistics.

State Legislation.—At least 8 of the 45 state (and 3 territorial) legislative sessions adopted laws in 1955 governing labor relations. Ohio and Rhode Island made arbitration awards enforceable in state courts. Utah was the only additional state to adopt a "right-to-work" law, but union restrictions were added to the state labor relations act in Kansas; South Dakota strengthened its antipicketing and "right-to-work" laws; and Texas outlawed picketing by minority unions. Unions were prohibited, in New Hampshire and Wisconsin, from contributing to political campaigns.

Maximum basic weekly unemployment insurance benefits were increased in 32 states. Idaho, New Mexico, and Wyoming adopted minimum wage laws for the first time. Michigan, Minnesota, and Pennsylvania enacted mandatory fair employment practice laws. Workmen's compensation benefits for one or more types of disability were raised in 35 states, as well as in Alaska and Hawaii.

The U.S. Senate Subcommittee on Welfare and Pension Funds (83d Congress) reported in January 1955, after a 6-month investigation of a small number of plans and existing sources of regulation. It found corrective legislation needed and immediate strengthening of state and federal

administrative controls. The 84th Congress continued the inquiry. Both the AFL and the CIO unanimously approved programs to safeguard welfare funds and called for legislative action to obtain public disclosure of fund operations. This type of provision was contained in a new Washington state law. At least 12 million workers are covered by some type of health and insurance or pension plan under collective bargaining agreements.

Labor and the Law.—The National Labor Relations Board (q.v.) elaborated on its 1954 jurisdictional standards regarding radio stations (*Lynett et al.*, Feb. 24, 1955), transit companies (*Rollo Transit*, Dec. 16, 1954), and other establishments; prescribed conditions for taking restaurant cases (*Bickford's, Inc.*, Dec. 16, 1954); and reaffirmed its policy of nonjurisdiction over hotel cases (Aug. 26 and Oct. 10, 1955, announcements).

Other significant rulings were made in the following cases during 1955—*Campbell Soup Co.* (January 18): for decertification purposes, craft employees may not be severed from an existing production and maintenance unit. *Clayton and Lambert* (February 8): welders do not form a separate and distinct craft for severance purposes. *Conrado Forestier* (March 4): the board's jurisdictional standards will be uniformly applied in all United States territories as in the 48 states. *Sand Door* (August 26): a "hot cargo" clause does not legalize a union's action in directly requesting employees to refuse to handle goods designated as unfair. *W. L. Mead, Inc.* (August 27): employees who went on strike although their contract required arbitration, violated the Taft-Hartley Act, even though the contract did not have a no-strike clause.

The U.S. Supreme Court dealt with the following noteworthy labor cases, among others, in 1955—*Westinghouse Salaried Employees v. Westinghouse Electric Corp.* (March 28): the Taft-Hartley Act does not give federal courts

JUSTUS IN THE MINNEAPOLIS STAR

"DELIVERING THE BLUEPRINTS?"

jurisdiction over a union's suit for wages allegedly owed its members under a collective bargaining contract. *Weber et al. v. Anheuser-Busch, Inc.* (March 28): a state may not invoke a state antitrust law to enjoin picketing reasonably coming under the Taft-Hartley Act. *Amalgamated Clothing Workers et al. v. Richman Brothers* (April 4): federal courts may not interfere in state court proceedings in matters subject to the Taft-Hartley Act, except upon NLRB request following an unfair labor practice complaint. *Whitin Machine Works v. NLRB* (April 11): the court, refusing to review a lower court ruling, upheld the NLRB's decision that a union is entitled to receive from an employer wage data essential to bargaining, including names and wage rates of employees in the bargaining unit.

"SPEECH SPOILER"

JUSTUS IN THE MINNEAPOLIS STAR

Important U.S. Supreme Court decisions in 1955 on Fair Labor Standards Act coverage included *Joyce Agency, Inc.* (February 28) and *Vollmer and Co.* (June 6).

The federal district court at Washington, D.C., in *Covington Mills et al. v. Mitchell* (April 4, 1955), ruled invalid a wage determination by the secretary of labor fixing a single minimum wage throughout the cotton, silk, and synthetic-textile industry, under the Walsh-Healey Public Contracts Act. The federal court of appeals reversed this decision on December 1. (See also *Law*.)

ILSE S. ADDICKS, *

Bureau of Labor Statistics, U.S. Department of Labor.

LABOR FORCE, World. The year 1955 was a good year for workers in most parts of the world. Industrial production was greater than in 1954 in many countries. Unemployment decreased and economic conditions in most countries were at least as good as in 1954. There remained, of course, perplexing problems, with unemployment still typical of some countries and chronic underemployment characteristic of others.

The need for moving workers from country to country led to the adoption by the International Labor Conference of a Recommendation on the Protection of Migrant Workers. Other ILO actions covered vocational rehabilitation and penal sanctions.

Technical assistance programs to improve skills in the labor force, employment placement services, and standards of labor relations, were continued in 1955 at a high level.

ILO Action in the Manpower Field.—Manpower problems claimed much of the attention of the 38th International Labor Conference in June 1955. Delegates from governments, employers, and workers and from the International Labor Organization (q.v.) meet each year to consider important labor problems and to recommend international labor standards to the 70 member nations.

The 38th conference adopted a Recommendation on the Protection of Migrant Workers in Underdeveloped Countries and Territories. The suggested labor standards in the instrument cover conditions faced by migrant workers in their outward and return journeys, including transportation, food, lodging, medical care, and placement in jobs. For the period of employment in the new country, the recommendation covers housing, wages, working conditions, trade union activities, social security provisions, and factors affecting the material, intellectual, and moral welfare of workers. For those workers who would remain in the new country, it sets forth standards for their stabilization and for their ultimate absorption into the new country.¹

The unanimous adoption of a Recommendation on Vocational Rehabilitation of the Disabled was another important ILO action in 1955. The instrument spells out basic standards for coordinated processes for medical, psychological, social, educational, and vocational services designed to meet the individualized needs of disabled persons. It includes principles and methods of voca-

¹ This action did not cover all people who migrate, but was focused on substantial movements of workers to or from underdeveloped countries. As with all ILO instruments, adoption by member countries is not obligatory, but the standards suggested will be of material assistance to those facing the problem of substantial migratory movements.

tional guidance, vocational training, and occupational placement. It suggests methods of administering these services, and of their coordination with medical services for disabled persons. It also describes ways of improving employment opportunities for disabled persons and of encouraging both employers and trade unions in promoting such opportunities.

In the United States, the President's Committee on Employment of the Physically Handicapped has done a noteworthy job in promoting the use of handicapped workers. With the federal and state agencies cooperating, the committee and its state and local affiliates assisted in placing 214,235 handicapped workers in employment in the 12-month period ending July 1, 1955.

The ILO Conference also adopted a convention calling upon member nations to abolish, wherever they may still exist, penal sanctions for breaches of contracts of employment. This convention, which member nations may voluntarily ratify, called for countries which do so to end penal sanctions within one year from the date of ratification. It condemned penal sanctions as "contrary to the modern conception of the contractual relationships between employers and workers and to the personal dignity of the rights of man."

The ILO placed the issue of forced labor on the agenda of its 1956 conference. U.S. Secretary of Labor James P. Mitchell, in his speech before the ILO, condemned forced labor and urged the ILO to "take advantage of every power, every resource, and every facility at its command to assure that effective action is taken against this form of bondage." This action follows a long series of developments in both the ILO and in the U.N. Economic and Social Council, looking toward a full fact-finding process and ultimate banishment of forced labor wherever it might exist.

Migration.—One problem in the utilization of the world labor force is the existence of too many workers in some countries and not enough in others. To alleviate this situation, a number of international agencies, both governmental and private, are active in promoting, financing, and giving technical assistance in the field of migration. Among the governmental organizations are the ILO, the Intergovernmental Committee for European Migration, the Organization for European Economic Cooperation, and the High Authority of the European Coal and Steel Community.

One of the most active of these organizations is the Intergovernmental Committee for European Migration (ICEM), supported by the United States and 23 other countries with a budget of \$46.5 million for the year 1955. During 1954, 119,000 migrants were moved through ICEM facilities. In 1955, 67,171 migrants from European countries had been moved by August 15 and the anticipated total for 1955 was estimated at slightly over 120,000. In the more than 3½ years of ICEM's existence, slightly more than a fourth of the 350,000 migrants moved in the program went to Australia; with Canada, the United States, Argentina, and Brazil receiving most of the others. In 1955 the largest number came from Italy.² (See also REFUGEES AND DISPLACED PERSONS.)

² ICEM also has working relationships with 11 voluntary agencies in which it provides funds which these agencies use as revolving loan funds for individual migrants. In 3 years, under such arrangements, more than 50,000 migrants have left Europe, chiefly for North American countries.

Technical Assistance.—Technical assistance in the manpower field continued through 1955 at a high level, especially in underdeveloped countries, largely through the auspices of United Nations agencies, the United States government, and the Colombo Plan.

A major portion of the United Nations technical assistance program in the manpower field was administered by the ILO. The projects cover a range of functions, including training programs, employment exchange services, vocational rehabilitation of the disabled, and assistance in labor statistics.

At a late summer period, the ILO reported 61 full-time experts in the manpower fields, 49 instructors, and 80 persons studying under fellowship grants in various aspects of this program.

The United States, through the International Cooperation Administration, in cooperation with the U.S. Department of Labor and other agencies, has conducted a varied program of technical assistance. It includes sending consultants in labor fields to foreign countries and bringing teams, trainees, and prominent citizens to the United States. These visitors study problems in their technical fields and are given an opportunity to meet Americans in all walks of life. In the fiscal year ending July 1, 1955, the U.S. Department of Labor serviced 652 foreign visitors under this program.

In Southeast Asia, the Colombo Plan, an organization of countries for the exchange of technical assistance through a sharing of skills in many fields, completed its fifth year of existence. (See COMMONWEALTH OF NATIONS.) Basically, the arrangement has provided for exchanging experts and sending young people for training to other countries. Since 1950, the Colombo Plan countries have exchanged 392 experts and provided training facilities for 2,676. Although the plan embraces many functions other than manpower, many activities have been directed toward improving workers' skills and providing for better utilization of the labor force.

Labor Force Situation by Area. *Western Hemisphere.*—The year 1955 saw a steady and consistent improvement in production and business in the United States. In September the U.S. Department of Commerce released figures showing that the civilian labor force totaled 66,882,000, including 64,733,000 employed and 2,149,000 unemployed. Those employed comprised 7,875,000 agricultural and 56,858,000 nonagricultural workers. The unemployment total was at its lowest point since the autumn of 1953. As the year approached an end there was every prospect for a continuation of the high employment trend, although, of course, there were still areas where employment was down, but the number of these was decreasing. (See also BUREAU OF EMPLOYMENT SECURITY; LABOR.)

In Canada, unemployment, after reaching almost 8% of the labor force in the spring of 1955, decreased by July to only 150,000 or 2.6%. This appeared to complete a readjustment in the economy and to be the end of aggravating difficulties which started in the fall of 1953, and which in general followed economic trends in the United States.

In most of the Latin American countries little change occurred in employment levels during 1955, as compared with 1954. Problems of unemployment persisted in some countries, notably Cuba and Panama. Public works programs were among measures aimed at easing such situations. In Cuba, the recently established Bureau of La-

bor Statistics released its first report on employment, and Census Bureau plans went forward for the regular collection of unemployment data, with technical assistance from the United States.

Shortages of skilled workers continued in such countries as Brazil, where industrialization has progressed rapidly. Chronic underemployment in agriculture and handicraft industries continued in large areas, notably among Indian populations of the Andean plateau across Bolivia, Peru, and Ecuador. At the same time, shortages of agricultural workers were reported in scattered areas.

Europe.—In Europe, the year 1955 was in many respects the best of the postwar years. In the first six months, for example, industrial production was running 10% higher than in the first half of 1954. In all countries except Italy and Denmark (and in Denmark the situation was not serious) unemployment was consistently below 1954 levels. Of course, there were trouble spots in 1955, with pockets of unemployment in particular industries and with seasonal unemployment still a vexing situation in some countries. Underemployment, especially in the countries of southern Europe, was troublesome.

A status of virtually "full employment," with some labor shortages, prevailed in 1955 as it did in 1954, in the Scandinavian countries, the Netherlands, England, France, Luxembourg, and Switzerland. Of the countries with difficult unemployment problems in 1954, substantial improvement took place in 1955 in Austria, Belgium, and Germany.

In Austria, measures taken in 1954 for economic improvement apparently helped to reduce unemployment to 75,000, or only 3.6% of the labor force, by June 1955. This compared with 119,600 and 142,200, respectively, in June 1954 and 1953.

In Belgium, the number of insured unemployed had dropped to 82,800, or 4% of the labor force, by August, as compared with 140,300 in August 1954. This reflected a consistent improvement in the unemployment situation since the peak postwar unemployment in 1953.

In Germany, unemployment dropped to the lowest point in the postwar period, with 495,000 registered unemployed in September, or 2% of the labor force. Except for the perennial problem of seasonal fluctuations, the Federal Republic had reached a point approaching full employment.

Ireland, Italy, and Greece continued to have unemployment and underemployment problems. In Ireland, chronic unemployment has been a problem for some years, ranging from 6% to almost 10% of the labor force. Some improvement was noted in 1955, however, with unemployment decreasing to 27,400 in August, representing 5.8% of the labor force.

Unemployment in Italy continued at about 2 million, or 10% of the labor force, in the early months of 1955, with underemployment estimated at various figures up to another 2 million workers. The economy in recent years has succeeded each year in absorbing the number of workers representing approximately the natural increase in the working population, but has not improved sufficiently to make a dent in the net total of unemployed and underemployed.

Unemployment and underemployment in Greece were apparently no worse than in 1954, but the problem of surplus manpower and the possibilities of more emigration are still matters of serious concern to Greek officials.

Iron Curtain Countries.—In 1955 full em-

ployment and scarcity of manpower for the desired industrial expansion were reported for the planned economies of the USSR and its European satellites. Press reports in these countries indicated that manpower resources among the agricultural population appeared to be drying up, especially in the Soviet Union where large numbers of city workers were recruited for agricultural work. They were especially needed for the program of reclamation of waste lands in central Asia. Other labor force shifts were reductions in armed forces, ranging from a claimed 640,000 in the Soviet Union to 9,000 in Albania, and release of white collar workers for production jobs.

Asia and Africa.—Chronic unemployment and underemployment continued to be serious problems in most countries of Africa and Asia, although no notable deterioration in this situation was observed in 1955. At the same time, shortages of skilled and managerial personnel, the lack of adequate educational facilities in many countries, and resistance to worker mobility for traditional, religious, and racial reasons continued to retard industrial development.

In Japan, deflationary policies, aimed at maintaining or improving the country's dollar exchange position, have adversely affected some industries. Registered unemployment was slightly less than 700,000 in July 1955, compared with a labor force of around 40 million. However, actual unemployment was estimated by trade union observers to be about double this amount. The figure might run to 6 million, according to NIKKIEREN, the Japanese Employers' Association, if the underemployed were included. The situation was considered sufficiently serious to play an important role in the government's proposals to develop an overall 6-year economic plan, with a target of full employment by the end of the fiscal year 1960.

Unemployment continued to be a problem of major concern in the Philippines. A public works program was developed in 1955, and a number of measures were proposed to bolster the economy generally. Although statistics are lacking, it has been estimated that unemployment may have run as high as 15% of the labor force, with an additional portion underemployed.

India's second Five-Year Plan (see INDIA), covering the years 1956–61, has as its central objective the solution of the unemployment problem as quickly as possible while increasing consumption and investment.

In Israel, unemployment was reduced during the first half of 1955 to 2½% of the labor force. This continued the steady improvement in the economic situation since 1953.

Oceania.—In Australia production was high in 1955 and inflationary pressures were mounting. There was full employment, with labor shortages and higher turnover. In July, registered unemployment was only 2,410, a new low since 1953. In October, a number of import restrictions were imposed as a deflationary measure. New Zealand, as during all of the postwar years, continued to have full employment in 1955.

LAMB, Willis E(ugene), Jr., American physicist: b. Los Angeles, Calif., July 12, 1913. With Polykarp Kusch (q.v.), he was awarded on Nov. 2, 1955, the Nobel Prize in physics "for his discoveries regarding the hyperfine structure of the hydrogen spectrum." Earlier in the year he had received the Research Corporation Scientific Award for 1954.

A graduate of the University of California (B.S., 1934; Ph.D., 1938), Lamb was in 1938 appointed instructor at Columbia University, where he became a full professor in 1948. Since 1951 he has been professor of physics at Stanford University.

Before he began his experiments in atomic physics, the results of which were published in 1947, it was held that the energy of different levels or states of the hydrogen atom was identical. His research with microwave radiation showed, however, that there was a very slight difference in energy between two levels. This difference is now known as the Lamb shift. Lamb's studies of the atom and the similar experiments of Kusch mark an important advance in theoretical physics.

LATIN AMERICAN ART. Argentina.—The Buenos Aires art galleries were very active during 1955 publishing books, monographs, and signed reproductions of Argentine art. Two important contributions were the three portfolios of silk screens by the painters Luis Seoane, Hector Basaldúa, and Rafael Alberti, and a collection of 18 lithographs of a nonobjective nature by Libero Badii, Antonio Fernández Muro, Sarah Grilo, Miguel Ocampo, Leopoldo Presas, Ideal Sánchez, Leopoldo Torres Agüero, and José María Lanús.

Bolivia.—In July 1955 the municipality of La Paz held the Third Salon of painting and sculpture. The two major prizes went to painter Enrique Arnal and sculptress Marina Nuñez del Prado. In August an exhibition of popular arts was organized as the country's first attempt to present in an organic form a spontaneous production of folklore.

Brazil.—From June to October 1955 the Museum of Modern Art of São Paulo held its Third International Biennial. The big prize was awarded to the French painter, Fernand Léger (q.v.). First prizes to a foreign painter and sculptor went respectively to Alberto Magnelli and Mirko, both Italians. Prizes to a Brazilian painter and sculptor went respectively to Milton Dacosta and Maria Martins.

Chile.—The Chilean painter Roberto Matta was presented by the Sidney Janis Gallery of New York City during January in an exhibit which was repeated at the Pan American Union in Washington, D.C., in February. The painter Enrique Zañartu held a one-man show at the Galerie du Dragon in Paris during the summer.

Colombia.—A recent government decree has established that all official buildings which cost at least half a million pesos should include a work of national art, either a painting or sculpture. The first step taken in compliance was creation of a mural by Pedro Nel Gómez at the Instituto de Crédito Territorial, Bogotá.

The Colombian painter, Alejandro Obregón, exhibited for the first time in the United States

at the Pan American Union in Washington in January. The progressive sculptor, Edgar Negret, was presented for the second time by New York City's Peridot Gallery in October.

Cuba.—During 1955 the new "Galerías Cubanas," which opened in Havana at the end of 1954, was very active. It is devoted to the promotion of the work of progressive Cuban painters and sculptors, and in March 1955 held a successful one-man show for the painter Cundo Bermúdez.

In the same month the Faculty of Social Sciences at the University of Havana held a large exhibit of paintings and drawings by Wifredo Lam; in April it presented the nonobjective oils and constructions of Luis Martínez Pedro and Sandú Darié; and in June it showed a series of ink drawings by Raúl Milán.

One of the most important events of 1955 was the creation of the National Institute of Culture by the Ministry of Education. One of the institute's first activities was the presentation of the ministry's collection of Cuban paintings and sculpture of the past decade at the new Palace of Fine Arts in Havana.

Dominican Republic.—In March 1955 the National Gallery of Fine Arts presented an exhibition of women painters, including Noemí Mella, Clara Ledesma, and Mounia André. The group known as "The Four" (Jaime Colson, Gilberto Hernández Ortega, José Gausachs, and Clara Ledesma) exhibited in June in the French Alliance Association in Ciudad Trujillo.

Ecuador.—The Pan American Union in Washington, D.C., presented during 1955 the work of two prominent Ecuadorian painters: in March, Manuel Rendon, who follows nonobjective expression; and in June, Oswaldo Guayasamin, who continues the indigenous trend. Later in May, Rendon held a one-man show in the Galerie de Berri in Paris, and Guayasamin participated in the Ecuadorian group show held in June-July in the Museum of Contemporary Art of Madrid, Spain, which also included works by Diógenes Paredes, Eduardo Kingman, and José Enrique Guerrero.

Guatemala.—The University of Guatemala presented in February a retrospective exhibit of the Guatemalan painter, Roberto Ossaye (1927-54), which was organized in memoriam by friends of the artist.

Mexico.—The Proteo Gallery in Mexico City inaugurated on March 17, 1955, its first salon of free art, with works by Mexican and foreign resident artists who consider themselves independent of political propaganda in their output. The exhibit included the Mexicans Rufino Tamayo, Carlos Orozco Romero, Pedro Coronel, Enrique Echeverría, José Luis Cuevas, Alberto Gironella, and Geles Cabrera. During July and August the same gallery presented a one-man show of small sculptures by Vicente Castillo Oramas.

In June exhibits were held in Paris of the Mexicans Rafael Navarro, who showed a selection of paintings at the Club des Quatre Vents, and José Luis Cuevas, whose drawings were successfully presented by the Galerie Edouard Loeb.

Panama.—A new progressive painter, Justo Arosemena, showed his work at the University of Panama, and later exhibited in Medellín and Bogotá, Colombia.

Peru.—Peru sent Mexico a large display of its art from pre-Columbian times. It was inaugurated on May 12, 1955, in the Palace of Fine Arts in Mexico City, and contained ceramics, textiles, jewels, colonial and 19th century paint-

ings, and the work of such contemporary artists as José Sabogal and Sérvulo Gutiérrez.

In Lima the Institute of Contemporary Art was inaugurated in July, and its opening exhibition presented works of Ricardo Grau, Sabino Springett, Fernando de Szyszlo, Sérvulo Gutiérrez, Jorge Piqueras, Joaquín Roca Rey, and others. The Peruvian sculptor, Joaquín Roca Rey, and architect Juan Pardo de Zela were awarded the first prizes in a contest held by the government of Panama for a monument to José A. Remón, late Panamanian president, which will be erected in Panama City.

Uruguay.—On July 28, 1955, the Torres García Museum, devoted to the work of the Uruguayan constructivist painter, Joaquín Torres García (1874–1949), was opened in Montevideo.

Venezuela.—In July 1955 the Museum of Fine Arts in Caracas presented a retrospective exhibition of 400 works by the Venezuelan expressionist painter, Armando Reverón (1889–1954).

The city of Valencia held an international exhibition of painting in September. First prize to a foreign artist went to the Frenchman Alfred Manessier, and first prize to a Venezuelan went to Pascual Navarro.

JOSÉ GÓMEZ-SICRE,
Chief, Visual Arts Section, Department of
Cultural Affairs, Pan American Union.

LATIN AMERICAN LITERATURE. Fiction.—The most significant literary events of 1955 took place in the field of fiction. Introduced to American readers in English translation were the short stories, *The Jewish Gauchos of the Pampas*, by the Argentine Alberto Gerchunoff, and a novel, *Born Guilty*, by the Chilean Manuel Rojas. Couched in an earthy idiom, Gerchunoff's tales have a delightfully folkloric flavor and are extremely touching in their mixture of pathos and humor. The life and landscape of the pampas is seen and experienced by the Jewish immigrants who created an uniquely new culture while trying to adapt themselves to the American environment. Known principally as a leading short story writer, Manuel Rojas surprised his readers with his powerful novel, which is rich in incident and deep in psychological penetration, and which faithfully mirrors the nature and society of his native land.

The novelette, *Pedro Páramo*, by the young Mexican short story writer, Juan Rufo, towers over all the numerous outstanding fictional productions of 1955. Availing himself of the most advanced narrative techniques and employing his typically lean and poetic language, Rufo tells the exciting saga of Pedro Páramo, a little despot in a remote rural area of Mexico, through the recollections of his son, mistresses, and other persons who loved, feared, or hated him.

Equally original was *La penúltima hora*, a novel in which the Colombian veteran, E. Caballero Calderón, dramatizes the final hours of the passengers in a plane which never reaches its destination. *La maldición*, a posthumous novel by the Mexican Mariano Azuela (1873–1952), which exposes the bureaucratic corruption of Mexico, was rather disappointing. On the other hand, *Las dos vidas del pobre Napoleón*, by Azuela's Argentine contemporary, Manuel Gálvez, was charmingly fresh and whimsical. It depicts the adventures and misadventures of a little man who decided to emulate Napoleon. Decidedly impressive were Manuel Mujica Lainez' *Los viajeros*; the novels, *La gota de mercurio*, by the Mexican Alejandro Nuñez Alonso; *El juramento*

and *La casa del ángel*, by the Argentines, Luis Horacio Velázquez and Beatriz Guido, respectively; and *El diablo sube el telón*, by the Colombian, Germán Beltrán, which was awarded the Espiral Prize. In short story writing, the young Chilean, Claudio Giona, showed considerable talent in *La difícil juventud*.

Nonfiction.—No work of nonfiction in 1955 surpassed in scope and erudition Daniel Cosío Villegas' *Historia moderna de México*, of which are available the first two of six volumes covering the crucial years 1867–1911. More popular in appeal is Germán Arciniegas' *Américo y el nuevo mundo*, a biography of Amerigo Vespucci.

More than a score of studies emphasized the Colombian crisis. Of these, Eduardo Santos' *Sociología política de Colombia* and Alfonso López Michelsen's *Cuestiones colombianas* were especially engaging.

Keen literary criticism in its widest relation to social phenomena found brilliant expression in *El humanismo y el progreso del hombre*, by the 96-year-old Colombian essayist, Baldomero Canín Sano; in *El heroísmo intelectual*, by the Cuban, José Antonio Portuondo; and in two brief but meaty books by the Mexican, José Luis Martínez, *Problemas literarios* and *La emancipación literaria de México*. More concerned with stylistics and the craft of fiction were *Apuntes de crítica literaria*, by the Venezuelan, Gloria Stolk, and Joaquina Navarro's perceptive *La novela mexicana realista*, dealing with the Mexican novel from 1880 to 1910.

Stimulating interpretations of contemporary writers were Aristóbulo Echegaray's attack on Ricardo Güiraldes in *Don Segundo Sombra, reminiscencia infantil de R. Güiraldes*; J. Ríos Patrón's *Jorge Luis Borges*; Fernando Lamberg's *Vida y obra de Pablo de Rokha*; and Pablo Stelingis' *La obra poética de Manuel Magallanes Moure*—recipient of the two most recent prizes awarded by the Sindicato de Escritores de Chile. The autobiographical *Tiempo de arena* reveals the formative years of the Mexican poet and diplomat, Jaime Torres Bodet.

Poetry.—The poetical output of 1955 bears an unmistakable neoromantic aura. Deep nostalgia and ever-present anguish almost always suffuse the most promising utterances. Of these, there came from Argentina, Julia Prilutzky Farny's *Este sabor de lágrimas*, Horacio Clemente's *Ventanales a la luna*, Dolores López Aranguren's *Laurel sin bronce*, and most especially, Alberto Girri's magnificent *Línea de la vida*. From Chile appeared Matías Rafide's *Itinerario del olvido* and Fernando de la Lastra's *Retorno al aire*. From Venezuela came Marco Ramírez Murzi's *Alta noche*; from Mexico, César Rodríguez Chicharro's *Eternidad es barro*; and from Colombia, Omer Miranda's *Isla en el corazón*.

In a more optimistic vein are César Tiempo's *Sábado pleno*, dramatizing with verve and playful humor his Buenos Aires ghetto; and Manuel F. Rugeles' *Canto de sur y norte*, a lyrical landscape of Venezuela, which won the National Prize.

College.

LATTER-DAY SAINTS. See CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS.

LATVIA. Independent since 1918, Latvia was forcibly annexed to the USSR in 1940, and re-annexed by force after World War II, thus being converted into the Latvian Soviet Socialist Re-

public. The United States does not recognize this annexation.

Area and Population.—Latvia's area is about 25,000 square miles; its population (est. 1954) is 2,100,000. An estimated one fourth of independent Latvia's population has been deported to the interior of the USSR. The deportees have been replaced by Russians and other peoples from the Soviet hinterland. Because the Latvians have been hostile to Soviet rule, the Soviet government is gradually destroying Latvia as a nation. By 1955, three fifths of the population of Riga, the capital (pop., 1952 est., 600,000), was Russian. In Latvia's second largest city, Liepāja (Libau) (pop., 1953 est., 100,000) Russians constituted one third of the inhabitants. Other major cities (with 1935 populations) are Daugavpils (Dvinsk), 45,160; Jelgava (Mitau), 34,099; and Ventspils (Windau), 15,671.

Religion.—The principal religions are Lutheran, Roman Catholic, and Russian Orthodox. As a result of Soviet persecution, only 85 of independent Latvia's 279 Lutheran pastors are believed to be conducting services.

Government.—Latvia has virtually no autonomy, all phases of its life being under Communist direction from Moscow. All key positions in the Latvian Soviet government are held by the 50,000 members of the Latvian Communist Party, many of whom are Russians. In 1955 *Pravda* attacked several local secretaries of the Latvian Communist Party for being dictatorial and for ignoring the suggestions of their subordinates.

Education.—In 1950 there were 232,000 students in primary schools; 20,000 in secondary schools; and about 15,000 in institutions of higher learning.

Economy.—The planned budget for 1955 called for a total expenditure of 1,656,421,000 rubles (\$414,105,250), of which 835,875,000 rubles were to be spent by the Latvian central government, and 820,546,000 rubles by city, town, and district authorities. The greater portion of the Latvian government's income had to be turned over to the central government of the USSR. Thus, the Latvian government was permitted to spend only 4.7% of its sales tax revenue, and 25% of its revenue from income taxes and machine-tractor station earnings.

The chief Latvian industries in 1955 were electrical machinery and railway car manufacture, machine-tool making, shipbuilding, and fishing. Latvian industry was at least twice its pre-World War II size, although real wages are lower than they were before 1939.

In 1955, Latvian agriculture was almost completely collectivized, with 1,513 collective farms, 50 state farms, and 120 state-owned machine-tractor stations. Livestock raising and dairying are the most important agricultural activities, accounting for 63% of collective farm revenue. In 1955 Latvian agriculture continued in the slump into which it fell in 1953. Milk production and vegetable harvests on collective farms were both lower than in 1954. Due to USSR insistence, about 10% of Latvia's arable land in 1955 was sown to Indian corn, a crop unsuited to the soil and climate.

Unrest.—No foreigners were permitted to travel in Latvia during 1955. A few nationalist guerrillas still operated in Latvian forests, but this resistance movement is decreasing because of lack of outside aid.

ELLSWORTH RAYMOND,
USSR Area Specialist and Associate Professor
of Government, New York University.

LAW. Summary of Supreme Court Statistics.—The Supreme Court of the United States, during the term beginning Oct. 4, 1954, and ending June 6, 1955, handed down 79 opinions, of which 31 were unanimous or with concurrence only, and 48 were with dissents. Forty-nine cases involved the federal government and ten involved state governments. Justice Reed wrote the greatest number of dissents (24) and Justice Clark wrote the fewest (5). Justice Clark wrote the most opinions of the court (14), but was

closely followed by Chief Justice Warren (12). The total number of cases disposed of during the term was 1,361, with 205 cases remaining on the docket at the end of the term. On March 28, 1955, John Marshall Harlan, circuit judge from New York, became an associate justice of the Supreme Court, succeeding Justice Robert H. Jackson, who died in October 1954.

Business Regulation; Antitrust Laws; Fair Trade Laws.—The Supreme Court decided that both show business and professional boxing were within the scope of the federal antitrust laws, in spite of its contrary holding as to big-league baseball in 1953 (*Toolson v. New York Yankees*, 346 U.S. 356). In *United States v. Shubert* (348 U.S. 222) the government sued to restrain certain monopolistic practices in the business of producing, booking, and presenting legitimate theatricals. The defendants' contention that they were not engaged in "trade or commerce among the several states" was rejected by the court, which did not consider determinative the fact that show business, like baseball, was built around the performance of local exhibitions. The court reached the same conclusion in *United States v. International Boxing Club* (348 U.S. 236), attaching considerable significance to the government's charge that over 25% of the revenue from championship boxing bouts was derived from interstate operations through the sale of radio, television, and motion picture rights.

The Supreme Court granted review in two cases involving alleged monopolies by the duPont Company in connection with its control of the cellophane market and its control of the General Motors Corporation (*United States v. E. I. du Pont de Nemours & Co.*, 118 F.Supp. 41 and 126 F.Supp. 235).

State courts dealt with the validity of fair trade laws in several cases. The highest courts of Arkansas, Georgia, and Nebraska held that such laws, when applied to nonsigners of price maintenance agreements, violated the due process clauses of the respective state constitutions (*Union Carbide & Carbon Corp. v. White River Distributors, Inc.*, 275 S.W. 2d 455, Ark.; *Cox v. General Electric Co.*, 85 S.E. 2d 514, Ga.; *McGraw Electric Co. v. Lewis & Smith Drug Co.*, 68 N.W. 2d 608, Neb.). The Pennsylvania Supreme Court upheld the constitutionality of fair trade laws, even as applied to nonsigners (*Burche Co. v. General Electric Co.*, 382 Pa. 370).

In a business regulation decision growing out of the attempt by Louis E. Wolfson to gain control of Montgomery Ward and Company, the Illinois Supreme Court held that a statute allowing the election of corporation directors for staggered terms violated the state constitutional guarantee of the right to cumulate votes (*Wolfson v. Avery*, 126 N.E. 2d 701).

Communications; Transportation; Public Utilities.—In *Federal Communications Commission v. Alentown Broadcasting Co.* (349 U.S. 358) the commission had awarded a radio broadcasting license to an applicant in a city which had only one radio station. The commission decided that the city's need for a choice between locally originated programs was more important than other considerations urged by a rival applicant in a nearby town which already had three stations. The Supreme Court held that this action was within the allowable area of the commission's discretion. In *Storer Broadcasting Co. v. United States* (220 F.2d 204) the Court of Appeals for the District of Columbia Circuit held that the commission's rules establishing the maximum

number of radio and television stations which could be owned, operated, or controlled by the same interests were invalid under the "public interest" criterion of the Communications Act. The Supreme Court has agreed to review this case.

The Supreme Court decided three admiralty cases invalidating "release-from-negligence" provisions in towage contracts, by which towboat owners had tried to protect themselves from the consequences of negligence on the part of their own employees (*Bisso v. Inland Waterways Corp.*, 349 U.S. 85; *Boston Metals Co. v. Wind-ing Gulf*, 349 U.S. 122; and *United States v. Nielson*, 349 U.S. 129). The reason given for these decisions, which the court said followed a long-established judicial rule, was that such contracts were contrary to public policy. In another admiralty case, *Wilburn Boat Co. v. Fireman's Insurance Co.* (348 U.S. 310), the court refused to establish a federal rule governing marine insurance policies, holding that state law should apply.

In the field of public utility finance the court held, in *Securities Exchange Commission v. Drexel & Co.* (348 U.S. 341), that the commission had power to regulate the fees paid by a parent public utility holding company in connection with a reorganization plan filed by the company's subsidiary. In *Natural Gas Pipeline Co. v. Panoma Corporation* (349 U.S. 44) the court held that a state could not fix a minimum price to be paid for natural gas, after its production and gathering had ended, by a company which transported the gas for resale in interstate commerce. The Federal Power Commission won another contest with a state in *Federal Power Commission v. Oregon* (349 U.S. 435). The court held that the commission had exclusive jurisdiction to issue a license for a power project to use waters on lands constituting "reservations" of the United States located in Oregon, and that the permission of the state was not required.

Taxation.—The Supreme Court decided that the punitive portion of treble damages for federal antitrust violations, and exemplary damages for fraud, were "gross income" and thus subject to federal income taxation (*Commissioner of Internal Revenue v. Glenshaw Glass Co.*, 348 U.S. 426). The court noted that the case involved "instances of undeniable accessions to wealth, clearly realized, and over which the taxpayers have complete dominion," and stated that the fact the payments were extracted as punishment for unlawful conduct did not deprive them of their character as taxable income. The same holding was made as to "insider profits" recovered by a corporation under the Securities Exchange Act and the Investment Company Act (*General American Investors Co., Inc. v. Commissioner of Internal Revenue*, 348 U.S. 434). The "insider profits" provisions require directors and major stockholders of a corporation to turn over to it any profits that they may realize from certain dealings in its securities. In an estate tax case, *Commissioner of Internal Revenue v. Sternberger's Estate* (348 U.S. 187), the court disallowed a claim for a charitable deduction. The decedent's will left his property, in trust, to his wife and 27-year-old divorced and childless daughter during both their lives and the life of the survivor. Upon the death of the survivor, the property was to go to any living descendants of the daughter, but if no descendants of the daughter were alive at that time, all or part of the property was to go to charity. The court decided that the chance of charity's receiving any-

thing under this arrangement was too remote to allow an estate tax deduction for a charitable gift.

Society for Savings v. Bowers (349 U.S. 143) involved the question of immunity of federal government obligations from state taxation. The court invalidated an Ohio tax on the amount of capital, surplus, and undivided profits of certain banks (without deduction of the value of federal government obligations owned by them), finding that the incidence of the tax was on the banks and not on their depositors. The court pointed out that it was not bound by the contrary opinion of the Ohio Supreme Court as to the incidence of the tax.

Labor Law.—The Supreme Court decided two cases involving the power of state courts to act in labor disputes. In *Weber v. Anheuser-Busch, Inc.* (348 U.S. 468) the Missouri courts had enjoined a union's jurisdictional picketing as a violation of the state law against "restraint of trade." The Supreme Court reversed this ruling, holding that the Labor Management Relations Act (Taft-Hartley Act) pre-empted the field for the federal government as far as the strike tactics in question were concerned, and that state courts had no power to act. *Amalgamated Clothing Workers v. Richman Brothers Co.* (348 U.S. 511) was similar to *Anheuser-Busch* except that the highest state court had not yet made a decision. The employer had obtained an injunction in an Ohio court against certain union picketing, on the ground that it constituted a common-law conspiracy and a violation of state law prohibiting restraint of trade. The union then sued in a federal court, attempting to keep the employer from proceeding further with its state court action. This time the union lost, with the Supreme Court holding that the federal courts lacked power to interfere with such proceedings in the state courts. In another case involving the power of the federal courts under the Taft-Hartley Act, a labor union sued under a collective bargaining agreement to recover pay for a day's absence on behalf of 4,000 employees (*Association of Westinghouse Salaried Employees v. Westinghouse Electric Corp.*, 348 U.S. 437). The court held that the federal courts had no jurisdiction in this type of lawsuit, pointing out that employees have always been able to enforce their individual rights in the state courts.

The Supreme Court also decided two cases involving the Fair Labor Standards Act of 1938. In *Maneja v. Waialua Agricultural Co.* (349 U.S. 254) workers on a narrow-gauge railroad within a sugar plantation, and employees repairing farm implements were held to be "agricultural workers," and thus not entitled to receive overtime pay under the act. Employees working in a sugar-processing plant on the plantation, however, were held not to be within the agricultural workers' exemption. In *Mitchell v. C. W. Vollmer & Co., Inc.* (349 U.S. 427) the court decided that the Fair Labor Standards Act applied to the construction of a new canal lock in Louisiana, designed to serve as an alternate route for the Gulf Intercoastal Waterway, because this work involved the improvement of existing facilities of interstate commerce.

The lower federal courts also decided many labor cases. In *Union Manufacturing Company v. National Labor Relations Board* (221 F.2d 532) the Court of Appeals for the District of Columbia Circuit held that strikers who had not yet been discharged or replaced could vote in an NLRB election even though they had been guilty

of strike misconduct which would bar their reinstatement. In *National Labor Relations Board v. Associated Machines, Inc.* (219 F.2d 433) the Court of Appeals for the 6th Circuit held that an employer's sponsorship of a grievance committee was not a violation of the Taft-Hartley Act. In *National Labor Relations Board v. Babcock & Wilcox Co.* (222 F.2d 316) the Court of Appeals for the 5th Circuit upheld a nondiscriminatory rule prohibiting nonemployee union organizers from distributing literature on company premises. In a similar case, the Court of Appeals for the 10th Circuit allowed an employer to enforce a nondiscriminatory "no trespassing" rule against nonemployee union organizers who tried to solicit employees on the plant's parking lot (*National Labor Relations Board v. Seamprufe, Inc.*, 222 F.2d 858). The Supreme Court has agreed to review both of these cases.

According to a decision of the Court of Appeals for the 5th Circuit, which the Supreme Court has refused to review, the Federal Anti-Kickback law applies to union officials who extort money from employees, as well as to unions (*United States v. Alsup*, 219 F.2d 72, cert. denied, 343 U.S. 982). The Court of Appeals for the 2d Circuit, on the other hand (in a case which the Supreme Court has agreed to review), held that a union officer could not be prosecuted under the antibribery provisions of the Taft-Hartley Act, making it unlawful for "any representative of any employees" to accept money from an employer (*United States v. Ryan*, 225 F.2d 417). The court interpreted the word "representative" as applying to a union but not to an individual.

Torts; Workmen's Compensation.—The Supreme Court held that a suit under the Jones Act, for damages for the negligently caused death of a seaman, survived the death of the shipowners, despite the absence of express statutory language so providing (*Cox v. Roth*, 348 U.S. 207). In *Boudoin v. Lykes Brothers Steamship Co., Inc.* (348 U.S. 336) the court allowed recovery of damages when a seaman was attacked by a fellow crewman "of dangerous propensities and proclivities," on the theory that keeping such a person aboard a ship was a violation of the "warranty of seaworthiness."

In *Carroll v. Lanza* (349 U.S. 408) the court decided that the "exclusive remedy" provision in one state's compensation law was not binding upon the courts of another state in which the employment contract was performed and the injury occurred.

The Pennsylvania Supreme Court upheld the constitutionality of a law authorizing the submission of all small claims (\$1,000 or less) arising from automobile accidents to an arbitration board, with a provision that either party could appeal to the courts after the board had made its award (*In re Smith*, 381 Pa. 220).

The Court of Appeals for the District of Columbia Circuit decided that the United States was liable under the Federal Tort Claims Act for injuries caused by a federal employee's negligent regulation of air traffic at a federal airport (*United States v. Union Trust Co.*, 221 F.2d 62).

Criminal Law.—The Supreme Court upheld the constitutionality of a \$50 federal tax on persons engaged in the business of taking wagers, and its related criminal penalties, as applied to violations occurring in the District of Columbia (*Lewis v. United States*, 348 U.S. 419). The court held that the law was a valid exercise of the taxing power, and did not violate the defend-

ant's privilege against self-incrimination under the 5th Amendment.

In *United States v. Bramblett* (348 U.S. 503) the court held that a former congressman could be prosecuted for payroll padding, under a law applicable to false statements made to "any department or agency of the United States" (18 U.S.C. 1001). It was held that the quoted words were not limited to departments or agencies of the executive branch, and that they applied to the Disbursing Office of the House of Representatives.

In *Regan v. New York* (349 U.S. 58) the defendant, an employee of New York City, had signed a waiver of his rights under a state immunity statute and later refused to testify before a grand jury concerning his receipt of bribes. The court upheld his conviction for contempt, deciding that he was not deprived of his liberty without due process of law, in violation of the 14th Amendment, or of any other rights under the federal constitution.

The defendant in *Williams v. Georgia* (349 U.S. 375) was a Negro who was convicted of murder by an all-white jury in a Georgia court. In argument before the U.S. Supreme Court, the state conceded that the defendant had been deprived of his constitutional rights by the discriminatory method used in the selection of the jury. The state argued, however, that his objection was too late, having been made after his conviction had been affirmed by the Georgia Supreme Court. The Supreme Court of the United States, disagreed, and in view of the unusual facts involved remanded the case to the Georgia Supreme Court for reconsideration.

In a case involving the effect of the 14th Amendment on criminal procedure in state courts, the Supreme Court decided that a Michigan state judge who had served as a "one-man grand jury" investigating crime could not later preside over a case resulting in the conviction for contempt of two witnesses before him in the grand jury proceedings (*In re Murchison*, 349 U.S. 133).

In *Bell v. United States* (349 U.S. 81) the court held that the transporting of two women on the same trip and in the same vehicle for immoral purposes constituted only one violation of the Mann Act. *United States v. Provo* (350 U.S. 857) involved an infrequently used constitutional provision. The Supreme Court held, without opinion, that a lower federal court was right in dismissing an indictment for treason on the ground that oppressive trial delay, occasioned by the government's prosecuting the case in the wrong district, violated the defendant's right to a speedy trial under the 6th Amendment.

In *United States v. Costello* (222 F.2d 656) the Court of Appeals for the 2d Circuit decided that a grand jury indictment for tax evasion could be based solely on hearsay evidence if such evidence was "rationally persuasive." The Supreme Court has granted review.

The Supreme Court decided four cases involving convictions of members of Jehovah's Witnesses for violating the draft law. It reversed three convictions and affirmed one. The conviction in *Scirella v. United States* (348 U.S. 385) was upset because the Appeal Board's classification decision was based on a legally erroneous recommendation of the Department of Justice, which had stated that the registrant's willingness to use force in defense of "Kingdom Interests" and his brethren was inconsistent with his claim to be a conscientious objector. The error in *Sim-*

mons v. United States (348 U.S. 397) was the failure of the Department of Justice to furnish the registrant with a fair résumé of all the adverse information in the Federal Bureau of Investigation report which had been made in his case. In *Gonzales v. United States* (348 U.S. 407) there was procedural error in failing to furnish the registrant with a copy of the Department of Justice's recommendation to the Appeal Board. In *Witmer v. United States* (348 U.S. 375), however, the registrant had originally claimed exemption as a "farmer" and a "conscientious objector," and upon denial of these claims he had applied for classification as a "minister of the gospel." The court held that the Appeal Board had sufficient grounds to find that the registrant was insincere in his claim to be a "conscientious objector." (See also below, *Communism and Internal Security*.)

Communism and Internal Security.—The Supreme Court decided three cases dealing with charges of communism and the application of the 5th Amendment's privilege against self-incrimination.

In *Quinn v. United States* (349 U.S. 155) the defendant was convicted of contempt of Congress for refusing to say whether he was or had been a member of the Communist Party. He appealed his conviction on the ground that he had adequately invoked the privilege against self-incrimination. The fact was that, when questioned by a congressional committee, he had adopted as his own the statement of a previous witness, who had based his refusal to answer the same question on "the first and fifth amendments" and on "the first amendment to the Constitution, supplemented by the fifth amendment." The Supreme Court reversed the conviction, holding that after the defendant's reply it became incumbent upon the committee either to accept the apparent claim of privilege or to ask him whether he was in fact invoking the privilege.

In *Emspak v. United States* (349 U.S. 190), as in *Quinn*, the defendant refused to answer questions on the basis of "primarily the first amendment, supplemented by the fifth." Ten of the questions of the congressional committee related to the defendant's own membership and activities in the Communist Party and "front" organizations, while 58 others related to his acquaintance with other persons and their activities. The court reversed a conviction for contempt, holding that all the questions were "within the scope of the privilege."

In *Bart v. United States* (349 U.S. 219) the defendant refused to answer some of the questions of an investigating committee on the ground of self-incrimination and others because he claimed they were not pertinent. The committee did not specifically overrule his objections or direct him to answer. Holding that the committee had failed to lay the necessary foundation for a contempt prosecution, the court ordered acquittal.

In *United States v. Ullmann* (221 F.2d 760), which has been granted review by the Supreme Court, the Court of Appeals for the 2d Circuit upheld the constitutionality of a law requiring witnesses to testify concerning treason, sabotage, espionage, and conspiracy to commit any of these offenses, and granting them immunity from prosecution.

In *Peters v. Hobby* (349 U.S. 331) the Civil Service Commission's Loyalty Review Board, on its own initiative, held a hearing in the case of a

federal employee who had been twice cleared of charges of disloyalty by his own agency's loyalty board, and ordered his own agency to dismiss him. The Supreme Court cancelled the action of the board, on the narrow jurisdictional ground that it had acted beyond its authority under Executive Order 9835 establishing it, its power being limited to reviewing rulings which were adverse to employees. The court did not decide the constitutional issues raised by the employee, including his contention that his lack of opportunity to confront and cross-examine his secret accusers (confidential government informants) deprived him of liberty and property without due process of law. A similar case, *Parker v. Lester* (24 L.W. 2203), was decided in favor of a merchant seaman by the Court of Appeals for the 9th Circuit, which rested its decision squarely on the ground that failure to permit confrontation and cross-examination of accusers was an unconstitutional denial of due process.

Slochower v. Board of Education (306 N.Y. 532; 307 N.Y. 806), under review in late 1955 by the Supreme Court, was a holding by the Court of Appeals of New York that the state could lawfully dismiss a teacher in a publicly supported college for refusing to tell a congressional committee whether he had ever belonged to the Communist Party. *Black v. Cutter Laboratories* (278 P.2d 905), another case in which the Supreme Court has granted review, was a holding by the California Supreme Court that an arbitration award reinstating a Communist to a job in a plant making antibiotics for military and civilian use was void, being contrary to public policy. The Supreme Court agreed to review *Communist Party of the United States v. Subversive Activities Control Board* (223 F.2d 531), in which the Court of Appeals for the District of Columbia Circuit upheld the constitutionality of the Internal Security Act. This act, which was attacked by the Communist Party as violative of the 1st and 5th amendments, requires registration and filing of reports by Communist-action and Communist-front organizations and imposes various sanctions upon their members.

Aliens and Citizenship.—The Supreme Court decided five cases interpreting the Immigration and Nationality Act of 1952. In *United States v. Menasche* (348 U.S. 528) an alien had filed his declaration of intention to become an American citizen before the passage of the 1952 act. If applicable to him, the new law would have imposed a new requirement of physical presence in the United States which was not contained in the old law. Because of a "savings clause" in the 1952 act, the court held that the old law governed the case. A contrary result under the "savings clause" was reached in *Shomberg v. United States* (348 U.S. 540). This time the question was whether the alien's petition for naturalization or the government's deportation proceedings against him should take priority. The court held that the 1952 act's requirement that deportation proceedings should be completed first was controlling.

In *Shaughnessy v. Pedreiro* (349 U.S. 48) it was held that a deportation order issued under the 1952 act was subject to review by the federal courts. The court made this decision despite the fact that the law itself said that deportation orders of the attorney general were "final." The word "final," said the court, was ambiguous and should be construed as referring to finality in administrative procedure, rather than as cutting off the right of judicial review in whole or in part.

In *Marcello v. Bonds* (349 U.S. 302), the court held that it was permissible for the officer conducting deportation proceedings to be under the supervision of officials having investigative and prosecuting functions. In *Shaughnessy v. Accardi* (349 U.S. 280) the question was whether the Board of Immigration Appeals had properly denied an application for the suspension of a deportation order. The applicant claimed that the board had been influenced by a confidential list of "unsavory characters" drawn up by the attorney general, and thus had not exercised its own discretion. A federal district court had found, after a full hearing, that the board had reached its decision on the merits, "free from any dictation or suggestion," and the Supreme Court affirmed its decision.

Racial Discrimination.—Following up its 1954 decision in the school segregation cases, the Supreme Court handed down an opinion concerning the manner in which relief was to be accorded (*Brown v. Board of Education*, 349 U.S. 294). The court first noted that substantial steps to eliminate racial discrimination in public schools had already been taken in some of the states involved. It left to the various federal district courts the problem of considering whether the action of school authorities constituted "good faith implementation of the governing constitutional principles." (See also EDUCATION.)

Resorting to a rather unusual procedure in another racial discrimination case, the court vacated an earlier judgment and dismissed the case on the ground that certiorari had been improvidently granted (*Rice v. Sioux City Cemetery*, 349 U.S. 70). In this case, the widow of a Winnebago Indian had sued a cemetery for breach of contract for refusing to bury her husband. The Iowa Supreme Court dismissed her suit, upholding the validity of a contractual provision that "burial privileges accrue only to members of the Caucasian race." The U.S. Supreme Court had at first affirmed the Iowa decision without opinion (dividing evenly). At a rehearing, the court's attention was directed to a new Iowa law, passed after the commencement of the litigation, which outlawed restrictive covenants by cemeteries based on race or color. The court then decided, in view of this law, that the issues presented in the case were not of sufficient public importance to justify letting its decision stand.

In *Mayor of Baltimore v. Dawson* (350 U.S. 877) and *Holmes v. City of Atlanta* (350 U.S. 879) the Supreme Court held that racial segregation at public bathing facilities and golf courses was unconstitutional. In *Naim v. Naim* (197 Va. 80) the Virginia Supreme Court of Appeals held that the Virginia law against miscegenation did not violate either the due process or the equal protection clause of the 14th Amendment.*

Miscellaneous.—Ruling on a claim of "sovereign immunity," the Supreme Court decided in *National City Bank of New York v. Republic of China* (348 U.S. 356) that when an official agency of the Republic of China sued an American bank in American courts, the bank could interpose a counterclaim, up to the amount of the deposit sued for, based on defaulted treasury notes of the Republic.

In *Tee-Hit-Ton Indians v. United States* (348 U.S. 272) the court denied the claim of a clan

of an Alaskan Indian tribe for "just compensation" under the 5th Amendment when the federal government took timber from lands occupied by them. The court said that permissive Indian occupation of land did not constitute "ownership," and could be extinguished by Congress in its own discretion.

The Supreme Court invalidated the law of the Virgin Islands permitting nonresidents to get quick divorces, holding that the law was "designed for export" and hence was not concerned with a subject "of local application," as required by the Organic Act of the Virgin Islands (*Granville-Smith v. Granville-Smith*, 349 U.S. 1).

The court decided that a Kansas law banning "obscene, indecent or immoral" motion pictures was unconstitutional, indicating that it violated freedom of speech and of the press under the 1st Amendment (*Holmby Productions, Inc. v. Vaughn*, 350 U.S. 870).

The Court of Appeals for the District of Columbia Circuit held that the denial of a passport by the Department of State was subject to judicial review (*Shachtman v. Dulles*, 225 F.2d 938) because denial of a passport can "cause a deprivation of liberty that a citizen otherwise would have."

The New Hampshire Supreme Court decided that the exclusion of women from a municipal golf course at specified times during weekends and holidays did not violate the equal protection clause of the 14th Amendment or the state constitution (*Allen v. Manchester*, 111 A.2d 817).

In a ruling affecting offshore oil developments the Supreme Court refused to place a three-mile limit on Louisiana's seaward boundary into the Gulf of Mexico. The Department of Justice had sought to bar the state's claim that its boundary exceeded three Spanish leagues or 10½ miles (*United States v. Louisiana*, 350 U.S. 812).

The Supreme Court ruled that civilians could not be subjected to a court-martial for crimes committed when they were in military service. The court held that in drafting the 1950 Uniform Code of Military Justice, under provisions of which a civilian was to have been tried, Congress had invaded powers of the federal judiciary. It also maintained that safeguards are lacking in military trials which otherwise would be available to a civilian in a civil trial (*Toth v. Quarles*, 350 U.S. 11).

(For a discussion of major federal laws passed in 1955, see UNITED STATES—*The United States in 1955*; of major state laws, see articles on individual states; and for laws or legal decisions relating to special fields, see such articles as CIVIL LIBERTIES; HOUSING; LABOR; PUBLIC UTILITIES; SOCIAL SECURITY; TAXATION; TARIFFS; see also the Index entry, *Law*.)

RICHARD L. HIRSHBERG,
Attorney at Law; Member, Legal Advisory
Staff, U.S. Treasury Department.

LAXNESS, Halldór Kiljan (real surname GUÐJONSSON), Icelandic writer; b. Reykjavík, Iceland, April 23, 1902. Citing his novels as "vivid epic writing, which has renewed the great Icelandic narrative art," the Swedish Academy of Letters awarded him the Nobel Prize in literature on Oct. 27, 1955.

As a child, Laxness was deeply influenced by the great romantic sagas of his forebears. At an early age, however, he manifested a restlessness of spirit which, according to an Icelandic critic, was representative of the youthful urban population of Reykjavík, cut loose from the country's traditional farm culture by World War I. By the

* The U.S. Supreme Court vacated judgment and remanded the case to the Virginia Court of Appeals on Nov. 14, 1955, because "inadequacy of the record" prevented proper consideration of the constitutional issue of the validity of the Virginia statute (350 U.S. 891).

time he was 17 years old, he had immersed himself in philosophy and religion and had embarked on extensive travels in search of a new and more compatible way of life.

After two years of wandering through Germany and Austria (1920-22), where he was deeply affected by the strife and suffering he witnessed, Laxness visited Paris, underwent a conversion to Roman Catholicism, and retired to a monastery in Luxembourg for a year and a half. There he wrote *Undir helgahnúk* (*Under the Holy Mountain*, 1924), which, with *Verfarinn mikli frá Kasmír* (*The Great Weaver from Kashmir*, 1927), depicts the author's tumultuous spiritual life.

In the late 1920's, Laxness' travels took him to Canada, then (1927) to the United States, where he tried unsuccessfully to establish himself as a writer in the motion picture industry. During this period he came under the influence of Communist ideology, expressed in his volume of satirical essays *Alþýðubókin* (*The Book of the People*, 1929). In 1930, after severely criticizing American life, he returned to Iceland, where, except for short visits to continental Europe and the Soviet Union, he has since lived.

In 1931, Laxness began a series of monumental novels about Icelandic life, each of several volumes, in which the peasant and villager emerge as heroes of mythical proportions, and the poet as a symbol of light in a dark world. These include *Pú víndviður hreini* (1931) and *Fuglinn í fjörunni* (1932; both tr. into Eng. as *Salka Valka*, 1936); *Sjálfstætt fólk* (2 vols., 1934-35; published in the United States as *Independent People*, 1946); and *Ljós heimsins* (*The Light of the World*, 4 vols., 1937-40). In these novels, Laxness combines vehement social criticism with a rich and suggestive lyricism which elevate his writing into the realm of great art.

A prolific author with a wide knowledge of a number of languages and cultures, Laxness spent the years of World War II translating Voltaire's *Candide*, Ernest Hemingway's *A Farewell to Arms*, and five Danish novels into Icelandic, and editing for publication a number of the longer sagas. At the same time, he completed a new trilogy, *Íslandsklukkan* (*The Bells of Iceland*, 1943); *Hjálfjósa man* (*The Fair Maiden*, 1944); and *Eldur í Kaupinhafn* (*Fire in Copenhagen*, 1946).

LEAD. The trend in smelter production of lead in the world and the United States is indicated in the accompanying table compiled by the U.S. Bureau of Mines (in thousands of metric tons).

Year	World	U.S.	% in U.S.	Year	World	U.S.	% in U.S.
1945...	1,136	403.2	35.4	1950...	1,640	458.2	27.9
1946...	1,057	306.7	29.0	1951...	1,600	376.1	23.5
1947...	1,320	400.0	30.6	1952...	1,760	428.6	24.4
1948...	1,382	363.1	26.3	1953...	1,820	424.3	23.3
1949...	1,580	431.7	27.3	1954...	1,920	441.5	23.0

United States.—Mine production of recoverable lead was 318,985 short tons in 1954 (342,644 in 1953). It was the smallest output since 1934. Production in the first 10 months of 1955 was 277,361 short tons. Refinery output, however, increased from 472,102 tons in 1953 to 492,000 in 1954. The gain was confined to lead recovered from imported ores and bullion, which increased from 139,879 tons in 1953 to 165,000 in 1954. Refined lead from domestic sources was about the same in both years. Supply declined from 1,380,917 tons in 1953 to 1,240,402 in 1954. The drop was due in part to the lower domestic mine production, but chiefly to the decline in imports, which fell from 552,308 tons in 1953 to 443,050 in 1954. Consumption declined from 1,201,604 tons in 1953 to 1,095,000 in 1954.

Canada.—The recoverable lead content of ores mined through July 1955 was 122,208 short tons, as compared with 128,770 in the same period of 1954 (218,495 tons for the full year). Refined lead output through June 1955 was 78,265 tons, as compared with 85,437 during the first 6 months of 1954 (166,005 for the full year). (See MINERAL PRODUCTION for output of major countries.)

OLIVER BOWLES,
Former Chief, Nonmetals Division, U.S. Bureau of Mines; and
BERENICE B. MITCHELL,
Foreign Minerals Staff, U.S. Bureau of Mines.

LEATHER. Approximately 40,000 production workers were engaged in the tanning and finishing of leather in the United States in 1955. Some 440 tanning and finishing establishments produced finished leather with an estimated value of approximately \$750 million for the full year.

U.S. LEATHER PRODUCTION

Category	Unit	1955 (8 months)	1954 (full year)
Cattle.....	hides	16,976,000	24,087,000
Calf and whole kip.....	skins	7,033,000	9,366,000
Goat and kid.....	skins	17,413,000	26,496,000
Sheep and lamb.....	skins	17,092,000	23,796,000

In addition, several million hides or skins of the horse, kangaroo, ostrich, pig, deer, elk, walrus, seal, alligator, and various reptiles are tanned into leather.

While upwards of 80% of the total quantity of leather produced is utilized in the manufacture of footwear, substantial quantities are required for other end-products ranging from wallets, handbags, luggage, and sporting goods to transmission belting, mechanical leathers, and upholstery for furniture and automobiles. Significant increases in the demand for leather were recorded in 1955 for garments and gloves, luggage and leather goods, upholstery, and various specialty items.

With footwear production for 1955 in the United States at an unprecedented level (see SHOE INDUSTRY), demand for virtually all types of leather was at a high level. Despite the high level of demand, both finished leather and leather-making raw materials were relatively stable in price during the course of the year.

LEIF C. KRONEN,
Secretary, Tanners' Council of America, Inc.

LEBANON. A member of the Arab League and the United Nations, Lebanon is a republic, 3,475 square miles in area, situated along the eastern coast of the Mediterranean Sea and bounded on the south by Israel and on the east and north by Syria. The Lebanon Mountains extend along the coast and leave but a narrow coastal plain. Between the Lebanon and the Anti-Lebanon ranges lies the fertile Bekaa Valley, above 3,000 feet in average elevation, which constitutes the "bread basket" of Lebanon.

Population.—The population of Lebanon in 1954 was estimated at approximately 1,400,000 (the last census having been taken in 1932), aside from 103,376 Palestinian refugees (September 1955), of whom 38,681 live in camps. Beirut, the capital, has an estimated population of about 425,000. Its modern harbor, its large free zone facilities, and its international airport have made it one of the most important entrepôt centers in the Middle East.

Government and Political Events, 1955.—Lebanon is a constitutional republic modeled on the French government and administrative system with legislative power vested in a unicameral parliament (Chamber of Deputies, 44 members). The president (Camille Chamoun, elected

in September 1952 for a term of six years) is elected by the House of Deputies. He appoints the prime minister and all the other members of the cabinet, who in turn become directly and collectively responsible to the House.

On July 9, 1955, the cabinet formed on Sept. 17, 1954, and headed by Sami Solh, was reshuffled, but remained in office until Sept. 13, 1955, when it resigned because of criticism of its domestic policies. On September 19 a new cabinet was formed by Rashid Karami (34), the youngest prime minister in Lebanon's history. The new cabinet is composed of eight deputies and two nondeputies.

Education and Religion.—Lebanon has a literacy rate of about 60% (official estimates place the rate at 80%), the highest in the Arab Middle East. In 1955 there were 1,862 schools, of which 1,031 were public and 831 were private. Public schools served 112,476 students, while private schools served 134,524 students. Beirut is the seat of all the universities in Lebanon: The American University of Beirut (with approximately 2,000 students of university level), the Université Saint-Joseph (Jesuit), and the Lebanese University (governmental), officially chartered on Feb. 6, 1953. In addition, there are the Lebanese Académie des Beaux Arts (private), the National Conservatory of Music, the Beirut College for Women, the American Near East School of Theology, and the French Ecole Supérieure des Lettres de Beyrouth.

The multisectarian character of the population is evidenced by groupings of Christians into Maronite, Orthodox, Latin, and Protestant communions, and Moslems into Sunnites and Shi'ites. There are also the Druses, historically an offshoot of heterodox Islam, and the Jews. Officially, the Christians are a bare majority; actually the combined Moslem population comprises a little over 50% of the whole.

Finance.—The 1955 budget provided for expenditures and receipts balanced at 134.7 million Lebanese pounds, compared with L£123.4 million in the 1954 budget (L£3.20 equals U.S.\$1 at the free rate). The percentage distribution of major expenditures in 1955 was 17.4% for national defense, 16.4% for public works, 12.6% for education, and 4.9% for public health. Two thirds of the revenue is derived from indirect taxation (customs duty) and one third, from direct taxation.

Foreign Trade.—Exports in 1954 amounted to 372,466 tons valued at L£105,582,000 (compared with L£88 million in 1953); imports totaled 1,078,737 tons valued at L£484,402,000 (compared with L£362 million in 1953). Chief sources of imports were Syria (22.4%), the United States (14.8%), and France (8%). Chief markets for Lebanese exports were Syria (14%), Saudi Arabia (11%), Egypt (8%), the United States (6%), and Jordan (5%).

Principal imports are wheat and flour, meat, textiles, chemicals, wood and paper, gold, metal, machinery, cars and spare parts, radios, refrigerators, house utensils, and arms. The principal exports are fruits, vegetables, animal products, biscuits, chocolates, beer, arak, hides, tobacco, textiles, gold, and diamonds. The trade deficit is covered by such invisible exports as emigrants' remittances and earnings from tourism and from gold and exchange operations.

Production.—Lebanese per capita income, perhaps the highest in the Arab Middle East, is estimated at \$250 annually. Chief sources of income are trade (\$300 million), agriculture (\$175 million), industry (\$120 million), construction (\$100 million), and services (\$100 million). Although it accounts for not more than one fifth of the total national income, agriculture is the principal occupation of about half the country's working population. Because of its rugged terrain, only a fourth of Lebanon's area is under cultivation. However, a wide variety of crops can be grown, ranging from bananas, sugarcane, and citrus fruits along the coast, to fruits of the temperate zone on the mountain slopes, where intensive terrace farming has been developed from ancient times, and cereal, grapes, and vegetables in the inland valleys. In recent years apple growing has become a major Lebanese industry, second only to grape cultivation. Cereal production covers only one third of the domestic need, but

fruits and vegetables are abundant for export.

On Aug. 26, 1955, the World Bank made a loan of \$27 million to the Litani River Authority to help finance the construction of a power and irrigation project on the Litani River, scheduled for completion in 1961.

Communication and Transportation.—Motor vehicles constitute the chief means of transport in Lebanon. In 1954 approximately 2,400 miles of highway, of which 2,200 are either asphalted or macadamized, served 18,687 passenger cars, 1,013 buses, and 3,536 trucks. The country has 3 railways operating on 475 miles of track (385 miles of standard- and 90 miles of narrow-gauge. Two domestic airlines (Middle East Air Lines and Air Liban) connect Lebanon with almost all the countries of the Middle East. The Beirut Airport is located at Khaldeh, three miles south of Beirut, and is considered one of the finest in the Middle East, serving 29 foreign airlines. In 1954 there were 24,368 telephones in operation throughout the country. During that year a new automatic telephone system was installed in Beirut.

NABIH AMIN FARIS,

Director, Arab Studies Program, American University of Beirut.

LEEWARD ISLANDS. Constituting a British colony, this group in the Lesser Antilles, lying north of the Windward Islands and thence extending northwestward to Puerto Rico, comprises four federated presidencies (area, 422 square miles; 1954 est. pop., 126,251, predominantly Negro).

Presidency	Square miles	Population	Capital
Antigua ¹	170.5	50,908	St. John's (13,500 ³)
St. Kitts-Nevis ²	152	53,598	Basseterre (13,000 ³)
Montserrat.....	32.5	14,145	Plymouth (2,000 ³)
British Virgin Islands.....	67	7,600	Road Town (700 ³)
Total.....	422	126,251 ⁴	

¹ The island of Antigua (108 square miles) and its dependencies: Barbuda (62 square miles) and Redonda (0.5 square miles). ² St. Kitts or St. Christopher (68 square miles), Nevis (50 square miles), and dependent Anguilla (34 square miles). ³ Estimated. ⁴ At December 1953 census, 122,884.

Antigua is the seat of government, and St. John's (the capital) the residence of the governor (Sir Kenneth W. Blackburne, appointed Sept. 14, 1950). A 23-member General Legislative Council includes a majority of 13 representative members chosen from the legislatures of each of the presidencies, which are also represented on a 14-member Federal Executive Council. Seats have been allocated to the Leeward Islands in the projected legislature of the British Caribbean Federation as follows: Antigua, 2; St. Kitts-Nevis and Anguilla, 2; and Montserrat, 1. (The plan of federation was rejected by the Virgin Islands.) The unit of currency is the British West Indian dollar (equals 58.33 U.S. cents). The British Treasury has allocated £2,884,230 toward the cost of various development and welfare programs. The Leeward and Windward Islands (q.v.) have a unified judiciary.

Antigua.—An administrator (Alec Lovelace) is assisted by an Executive Council and a 13-member Legislative Council over which he presides. Revenue in 1954 was BWI\$5,290,500; expenditure, BWI\$5,289,338.

There were 36 primary schools (30 government and 6 private) and 6 secondary schools (4 government grant-aided and 2 private). Enrollment was 12,226 (primary, 10,953; secondary, 1,273).

Severe drought, occurring for the second successive year, reduced the sugar crop to 11,083 tons (31,588 tons in 1953). Cotton is Barbuda's chief crop. Sugar, rum, and molasses are manufactured. Total exports in 1954 were valued at BWI\$2,598,343 (sugar, BWI\$2,131,429;

raw cotton, BWI\$238,291; molasses, BWI\$26,986); imports totaled BWI\$7,417,076. Coolidge Airfield, on a United States-leased base, is used commercially. British West Indian Airways, Pan American World Airways, and Air France serve the island.

St. Kitts (or St. Christopher) —Nevis and Anguilla.—Under a new constitution in effect from October 1952, an administrator (Hugh Burrowes) is assisted by a nominated Executive Council and a 14-member Legislative Council (including 8 elected members). Revenue in 1954 was BWI\$4,481,833; expenditure, BWI\$3,985,157.

There were 33 government primary schools (St. Kitts, 17; Nevis, 11; Anguilla, 5), and 1 private primary school. Total primary enrollment was 10,928 pupils. Five secondary schools (4 government and 1 private) had 805 pupils.

The chief product of St. Kitts is sugar (in 1954, 48,897 tons from 13,985 acres); of Nevis, sea-island cotton (373,013 pounds from 2,640 acres). Exports in 1954 had a total value of BWI\$8,779,072 (sugar, 47,001 tons, BWI\$7,764,623; sea-island cotton, 425,293 pounds, BWI\$357,815; molasses, 1,228,003 gallons, BWI\$161,024; and salt, 31,088 barrels of 300 pounds each, BWI\$80,833. Imports in 1952 totaled BWI\$9,971,678.

Sugar companies operate 36 miles of light railways on St. Kitts. Highways aggregate 79 miles: St. Kitts, 30 miles (24 miles surfaced); Nevis, 19 miles; and Anguilla, 30 miles. British West Indian Airways, and KLM (to Curaçao) serve the islands.

Montserrat.—Assisting the commissioner (Charlesworth Ross) are a 5-member Executive Council and a 9-member Legislative Council (including 5 elected members). Estimated local revenue in 1955 was BWI\$501,194; expenditure, BWI\$909,572.

Primary schools in 1955 numbered 14 (government, 12; denominational, 1; private, 1), and there was one government secondary school. Pupils on Jan. 1, 1955, totaled 3,494 (primary, 3,365; secondary, 129).

Exports in 1954 were valued at BWI\$520,554, including tomatoes, 76,245 pounds; cotton, 402,346 pounds; raw lime juice, 16,454 gallons; and lime oil, 85 pounds. Imports (mainly foodstuffs, textile goods, and hardware) were valued at BWI\$1,108,309 in 1954.

The island's road system consists of about 40 miles of asphalted public roads and 30 miles of secondary unsurfaced roads.

British Virgin Islands.—This group (area, about 67 square miles) lying east of the Virgin Islands of the United States (q.v.), comprises 11 inhabited islands (est. pop., 7,600), along with 25 uninhabited islands. On Tortola, the largest island (20 square miles; est. pop., 5,800) is Road Town, the capital and port of entry; other large islands are Virgin Gorda, Anegada, and Jost Van Dyke. Under a new constitution and elections ordinance, 6 elected members were returned in 1954 by 5 electoral districts to a reconstituted Legislative Council, the membership of which also includes 2 nominated nonofficials, and 2 officials, with the commissioner (Lieut. Colonel H. A. C. Howard) as president, and a nonofficial deputy president. Revenue in 1954 was BWI\$552,211; expenditure, BWI\$150,321. There are 12 primary schools (enrollment, 1,886), and 1 government secondary school (enrollment, 114).

The principal occupations are stock-raising, fishing, and the production of food crops (chiefly vegetables and fruits). (See also **BRITISH WEST INDIES**.)

LEGER, Fernand, French artist; b. Argentan, France, Feb. 4, 1881; d. Gif-sur-Yvette, France, Aug. 17, 1955. One of the leading spirits of modern art, he developed a highly individual style of painting which lyrically and dynamically reflects the machine age in which he lived.

After completing his studies at the *lycée* in Caen, Fernand Léger went to Paris in 1898 to devote himself to painting. From 1901 to 1903 he attended the École des Beaux-Arts and studied under Jean Gérôme and Gabriel Ferrier, coming later under the influence of Cézanne. After 1909, however, Léger's own character became more evident, and his intensity of form and heightening of color were demonstrated in his paintings, *The Nudes in the Forest* and *The Smokers* (1910), which he exhibited in 1911 with the Indépendants, a group pioneering in cubism, which was headed by Picasso and Braque.

During World War I, in which he served as an artillery engineer in the French Army, Léger made a complete break with impressionism. Fascinated by the precision weapons of modern warfare, he painted a number of pictures which glorified mechanized civilization. Among these

were *The Card Game* (1917), *The Disks*, and *The Town* (1919). Then Léger added the human figure in a mechanical society to his compositions (*The Mechanician*, 1920). His subsequent paintings became more and more static (*Big Lunch-eon*, 1921; *Mother and Child and Reading*, 1924), until his reaction against this diminution of movement in 1926. In 1929, with Amédée Ozenfant, he founded an atelier school, the Académie Moderne, where his teaching gained him a wide following. His work was exhibited comprehensively at the Museum of Modern Art in New York City in 1935.

With the fall of France in 1940, Léger fled to the United States, where his increased interest in his surroundings, the human figure in particular, was reflected in *The Cyclist* (1944). Returning to France after the liberation, his preoccupation with the human form was culminated in *The Pastimes* (1948-49). In 1952 he created the stained glass windows of the Church of the Sacred Heart at Audincourt in his native country. In 1953 nearly 50 years of his work was exhibited at the Museum of Modern Art; and in 1955 his monumental painting, *The Builders*, won first prize at the Third International Biennial in São Paulo, Brazil.

LEGISLATION. See **UNITED STATES—The United States in 1955**; articles on the countries and states; and the Index entry, *Congress, U.S.*

LEMONS. See **FRUITS**.

LETTUCE. See **VEGETABLES**.

LEVANT STATES. See **LEBANON**; **SYRIA**.

LIBERIA. A republic on the west coast of Africa, bounded by French West Africa and Sierra Leone. Area, about 43,000 square miles; pop. (est. mid-1954), 1,250,000. A small group of descendants of 19th century Negro colonists, chiefly from the United States, dwell along the coast. They form a ruling elite, and speak English, the official language. About 85% of the population are jungle tribesmen inhabiting the interior. Monrovia (35,000) is the capital and chief seaport.

Government.—The legislature comprises a 10-member Senate elected for a 6-year term and a 31-member House of Representatives elected for 4 years. The president is elected for an 8-year term and may be re-elected for succeeding 4-year terms. President William V. S. Tubman was re-elected in 1951 and 1955. The Tubman regime permits no effective opposition. Technical and financial aid in public administration, agriculture, education, health, and transport is provided by the United States and United Nations agencies.

Education.—About 10% of school-age children attend school, and over 90% of the population is illiterate. School enrollment in 1954 totaled 43,000. The government provides about 53% of school facilities, missions and private groups about 43%. The government operated 326 schools in 1954, including 5 high schools. Higher institutions include the University of Liberia and Booker Washington Institute.

Finance.—Receipts in 1953 totaled \$11,199,433; expenditures, \$12,446,820. The Liberian dollar equals the United States dollar. On Jan. 20, 1955, the Export-Import Bank of Washington announced a \$15 million credit to Liberia for the construction of highways to open up the hinterland.

Production.—Agriculture on an extremely primitive level characterizes the native economy. Chief subsistence crops are rice and cassava. Cash crops grown on a small scale include coffee, palm kernels, cacao, piassava, cotton, kola nuts, ginger, and chilies. Rubber is produced by the Firestone Rubber Company (which employs over 20,000 natives) and some Liberian planters; net exports totaled 38,400 metric tons in 1954. The Liberian Mining Co., Ltd. (controlled by the Republic Steel Corporation) extracts some 1.3 million tons of iron ore annually from the rich Bomi Hills de-

posit, 40 miles northwest of Monrovia. In 1955, preparations were under way by the Liberian American Minerals Company to exploit the iron ore deposits of the Putu Hills, about 200 miles east of the Bomi deposit. Gold and diamonds are extracted on a small scale. Manufactures, mainly handicrafts, include a rough cloth, leather goods, bricks, tiles, pottery, crude metalwork, and wood products.

Foreign Trade.—Exports in 1953 totaled \$30,-460,700; imports, \$18,588,900. Rubber provided 64.6% of export values; iron ore, 19%; palm kernels, 6.2%; and cash crops most of the remainder. Imports are mainly cotton goods, transport and other machinery, food, mineral fuels, and chemicals. The United States purchased 73.7% of 1953 exports and provided 67.1% of imports.

Transportation and Communications.—The nation's only railroad connects Monrovia and the Bomi Hills, about 40 miles away. Roads total some 800 miles, including 260 miles of all-weather roads. Motor vehicles numbered 2,777 in 1955; telephones, 621. Liberian National Airways provides domestic service to 11 inland towns with airstrips. Roberts Field, 50 miles east of Monrovia, is the main airport. Monrovia has the only telephone system. Communication with the rest of the country is mainly by radiotelephone.

Principal Events, 1955.—The elections of May 3 resulted in a victory for President William V. S. Tubman and his True Whig Party. Official returns gave the president 244,873 votes to only 1,182 for former President Edwin J. Barclay, candidate of the Independent True Whig Party. (Barclay, who held the presidency from 1930 to 1944, died on November 6, aged 73.) On June 22, Tubman escaped an assassination attempt in the pavilion of the executive mansion. Thirty persons, said to be implicated by the would-be assassin, were subsequently charged with treason and sedition. The accused included several prominent persons and political adversaries of President Tubman.

LIBRARIES. During the year 1955 the expansion of services in all types of libraries continued. Reports from public libraries showed a steady increase in book circulation and in the use of their services. Librarians of college and university libraries are being recognized as a part of the faculty, and school libraries are becoming the important material centers for teachers. The year also marked important progress in bringing librarians into closer professional contact with the book trade. The development of worthwhile reading habits beginning on the elementary school level and carrying over into adult life is becoming the concern of librarians and publishers alike.

International Developments.—The adequate exchange of publications and personnel between libraries in the United States and abroad continues to be studied by librarians. The U.S. Book Exchange is the foremost medium for the exchange of publications, and the Farmington Plan is particularly helpful to college and research libraries for acquiring publications from foreign countries. Northwestern University Library was given a special grant for securing materials from Africa in order to build up its collection in this field.

Under Fulbright, U.S. Army, State Department, and Institute of International Education auspices, many librarians from abroad visited libraries in the United States, while many Amer-

ican librarians lectured or studied in other countries. In the spring of 1955, 25 foreign librarians came to the United States for study and internships under project agreements between the United States Department of State and the American Library Association (ALA). One group consisted of Indian university librarians, and the other of public librarians from various countries. Thirty-three librarians from the United States attended the first International Congress of Libraries and Documentation Centers in Brussels, Sept. 11–18, 1955.

The Japan Library School, located at Keio University in Tokyo, completed five years of operation. By the end of August 1956 it is expected that the entire faculty will be Japanese. The ALA cooperated with the Ford Foundation and the University of Ankara in Turkey in establishing the University of Ankara Institute of Librarianship.

Many libraries celebrated the 10th anniversary of the United Nations by setting up special exhibits for both adults and children. Packages of outstanding foreign children's books, selected by the International Committee of the Children's Library Association of ALA's Division of Libraries for Children and Young People, are now available to public and school libraries. The CARE Children's Book Fund also provides a means for sending packages of American children's books to institutions and individuals in other countries. Both of these projects help promote international understanding. The International Youth Library in Munich, Germany, was the recipient of a bookmobile donated by the ALA Friends of Libraries Committee from a special fund.

Federal and State Legislation.—Efforts toward securing passage of the Library Services bill, which is sponsored by the ALA, continued during 1955. This bill (S.203 and H.R. 2840), which is designed to promote the further development of public library services in rural areas without such service or with inadequate service, was introduced in both Houses of Congress in January. Twenty-two interested citizens testified for the bill before the House Committee on Education and Labor, which reported it favorably out of committee in July. The bill will be presented early in the second session of the 84th Congress.

During 1955 librarians made a vigorous appeal to their state legislatures for additional funds for strengthening existing libraries and establishing good libraries where none exist. The keynote of the governors' messages to the 42 legislatures which convened in January 1955 seemed to be the expansion of state services, including those for libraries. Appropriations for many state library extension programs were increased for the biennium 1955–57.

Public Library Development.—The improvement and expansion of public library services continued to be the concern of librarians who wished to make their libraries the focal point for the education of adults. New services, such as special programs for retired citizens and the use of radio and television to publicize the resources of a library, were inaugurated in many communities; and older services, such as discussion groups and film programs, and the circulation of audiovisual materials, were strengthened.

The development of lifetime reading habits has been the concern of librarians and was the subject of a conference, sponsored by the Committee on Reading Development of the American

The new Cincinnati Public Library, which has a roof garden, and a United States Information Agency bookmobile parked near a Burmese jungle illustrate contrasts in present-day library facilities.

Book Publishers Council. The need for teachers and librarians to recognize their responsibility for instilling in children enthusiasm for books and reading, which would carry over into adult life, was emphasized in the report.

During the past five years grants from the Fund for Adult Education have enabled the ALA to experiment with various types of programs in the field of adult education. Among these has been the American Heritage Project, which was started in the fall of 1951 in six demonstration areas across the United States. Discussion of contemporary problems has enabled the members participating in the groups to obtain a better understanding of their responsibilities as citizens. During the four years of the project, the staff has trained a total of 1,153 discussion leaders, and 16,753 people have participated in 1,063 discussion groups.

The experience gained from the American Heritage Project, as well as from another program under which ALA made subgrants to libraries for individual and original adult education programs (also financed by the Fund for Adult Education), has resulted in the establishment of a new project called the Library-Community Project. This project, which the fund will finance for a two-year period, will work with four state library extension agencies on an experiment in the establishment of a soundly based and well-integrated program of adult education in four pilot libraries in Kansas, Maryland, Michigan, and Tennessee. The project staff will also provide consultant service in adult education to libraries all over the United States.

A conference was held in November 1954 by a group of educators and library administrators to discuss the training needs of librarians doing adult education work in libraries. A small conference of library adult educators was also held in 1955 to determine areas of need and to do long-range planning for these needs as they were pointed out in the *Survey of Adult Education Activities in Public Libraries and Library Extension Agencies in the United States*, published by ALA in 1954.

One of the most important activities being carried on by the Public Libraries Division of the ALA is the revision of the national standards for public libraries. These standards, which will be published in 1956, will be based on a regional library system as the key unit of service. This system will consist of a central library with any number of smaller community libraries, and

with the resources of each available to all. These library systems will be able to draw on the resources of the state library, as well as on college, university, and special libraries of the region or nation.

Selected statistics for the fiscal year 1954, issued by the Library Services Section of the U.S. Office of Education, indicate an increase in the number of books owned and circulated by public libraries in cities of 50,000 to 99,999, as well as an increase in operating expenditures, salaries, and the amount spent for books and periodicals. The tables show that the selected group of libraries (117) at the end of the fiscal year 1954 owned 12,894,000 books and had circulated 41,379,000 volumes. Total operating expenditures (excluding capital outlay) were \$12,611,000, with salaries amounting to \$8,569,000, and books and periodicals, \$1,967,000. For cities of 100,000 or more population, the selected group of public library systems owned, at the end of the fiscal year 1954, 55,565,923 books, and had circulated 163,887,844 volumes. Total operating expenditures were \$77,507,482, with \$56,491,430 for salaries and \$9,643,270 for books and periodicals.

Know Your Library Month, sponsored by the Libraries Division of the General Federation of Women's Clubs in cooperation with the Public Libraries Division of ALA, was celebrated by many public libraries during the year.

Several new large public library buildings were opened in 1955, including those at Cincinnati, Dallas, El Paso, Memphis, and San Diego. Those in Denver, Hartford, and Charlotte (N.C.) were undergoing construction. Among those opened in smaller towns were the libraries of Midland, Mich.; Lake Geneva, Wis.; Glenview, Ill.; and Lakewood, Ohio. New branch buildings have been opened in Birmingham, Los Angeles, Chicago, Seattle, New York (Manhattan), and Brooklyn. All have exemplified the latest development in library architecture, furniture, and equipment. The proceedings of the ALA Buildings Preconference Institute, held in St. Paul in 1954, were published by ALA under the title *Planning the Library Building*.

Among other publications of interest to public librarians is *The PLD Reporter*, which is issued at irregular intervals by the ALA Public Libraries Division. Designed to acquaint the reader with current practices in public libraries, the first four issues were concerned with book selection policies, Friends of the Library groups, television and its use, and the use of paper-bound books.

Other books of interest published by ALA were *Freedom of Book Selection*, which contains the proceedings of the preconference institute, held by the Committee on Intellectual Freedom in 1953; *Films for Public Libraries*, selected by a committee of the ALA Audio-Visual Board; *Charging Systems*, by Helen T. Geer; and *Handbook for Library Trustees*, by Marian Manly Winsor, published by the R. R. Bowker Company. A home-study course for trustees, consisting of ten lessons on the functions and responsibilities of trustees, is now available from the University of Chicago.

The selection of titles for the *Notable Books of 1954*, made by a special committee of the Public Libraries Division of ALA, was published in *Public Libraries* for March 1955 and the *ALA Bulletin* for February 1955. This ALA division continues to grow in strength, and currently has a membership of approximately 5,600.

Work With Children and Young People.—The library-initiated young adult discussion program, under the ALA American Heritage Project, completed three years of successful achievement in 1955. Discussion leaders were trained to conduct group discussion on the subject of "It's Our America" through public libraries in Ohio, Georgia, and the Boston area.

The Association of Young People's Librarians, a section of ALA's Division of Libraries for Children and Young People, received a grant of \$1,000 from the Norman Bassett Foundation for the compilation of a list of 100 adult books for young people. Through this grant it will be possible to distribute this list without charge to every public library in communities under 50,000 population and to libraries in large cities without a young people's librarian. *Distinguished Children's Books of 1954* and *Interesting Adult Books of 1954 for Young People* were compiled and distributed by the Children's Library Association and the Association of Young People's Librarians.

In July 1955 the Children's Library Association and the American Association of School Librarians cosponsored with the Children's Book Council and the School of Library Service, Columbia University, a two-day conference on the production and promotion of children's books.

School Libraries.—The evaluation of school libraries in relation to the total school program, as well as attention to the standards or criteria for developing and measuring school libraries, has been the concern of librarians and school administrators. The American Association of School Librarians is working on a revision of its school library standards, which will be based on well-thought-out objective evidence to substantiate the standards.

In the past, pressure has been brought to bear on schools concerning the materials found in their libraries. In order to combat this tendency the American Association of School Librarians drew up and adopted the School Library Bill of Rights, which is a reaffirmation of the ALA Library Bill of Rights, but directed specifically to the responsibilities of school librarians to provide a wide range of materials to develop the practice of critical reading and thinking. This Bill of Rights was endorsed by the ALA Council at the Philadelphia conference in July 1955.

In 1955 the U.S. Office of Education issued *School Library Standards, 1954*, which was prepared with the cooperation of the state departments of education, regional accrediting associations, and the ALA. The study digests standards of the ALA, those of three regional ac-

crediting associations, and individual state departments of education for elementary and secondary schools.

Part three of the *American School Library Directory*, covering the Middle Western states, was published by the R. R. Bowker Company in 1955. The February 1955 issue of the *ALA Bulletin* was again devoted to school libraries.

Librarians took part in a number of state conferences preceding the White House Conference on Education, held in Washington, D.C., Nov. 28-Dec. 1, 1955. (See also EDUCATION.) ALA sent an official representative to the conference, and several librarians attended as representatives from their own states.

A need for professionally qualified school librarians for schools of all types, as well as for adequate school library quarters, continues to be felt. Recruiting professionally qualified librarians is one of the great problems confronting administrators of all types of libraries.

College, University, and Research Libraries.—A marked trend toward the academic recognition of college and university librarians by appointing them as members of the faculty, is beginning to be emphasized. This has come about mainly through the realization of the important function the college library maintains in present-day instruction and research, and through the increasing recognition of the library and the librarians by educational associations and individual educators.

A selected group of liberal arts college libraries will be the recipients of subgrants to be administered by the Association of College and Reference Libraries from a \$30,000 grant given by the U.S. Steel Foundation. The bulk of this grant will be used to enhance the book collections and provide better teaching tools for the selected college libraries, and the remaining amount will be used to support research in problems of college libraries.

Two important retirements in the university library field are worthy of mention: that of Keyes D. Metcalf at Harvard University, and of Charles W. David at the University of Pennsylvania. Their successors are Dr. Paul W. Buck and Dr. Kenneth Setton, respectively.

A three-day conference on "The Practical Utilization of Recorded Knowledge" was scheduled for Jan. 16-18, 1956, at Western Reserve University. Problems facing librarians in the processing, dissemination, and utilization of the constantly increasing volume of recorded information in the fields of chemistry, law, medicine, metals, military decisions, patents, physics, and others were to be discussed by more than 30 experts. The School of Library Service at Western Reserve, which is developing a Center for Documentation and Communication Research, cosponsored this conference with other organizations.

The Association of College and Reference Libraries' Committee on Audio-Visual Work made a study during 1955 of the use of audio-visual materials in colleges and universities. Its purpose was to ascertain the extent to which services with educational films, filmstrips, recordings, and other aids have been developed in colleges and universities, and more especially the patterns of service which have been evolved in meeting the needs for these materials.

Many colleges and universities have built or are planning new library buildings for their campuses. Among those erected in 1955 were the buildings at Santa Barbara College, Goleta, Calif.; Idaho State College, Pocatello; Lynchburg

College, Lynchburg, Va.; Centenary Junior College, Hackettstown, N.J.; Queens College, Flushing, N.Y.; and Wisconsin Teachers College, Milwaukee. The Committee on Buildings of the Association of College and Reference Libraries held institutes during the year for interested librarians and architects.

The Service to Libraries Section of the U.S. Office of Education published, late in 1954, *Statistics of Libraries in Institutions of Higher Education, 1951-52*, which forms chapter six of the *Biennial Survey of Education*. Other important publications were *Serial Publications* by Andrew D. Osborne (ALA), *Who's Who in Library Service* (The Grolier Society Inc.), *Library Co-operation in the British Isles*, by Ralph T. Esterquest; and *The Development of Reference Services Through Academic Traditions, Public Library Practice and Special Librarianship*, by Samuel Rothstein. The last two were part of the ACRL's Monograph series. *The American Library Annual*, which brings together much-needed information of interest to the library world previously available only from scattered sources, was published by the R. R. Bowker Company. *Contents in Advance*, a monthly publication, which reproduces the contents pages of a selected number of United States and foreign library periodicals, is an interesting development in the publishing field.

With a membership of over 5,300 in 1955 and five chapters, the Association of College and Reference Libraries continued to publish its monograph and microcard series, and to collect and publish statistics pertaining to college and university libraries. Starting in January 1956, its official journal, *College and Research Libraries*, will be issued bimonthly instead of quarterly.

Personnel.—*The Library's Pay Plan—A Statement of Principles*, prepared by the ALA Board on Personnel Administration, was accepted by the ALA Council at its 1955 conference. The board now publishes bimonthly, *BPA Notes*, which gives news and information on various phases of personnel practices in libraries.

In 1955 a medium of exchange for employment information of interest to administrators and librarians was started through the pages of *Library Placement Exchange*, a privately printed service.

Education for Librarianship.—On March 1, 1955, 2,794 students were enrolled in 37 library schools, including two schools in Canada. These schools conferred 230 bachelor's degrees (fifth year), 1,196 master's degrees, and 5 doctoral degrees in the calendar year 1954.

The ALA Board of Education for Librarianship continued its program of re-evaluating previously accredited library schools, and made considerable progress toward greater cooperation in accrediting with regional associations. June 30, 1957, has been set as the terminal date for the current program of re-evaluating library schools, previously accredited under 1933 standards. Special studies of undergraduate programs in library science and of programs leading to advanced degrees in librarianship beyond the master's degree awarded for basic professional curriculum are being studied by the ALA Board on Education for Librarianship.

(See also AMERICAN LIBRARY ASSOCIATION; LIBRARY OF CONGRESS; and the following listings under SOCIETIES AND ORGANIZATIONS: American Association of Law Libraries; Association of Research Libraries; Canadian Library Association; Catholic Library Association; Educational Film

Library Association; and Special Libraries Association.)

HELEN T. GEER,

Librarian, Headquarters Library, American Library Association.

LIBRARY OF CONGRESS. On April 24, 1800, an act of Congress created a small parliamentary library to serve the nation's lawmakers; since then, through gifts, copyright deposits, purchases, and exchange, the Library of Congress has become one of the world's largest libraries, with collections universal in scope. By June 30, 1955, it contained more than 34,000,000 items, consisting of more than 10,500,000 books and pamphlets in every written language; 2,360,000 maps and other cartographic items; 2,040,000 volumes and pieces of music from the classics to folksongs and modern jazz; 2,600,000 photographic negatives, prints, and slides from Mathew Brady's Civil War pictures to this year's news photographs; 152,000 bound volumes of newspapers and hundreds of thousands of issues of newspapers from all over the world; 583,000 fine prints, by artists such as Joseph Pennell and James Whistler, as well as by modern masters; 459,000 phonographic recordings of music, poetry, speeches, and the like; 112,000 motion picture reels and, in the form of paper prints, more than 3,000 of the earliest American movies; 108,000 reels and strips of microfilm; more than 14,283,000 manuscripts relating to American history and culture, including papers of most of the presidents from Washington through Coolidge; and many other kinds of material, such as broadsides, microcards, photostats, and posters.

Because the library was established for the use of Congress, the needs of that body are served first, but the collections and services are available to other government officials, other libraries, scholars, and the public. During the fiscal year 1955, the Legislative Reference Service, which is the main research arm of Congress, answered more than 56,000 of the 76,000 inquiries from members and committees handled by the library. More than 751,071 readers were served by all departments of the library; 319,221 inquiries were answered for them; and they used 1,519,379 books and other items in the two library buildings and in the Law Library in the Capitol. Although the library is not primarily a lending library, about 250,000 books were lent, some through interlibrary loan to every state in the Union. The library also administers a national program of books for the blind that lends a million books a year; as one of the 28 regional libraries in this system, the library itself lent 67,810 "talking books" (recordings) and books in Braille and Moon type. Under contract to the Defense Department, the library furnished that agency with bibliographic data about vast quantities of current scientific and technical reports.

In two of its operations, the library annually turns funds into the U.S. Treasury, and in both it again set new records. The sale of its printed catalog cards to libraries throughout the country—some 10,000 subscribers who bought more than 23 million cards and technical publications—netted \$1,161,000. Fees for copyright registrations totaled \$881,000 for the 224,732 works registered in the Copyright Office during the fiscal year 1955 (see COPYRIGHTS).

Funds available for use by the library in this period were \$13,950,376, of which \$9,612,708 was appropriated directly by Congress and \$3,054,483 was transferred by other government

agencies; \$1,658,000 was derived from gifts and other sources.

To its holdings, the library added about a million items during the fiscal year 1955. An outstanding acquisition in the photographic field was the Brady-Handy Collection of the L. C. Handy Studios, which brought to the library 3,000 more Mathew B. Brady negatives and several thousand negatives made by his nephew, Levin C. Handy. Research materials in the Manuscripts Division were enriched by the papers of Kermit Roosevelt, James Rudolph Garfield, Peyton C. March, Ogden Mills, Nelson Trusler Johnson, and many others. Among the important materials relating to music that were received were the papers of Geraldine Farrar and papers and musical manuscripts of composers William Schuman and Richard Rodgers.

The library continued to publish its *Quarterly Journal of Current Acquisitions* and five accessions lists—the *East European Accessions List*, *Monthly Checklist of State Publications*, *Monthly List of Russian Accessions*, *New Serial Titles*, and *Southern Asia: Publications in Western Languages*. Its serial *Library of Congress Catalog* continued to reproduce the catalog cards the library prints for books, maps and atlases, motion pictures and filmstrips, music, and phonograph records; and a quinquennial cumulation, prepared for publication in the fall of 1955, recorded on 11,210 pages a million entries for books that were cataloged during 1950–54. The *Catalog of Copyright Entries*, also published serially in several parts, provided a comprehensive listing of materials registered for copyright during the year. Another major bibliographical tool published was the quinquennial cumulation of the *Armed Forces Medical Library Catalog* (1950–1954). Monographs published during the year included the *Catalog of the Jean Hersholt Collection of Hans Christian Andersen*; *Guide to the Special Collections of Prints & Photographs in the Library of Congress*; *Introduction to Asia: A Selective Guide to Background Reading*; *Scientific and Serial Publications: Soviet Union, 1945–1953*; and *Walt Whitman: A Catalog Based Upon the Collections of the Library of Congress*.

The library's series of concerts and literary readings continued, bringing to the Washington area the Budapest String Quartet and, as guests, such literary figures as Carl Sandburg, Lord Dunsany, and Thornton Wilder. It commemorated the centennial of *Leaves of Grass* with three lectures on Whitman by Gay W. Allen, Mark Van Doren, and David Daiches, and with a reading of Whitman's poetry by actor Arnold Moss. These programs coincided with a major exhibit of Whitman manuscripts, photographs, and memorabilia.

ELIZABETH E. HAMER,
Information and Publications Officer,
Library of Congress.

LIBYA. A federal monarchy situated on the northern coast of Africa. Area, about 679,358 square miles. Preliminary results of Libya's first census (August 1954) showed a population of 1,091,830, divided as follows: Tripolitania, 746,064; Cyrenaica, 291,328; and the Fezzan, 54,438. Bengasi (Benghazi), est. pop. 62,300, is the summer capital, and Tripoli (146,100) the winter capital. Libyans are mostly Arab Moslems, with about 40% nomads or seminomads. Some 100,000 Senussi Bedouins inhabit Cyrenaica. Europeans number about 60,000, mostly Italians

who dwell in Tripolitania. Native levels of living are extremely low. Per capita annual income is estimated at \$35. Libya obtains United Nations financial and technical aid in vocational training, public administration, education, agriculture, health, communications, and other fields.

Government.—An Italian colony before World War II, Libya was constituted an independent state on Dec. 24, 1951, under United Nations auspices. The legislature comprises a Senate of 24 members (8 from each province), with 12 appointed by the king and 12 by the provincial legislatures; and an elected House of Representatives of 55 members. The king may introduce or veto legislation and dissolve the lower house at his own discretion. Mustafa ben Halim took office as premier on April 12, 1954. Under a 20-year treaty signed in 1953, Britain maintains military forces in Libya in return for an annual payment to Libya of £3,750,000 (for the first 5 years). Under an agreement signed in 1954, the United States has the use of Wheelus Field, near Tripoli, as an airbase, and will contribute to Libyan economic development a total of \$43 million in annual payments over the period 1954–71.

Education.—Less than 20% of the school-age population attends school, and some 85% of the population is illiterate. In 1953 there were 291 primary and elementary schools (54,409 pupils); 15 secondary schools (2,715); 4 teacher training schools (766); and 3 technical schools (404). There are also private Koranic, Jewish, Greek, and Italian schools.

Finance.—The 1953–54 budget estimated expenditures at £4,788,880, shared by the federal and provincial governments; and revenue at £6,019,000. Revenue derives mainly from British, American, and French payments and contributions. The Libyan pound is equal to the pound sterling.

Production.—Resources are meager. Interior areas are chiefly barren desert. Much of the cash income comes from spending by foreign military forces. Tripolitanian coastal areas yield date palms, vegetables, wheat and other cereals, and olives (olive oil output in 1953, 4,000 metric tons). Barley is grown on the coastal belt of Cyrenaica. Truck garden and orchard products (chiefly citrus fruits) do well under irrigation. Esparto grass, almonds, and peanuts are also grown. Sheep raising yields wool and other animal products. Salt is virtually the only mineral exploited, 1953 output totaling 12,000 metric tons. The few industries include sponge and tunny fisheries, tobacco products, dyeing and weaving of wool and imported cotton yarn, carpets, leather products, bricks, castor oil, and sansa oil. Famine conditions in 1954–55 were alleviated by United States gift shipments of wheat totaling 45,000 tons.

Foreign Trade.—Exports in 1953 were estimated at £3,340,000; imports, £13,201,000. Chief exports were barley, olive oil, esparto grass, scrap metal (from World War II battlefields), and animals; chief imports: foodstuffs, fuels, tobacco, textiles, and metals and their manufactures. Italy took 42% of 1953 exports and provided 29% of imports.

Transportation and Communications.—The 2 small railways emanating from Tripoli and Bengasi total 244.4 miles. A coastal highway runs through Libya, linking Egypt with Tunisia. Most transport is by caravan. Motor vehicles in 1955 numbered 5,039. International airlines use airports at Tripoli and Bengasi. Telephones numbered 6,523 in 1955; radio receiver licenses, about 5,000 in 1953.

Principal Events, 1955.—Sharif Moheiddin el-Senussi, nephew of Queen Fatima, was executed on February 6 for the assassination of Sayed Ibrahim el-Shalhi, minister of the palace, on Oct. 5, 1954. On June 6, King Idris took a second wife in Cairo, the daughter of an Egyptian Bedouin chief.

A Franco-Libyan agreement was signed on August 10, providing for the withdrawal of

France's 400-man Foreign Legion contingent from the Fezzan within a year after the pact's ratification. France reserved the right to reactivate the French bases in time of war. At the same time agreements were concluded on joint supervision of the Tunisian-Libyan frontier, and on economic and cultural cooperation. A Soviet-Libyan agreement on the establishment of diplomatic relations and the exchange of ambassadors was announced in Tripoli on September 25. Libyan Premier Mustafa ben Halim revealed on November 16 that the United States and Britain had agreed to supply Libya with full equipment for one battalion, including armored cars.

Italy and Libya announced on November 25 that an agreement had been reached on the establishment of a mixed arbitration commission to replace the United Nations tribunal which had dealt with problems arising between Libya and Italy. On December 14, Libya, along with 15 other nations, was elected to membership in the United Nations.

LIECHTENSTEIN. A sovereign principality of central Europe between Switzerland and Austria. Area, 61 square miles; pop. (est. mid-1954), 14,000, chiefly of Germanic origin and of the Roman Catholic faith. Vaduz (2,772) is the capital. Prince Francis Joseph II (b. 1906) is the titular ruler. The legislature consists of a 15-member Landtag elected for four years. The chief of government is Dr. Alexander Frick, appointed in 1945. Budget estimates for 1955 were: revenue, 6,878,450 Swiss francs; expenditure, 7,749,740. In 1953, 2,433 pupils attended 14 elementary and 4 continuation schools. Chief occupations are farming and livestock raising. Manufactures include precision instruments, machine parts, textiles, and pottery. A customs union exists with Switzerland and Liechtenstein's foreign relations are conducted by Switzerland. The Paris-to-Vienna express passes through Liechtenstein. Telephones numbered 2,554 in 1955.

LIFE EXPECTANCY. See Index entry.

LIFE INSURANCE. Benefit payments made by legal reserve life insurance companies to United States families totaled approximately \$5 billion in 1954, of which \$2 billion went to beneficiaries as death benefits and \$3 billion was paid to living policyholders as matured endowments, annuity payments, surrender values, policy dividends, and the like.

In the United States, at the beginning of 1955, about 100 million persons owned \$334 billion of life insurance protection in legal reserve companies. This was 10% over the insurance owned one year earlier, and well over double the insurance owned 10 years earlier. By type, the insurance consisted of \$201 billion ordinary, \$94 billion group, and \$39 billion industrial. During 1955 the legal reserve life insurance owned by persons in the United States increased to around \$370 billion. Large as the total was, it was equal to only a little more than one year's personal income of the people of the United States. Life insurance premiums paid in 1954 amounted to 2.9% of the people's income.

In Canada, about 6 million policyholders owned about \$24 billion of life insurance at the beginning of 1955. This was made up of \$16.8 billion ordinary, \$5.5 billion group, and \$1.8 billion industrial. By the end of 1955, the total amount of life insurance increased to about \$26 billion. Here the total was equivalent to some-

thing over one year's personal income of the people, and the premiums paid were about 2.7% of that income.

Investments and Interest Earnings.—United States life insurance companies had \$87.6 billion in assets on July 31, 1955, while Canadian companies had some \$6 billion as of that date. The former are gaining at an annual rate of over \$6 billion, and the latter at a rate of about \$300 million.

For United States companies in 1955, most new funds continued to be invested in mortgages and corporate bonds. However, some changes occurred within those classifications. Net acquisitions of public utility bonds and notes, during the first 7 months of 1955, were little more than half as much as in 7 months of the year before. Industrial bond purchases leveled off, after previous sharp declines. City mortgage acquisitions in 1955, mainly on small homes, were close to the largest ever.

During 1955, life insurance companies continued to place substantial amounts in commercial real estate and common stocks. However, these two categories combined still accounted for less than 3% of all assets on July 31, 1955. In contrast, mortgages and corporate bonds accounted for 32% and 40% of assets, respectively.

Interest earned on assets of United States life insurance companies in 1954 expanded to 3.24% (after taxes and expenses)—the best rate in 12 years. Earnings were supported in 1954 to some extent by a backlog of investment commitments at higher rates. These helped to offset effects of the general decline in yields through early 1954. Since then, however, interest rates have again turned upward.

Other Insurance.—In the United States, in addition to the \$334 billion in force in legal reserve companies at the beginning of 1955, veterans and servicemen held about \$43 billion of National Service and United States Government life insurance. Further, under the Servicemen's Indemnity Act of 1951, each man in service is granted without charge an indemnity of \$10,000 (decreased by any National Service or United States Government insurance he may have) in event of death while on active duty. (See also VETERANS ADMINISTRATION.)

On Jan. 1, 1955, some \$13 billion of life insurance was in force in fraternal societies, assessment associations, and savings banks. Certain provisions of the Social Security Act provide survivor payments to specified members of the families of individuals covered under the act. Thus they form a foundation for further protection to many individuals. (See also GROUP INSURANCE; SOCIAL SECURITY.)

LEREOY A. LINCOLN,
Chairman of the Board, Metropolitan Life Insurance Company.

LIGHTING. See ELECTRICAL DEVELOPMENTS.

LIME. Statistics of the lime industry, given in the accompanying table in shoit tons, show that total sales were considerably lower in 1954 than in 1953. Total lime figures include dead-burned

	1952	1953	1954
Sales, total.....	8,073,078	9,674,183	8,688,326
Quicklime.....	6,190,254	7,632,083	6,669,621
Hydrated.....	1,882,824	2,042,100	2,018,705
Uses			
Agricultural.....	392,383	329,455	339,871

Industrial.....	4,561,407	5,883,673	5,696,994
Refractory.....	1,928,025	2,294,815	1,520,854

(Source: U.S. Bureau of Mines.)

dolomite (refractory lime), which is used for furnace linings.

Incomplete figures for the first 8 months of 1955 showed a reversal of the downtrend, with a gain of about 23%, as compared with the like period of 1954. The largest gain was in refractory lime, used principally by the iron and steel industries. Other large gains were in the chemical and industrial uses, which have attained great importance. There is very little foreign trade in lime.

LIMES. See FRUITS.

LINEN AND FLAX. See TEXTILE INDUSTRY.

LINGUISTICS. Meetings.—Three linguistic institutes were held in 1955: one at the University of Chicago, one at Georgetown University, and one at the University of Michigan. The Summer Institute of Linguistics (for missionaries) operated its regular establishments in Oklahoma and North Dakota, as well as its more recent training facilities in Australia, Great Britain, and the Philippines. There was a round-table conference, devoted in part to teaching aids and similar topics, at the Georgetown University Institute of Languages and Linguistics. The Linguistic Society of America, the American Philological Association, and the Modern Language Association met in Chicago; and the American Oriental Society in Toronto.

Discussion and Research.—Interdisciplinary discussion currently holds the center of the stage. The newest addition to the growing literature of verbatim (or only slightly edited) proceedings is *Language in Culture* (Chicago 1954), a report on a conference of anthropologists and linguists held in Chicago in 1953, edited by H. Hoijer. Its first objective was to appraise the hypothesis stated by the late B. L. Whorf, among others, that "a people's perception and patterns of thought are in some way a resultant of the structure of the language they speak" (W. H. Goodenough, *Language*, 31:242). It is worth noting that two linguists participating in the Whorfian debate, C. F. Hockett and N. A. McQuown, have been added to the staff of the Center for Advanced Studies in the Behavioral Sciences in Palo Alto, Calif.

At Indiana University, the new Research Center for Anthropology, Folklore, and Linguistics has begun publication of a series of monographs with E. Sapir and M. Swadesh' *Native Accounts of Nootka Ethnography*. An issue of the *International Journal of American Linguistics* is devoted to elaborations and criticism of lexicostatistic dating, or the proposed technique of calculating the time of dialect divisions from measuring the effects of vocabulary replacement. (G. E. Hutchison gives a popular account in the *American Scientist*, 41:633-4, 1953.)

There has been considerable interest in the methods of language teaching, some of it directed especially toward the introduction of foreign languages in the lower elementary grades. Foundation support for intensive language teaching on the high school level has made some experimental summer teaching possible. One of the most interesting as well as disturbing reports is contained in the American Council of Learned Societies' *Newsletter* (vol. 6, no. 2, pp. 12-19), in which S. D. Hudson analyzes the council's \$250,000 program, supported by the Ford Foundation, to provide the bare reference necessities for a large number of Oriental languages. Progress is impressive, but the remaining gaps are vast.

Publications.—The year 1955 saw the publication of an important work on method, C. F. Hockett's *Manual of Phonology* (Baltimore). It deals chiefly with phonological typology and with the principles of phonologic analysis, pattern, acoustic phonetics, and functional load (the relation between contrast and segmentation). One of its permanent merits will lie in the fact that it takes typological generalizations on sound structure out of the domain of unconnected *aperçus*.

H. A. Gleason, Jr., has written an *Introduction to Descriptive Linguistics*, with a *Workbook* (New York), a much-needed solid manual of established procedures. B. Siertsema is the author of a thorough discussion of Hjelmslev's language theory, under the title *A Study of Glossomatics* (The Hague). P. Guiraud's *La Sémantique* (Paris) is concerned with meaning and meaning change. There is a collection of essays by M. West, *Learning to Read a Foreign Language* (London). J. H. Greenberg's *Studies in the Classification of African Languages* has now appeared in book form (New Haven).

Kassitenstudien, 1 by K. Balkan (New Haven) deals with the ancient Near Eastern language of the Kassites. Another important language from that area is studied by H. H. Paper in *The Phonology and Morphology of Royal Achaemenid Elamite* (Ann Arbor). E. Ullendorff surveys *The Semitic Languages of Ethiopia* (London). M. B. Emeneau presents a detailed study of *Kolami* (Berkeley and Los Angeles), a Dravidian language of southern India, and H. Penzl has published a *Grammar of Pashto* (Washington). The monograph series entitled *The Great Languages* has been continued with T. Burrow's *Sanskrit Language* (London). C. D. Buck, the dean of American linguistics, whose death occurred early in 1955, was able to see through the press a new and considerably changed edition of his *Greek Dialects* (Chicago). K. H. Jackson's *Contributions to the Study of Manx Phonology* (Edinburgh) is concerned with a virtually extinct Celtic language. From W. B. Lockwood we have *An Introduction to Modern Faroese* (Copenhagen), the little-known and orthographically ill-favored speech of the Faeroe Islands in the North Sea.

H. Kökeritz' *Guide to Chaucer's Pronunciation* is accompanied by a phonograph record. J. H. Sledd and G. J. Kolb are the authors of a study on Dr. Johnson's dictionary (Chicago), and a *Concise Dictionary of American Grammar and Usage* has been compiled by R. C. Whitford and J. R. Forster (New York).

LIQUOR INDUSTRY. See DISTILLING INDUSTRY.
LITERATURE. See Index entry.

LITHUANIA. An independent republic since 1918, Lithuania was forcibly annexed by the Soviet Union in 1940, and reannexed by force after World War II, thus becoming the Lithuanian Soviet Socialist Republic. The United States does not recognize this annexation.

Area and Population.—Lithuania's area is about 25,000 square miles; its population (est. 1954) is 3,000,000, of whom close to a million may be recent importees (including police and military personnel) from other parts of the USSR to replace the large numbers of Lithuanians killed or deported to Germany and Siberia between the years 1940 and 1955. Because of Lithuanian hostility to Soviet rule, the USSR is gradually destroying Lithuania as a nation. In 1955, two thirds of the popu-

lation of Vilnius, the capital, was Russian, as was also three fifths of the population of Klaipeda and one third of the population of Kaunas, the other main cities. Principal cities are Vilnius (Vilna, Vilno) (pop., est. 1949, 160,000); Kaunas (Kovno) (est. 1949, 150,000); Klaipeda (Memel) (est. 1938, 47,000); and Shauliai (Siauliai) (est. 1939, 31,000).

Religion.—Because of Soviet persecution of the predominant Roman Catholic religion, by 1955 no more than 340 of Lithuania's former 1,600 Catholic priests were still conducting services.

Government.—Like all Soviet republics, Lithuania has its own Soviet (legislature), Soviet Presidium (standing legislative committee), and Council of Ministers (cabinet). However, all three have virtually no power, except as agents executing orders from the USSR central government in Moscow. Most Lithuanian laws simply copy the law code of the Russian Republic, or Soviet edicts. All key governmental posts are in the hands of members of the Lithuanian Communist Party, many of whom are Russians. Theoretically Lithuania has the right to have its own armed forces and to conduct its own foreign relations; but in practice, Lithuania is guarded and policed by the Soviet armed forces, and has never been permitted to send diplomats abroad or to receive foreign envoys.

Economy.—The 1955 planned budget provided for the expenditure of 1,644,514,000 rubles (\$411,128,500), of which 811,235,000 rubles were to be spent by the central government of Lithuania, and 833,279,000 by city, town, and district authorities. In comparison with 1954, the 1955 total expenditures were slightly reduced. Lithuania's budget appropriations in 1955 were less than those of Latvia, although the latter neighboring Soviet republic has almost a million fewer inhabitants.

As in 1954, the 1955 budget data revealed how little of the tax revenue collected in Lithuania under Soviet rule is actually spent by the Lithuanian authorities. Of the various taxes collected in 1955, Lithuania received the following percentages: sales tax, 32.4%; income taxes, 25%; machine-tractor station profits, 25%; state loan subscriptions, 40%; and taxes on agriculture, forests, bachelors, spinsters, and parents with less than 3 children, 40%. All of the remaining tax revenue went to the USSR central government.

Under Soviet rule, Lithuanian industry has at least doubled in size, with emphasis on the production of capital goods. In 1955 shipbuilding, turbine construction, electrical machinery manufacture, machine-tool making, and fishing were the chief Lithuanian industries. In general, the fishing industry functioned poorly during 1955; during the first half of the year, only 37% as much fish were caught as had been planned. Other Lithuanian industries with a poor record for production in 1955 were peat cutting, lumbering, the manufacture of construction materials, and so-called "local industry" (which is managed by district and city governments and specializes in production of consumer goods).

By 1955, Lithuania's 300,000 peasant households were almost entirely collectivized. There were 2,656 collective farms, with the average collective tilling 3,300 acres. The chief crops are rye, oats, wheat, potatoes, flax, clover, and sugar beets. Hogs, chickens, and cattle are raised in large numbers. Sale of livestock products accounts for 49% of collective farm income. Because of Soviet insistence, Lithuania in 1955 was forced to sow 390,000 acres under Indian corn (only 10,000 acres of corn were planted during 1954). This acreage expansion occurred despite the fact that Lithuania's soil and climate are not suitable for large-scale cultivation of corn.

Because of passive resistance by the peasants to collectivization, Lithuanian agriculture in 1955 continued in the slump which had begun two years before. The milk production of collective

farms was smaller in 1955 than in 1954, and harvesting of hay and other fodder crops was also slower in 1955. Meanwhile, production costs on Lithuanian state farms remained very high.

As a result of the scarcity of certain farm products and enforced sacrifice of consumer goods output to heavy industry, the Lithuanian standard of living continued to be low in 1955. Real wages were no more than two fifths of the level before World War II.

Political Unrest.—Although many tourists visited other sections of the USSR during 1955, none was permitted to visit Lithuania. Even foreign diplomats accredited to the Soviet government are not allowed to enter this Baltic republic, whose political unrest is thus hidden from foreign eyes. However, recent refugees from Lithuania reported that anti-Communist guerrillas still operate in the country's forests, although this resistance movement is weakening because of lack of outside aid. Radio Free Europe states that 9 slave labor camps are known to exist in Lithuania, but that persons sentenced to a year or more of imprisonment are deported to other areas of the USSR (often Siberia).

Military Developments.—Rocket-launching emplacements are strung along the Lithuanian Baltic coast, which is a security zone requiring special passes to enter. There also are large concentrations of combat planes at major airports.

ELLSWORTH RAYMOND,

USSR Area Specialist and Associate Professor of Government, New York University.

LIVING STANDARDS. See STANDARDS OF LIVING.

LLOYD, (John) Selwyn (Brooke), British foreign secretary: b. West Kirby, Cheshire, England, July 28, 1904. One of the leading younger members of the Conservative Party, he succeeded Harold Macmillan as secretary of state for foreign affairs on Dec. 20, 1955.

Educated at Fettes College, Edinburgh, and at Magdalene College, Cambridge University (M.A., 1927), he was called to the bar in 1930 and for nine years practiced law in Liverpool, specializing in insurance cases. During World War II he served in the British Army, rising in rank from 2d lieutenant to brigadier by 1944. He was made a commander of the British Empire in 1945. As a staff officer of the Second Army (1943-45), he had numerous contacts with United States forces, and in 1946 received the Legion of Merit.

Lloyd was elected to Parliament in 1945 from the Wirral Division of Cheshire. In 1947 he became a king's counsel, and from 1948 to 1951 served as recorder of Wigan. When the Conservatives returned to power in the latter year, Lloyd was appointed minister of state at the Foreign Office, in which capacity he led the British delegation at the sixth, seventh, and eighth sessions of the U.N. General Assembly and attended numerous international conferences. In October 1954, he became minister of supply, and in April 1955 was raised to cabinet rank as minister of defense.

LOANS. See Index entry.

LOS ANGELES. Third most populous city in the United States (1953 special census: 2,104,663; 1955 estimate: 2,170,934), Los Angeles, Calif., is also the nation's largest city in area (454.7 square miles).

Since 1950 the population of Los Angeles has

WIDE WORLD

A white bank of smog, one of the city's major problems in 1955, moves in across Los Angeles.

increased by more than 200,000. The most conspicuous factor in its history in 1955 was, as usual, unprecedented growth. This expansion of population continued to baffle demographers, census officials, and economists. Since 1950, Los Angeles has bypassed both Detroit and Philadelphia. Los Angeles County now holds 42% of California's total population. The county had by October 1955 increased to 5,140,583 residents, and continued to be the most populous county in the nation.

The city government is headed by Mayor Norris Poulson (Republican), Samuel Leask, city administrative officer, and a 15-member City Council. Budget appropriations (1955-56 fiscal year): \$147,032,532. City tax rate (1955-56): \$1.8271 per \$100 of assessed valuation (\$3,234,518,880, including public utilities). The tax rate was cut 0.8 mills from the previous year. Long-term debt (June 30, 1955): \$393,154,000, of which \$252,215,000 was for Department of Water and Power bonds. School enrollment (October 1955): 508,837, comprising 39,115 kindergarten; 216,503 elementary; 151,969 secondary; 47,266 junior college; and 53,984 adult education. An increase of 24,089 students occurred during the 1955 calendar year.

Total employment (July 1955) for metropolitan area: 2,284,000; unemployment: 70,400. Value of manufactures for metropolitan area (1954-55): \$5.3 billion; of retail sales, \$6,350 million. Harbor tonnage (short tons, 1954): 26,513,994, including general cargo, 3,034,318; lumber, 657,747; and petroleum, 22,821,933. Value of building permits for 1954 was \$408,672,000, and for the first seven months of 1955 was \$241,033,000, again breaking all previous records. The number of new dwelling units authorized in 1954 was 27,187; for the first seven months of 1955, 14,741.

The city's major controversial problem—smog—remained unsolved. During 1955, Smith Griswold was appointed director of the Los Angeles County Air Pollution Control District by the Board of Supervisors. Considerable argument continued over the cause of ozone in the air; the general consensus was that automobiles, industry, and backyard incinerators are major contributors. On September 13, eye irritation reached the "alert" stage for the seventh time since June. A related controversy over the collection of combustible rubbish also brought accusations of corruption in that industry by the mayor, touching off an investigation reaching into the County Board of Supervisors. Controversy also continued in 1955 over the segregation of the city's Negro firemen, with fire chief John Alderson proffering his resignation toward the close of the year.

Additional links were added to Los Angeles' extensive freeway program in 1955. Both the Harbor and Santa Ana freeways were extended,

the latter beyond Norwalk. Development of the City Center continued. New health and police buildings were completed; construction continued on the courthouse; and various old municipal buildings were razed.

The first six months of 1955 saw an 11% decrease in crime. Some \$60 million in sewer bonds and \$4 million in Fire Department bonds for 34 new substations were voted. Budgetary provisions were made to establish the Municipal Art Center in Barnsdall Park on a full-time basis. Light opera and ballet were again presented in the city's Greek Theater in Griffith Park.

ANDREW F. ROLLE,

Assistant Professor of History, Occidental College.

LOUISIANA. South Central State, United States; admitted to the Union, April 30, 1812. The "Pelican State" ranks 30th in area and 21st in population (1955) among the 48 states.

Area and Population.—Area: 48,523 square miles (land, 45,162; inland water, 3,361), divided into 64 parishes. Population: (1950) 2,683,516; (est., July 1, 1955) 2,902,000. Urban places with 1950 populations above 10,000 are as follows:

Alexandria.....	34,913	Lafayette.....	33,541
Bastrop.....	12,769	Lake Charles.....	41,272
Baton Rouge.....	125,629	Monroe.....	38,572
Bogalusa.....	17,798	New Iberia.....	16,467
Bossier City.....	15,470	New Orleans.....	570,445
Crowley.....	12,784	Opelousas.....	11,659
Gretna.....	13,813	Ruston.....	10,372
Houma.....	11,505	Shreveport.....	127,206
Jennings.....	10,673 ¹	West Monroe.....	10,302

¹ Capital. ² Special census, Dec. 1, 1953.

Executive.—Chief state officers in 1955:

Governor: Robert F. Kennon (Democrat)

Lieutenant Governor: C. E. Barham

Secretary of State: Wade O. Martin, Jr.

Treasurer: Andrew P. Tugwell

Attorney General: Fred S. LeBlanc

Supt. of Public Education: Shelby M. Jackson

Constitution and Judiciary.—The present constitution went into effect in 1921. The Supreme Court comprises seven justices; chief justice in 1955 was John B. Fournet.

Legislature.—The Legislature (Senate, 39 members; House of Representatives, 101) meets annually, commencing the second Monday in May.

At the regular legislative session (May 9-June 7) approximately \$120 million was appropriated, supplementing the 1954 biennial session appropriation for 1955. A total of \$16 million was allocated for construction at state institutions of higher education, hospitals, and charitable institutions, including \$5 million for the erection of an off-campus division of Southern University; and \$15 million was assigned to the Department of Highways for the initiation of a long-range road program. Standing committees in the House of Representatives were reduced from 37 to 16; and in the Senate, from 29 to 15. Provisions were made for orientation conferences for legislators before each regular session, publication of a manual for legislators, and for new rules governing the filing and printing of bills. State employees were permitted to vote on participation in federal social security; and an expanded program for the education of mentally retarded children was initiated. (See also below, *Principal Events*, 1955.)

Finances.—General Fund revenue (1954-55 fiscal year), \$485,371,846.10; expenditures, \$437,566,703.97; General Fund balance, \$171,388,004.96; net bonded indebtedness, \$229,198,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$421,555,918.90, including \$64,811,172 from a 2% general sales tax and selective sales and gross receipts taxes; \$13,879,943 from licensing; \$8,465,599 from individual income taxes; \$10,823,593 from corporate income taxes; and \$14,100,791 from property taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 40 national banks had \$1,755,284,000 in assets, \$1,411,347,000 in demand deposits, and \$232,594,000 in time deposits; the state's 136 other banks had \$807,469,433.94 in assets, \$597,338,025.21 in demand deposits, and \$151,617,638.88 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 15, inclusive. Operating expenditures of \$112,189,949.01 (\$229.59 per pupil) for public elementary and secondary education in the 1953-54 school year comprised

LOUISIANA

32.6% from local school districts, 65.7% from the state, and 1.7% from the federal government. Expenditures for construction and improvements totaled \$34,971,049.12. Teachers' salaries averaged \$3,462.52 for white teachers; \$3,088.71 for Negro teachers.

LOUISIANA SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students

Labor Force.—The labor force on July 15, 1955, numbered 1,027,500, including 144,950 agricultural workers. Nonagricultural employees numbered 690,500, and for 1954 averaged 693,200. There were 41,400 unemployed workers on July 15, 1955, and the state paid \$10,355,855 in unemployment compensation during 1954.

Manufacturing.—Establishments numbering 2,617 in 1954 employed 147,854 "covered" workers who received \$538,851,094 in salaries and wages.

(Source: *The Blue Book of Southern Progress*, 1955.)

Investment in new plant and equipment was \$149,743,005. Earnings of production workers in manufacturing averaged \$65.25 for an average work week of 41.3 hours in 1954, and \$69.14 for 41.9 hours in the first half of 1955.

Port of New Orleans.—New Orleans handled a record 40,560,350 tons of internal and foreign trade (value over \$1.5 billion) during 1954, retaining its status as the second leading American port in value of imports and exports.

The Board of Commissioners of the port approved a \$10 million bond issue to initiate a 3-year, \$20 million construction program. Begun on July 1, 1955, the plan will end on June 30, 1958, marking one phase of a \$60-million, 10-year harbor improvement program.

New industrial plants announced for or begun in the port area in 1955 include a \$6 million gypsum plant of the National Gypsum Company in Westwego; 11 acres of docks and other facilities on the east side of the Industrial Canal, by the National Lead Company; a new plant of the Ideal Cement Company; and a \$60 million Kaiser Aluminum and Chemical Corporation bauxite refinery at Gramercy, 30 miles north of the city.

Mining.—Louisiana normally ranks second among the states in production of sulfur and natural gas, and third in petroleum, natural gas liquids, and salt. In 1953 it stood 4th in the overall value of its mineral products, with 6.71% of the United States total. There were 39,500 persons employed in the state's mineral industries on July 15, 1955.

Fisheries.—The commercial fish and shellfish catch in 1953 was valued at \$41,398,473.24. Freshwater fish totaling 11,013,466 pounds had a value of \$1,266,451.95 to fishermen; saltwater fish of 12,812,145 pounds was valued at \$2,869,600.50, not including menhaden valued at \$6,525,977.50. The two leading shellfish catches were shrimp, 100 million pounds (\$28 million) and oysters, 885,717 barrels (\$1,753,098). In June 1953 there were 75,982 commercial fishermen.

Agriculture.—Cash farm income in the first half of 1955 totaled \$104,050,000, and for the full year 1954 comprised \$117,647,000 from livestock and livestock products, \$254,113,000 from crops, and \$11,306,000 from government payments.

Receipts from principal crops and livestock in 1954 included: cotton lint, \$107,630,000; rice, \$55,500,000; cattle, \$48,286,000; sugarcane for sugar, \$38,530,000; and dairy products, \$33,027,000.

The state's 111,127 farms (11,441,343 acres; harvested cropland, 3,010,580) had an average of 103 acres and \$9,591 in value of land and buildings per farm in 1954. There were 28,457 farms with telephones and 101,419 with electricity.

Livestock on farms (Jan. 1, 1955) included 1,787,000 cattle and 4,342,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 283,535 family and hired workers engaged in farming.

LOUISIANA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Corn (1,000 bu.)	15,230	12,957	18,870
Cotton lint (1,000 bales)	591	572	585
Cottonseed (1,000 tons)	239	236	236
Hay (1,000 tons)	381	324	438
Pecans (1,000 lb.)	13,725	10,500	17,000
Potatoes (1,000 bu.)	1,418	927	480
Rice (1,000 bags)	10,968	15,956	13,150
Soybeans (1,000 bu.)	460	848	1,408
Strawberries (1,000 crates)	594*	918	352
Sugarcane for sugar and seed (1,000 short tons)	5,407	6,058	6,199
Sugarcane sirup (1,000 gal.)	5,932	3,000	3,320
Sweet potatoes (1,000 bu.)	9,319	8,835	10,500

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$36,861,653.69, and newly completed construction and reconstruction aggregated 1,362.85 miles.

Highways and roads on Dec. 31, 1954, totaled 40,040 miles (26,467 surfaced). Registered motor vehicles numbered 939,061 on July 31, 1955, including 700,575 passenger cars. There were 38 railroads (1954) operating 4,685.39 line miles, and (1955) 9 regularly scheduled airlines and 149 airports and airfields (42 commercial and municipal, 5 military, and 102 private).

Communications media (1955) included 59 radio stations and 11 operating television outlets; 20 daily newspapers (circulation, 695,136) and 117 other newspapers; and (Jan. 1, 1955) 192,801 business and 491,954 residential telephones.

Principal Events, 1955.—At a special session of the Legislature (January 3-14), only three measures were enacted. Two provided for session expenses and the third appropriated \$50 million for highway maintenance and construction. The regular session (May 9-June 7) was the first under the constitutional amendment adopted in 1954 providing for annual sessions, with those held in odd-numbered years limited to 30 days and to considering financial matters. The 1955 budget session approved 142 acts and appropriated approximately \$120,000,000. This amount was in addition to that provided in the 1954 biennial session for spending in 1955. (See also above, *Legislature*.)

Preparatory to the general election in 1956, five candidates qualified for the office of governor and 535 for the 139 places in the state Legislature. On Oct. 1, 1955, there were 912,530 registered voters, 127,231 of whom were Negroes. A few years earlier Louisiana had fewer than a thousand registered Negro voters.

On October 17, an announcement was made that the boundary dispute between Louisiana and Mississippi had been settled, with both states accepting the recommendation of the U.S. Supreme Court. Both states began taxing landowners in the 25-mile area of Diamond Island, over which the dispute had begun 50 years earlier.

Business conditions were better in 1955 than in the previous year. Agriculture benefited from a better distribution of rainfall throughout the year. A number of cities began subsidizing industries which located in their areas, and tax exemptions were continued for new industries.

A number of business mergers took place. The Southern Advance Bag and Paper Company merged with Robert Gair Company, Inc., while

Olin Industries acquired the Frost Lumber Industries and the Brown Paper and Box Company and then merged with the Mathieson Chemical Corporation.

New Orleans started building its \$7 million city hall as part of a civic center which is to rise on an 11-acre site. Other structures are expected to include a state office building, a state Supreme Court building, and, subject to voter approval of a bond issue, a new library.

Among miscellaneous developments in 1955, inmates of the Louisiana State Penitentiary moved into their new \$8 million plant at New Angola, which embodies modern prison theories; the world's largest undersea pipeline (for oil and gas), a 46-mile facility off the Louisiana shore, began operating; and the bicentennial of the arrival in Louisiana of the Acadian exiles (their 700,000 descendants are scattered in 25 parishes) were celebrated from January to October. (See also BRIDGES; HIGHWAYS.)

Principal Events by: G. W. MCGINTY, Professor of History, Louisiana Polytechnic Institute; Author, "A History of Louisiana" (1949).

LUMBER. Production of lumber in the United States in 1954 amounted to 37,329 million board feet, according to a preliminary estimate by the National Lumber Manufacturers Association, based on reports of regional industry associations. The 1954 production was slightly above that of 1953 as estimated by the association.

Of the 1954 production, 29,296 million board feet was softwood lumber, and 8,033 million was hardwood lumber. Production (in millions of board feet) by principal lumber industry regions was: Southern pine, 8,007; Douglas fir, 8,723; Western pine, 7,953; redwood, 2,450; other softwoods, 2,163; Southern hardwood, 4,264; and other hardwoods, 3,769.

United States imports of lumber in 1954 totaled 3,066 million board feet, according to the U.S. Department of Commerce. The total comprised 2,855 million feet of softwoods, 208 million feet of hardwoods, and 3 million feet of sawed railroad ties. Exports were 723 million board feet, including 555 million feet of softwoods, 97 million feet of hardwoods, 5 million feet of box shooks, and 66 million feet of sawed railroad ties.

A three-month strike of sawmill and logging workers in the Pacific Northwest in the summer of 1954 affected production in that area.

During the first quarter of 1955, demand for lumber was reported exceeding production. Total output for 1955 was expected to show an increase over 1954.

During 1954, wholesale lumber prices, according to a Bureau of Labor Statistics index, averaged 117.3 (1947-49 = 100). The 1953 average was 119.3; the 1952 figure was 120.5. The all-time peak of 123.6 was in 1951. During the first four months of 1955, lumber prices were above the 1954 average.

Canada.—Canada's production of softwood lumber in 1954 was reported at approximately 7,001 million board feet, compared with 7,385 million in 1953. About 30% of production was exported. (See also CANADA.)

World Production.—The Forestry Division of the Food and Agriculture Organization of the United Nations estimated world production of sawnwood (including boxboards) in 1953 at 266,850,000 cubic meters (1 cubic meter = 424 board feet). This total showed a 3% increase

over the estimated world production in 1952. While Latin America showed a slight decrease, due mainly to lower production in Argentina and Brazil, all other regions increased their output. Production in the USSR was estimated to have increased by 6%. Japan's production, which had risen by 36% from 1951 to 1952, increased only slightly in 1953.

Coniferous or softwood species accounted for about four fifths of the total 1953 production of sawnwood in the countries reporting to FAO. North America, the USSR, Scandinavia, and Japan together produced 81% of the total softwood lumber output.

The volume of lumber reported as moving in international trade in 1953 was about 10% of reported world production. All regions, except the USSR, Latin America, and Canada, were net importers. The United Kingdom and the United States, by far the biggest importers, together accounted for more than half of the world's trade volume. In softwood lumber, Europe, the USSR, and North America accounted for over 90% of the volume shipped. Austria, Finland, Sweden, and Canada were the main exporting countries. In hardwood lumber, Europe, North America, and Asia each accounted for about a quarter of the export quantities. Yugoslavia, next to Canada the biggest exporter, increased its shipments by some 60%. The United Kingdom accounted for about a third of the world's hardwood imports.

FAO estimated that of the total cut of roundwood in 1953, 54.7% went into industrial uses. In the countries reporting to FAO, the amount of industrial wood from coniferous forests was 89% and from broadleaved stands 24%. (See also FORESTRY; PUBLIC LANDS.)

CHARLES E. RANDALL,
Division of Information and Education,
U.S. Forest Service.

LUTHERAN CHURCHES OF AMERICA. Lutheran church membership passed the seven million mark in 1955. Of the 7,117,906 baptized members, 6,906,331 were in the United States and 211,575 were in Canada. Church property was valued at \$1,238 million, and debts amounted to \$156 million.

The 17,239 congregations, served by 15,881 ministers, belonged to 16 autonomous church bodies, but merger talks between several of these were an outstanding feature of the year. The 2,200,000-member United Lutheran Church in America (the largest single body) and the 516,000-member Augustana Lutheran Church jointly invited all Lutherans to talks "looking toward organic unity." Four other bodies declared Jan. 1, 1960, as the "target date" for union. These are the Evangelical Lutheran Church (960,000 members), American Lutheran Church (862,000), Lutheran Free Church (67,000), and United Evangelical Lutheran Church (57,000). The 1.8 million group resulting from this merger will become the third largest in America, the 2 million-member Lutheran Church-Missouri Synod remaining second in size.

The eight bodies cooperating in the National Lutheran Council (largest nonparticipant; the Missouri Synod) began preparations for the 1957 Lutheran World Federation Assembly at Minneapolis, Minn. Delegates from 56 churches in 28 countries will represent two thirds of the world's estimated 77 million Lutherans.

In 1955, the National Lutheran Council launched a million-dollar refugee resettlement program, in cooperation with the Missouri Synod,

to resettle 15,000 persons under the Refugee Relief Act of 1953. A million dollars worth of farm produce was expected from the All-Lutheran Food Appeal, another joint program for overseas relief. American Lutheran missionary efforts were carried at an expense of over \$4.5 million by 1,687 missionaries serving 5,265 stations in 18 foreign countries.

Describing postwar Lutheran relief efforts as the most extensive undertaken by any Protestant denomination, the National Lutheran Council said Lutheran contributions in cash and goods to relief projects from 1939 through 1954 reached nearly \$82 million, primarily for overseas churches and refugees.

Highly publicized in 1955 were the Lutheran "heresy trials" against three young pastors in the Milwaukee (Wis.) area. Pastor George P. Crist of Durham was suspended for denial of the virgin birth and physical resurrection of Jesus Christ, as well as for deviation from other doctrines. Similar charges against two other pastors were investigated. These were the first such trials in the United Lutheran Church in America since the 1920's.

ALEX LIEPA,
Staff Writer, Division of Public Relations,
National Lutheran Council.

LUXEMBOURG. A grand duchy of western Europe, bounded by Belgium, France, and Germany. Area, 998 square miles; pop. (est. Dec. 31, 1954), 308,000. The capital and chief city is Luxembourg (pop. 1951, 63,951). French and Letzeburgesch, a German-French-Dutch admixture, are the chief languages in use.

Government.—Grand Duchess Charlotte (acceded 1919) is the sovereign. The unicameral legislature consists of a Chamber of Deputies of 52 members elected for 6 years (usually 26 every 3 years). There is also a Council of State whose 15 members are appointed for life. Following the elections of May 30, 1954, the Christian Social Party held 26 seats, as compared with 17 for the Socialists. Minister of State Joseph Bech (Christian Social) heads a Christian Social-Socialist cabinet formed on June 29, 1954. The estimated 1954 budget (including the extraordinary budget) was: revenue, 3,867,203,000 francs; expenditure, 4,371,426,000. The Luxembourg franc equals U.S.\$0.02.

Education and Religion.—In 1952-53, primary schools had 27,672 pupils; 22 higher elementary and secondary schools, 3,761; and 4 technical schools, 3,919. Luxembourgers are predominantly Roman Catholics.

Production and Trade.—Luxembourg's economy is featured by a highly developed heavy industry. Output of crude steel in 1954 totaled 2,828,000 metric tons; iron ore (30% metal content), 5,892,000; and pig iron and ferroalloys, 2,796,000. Other manufactures include sole leather, china, textiles, gloves, and beer. Chief crops are oats, wheat, rye, and potatoes. Luxembourg exports chiefly iron and steel products, and imports fuel, vehicles, cotton, textiles, foodstuffs, and machinery. Luxembourg has had an economic union with Belgium since 1922.

Transportation and Communications.—Luxembourg had 2,414 miles of roads and 286 miles of railways in 1953. Passenger cars numbered 18,317 in 1955; trucks, 6,488; and telephones, 29,861. There were 5 daily newspapers in 1952 with a total circulation of 135,000. Radio Luxembourg is one of the most powerful stations in the world. Luxembourg's first TV station was inaugurated at Dudelange on Jan. 23, 1955.

Principal Events, 1955.—On April 6, the Chamber of Deputies, 48-3, voted approval of the 1954 Paris pacts on the rearmament of West Germany. The United States and Luxembourg raised their respective legations to embassies in September.

Economic activity was at a high level in 1955, the index of industrial production (1948 = 100) averaging 125 for the first nine months, as compared with 114 for 1954 (full year). The growing gas and electric utilities set new output rec-

ords, while many manufacturing industries equalled or surpassed the boom levels of 1951-52. Mining, recovering strongly from the 1954 slump, reached the 1952 peak by mid-1955. Overall employment was also at a record level in 1955.

MACAO. See PORTUGUESE TERRITORIES.

McCORMICK, Robert Rutherford, American newspaper editor and publisher: b. Chicago, Ill., July 30, 1880; d. Wheaton, Ill., April 1, 1955. As editor and publisher of the Chicago *Tribune* for 40 years, he was an outspoken nationalist and champion of the extreme right wing in American politics.

The son of Robert Sanderson McCormick, American ambassador to Austria-Hungary, Russia, and France, and grandson of Joseph Medill, former owner of the Chicago *Tribune*, McCormick was educated at Groton School and Yale University (B.A., 1903). He was admitted to the Illinois bar in 1907, after a period of study at the Northwestern University School of Law, and subsequently became a member of a Chicago law firm. During this period he made a successful excursion into Chicago politics, serving, among other posts, as a member of the City Council (1904-06).

McCormick and his cousin, Joseph Medill Patterson, gained control of the Chicago *Tribune* when its editor and publisher, Robert W. Patterson, died in 1910. It was not, however, until 1914 that they jointly took the posts of editor and publisher and began directing editorial policy. Although differing in point of view, they nevertheless succeeded in establishing the *Tribune* as an important and widely read Midwestern paper.

McCormick's journalistic efforts were interrupted by World War I. After a brief period as war correspondent in France and Russia, he returned to the United States and participated with the 1st Illinois Cavalry in the Mexican campaign against Pancho Villa in 1916. Returning to France, he served with Gen. John J. Pershing's staff and saw action as a battalion commander of the 5th Field Artillery and later as commander of the 61st Regiment. He rose to the rank of colonel and was awarded the Distinguished Service Medal.

After the war, Colonel McCormick and Patterson launched the *Illustrated Daily News* in New York City (June 1919), a tabloid modeled after the London *Daily Mirror*. McCormick became sole editor and publisher of the Chicago *Tribune* when Patterson split with him and went to New York to become resident head of the *Daily News* (the word *Illustrated* having been dropped) in 1925.

Under the colonel's rigid direction, the *Tribune* became a reflection of its editor's brilliant, if erratic, personality. Its pages were exhibitionistic, but dynamic; its editorials were opinionated and frenetic, but independent and often provocative. As one journalist put it, one could never be certain whether the *Tribune* "is going to be reactionary and vicious, or whether it accidentally will be found on the side of progress and en-

lightenment." Nevertheless the reiteration of certain tenets served to reveal the editor's views. As spokesman of the Midwest, he was uncompromising in his condemnation of internationalism, the welfare state, the New Deal, subversion in government, control of the press, and life in the eastern United States.

During the years prior to the entry of the United States into World War II, his opposition to President Roosevelt's foreign policy was total. During the war, however, he gave his editorial support to the war effort. In the postwar period he roundly condemned President Truman, the Marshall Plan, and the United Nations; and in the presidential campaign of 1952, he denounced both Dwight Eisenhower and Adlai Stevenson.

In July 1949, McCormick purchased the Washington (D.C.) *Times-Herald* "to take Americanism into the nation's capital." The venture failed, and he was forced to sell the newspaper to the Washington *Post* on March 17, 1954. In his will the colonel turned over the management of the *Tribune* to its three top executives: Chesser M. Campbell, vice president of the Tribune Company; William D. Maxwell, the newspaper's managing editor; and J. Howard Wood, its business manager.

McCormick was the author of several provocative books, including *Ulysses S. Grant, the Great Soldier of America* (1934); *Freedom of the Press* (1936); *The American Revolution and Its Effect on World Civilization* (1945); and *The War Without Grant* (1950). He also wrote numerous articles on history, military science, law, and politics.

MACFADDEN, Bernarr (original name BERNARD A. McFADDEN), American publisher and physical culturist: b. near Mill Springs, Mo., Aug. 16, 1868; d. Jersey City, N.J., Oct. 12, 1955. The colorful former owner of popular magazines and newspapers, he influenced a wide segment of the American public in the fields of physical health and beauty.

Orphaned at the age of eight, Bernarr Macfadden spent his youth traveling from one odd job to another until 1886, when he established a physical culture studio in New York. In 1898 he published the first issue of *Physical Culture*, a pamphlet amply illustrated with photographs of "Professor B. Macfadden in classical poses" to advertise a massage reducer he had invented. The combination of health theories and vivid illustrations depicting the results of their application proved very appealing to the public and highly remunerative to Macfadden. Although he was convicted, in a case that reached the U.S. Supreme Court, of sending obscene literature through the mails, his publishing fortunes continued to rise during the first and second decades of the 20th century. By 1929 he owned 13 nationally circulated magazines, including *Health and Beauty*, *True Story Magazine*, *True Romance*, *True Detective*, and *Modern Marriage*,

and 10 daily newspapers, including the *Philadelphia News*, the *Detroit Daily*, and the notorious *New York Evening Graphic*. In 1931 he acquired *Liberty*, but was forced to dispose of it in 1942.

During the heyday of his publishing career, Macfadden greatly broadened the scope of his activities. In 1931 he established the Bernarr Macfadden Foundation to promote the cause of "physcultopathy" (healing through physical culture) in the United States. He also founded the Macfadden Institute of Physical Culture; the American Institute for Physical Education; Castle Heights Military Academy, Lebanon, Tenn.; the Physical Culture Hotel, Danville, N.Y.; and the Macfadden-Deauville Health Hotel, Miami Beach, Fla. With the depression and the failure of the *Evening Graphic* in 1932, Macfadden's fortunes took a negative turn, and in 1941 he sold his publishing interests to minority stockholders.

Macfadden practiced vigorously and exuberantly the health tenets he advocated. As late as 1952, on his 84th birthday, he parachuted into Paris to demonstrate that he had succeeded in avoiding the "bad habit" of old age. He was the author of numerous books on health and related subjects, including an *Encyclopedia of Physical Culture*.

MACHINERY. See Index entry.

McKAY, (James) Douglas, United States secretary of the interior: b. Portland, Oreg., June 24, 1893. Head of one of the largest and most complex of the executive departments, he has been a strong advocate of development of hydroelectric power by local authorities and private industry rather than by the federal government.

Educated at Oregon State College (B.S., 1917), he served in the army in World War I. After the war he sold automobiles, establishing his own agency in 1927. He served as mayor of Salem in 1933-34, and as state senator in 1935-37, 1939-41, 1943-45, and 1947-49. Elected Republican governor of Oregon in 1948 to fill an unexpired term, he was re-elected in 1950. Designated secretary of the interior on Nov. 20, 1952, by President-elect Dwight D. Eisenhower, McKay took office on Jan. 21, 1953.

As a proponent of the reduction of federal authority, he has supported the development of natural resources on federal lands by private enterprise, and local and private power development. On May 2, 1955, he appeared before the Senate Interior Committee to oppose federal construction of the long-sought Hell's Canyon Dam on the Snake River (see DAMS).

MACMILLAN, (Maurice) Harold, British political leader: b. London, England, Feb. 10, 1894. A leading figure in the British Parliament for almost 30 years and the holder of various important ministerial posts, he was, on April 7, 1955, appointed secretary of state for foreign affairs, succeeding Sir Anthony Eden (q.v.). In a reshuffling of the British cabinet on December 20, Macmillan moved into the post of chancellor of the Exchequer succeeding R. A. Butler.

Born of a Scottish father and an American mother, Macmillan received his formal education at Eton and at Balliol College, Oxford University. During World War I he served with the Special Reserve Grenadier Guards and was wounded three times in combat. He spent the year 1919-20 as aide-de-camp to the ninth duke of Devonshire, who was governor general of Canada, and whose daughter, Lady Dorothy Evelyn Cavendish, he married in 1920. Returning to England

in 1920, Macmillan became a director, until 1940, of Macmillan and Company, Ltd., the publishing firm founded by his grandfather.

Macmillan's political career began in 1924 when he was elected as a Conservative to the House of Commons from Stockton-on-Tees. He lost his Commons seat in 1929, but was re-elected in 1931 and served continuously until 1945. In the years prior to World War II, he was a frequent and caustic critic of the Conservative Party's economic and foreign policies. Conscious of the necessity of progress, he propounded a liberal economic philosophy that integrated what he thought was the best of both socialism and capitalism. He also opposed Prime Minister Stanley Baldwin's appeasement of Italy in the Ethiopian war and Neville Chamberlain's appeasement of Germany at Munich. With the outbreak of the war, he joined Winston Churchill's coalition government in May 1940 as parliamentary secretary to the Ministry of Supply. On Feb. 4, 1942, he was appointed undersecretary of state for the colonies and was charged with increasing colonial production and shipping to compensate for British losses to the Japanese.

On Dec. 30, 1942, after the Allies had invaded North Africa, Macmillan was named resident minister at Allied headquarters in Algiers to work with General Eisenhower and Robert D. Murphy, of the U.S. State Department, for the creation of a unified approach to the political and military problems of that area. In 1943 he participated in the Casablanca Conference and in the settlement of differences between the French generals, Charles de Gaulle and Henri H. Giraud, who were vying for power over Free France. He subsequently participated in the negotiations relating to the Italian armistice (September 1943), and was appointed British representative on the Advisory Council for Italy (November 1943). In December 1944 he visited Athens and assisted in negotiating the peace signed by the Greek government and the EAM (National Liberation Front). On his return to England in 1945, he was appointed secretary of state for air.

Macmillan was not returned to Parliament when the Churchill government was defeated by the Labour Party in July 1945, but was re-elected in a November by-election from the Bromley Division of Kent. In the years that followed he played an active role in modernizing Conservative doctrine, and with the return to power of the Conservative government in 1951, he was named minister of housing and local government. He held this post until late 1954 when he was appointed minister of defense.

A brilliant speaker with a biting wit—"The brave new world [Great Britain under the Labour government] has turned into nothing but a fish-and-Cripps age"—he is also the author of several important economic studies: *Industry and the State* (in collaboration with others, 1927); *Reconstruction: A Plea for a National Policy* (1933); *Planning for Employment* (1935); *The Next Five Years* (1935); and *The Middle Way* (1938).

(See also GENEVA CONFERENCE; GREAT BRITAIN.)

McNEIL, Hector, British public official: b. Garelochhead, Dumbarton, Scotland, March 10, 1907; d. New York, N.Y., Oct. 11, 1955. One of the highest-ranking diplomats in the postwar Labour government, he was a leading spokesman for the Western nations in conflicts in the United Nations with representatives of the USSR.

Soon after graduation from Glasgow University, he was elected in 1932 to the Corporation of Glasgow. Two years later he went to work for Lord Beaverbrook's Scottish *Daily Express*, of which he later became night news editor. After standing for Parliament unsuccessfully in 1935 and 1936, he won a seat in the House of Commons from the burgh of Greenock in 1941. With the accession to power of the Labour Party in 1945, he was appointed parliamentary under-secretary of state for foreign affairs. A year later he became minister of state under Foreign Secretary Ernest Bevin. A member of several diplomatic missions, he was Great Britain's representative at the United Nations from 1946 to 1949, serving as vice president of the General Assembly in 1947. From 1950 to 1951 he was secretary of state for Scotland. After the defeat of the Attlee government in 1951, he retained his seat in the House of Commons, and returned to private business.

During the three years in which he represented Great Britain at the United Nations, McNeil's diplomatic skill and his ability as a speaker made him an outstanding spokesman for the West in debates with the Soviet delegates, Vyacheslav M. Molotov and Andrei Y. Vishinsky, on such issues as the control of atomic energy, the Berlin blockade, the Palestine problem, and the North Atlantic Treaty.

McNUTT, Paul Vories, American lawyer and public official; b. Franklin, Ind., July 19, 1891; d. New York, N.Y., March 24, 1955. A former governor of Indiana, he served in a variety of important administrative posts during World War II, and was the first United States ambassador to the Republic of the Philippines.

McNutt took his B.A. degree from Indiana University in 1913 and his LL.B. degree from the Harvard Law School in 1916. After a brief period of law practice with the family firm, McNutt and McNutt, in Martinsville, Ind., he accepted a teaching post at the Indiana University Law School in 1917. During World War I he began service in the field artillery as an instructor, and rose to the rank of colonel. With the termination of hostilities, he returned to his teaching duties at Indiana University Law School, where he served as dean from 1925 to 1933.

Gaining prominence as national commander of the American Legion (1928-29), he was elected governor of Indiana on the Democratic ticket in 1932. During his term he reorganized the executive branch of the state government, and was instrumental in the passage of a comprehensive social security program. When his term expired in 1937, President Roosevelt appointed him high commissioner to the Philippines, a post he held twice (1937-39 and 1945-46).

Aspiring to the presidency from his youth, McNutt came closest to achieving his ambition during the Democratic National Convention of 1940, when President Roosevelt's demand that Henry Wallace be his running mate encountered considerable opposition among the delegates. The McNutt adherents began a drive in behalf of their choice, but he loyally withdrew his candidacy.

Between 1939 and 1945, McNutt served in a number of wartime administrative capacities in Washington. He was federal security administrator (1939-45), director of the Office of Defense Health and Welfare Services (1941-43), chairman of the War Manpower Commission (1942-45), and member of the War Production and

Economic Stabilization boards. When the Philippines gained their independence in 1946, he was appointed first ambassador to that country. After seeing through the initial diplomatic arrangements, he resigned the post in 1947 to return to private law practice in both Washington, D.C., and New York City. In the succeeding years he assumed the board chairmanship of the Philippine-American Life Insurance Company (1948), served as economic adviser to the Korean government (1951), and was director of several companies. He was awarded the Medal of Merit by President Truman for his wartime services.

MADAGASCAR. An island in the Indian Ocean about 250 miles off the east coast of Africa. With Nossi-Bé, Sainte-Marie, and other small island dependencies, it forms an overseas territory of the French Union. Area (without dependencies), 227,737 square miles; pop. (est. 1953), 4,523,000, including (in 1951) 66,107 nonindigenous inhabitants, mostly French. The natives, known as Malagasy, comprise over 20 different ethnic groups of Negro, Arab, and Malayo-Polynesian origin. Tananarive (187,339) is the capital, and Tamatave (39,843) the chief port.

Government.—The French high commissioner is aided by a government council. A Representative Assembly of 36 members (15 French and 21 Malagasy) is elected by the provincial assemblies of the 5 provinces. The provincial assemblies are elected on a 2-college basis. Madagascar sends 5 deputies and 5 senators to the French Parliament in Paris, and 7 delegates to the Assembly of the French Union.

Education and Religion.—About 42% of the school-age population attends school. In 1954 there were 1,861 primary schools (236,041 pupils); and in 1953, 146 secondary schools (11,358), 135 technical schools (6,194), and 4 higher schools (378). Roman Catholic and Protestant missions have converted many of the natives to Christianity. There is a small Arab Moslem minority.

Finance.—The general budget for 1954 totaled 12,145 million francs CFA; the provincial budgets aggregated 7,860 million. The franc CFA (*Colonies Françaises d'Afrique*) equals 2 metropolitan francs.

Production.—The economy is predominantly agricultural and pastoral. Subsistence crops include rice, manioc, sugarcane, sweet potatoes, maize, and bananas. Chief cash crops are coffee, rice, vegetables, sisal, tobacco, cloves, vanilla, tapioca, and raffia. Minerals include graphite (12,051 metric tons in 1954), mica (524), industrial beryls and garnets, quartz, and columbite. Industrial products are mainly canned and frozen meats, hides, refined sugar and rice, rum, alcohol, soap, essential oils, sisal and raffia fibers, footwear, tobacco products, and distilled cloves.

Foreign Trade.—Exports in 1954 totaled 16,174 million francs CFA; imports, 24,040 million. Chief exports were: coffee, 41,476 metric tons (7,669 million francs CFA); leaf tobacco, 4,713; cloves, 5,656; vanilla, 244; and essential oils, 1,027. Imports include foodstuffs, textiles, machinery and equipment, and petroleum products. France took 69% of 1954 exports and provided 75% of imports.

Transportation and Communications.—Madagascar's 4 railways have a total route length of 538 miles. The road network in 1954 aggregated 16,120 miles, including some 5,000 of all-weather roads. Four airlines connect Tananarive with Paris and other points in Europe and Africa. Passenger cars numbered 8,251 in 1954; telephones, 8,614 (1955).

Principal Events, 1955.—On Aug. 5, 1955, the French National Assembly approved a measure constituting the Southern and Antarctic French Lands as an autonomous territory of the French Union. The territory included the Adélie Coast

(Adélie Land) of Antarctica, with an area of about 150,000 square miles, and the following former island dependencies of Madagascar: Kerguelen Islands, 2,700 square miles; Crozet Islands, 200; Amsterdam Island, 16; and Saint Paul, 3. The new unit, which has a population of 90, will have its own budget and will be represented by a Consultative Council attached to the French Ministry of Overseas Territories in Paris.

MADEIRA. A group of Atlantic islands about 535 miles southwest of Lisbon, forming the Funchal District of Portugal. Area, 308 square miles; pop. (1950 census), 266,990; capital, Funchal (37,215). Madeira (286 sq. mi.) and Porto Santo (16 sq. mi.) are the only inhabited islands. Uninhabited islets comprise the Desertas and Salvages (Selvagens) groups. Oranges, grapes, bananas, and sugarcane are grown. Industries include fishing, embroideries, wine, and wicker baskets and furniture. The island of Madeira is a noted health resort.

MAGAZINE PUBLISHING. The best news of 1955 for publishers of general circulation magazines was a slight upturn in net profit ratio from the all-time low of 2.8%, set in both 1953 and 1954. Despite almost-certain higher operating costs for 1956, the majority of publishers expected that the year would show a slight strengthening of the ratio of profits to income.

In three important respects 1955 was a record year. According to the Magazine Advertising Bureau, circulation of general and farm magazines averaged more than 166,300,000 copies per issue, compared with 164,966,886 in 1954. Advertising pages approximated 83,500 sold, compared with 81,103 in 1954. Advertising dollar volume was estimated at \$650 million, against \$604,121,055 in 1954.

Adding a note of encouragement for the end of 1955 and the beginning of 1956 was a sharp increase in newsstand sales, representing far more than simply a recovery from the so-called summer slump.

The year 1955 was outstanding for the specialized magazines, such as the home service, outdoor, and fashion magazines—those giving specific information of reference value. These few publications recorded sharp gains in circulation and all-time highs in advertising revenues.

Editorially in both Canada and the United States there was added evidence of more depth in subject coverage, as shown by increasing numbers of entire issues being devoted to a specific topic. Emphasis continued to be given to interpretive articles, especially on international and national issues, and the popularity of biographical and autobiographical features continued.

Canadian Publications.—In Canada, despite the growth of television, general circulation magazines (61 English- and 14 French-language) recorded consistent gains. The Magazine Advertising Bureau of Canada estimated that circulation of ABC publications in 1955 totaled some 3,700,000, against 3,630,058 in 1954, with advertising revenues of more than \$16,800,000 against 1954's final figure of \$16,098,898. With higher circulation, advertising rates moved up slightly, but cost per thousand circulation of 12 leading consumer magazines stayed about the same, at \$5.58 for black-and-white and \$7.81 for four-color advertisements. Total advertising revenues for 1955 marked an all-time high, and forecasts for 1956 indicated a moderate but steady increase.

There were no new Canadian publications in

1955, but two changed hands. Crombie Publishing, a new company, bought *Mayfair Magazine* and *Canadian Bride Magazine* from the MacLean Hunter Publishing Company. *Canadian Bride*, which in the past had been an annual, was scheduled for semiannual or more frequent publication.

Split-Run Advertising.—Use of three split-run techniques—sectional-edition, alternate copy, and split press—gained among United States advertisers in 1955. Originally used mainly to test advertising copy, the system became fairly common in 1954. In 1955, split runs were definitely moving from the test stage to tie-ins with more intensive local merchandising campaigns.

Business Publications.—Nearly half the year's new ventures were in the business publishing field. Circulation of some 1,870 such publications (compared with 1,838 in 1954) rose to a record high of about 32,700,000 from about 30 million in 1954. A study by A. R. Venezian, assistant to the director of advertising of McGraw-Hill Publishing Company, showed advertising pages increasing 4,000 to about 1,065,000, indicating that 1956's total would beat the all-time record of 1,073,000 set in 1953. With 1955 advertising volume estimated at \$390 million (compared with \$365.5 million in 1954) the study forecast that 1956 would set another record at some \$430 million.

Comics.—Although much less in the limelight than in the preceding year, comics in 1955 continued to be big business, with a continuing average of about 400 titles selling some 60 million copies a month. In the fall, former New York City Magistrate Charles F. Murphy went into his second year as "czar" of most of the industry—represented by the Comics Magazine Association of America. Censoring was continued in order to eliminate crime and horror content. With the industry thus moving to keep its own house in order, and apparently willing to meet all challenges, it was becoming less popular to attack the comics as a prime source of juvenile delinquency and crime. (See also CENSORSHIP.)

New Publications.—Continuing to reflect high costs and growing competition, new ventures in 1955—as in 1954—numbered some 50, about half the number started in 1953. And again, approximately 50% of the new publications were in the business field. Among these were: *American Salesman*, a monthly; *Atomic Age*; *Christian Bookseller*, a quarterly for religious publication distributors and dealers; *Cleaning Laundry Supplier*; *Design Engineering*; *Gadget Patents and Invention News*, a quarterly for manufacturers; *Grinding and Finishing*; *Insulation*, a monthly for electric and electronic material manufacturers; *Jobber Product News*; *Kitchen Business*; *Maintenance Engineering*; *Modern Office Procedures*; *National Retailer*; *New York Industrial World*; *Office Equipment Buyer*; *Outwear News*, a quarterly; *Package Engineering*; *Plastics Technology*; *Product Design and Materials*; *Research and Engineering*, a monthly for research and development management men; *Resident Physician*; *Room Service*, Florida hotel and motel monthly; *Seaway*; *Small Boat Dealer*; *Spot Radio Register*, quarterly covering spot radio advertiser activities; *Tackle Industry*, for fishing equipment producers and distributors; and *Travel Markets*.

Other publications scheduled for 1955 appearance included: *Audiocraft*, how-to-do-it magazine for home sound-reproduction experimenters; *Bride-To-Be*, a quarterly; *Calling All Girls*, pocket magazine for the 7-14 age group;

Commuter, "for, of and by the commuter"; *Conquest*, bimonthly men's magazine; *Essential Books*, slated for 5 issues a year; *Evening Out*, quarterly for New York City college students; *Fanfare*, about night clubs; *Film Culture*, bimonthly for the "adult and discriminating film goer"; *Fishing Waters Of The World*; *Flip*; *The Georgia Farmer*; *Handy-Cap*, pocket-sized monthly for the physically handicapped; *International Theatre*, fortnightly on theater and allied arts; *Intro Bulletin*, literary monthly; *Know-The-Facts*, pocket-size monthly; *Limelight*, show business monthly; *National Review*, conservative weekly journal of opinion; *Official Racing Guide*, monthly of automotive performance records; pocket-sized *Picture Week*; *Radio-TV Scripts*; *Simplicity's Children*, semiannual pattern magazine; *Sports Car Illustrated*; *Swank*, men's quarterly; *Teen Photo News*; *Utah Gardens*; *Water World*; *Wisdom*; and *Your Church*.

JOHN FOSTER, JR.,
Professor, Graduate School of Journalism,
Columbia University.

MAGNESIUM. World production of magnesium (revised estimates by U.S. Bureau of Mines) increased from 50,000 short tons in 1950 to 170,000 tons in 1953, but declined to 140,000 tons in 1954. (See MINERAL PRODUCTION for table showing output of major producing countries.) United States production, confined to the output of two plants, has declined from the peak of 105,821 short tons in 1952 to 93,075 tons in 1953, 69,729 tons in 1954, and 25,572 tons during the first half of 1955. The metal content of imports declined from 2,451 tons in 1953 to only 742 tons in 1954. A new use for magnesium, as a reducing agent for titanium, zirconium, and hafnium, consumed 8,704 tons in 1954.

MAIL SERVICE. See POST OFFICE DEPARTMENT.

MAINE. New England state, United States; admitted to the Union, March 15, 1820. The "Pine Tree State" ranks 38th in area and 36th in population (1955) among the 48 states.

Area and Population.—Area: 33,215 square miles (land, 31,040; inland water, 2,175), divided into 16 counties. Population: (1950) 913,774; (est., July 1, 1955) 890,000. Urban places with 1950 populations above 10,000 are as follows:

Auburn.....	23,134	Portland.....	77,634
Augusta (capital).....	20,913	Saco.....	10,324
Bangor.....	31,558	Sanford town*.....	15,177
Bath.....	10,664	South Portland.....	21,866
Biddeford.....	20,836	Waterville.....	18,287
Brunswick town*.....	10,996	Westbrook.....	12,284
Lewiston.....	40,974	* Civil division.	

Executive.—Chief state officers in 1955:

Governor: Edmund S. Muskie (Democrat)

Secretary of State: Harold I. Goss

Treasurer: Frank S. Carpenter

Attorney General: Frank F. Harding

Commissioner of Education: Herbert G. Espy

Constitution and Judiciary.—The present constitution went into effect in 1820 and was most recently codified in 1951. The highest tribunal, the Supreme Judicial Court, comprises six justices; chief justice in 1955: Raymond Fellows.

Legislature.—The Legislature (Senate, 33 members; House of Representatives, 151) convenes in odd-numbered years commencing the first Wednesday in January.

The state legislature convened in regular biennial session on Jan. 5, 1955. Under the leadership of Gov. Edmund S. Muskie, Maine's first Democratic chief executive in 20 years, it created a Department of Industry and Commerce, increased state aid to education, and upped the budget for 13 state institutions (penal, sanatoria, etc.). It also authorized a comprehensive survey of the state government and, for the first time since 1931, reapportioned the state legislature. However, the Republican-controlled legislature balked at the governor's proposals for an income tax or for a sales tax in-

crease, choosing instead to raise the gasoline tax from 6 to 7 cents a gallon and to increase various other existing levies (cigarettes, alcoholic beverages, etc.). It also turned down suggestions for a highway bond issue and for creation of a state building reserve fund. Appropriations approximated \$75.5 million, a record amount.

Finances.—State treasury receipts (1954-55 fiscal year), \$166,252,806.71; expenditures, \$167,794,290.41; treasury balance, \$12,218,808.12; long-term indebtedness, \$37,300,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$55,376,053.75, including \$43,522,467.36 from a 2% general sales tax and selective sales and gross receipts taxes, and \$9,234,818.24 from licensing. The state has no individual or corporate income taxes, but does have a \$3 poll tax for males.

Banking.—As of June 30, 1955, the state's 31 national banks had \$290,034,000 in assets, \$165,179,000 in demand deposits, and \$94,755,000 in time deposits; the state's 60 other banks had \$661,551,299.90 in assets, \$148,730,859.87 in demand deposits, and \$440,651,863.06 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 17, inclusive. Operating expenditures of \$30,527,058 (\$198.41 per pupil) for public elementary and secondary education in the 1953-54 fiscal year comprised approximately \$22,155,692 from local school districts, \$7,264,084 from the state, and \$492,399 from the federal government. Expenditures for construction and improvements totaled \$5,045,313. Teachers' salaries averaged \$2,719 (elementary school teachers, \$2,517; high school teachers, \$3,218).

MAINE SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students

Schools for the deaf (May 31, 1955).....	1	118
Homes for dependent children (July 31, 1955).....	1	37
Training schools for delinquent boys.....	1	90
Training schools for delinquent girls.....	1	87
Reformatories for males.....	1	111
Reformatories for females.....	1	80*
Prisons.....	1	395

* Including infants of inmates.

Labor Force.—In July 1955 the labor force numbered 389,300 workers, including 280,100 nonagricultural employees; for the preceding 12 months nonfarm employment averaged 267,515. There were 13,250 unemployed workers in July 1955, and the state paid \$8,824,882 in unemployment compensation for the year ending June 1955.

Manufacturing.—Establishments numbered 1,802 in 1954. Investment in new plant and equipment (1953) totaled \$38,593,000. Earnings of production workers in manufacturing averaged \$56.52 for an average work week of 39.9 hours in 1954, and \$58.71 for 41 hours for the first half of 1955.

MAJOR MAINE MANUFACTURES, 1954

Product or industry	No. of employees	Gross wages paid	Value of product
<i>All manufactures</i>	110,688	\$317,258,718	\$1,188,778,168
Paper and allied products	16,206	67,768,079	292,735,384
Textile mill products	19,594	57,898,193	219,803,904
Food and kindred products	14,117	23,709,067	153,350,041
Leather and leather products	19,880	44,383,633	148,805,044
Lumber and wood products (except furniture)	14,726	31,973,326	109,989,863
Transportation equipment ¹	10,852	47,094,523	52,731,358
Nonelectrical machinery	4,147	15,809,060	41,370,525
Fabricated metal products ²	2,631	9,043,221	39,505,262

¹ Portsmouth Naval Shipyard included, except value of product. ² Except ordnance, machinery, and transportation equipment.

Mining.—Maine ranked second among the states in production of beryllium concentrates and fourth in output of sheet mica in 1953. The state stood 44th in value of its mineral output, accounting for 0.07% of the United States total.

MAINE MINERAL PRODUCTION, 1953

(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	2,001,464	\$ 5,422,272
Clays	29,661	27,476
Feldspar (long tons)	17,637	117,090
Peat	2,428	73,564
Sand and gravel	8,071,937	2,608,386
Stone*	248,501	1,215,439
Other minerals		1,038,883
Total		\$10,503,110

* Excluding stone used in making cement and lime. (Source: U.S. Bureau of Mines.)

Fisheries.—In 1954, landings at Maine ports comprised 255,438,956 pounds of fish valued at \$6,547,596, and 283,905,931 pounds of shellfish valued at \$10,308,024. Principal species and their poundages and values were: Maine lobsters, 21,667,713 (\$8,087,165); ocean perch, 79,670,711 (\$3,205,500); herring, 123,602,099 (\$1,769,516); and soft clams, 3,721,891 (\$1,360,436). In the first eight months of 1955, landings totaled 163,013,668 pounds (\$10,101,722), compared with 195,729,852 pounds (\$10,798,234) during the same period in 1954.

Agriculture.—Cash farm income in the first half of 1955 totaled \$106,869,000, and for the full year 1954 comprised \$99,594,000 from livestock and livestock products, \$44,109,000 from crops, and \$849,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$32,547,000; eggs, \$26,505,000; broilers, \$24,848,000; and potatoes, \$23,936,000.

The state's 23,268 farms (3,614,242 acres; harvested cropland, 795,710) had an average of 154.7 acres and \$9,439 in value of land and buildings per farm in 1954. There were 16,991 farms with telephones and 22,028 with electricity. Livestock on farms on Jan. 1, 1955, included

MAINE CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.)	927	740	1,440
Bans, dry edible (1,000 bags)	61	26	52
Hay (1,000 tons)	772	712	817
Maple sirup (1,000 gal.)	21	27	13
Oats (1,000 bu.)	3,344	3,003	2,490
Potatoes (1,000 bu.)	61,758	48,960	64,325

(Source: U.S. Dept. of Agriculture.)

238,000 cattle and 4,464,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 75,846 family and hired workers engaged in farming.

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$33,688,675, and newly completed construction and reconstruction aggregated 257 miles.

Highways and roads on March 1, 1955, totaled 20,386 miles (11,162 surfaced). Registered motor vehicles numbered 307,142 on Dec. 31, 1954, including 237,800 passenger cars. There were 8 railroads (1954) which, in 1953, operated 1,862 line miles, and in 1955, there was one regularly scheduled airline and 121 airports and airfields (30 commercial and municipal, 4 military, and 31 private, and 56 private and commercial seaplane bases).

Communications media (1954) included 13 AM and 2 FM radio stations and 5 VHF operating television outlets; 11 daily newspapers (circulation, 260,408) and 56 other newspapers (circulation, 316,740); and (Jan. 1, 1955) 66,002 business and 184,864 residential telephones.

Principal Events, 1955.—Senators Margaret Chase Smith and Frederick G. Payne and Representatives Robert Hale, Charles P. Nelson, and Clifford G. McIntire served as Maine's all-Republican quota in Congress. In Augusta, Edmund S. Muskie was sworn in on January 6 as Maine's 56th governor. After years of talk a state office building was under way at Augusta, to be completed in 1956. A state liquor warehouse was also under construction in the state capital.

At a special election on September 12, voters passed on a bridge bond issue (for a \$1 million bridge over Jonesport Reach to connect Jonesport and Beals Island) and four proposed amendments to the state constitution submitted by the 1955 legislative session. The measures were approved, including an amendment which opened the governorship to naturalized citizens. Indian tribes, wards of the state living on reservations, were permitted to vote in the special election for the first time in history, due to a constitutional amendment approved in 1954.

Economic conditions were generally favorable in 1955, with a record tourist business, high employment in industry, and favorable weather for agricultural production. The Maine Turnpike extension from Portland to Augusta was opened on December 13. The \$55 million, 63-mile extension joins the original 43-mile portion from Kittery.

Legislature and Principal Events by:

Head, Department of History and Government,
University of Maine.

MALAYA, Federation of. This British-protected territory in Southeast Asia (area, 50,850 square miles; mid-1954 pop., 5,888,578) comprises 9 Malay states and 2 British settlements. The colony of Singapore (q.v.) is a separate political entity. The economies of the Federation of Malaya and Singapore are complementary; administration and policy are coordinated by a commissioner general in Southeast Asia (Sir Robert Heathie Scott, appointed May 15, 1955), who holds similar responsibilities with respect to Brunei, North Borneo, and Sarawak (see BORNEO). A high commissioner (Sir Donald MacGillivray, appointed June 1, 1954) heads the administration. The capital is Kuala Lumpur.

On June 30, 1954, the population comprised 2,893,650 Malaysians, 2,216,105 Chinese, 691,431 Indians and Pakistanis, and 87,392 others.

Government.—Under the Federation of Malaya Agreement of Feb. 1, 1948, the central government is

headed by a high commissioner, a 98-member Legislative Council, sitting at Kuala Lumpur, and a 15-member Executive Council. The Legislative Council in 1955 included 52 members elected at the first federal elections held on July 27, 1955 (see below, *Principal Events, 1955*). Authority is also exercised in the various federated units by state and settlement councils, which are legislative

bodies having some elected members and which are presided over by *mentris besar* (chief ministers).

Education.—In 1952 education was made free and compulsory, and a new type of national school inaugurated, in which the medium of instruction is either Malay or English, with Chinese and Tamil as subsidiary languages. Enrollment in government and state-aided Malay schools in September 1954 totaled 349,456; in Chinese schools, 251,124; in Indian schools, 44,538; and in English schools, 158,485. There were also a technical college, junior technical (trade) schools, a college of agriculture, and colleges or schools for training teachers, nurses, foresters, and railwaymen.

Finance.—Revenue in 1954 was M\$717,400,000 including M\$318,133,445 from customs (the Malayan dollar = 32.6667 U.S. cents); expenditures, M\$809,300,000. During 1954 the administration received a financial grant of M\$51,400,000 from the United Kingdom and a loan of M\$30 million from the Singapore government toward the cost of fighting Communist terrorism. The government's share of surplus funds of the former Straits Settlement amounted to M\$26,200,000. Surplus funds stood at M\$374,400,000 on Dec. 31, 1954.

Production.—Responding to prices averaging 50 cents (U.S.) per pound, rubber production in the first half of 1955 was at its highest level since the Korean War, accounting for an increase of 15% over the same period in 1954. Total output in 1954 was 582,991 tons. Acres of other crops in 1954 (and production in long tons) were: rice, 845,990 (408,170); coconuts, 92,019 (copra, 164,159; coconut oil, 96,800; coconut cake, 61,568); oil palm, 109,265 (palm oil, 53,950; palm kernels, 14,471); and pineapples, 27,949 (canned pineapples, 23,717). Tea production totaled 4,590,330 pounds in 1954.

Producing about one third of the world's total output, the tin industry ranks next to rubber as a source of Malaya's dollar earnings. Production in 1954 totaled 60,689 long tons of concentrates. Other mineral yields in 1954 comprised 20,955 troy ounces of gold, 1,212,780 tons of iron ore, 224,540 tons of coal, 44,745 tons of ilmenite, and 1,352 tons of China clay (kaolin). Deposits of bauxite and thorium are also worked.

Other primary production in 1954 included 46,371,101 cubic feet of lumber and 109,934 tons of fishery products.

The major manufacture is related to the rubber industry and includes the output of rubber footwear (more than 9 million pairs in 1953), rubber sheeting (1,696,000 pounds), hose (54,000 feet), tubing (600,000 pounds), and rubber compounds (2,170,000 pounds).

External Trade.—During 1954 imports totaled M\$1,318,000,000, compared with M\$1,451,300,000 in 1953; exports were valued at M\$1,626,900,000 (in the year 1953, M\$1,599,900,000).

Trade with Singapore accounted for about 37% of the total, and Commonwealth countries, for 25%. Pan-Malayan exports of rubber in 1954 totaled 915,114 tons; tin exports totaled 70,280 tons.

Communications.—The Malayan Railway (government-owned) operates 1,028 miles of railways, between Singapore and most principal towns in the federation. The main line divides at Gemas; the western route runs via Kuala Lumpur and the chief centers on the west coast, including Penang, and joins the State Railway of Thailand at Pedang Besar. The eastern route also connects, at Sungei Golok, with the Thailand railway. The Public Works Department maintains 6,354 miles of public roads (some 4,000 miles metalled surface). Malayan Airways operates the main internal routes and has services to British Borneo, Indonesia, and Indochina. Seven airlines maintain external services through Singapore. Registered motor vehicles on June 30, 1954, included 48,400 passenger cars, 3,306 taxis, 18,741 trucks, 2,039 buses, and 18,007 motorcycles.

Principal Events, 1955.—Marking a stage in the program of bringing the Federation of Malaya to eventual full self-government was the election of July 27. A quiet and orderly, though vigorously conducted, campaign brought out 80% of the qualified electorate to choose among 128 candidates (104 Malays) for 52 seats forming an elected majority for the first time in the Legislative Council. The Alliance Party coalition (United Malays National Organization; Malayan Chinese Association; Malayan Indian Congress), advocating full self-government for Malaya within the present four-year term of the Legislative Council, and independence within the Commonwealth of Nations soon thereafter, was swept into office by an overwhelming popular vote, winning 51 seats. Its leader, Tunku Abdul Rahman, became chief minister (ranking first in the 15-member Executive Council) in the new government, which was inaugurated with colorful ceremony on Aug. 31, 1955. Ten ministers in the Executive Council (6 Malays, 3 Chinese, and 1 Indian) hold elective posts. Following the visit of the secretary of state for the colonies, A. T. Lennox-Boyd, to the federation in August, it was planned that Alliance Party ministers should visit London early in 1956 to discuss further procedures in connection with independence. Chief Minister Rahman stated on December 24 that the government would welcome a joint approach with Singapore to Britain for immediate self-government.

The campaign against Communist rebels was intensified early in 1955 with the addition of a squadron of paratroopers ordered by the British War Office to augment three paratroop squadrons already on duty in Malaya. New Zealand and Australian reinforcements also were expected, bringing the government forces engaged to a total of 35,000 troops, 50,000 policemen, and 175,000 home guards. By February 1955, acts of terrorism, which numbered about 500 monthly in 1948-49, had been reduced to 100 per month, the Communist guerrillas being then estimated at fewer than 5,000. A proposal of the Communists to negotiate directly was rejected in June on the advice of Lieut. Gen. Sir Geoffrey Bourne, director of operations. The "white" areas (free from emergency restrictions) numbered 28 by September 9, embracing about 2¼ million of the population. On that date a declaration of amnesty came into force, offering forgiveness to

such Communist rebels as laid down their arms and became "law-abiding citizens." Only five surrenders were made in the following week, but a cease-fire was subsequently arranged, following which peace talks began on December 28 between government officials and Chin Peng, secretary general of the Malayan Communist Party. Two days later the talks broke down and Chin Peng announced that: "We will never accept surrender . . . and will continue the struggle to the last man."

DONOVAN ROWSE,
Author and Publicist.

MALDIVIVE ISLANDS. Situated 400 miles southwest of Ceylon, this British-protected Moslem sultanate comprises several hundred coral atolls (aggregate area, 115 square miles), of which about 200 are inhabited. The population was estimated at 95,000 in 1953, including 8,000 on Malé, the capital. A sultanate dating from the 12th century was restored with the election of Mohamed Farid Didi as sultan on Feb. 22, 1954, after about a year of republican government. The islands have few resources. Dried fish, copra, and tortoise shell are exported to Ceylon, and rice, sugar, and flour are imported from that country. Following hurricanes which swept the atolls early in 1955, the Ceylon government responded to a radio appeal made by prime minister Ibrahim Ali Didi, sending 400 bags of flour and 115 tons of rice to the Maldives, which received also cloth and sarongs from the Red Cross, and 100 tons of rice from United Nations Children's Fund allocations.

MALTA. Since 1814 a British colony, Malta comprises the islands of Malta (95 square miles), Gozo (26 square miles), and Comino (1 square mile), and is the base of the British Fleet and of the NATO command in the Mediterranean. The population as of Jan. 1, 1954, was 320,613, including Valetta (19,145), the capital and chief port.

A governor (Sir Robert Laycock, sworn in Sept. 5, 1954) is assisted by a 40-member Legislative Assembly, the latter comprising (after elections held Feb. 26-28, 1955) 23 Labor and 17 Nationalist members; Dominic Mintoff succeeded Dr. G. Borg Olivier as prime minister. In July 1955 the United Kingdom government agreed to confer with Maltese leaders on the question of representation of the colony in the British Parliament.

Revenue in 1954-55 totaled £8,485,728; expenditure, £8,927,435. Educational facilities in 1954 included 112 primary schools (42,623 pupils), 4 secondary schools for girls (886), a lyceum for boys (951), and 3 technical schools (578). Extension of full-time education to all primary school children was to begin in 1955.

Malta's exports, including potatoes, hides and skins, gloves, buttons, hosiery, and tobacco pipes, rose by £200,000 to £2.88 million in 1954. Imports totaled £20.3 million (in 1953, £20.17 million) and included 2.53 million square yards of cotton piece goods, 914 motor cars, cattle, foodstuffs, and metal manufactures. Motor vehicles totaled 12,856 in 1954. Air services connect Malta with Great Britain, France, Italy, Tunis, Tripoli, Egypt, Kenya, Cyprus, the Anglo-Egyptian Sudan, and the Netherlands. The island has one of the world's finest harbors.

MANCHURIA. A region of northeastern China. See CHINA, PEOPLE'S REPUBLIC OF.

MANGANESE. The figures on manganese, shown in the accompanying table, were compiled by the U.S. Bureau of Mines.

MANGANESE IN THE UNITED STATES
(Thousands of short tons)

	1951	1952	1953	1954 ¹
Mine shipments.....	105.0	115.4	157.5	210.0
Metallurgical ore.....	95.3	101.0	140.0	193.0
Battery ore.....	9.8	14.4	17.6	17.0
Imports, general.....	1,767.6	2,668.8	3,501.0	2,166.1
For consumption.....	1,902.9	2,203.5	3,115.0	2,244.1
Available supply ²	2,007.9	2,318.9	3,272.5	2,454.1
Consumption.....	4,892.6	1,809.2	2,195.7	1,713.2
Ferromanganese-made.....	791.3	758.7	907.5	718.7
Spiegeleisen-made.....	77.0	58.7	97.7	30.6

¹ Preliminary. ² Mine shipments plus imports for consumption.

Although imports of ore doubled from 1950 to 1953, they declined 38% from that high level in 1954. A complete import figure may be obtained by adding to the 2,166,144 tons of general imports, 116,088 import tons of the ore equivalent of ferromanganese. Corresponding figures for the first 9 months of 1955 were 1,563,738 and 128,858, respectively. Ore consumption, which had declined greatly in 1954, increased to 1,446,683 tons in the first 9 months of 1955. (See also MINES AND MINING; and for data on output of leading countries, see MINERAL PRODUCTION.)

MANILA TREATY. See SOUTHEAST ASIA TREATY ORGANIZATION.

MANITOBA. The central province of Canada, Manitoba is bounded on the east by Ontario, on the west by Saskatchewan, on the south by the states of North Dakota and Minnesota, and on the north by the Northwest Territories and the 440 mile-shoreline of Hudson Bay. Its area is 246,512 square miles, including 26,789 square miles of water. The population (1951 census) is 776,541 of which approximately 60% is urban; the estimated population for 1955 is 849,000. The capital of the province is Winnipeg, with a population (1951) of 235,710 (1955 est., 390,000). Other cities (1951 populations) are, St. Boniface, 26,342; Brandon, 20,598; Flin Flon, 9,899; and Portage la Prairie, 8,511.

Government.—The crown is represented by a lieutenant governor (Hon. J. S. McDiarmid). The government is headed by Premier D. L. Campbell and consists of 36 Liberal-Progressive members out of a total of 57 seats in the provincial legislature. Manitoba has 14 members in the House of Commons and 6 representatives in the Senate at Ottawa. The legislature opened on Feb. 1, 1955, and prorogued March 31. (See also below, *Principal Events, 1955.*)

Finances.—In 1955 there was a budget surplus of \$218,437 from revenue of \$56,727,947. The anticipated revenue for 1955-56 was expected to be \$58,475,000, and expenditures, \$58,318,564.

Education.—There were 1,722 school districts with 145,222 pupils enrolled during 1953-54, and 126 qualified and 567 permit teachers. Six colleges are affiliated with the University of Manitoba.

Public Health and Welfare.—Under the Manitoba Health Services Act there were 13 local health units in 1955, serving a total population of over 320,000; there were 4 laboratory and X-ray units operating with headquarters at Selkirk, Virden, Dauphin, and Neepawa. Hospitals for mental diseases at Brandon and Selkirk and the Psychopathic Hospital in Winnipeg had 3,686 patients under treatment during 1954. There were 29 general hospitals with 16 or more beds, and 11 with more than 60 beds; 2 contagious diseases hospitals, and 2 for chronic diseases; and 5 sanatoria.

Public Utilities.—Construction was begun in 1955 at the Manitoba Hydro Electric Board's \$26 million Brandon steam generating plant. Four units of the McArthur Falls generating station, on which construction began in 1952, went into operation in December 1954.

Production.—Shipments of grain through the port of Churchill in 1954 totaled 12,484,893 bushels. Output of dairy products amounted to

\$27,694,000; garden products, \$7,680,000; poultry products, \$18,613,000; fur farming, \$1,500,000; and honey, \$616,000. Receipts for field crops, which include only initial payments for wheat, oats, and barley, totaled \$108,334,000; and for livestock, \$48,313,000.

Fisheries production in 1954 amounted to 28,441,500 pounds, with a value to fishermen of \$3,087,959 and a market value of \$5,435,305.

The estimated gross value of manufactured products in 1954 was \$583,268,000, with salaries and wages totaling \$122 million. There were 1,650 establishments, with 50,000 employees.

The estimated value of mineral production in 1954 was \$34,952,541, of which \$19,906,022 represented metals. This total includes approximately 2,090,000 barrels of crude oil, valued at \$5,663,900. There were 282 producing wells in Manitoba's six fields at the end of December 1954. Other minerals are clay products, structural materials, peat moss, and salt.

The estimated value of raw furs collected in 1954 was \$2,879,907; of raw furs exported, \$9,869,174; and of processed furs, \$1,276,828.

Communications.—The government-owned telephone system on Dec. 31, 1954, numbered 199,338 subscribers' stations, with 20,443 miles of pole lines. Exclusive of yard tracks and sidings, there are 5,048 miles of railways. The estimated length of all-weather roads was as follows: gravelled, 8,700 miles; bituminous, 960 miles; and concrete, 105 miles.

Principal Events, 1955.—The Royal Commission appointed to inquire into all phases of liquor legislation and its administration in the province presented its report to the premier on Sept. 3, 1955. It recommended sweeping changes in the liquor laws and their administration, and alcohol education. The Special Select Committee on Redistribution of provincial electoral divisions presented its report to the legislature, and legislation was passed putting its recommendations into effect. First redistribution is scheduled to take place before the next provincial election, slated for 1957. Two by-elections were held on June 27, 1955; one seat was won by the Liberal-Progressives and one by the Progressive Conservatives. There was no change in party standings. The Revised Statutes of Manitoba (1954) came into force on April 1, 1955.

MARJORIE MORLEY,
Manitoba Provincial Librarian.

MANN, Thomas, German author; b. Lübeck, Germany, June 6, 1875; d. Zurich, Switzerland, Aug. 12, 1955. Influenced by the Germanic cultural tradition that produced Goethe, Schopenhauer, and Nietzsche, he penned a number of novels and shorter stories contributing to an artistic and intellectual achievement which made him one of the great literary figures of the 20th century.

Born into an old mercantile family, Thomas Mann was both grounded in the solid traditions of the German middle class and endowed by his part Portuguese-Creole mother with a fine sensibility and a lively imagination.

With the death of Thomas' father in 1893, the family moved to Munich, where Mann joined them in 1894 on completion of his schooling. He then attended the University of Munich, where he studied aesthetics and literature. Subsequently he journeyed to Rome and began work on *Buddenbrooks* (1901; Eng. tr. 1924), the publication of which gained him an enthusiastic audience. Incorporating much of the author's family

history and tracing through four generations the disintegration of a prosperous and respected German family, this novel explores with penetrating insight the affinity of physical and spiritual decay. In addition, the novel suggests the broad theme that was continually to occupy Mann: the agonizing conflict between artistic sensibility and middle-class life. There followed a number of shorter works which gave a more powerful and fuller expression to Mann's early romantic and pessimistic aesthetic and spiritual concerns. These included *Tonio Kröger* (1903; Eng. tr., 1914) and *Death in Venice* (1912; Eng. tr., 1925).

Mann's second masterpiece, *The Magic Mountain* (1924; Eng. tr., 1927), won for its author the Nobel Prize in literature in 1929. This complex novel, set in a Swiss sanatorium where the consumptive patients, representing the full scope of human ideology, attempt to convert an average young man to their respective creeds, presents symbolically a panorama of modern European civilization. Other important works of this second period include a prose idyl, *Bashan and I* (1918; Eng. tr., 1923); a short novel of moral

Thomas Mann
(d. Aug. 12, 1955)

COURTESY ALFRED A. KNOPP

chaos, *Disorder and Early Sorrow* (1925; Eng. tr., 1929); and an allegory attacking fascism, *Mario and the Magician* (1929; Eng. tr., 1930).

Despite his earlier insistence that art and life have distinct boundaries to be observed by the artist, Mann was caught up by the political and social issues arising over World War I. In *Reflections of an Unpolitical Man*, published in 1918, he attacked political democracy and defended German authoritarianism, maintaining that it suited the Germanic psychology best. With the advent of the Weimar Republic, however, he made his peace with democracy, although he remained reluctant to participate in German political life.

Following Hitler's rise to power in 1933, Mann went into voluntary exile in Zurich, Switzerland; nevertheless he refused to speak out against Hitler's regime. In 1936, however, when Nazi barbarism had become evident, he became one of its most persistent and effective intellectual foes. Following the revocation of his German citizenship and the banning of his books in 1936-37, he accepted a post as lecturer in the humanities at Princeton University. In the United States, of which he became a citizen in 1944, Mann continued to write and lecture vigorously against nazism. In 1941 he moved to Pacific Palisades, Calif., where he remained until 1953, except for a visit to Germany in 1949, when he was honored at the Goethe bicentennial ceremonies at Frankfurt-am-Main in West Germany and Weimar in East Germany.

Throughout these years, Mann, coming more

and more under the spiritual influence of Goethe, was engaged in the composition of his monumental tetralogy recreating the Biblical story of Joseph. Sixteen years in the writing, the epic comprises *Joseph and His Brothers* (1933; Eng. tr., 1934); *The Young Joseph* (1934; Eng. tr., 1935); *Joseph in Egypt* (1936; Eng. tr., 1938); and *Joseph the Provider* (1943; Eng. tr., 1944). These works, in which the isolated artistic sensibility finally becomes reconciled with humanity, brought to a climax Mann's personal and artistic evolution. Goethe's influence is, perhaps, more strikingly evident in other works of this period, principally *The Beloved Returns* (1939; Eng. tr., 1940), a study of genius, using the visit of Werther's Lotte to Goethe in his old age as its framework; and *Dr. Faustus* (1947; Eng. tr., 1948), a modern version of the Faust legend relating the tragic life of a gifted composer.

Despite his great productivity during his years in the United States, Mann was never completely at ease in that country, the European tradition being too deeply rooted in his nature. Thus in 1953 he returned to Zurich, where, in the last years of his life, he became a symbol of German unity. His final work, *Confessions of Felix Krull, Confidence Man*, an expansion of an earlier fragmentary story about genius' conflict with the world, was critically acclaimed on publication in Germany in 1954, and was published in the United States the following year.

Other works by Mann translated into English include fiction: *Royal Highness* (1909; Eng. tr., 1916); *Stories of Three Decades* (1936; a collection of Mann's shorter works); *The Transposed Heads* (1940; Eng. tr., 1941); *The Holy Sinner* (1951; Eng. tr., 1951); *The Black Swan* (1953; Eng. tr., 1954); and essays and speeches: *This Peace* (1938; Eng. tr., 1938); *The Coming Victory of Democracy* (1938; Eng. tr., 1938); *Order of the Day* (1942; a collection of Mann's political essays and speeches); *Germany and the Germans* (1947; Eng. tr., 1947); *Essays of Three Decades* (1947; a collection of Mann's literary essays).

MANUFACTURING. See **INDUSTRIAL PRODUCTION**.

MAPLE PRODUCTS. Maple sirup production in the United States (by 11 major producing states) in 1955 was estimated at 1,664,000 gallons (December estimate, U.S. Department of Agriculture), as compared with 1,730,000 gallons in 1954. Maple sugar output was 135,000 pounds in 1955, compared with 168,000 a year earlier. Trees tapped numbered 6,708,000, 1.1% under 1954. Leading sirup-producing states in 1955, with estimated output in gallons, were: Vermont, 673,000; New York, 461,000; Pennsylvania, 117,000; Ohio, 113,000; Michigan, 102,000; Massachusetts, 60,000; and New Hampshire, 57,000.

MAPPING. See **CARTOGRAPHY**.

MARCH, Peyton Conway, American army officer: b. Easton, Pa., Dec. 27, 1864; d. Washington, D.C., April 13, 1955. As chief of staff of the U.S. Army during the final eight months of World War I, he succeeded in reorganizing the War Department, unifying the separate armies, and building the American Expeditionary Force (AEF) from 300,000 to over 2,000,000 men, accomplishments which were significant factors in final victory for the Allies.

Peyton March was educated at Lafayette College (B.A. 1884; M.A. 1887) and the U.S. Military Academy (commissioned 2d lieutenant, June 11, 1888). He was graduated from the Artillery School of Fort Monroe in 1898, and served with distinction in the Philippines during the Spanish-American War. In 1899, March returned to the

Philippines as a major in the 33d Volunteer Infantry, and participated in the campaign against the guerrilla forces of Emilio Aguinaldo, the Filipino insurrectionary leader. After March's honorable discharge from the volunteers in 1901, he was appointed captain in the Artillery Corps of the Regular Army. Promotions came consistently, and by September 1917 he had been confirmed as major general in the Regular Army.

With the entrance of the United States into World War I, General March became artillery commander of the AEF on the western front. Despite lack of equipment and insufficient trained officers, he succeeded in quickly organizing the most effective artillery force in the war. He was recalled to the United States in March 1918 to become acting chief of staff under Newton D. Baker, secretary of war. On May 20 he was confirmed as chief of staff and was made a full general. With Germany mounting its last all-out offensive, General March undertook and executed the herculean project that landed over 2,000,000 troops in France by the time of the Armistice. At the same time, under constant congressional fire, the energetic and quick-tempered general reorganized the War Department and consolidated the Regular Army, the National Army, and the National Guard into a single U.S. Army.

Retiring in 1921, General March lived in comparative obscurity until September 1932, when he published *The Nation At War*, a book which became the subject of considerable controversy because of its attack on Gen. John J. Pershing, who had criticized the General Staff in Washington in his book, *My Experiences in the World War* (1931).

MARCUS ISLAND. See **PACIFIC ISLANDS**.

MARGARINE. Factory production of margarine in the United States in 1954 totaled 1,364,339,000 pounds, compared with 1,291,803,000 pounds in 1953, according to the U.S. Department of Commerce. (See also **DAIRY PRODUCTS**.)

MARINE BIOLOGY. Recognition that a host of organic compounds released into sea water by various plants and animals may have a profound effect upon growth rates, abundance, succession, and even the presence or absence of certain species in a marine environment seems to have come into its own in 1955 with two general publications on the subject.^{1, 2}

The background for this relatively new concept has been developing over a period of years, although a few biologists envisioned it some time ago. For example, it has been learned that certain species of marine plankton diatoms need a vitamin or some other organic compound that they cannot make themselves. It was obvious that these substances must be released from other plants or animals in the sea or else these diatoms could not grow. This concept of interdependence has been growing rapidly.

Molds, bacteria, algae, and other plants produce substances called antibiotics, familiar to everyone as a result of their medical applications. Apparently these antibiotics function in nature in controlling or influencing populations of various kinds and serve to give their producers the upper hand against competition. Where there are antibiotics there are also "probiotics" or substances that help other organisms instead of hindering

¹ Lucas, C. E., "External Metabolites in the Sea," suppl. to Vol. 5, *Deep-Sea Research*, pp. 139-148, 1955.

² Johnston, R., "Biologically Active Compounds in the Sea," *Jour. Mar. Biol. Assoc., U.K.*, 34:185-195, 1955.

them. Collectively and with reference to their function in nature, such influential metabolites have been termed "ectocrines."

An example of probiotic activity was reported by Collier, Ray, Magnitzky, and Bell,³ who discovered that oysters will feed only when the concentration of some extremely dilute organic substance reaches a certain level in the water. The source of this substance, why it varies, and how it affects oysters is still unknown, but Wangersky⁴ isolated and partially identified it as a rhamnoside. It is possible that in the absence of this substance (produced by bacteria or algae?) oysters would not be present even though all other conditions were ideal for them.

The establishment and continued maintenance of laboratory cultures of *Gymnodinium brevis*, cause of "red tide" along the Florida gulf coast, have shown that this one-celled plant requires an external source of vitamin B₁₂ and certain other organic substances.⁵ These observations strengthen the theory that river discharge may contribute to red tide outbreaks by supplying certain growth substances at certain times. It is also postulated that decaying fish, killed by the red tide organisms, contribute needed nutrients as bacterial decomposition goes on, and that this prolongs the red tide outbreak. Many other one-celled plankton organisms are now known to have a requirement for organic metabolites.^{6, 7} Even the settling of barnacle larvae is said to be influenced by such substances.⁸

Plankton as Food.—Many calculations and speculations concerning the quantity of plankton in the sea and the possibilities of gathering this vast storehouse of proteins have been made in the past. Dr. Philip Jackson of Scotland has made some realistic observations and calculations.⁹ He concludes that large nets do not seem feasible for the collection of plankton. With reference to a suggestion that the condenser water of large ships be strained, he points out that ships are not designed to permit installation of the necessary equipment.

At an estimated cost of \$4,000 to \$10,000 per dry ton of plankton, none of the methods thus far developed are economically feasible, as this is 50 to 100 times the cost of fish protein. About one million gallons of water are required to produce one pound of dry plankton. Furthermore, not all plankton is nutritious, and some of it is actually toxic.

Fish Populations.—A study of great value to the world's fisheries is Dr. W. E. Ricker's incisive but technical *Stock and Recruitment*.¹⁰ All aspects of the determinants of fish populations are covered. This will serve as an important reference for fisheries biologists who have an open mind and the training needed to follow Dr. Ricker's mathematics and philosophy.

New Animal Subclass.—Discovery of an un-

ALBURTUS—YALE NEWS BUREAU

Newly discovered crustacean subclass, named *Cephalocarida*, magnified in this picture next to a needle for the sake of comparison, is only one tenth of an inch long.

known crustacean in Long Island Sound has led to the establishment of a new subclass (*Cephalocarida*) of the class *Crustacea*, by Dr. Howard L. Sanders. This only known living member of the new class is about one-tenth inch long. It is a link between two other subclasses.

Tuna Research.—During the past year of experimental fishing in the Gulf of Mexico, the U.S. Fish and Wildlife Service exploratory vessel *Oregon* demonstrated the possibilities of an important commercial tuna fishery in the gulf. An 18-day tuna fishing cruise was made in August 1955 in an area about 90 miles south of Mobile and in another area south-southeast of the Mississippi delta. A total of 652 yellowfin tuna weighing 29½ tons were caught. They weighed from 7 to 215 pounds each, averaging about 90 pounds.

Recent studies on the yellowfin tuna in the Pacific have shown that they spawn around Hawaii from May to October. Each female produces from 2 to 8 million eggs at one spawning, and probably spawns more than once a season. The eggs float, and are fertilized in the water.

(See also ZOOLOGY.)

New Books.—An entire book on one plankton species, *Calanus finmarchicus*, is *Biology of a Marine Copepod*, by S. M. Marshall and A. P. Orr (Edinburgh 1955). *The Gulf of Mexico, Its Origin, Waters, and Marine Life* (Fisheries Bulletin 89, U.S. Fish and Wildlife Service, 1954) is a compendium of data on the gulf under many topics by 55 contributors. Enthusiastically received by both biological and physical oceanographers is H. W. Harvey's third book of its type, *The Chemistry and Fertility of Sea Water* (Cambridge University Press 1955). Also of major importance is volume 2 of *Fishes of the Western North Atlantic, the Batoidea*, by H. B. Bigelow and W. C. Schroeder (Sears Foundation for Marine Research, Yale University, 1955).

HAROLD J. HUMM,

Department of Botany, Duke University.

MARINE CORPS, U.S. One of the armed services of the United States, the U.S. Marine Corps dates from Nov. 10, 1775, since which time it has fought in over 300 engagements.

Progressing into the nuclear age, the corps has evolved a new design for amphibious operations of the future. Throughout 1955, tactical concepts in keeping with this design were emphasized by the employment of helicopters and

other new developments in training for amphibious assault.

In May 1955, Marines participated in the atomic operations at Desert Rock, Nev., where helicopter-borne troops of a U.S. Marine air-ground experimental force carried out an assault exercise on an objective which had been hit by an actual atomic explosion. This unit applied newly developed principles of offense and defense in atomic warfare.

In the United States and at far-flung overseas bases, ground-air teams of the Fleet Marine Forces stood alert in 1955 for service with the fleet commanders in the two great ocean areas. During 1955, large-scale amphibious exercises were staged in North Carolina, California, and the Far East.

The average strength of the Marine Corps in 1955 was approximately 207,000 officers and enlisted personnel, including about 2,200 women. The corps was commanded by Gen. Lemuel C. Shepherd, Jr., the commandant, who assumed office on Jan. 1, 1952. Lieut. Gen. Randolph McCall Pate was appointed by President Eisenhower to assume four-star rank and the office of commandant, effective Jan. 1, 1956.

The first Marine Corps trainees under the Reserve Forces Act of 1955 were enlisted in September. Men so recruited will serve with the regular establishment for six months and then an additional seven and a half years in the Marine Corps Reserve. Basic training will be conducted at Parris Island, S.C., and San Diego, Calif.

A highlight of 1955 was the redeployment of the 1st Marine Division to the United States in March, after nearly five years' service in Korea—three years of which were spent in front-line combat.

Although the size of the corps diminished somewhat in 1955, the authorized strength remained at three combat divisions and three aircraft wings. One division and one aircraft wing remained in the Far East.

The Marine Corps displayed in 1955 a new armored antitank vehicle called Ontos. Relying on speed and firepower, it carries six 106-mm. recoilless rifles. An all-weather air-support system was also unveiled. The system had been effectively tested in Korean combat. Using radar guidance, it enables planes flying blind and releasing bombs automatically to hit targets with excellent accuracy.

The Marine Corps in 1955 continued its experimental work with and field-testing of lightweight geodesic domes—igloo-shaped hemispheric frames covered by plastic-coated synthetic fabric almost as strong as steel and, except for the largest sizes, fully transportable by helicopter even when fully assembled. These domes are expected to solve many problems of military shelter in the field.

Major U.S. Marine Corps bases in the United States in 1955 were located at Quantico, Va.; Cherry Point and Camp Lejeune, N.C.; Parris Island, S.C.; Miami, Fla.; and El Toro, Camp Pendleton, and San Diego, Calif. In Hawaii, marines were stationed at Kaneohe Bay on the Island of Oahu. They also serve in Japan, on Okinawa, with the various fleets and naval bases, with United States embassies, and at NATO and United Nations installations. (See also NAVAL AFFAIRS.)

(The foregoing article was prepared by Headquarters, U.S. Marine Corps.)

MARITIME COMMISSION, U.S. See MERCHANT MARINE, U.S.

MARRIAGE AND DIVORCE. *Marriage.*—The number of marriages in the United States is at its lowest point in a decade, and there are likely to be still fewer marriages in the years immediately ahead. This is because marriage rates were unusually high during the war and postwar years, and reduced the number of marriageable persons in the population, and because the small generation of depression babies is now reaching marriageable age. In 1940, for example, there were 19 million unmarried males in the United States 15 years of age and over, as compared with 16½ million in 1955. The number of males in the most marriageable age group (20 to 25 years) in the United States fell from 7¼ million in 1945 to about 6½ million in 1955, and will continue to fall until 1957, when the large baby crop of World War II (3,909,000 births in 1953, as compared with 1,500,000 in 1932) begins to come to maturity. By 1965 this group will grow to some 8 million and produce the greatest marriage boom in American history until at least 1975. The trend for girls in the most marriageable age group (18 to 23 years) is similar to that for men.

Death or divorce now ends about 1,076,000 marriages a year, a fifth more than in 1940. In spite of this loss, there is now an annual increase of more than 470,000 married men each year, giving a total of almost 40½ million married men in the United States.

Early marriage has increased in the United States and the Western World since World War II. The economic factor is important, but changing customs are involved as well. Marriage and parenthood now have a larger place in the motivations of youth, and the extreme feminism of liberated Western women has run its course. In the highly individuated cultures, like those of Sweden and Norway, where marriages have been late, the trend is toward earlier marriages. Even in Ireland, where the custom of celibacy dates back to the great famine of a century ago, and where marriage has usually come very late, the age of marriage is earlier than formerly.

The statistical trend of marriage in the U.S. MARRIAGE AND DIVORCE DATA, 1945–55

Year	Marriages			Divorces		
	No. of marriage licenses	Rate per 1,000 pop. ¹	Percentage change	Estimated no. of divorces	Rate per 1,000 pop. ²	Percentage change
1955	1,509,545 ³	9.2	0.0	372,291 ⁴	2.3	0.0
1954	1,476,000	9.2	-6.1	376,300	2.3	-8.0
1953	1,546,000	9.8	-2.0	390,000	2.5	0.0
1952	1,539,318	9.9	-4.8	392,000	2.5	0.0
1951	1,594,694	10.4	-5.5	381,000	2.5	0.0
1950	1,667,281	11.0	3.7	385,000	2.5	-7.4
1949	1,579,789	10.6	-14.5	397,000	2.7	-3.6
1948	1,811,155	12.4	-10.1	408,000	2.8	-6.7
1947	1,991,878	13.8	-15.9	438,000	3.0	-30.2
1946	2,291,045	16.4	34.4	610,000	4.3	22.9
1945	1,612,992	12.2	11.9	485,000	3.5	20.7

¹ Excluding armed forces overseas. ² For 1945–46, based on population including armed forces overseas; for 1947–55, based on population excluding armed forces overseas. ³ Data for 1955 are estimates based on licenses issued during the first five months. ⁴ Estimate based on divorces in 25 states for first five months.

United States is summarized in the accompanying table. It will be seen that the peak year was 1947, following the return of the armed forces, and that the current rate is low by comparison.

Canada had 128,385 marriages in 1954, a rate of 8.5 per 1,000 population, as contrasted

with 10.9 in 1946. The highest marriage rate for 1954 was in Ontario (8.9) and the lowest was in Newfoundland (7.4). For all periods, the Canadian marriage rate has been considerably lower than that of the United States, probably due to Canada's many frontier areas, which are forbidding to women.

Divorce.—Divorce rates have shown very little change in recent years. Since 1948 they have decreased from their postwar peak to a rather stable level, but remain considerably higher than in the prewar period. Although in the United States the peak periods following wars are not retained, the rate never returns to the previous level, and now, as in the past, it may be expected to begin a new gradual rise.

It will be seen from the accompanying table that the peak for divorces was 1946, with a slight decrease in 1954-55.

Divorces in Canada are estimated by the Dominion Bureau of Statistics at 58,000 for 1954, a rate of 0.38 per thousand, much lower than that of the United States and little more than half the peak year 1947, when the Canadian divorce rate was 0.65 per thousand.

PAUL H. LANDIS,
State Professor of Sociology,
The State College of Washington.

MARTIN, Glenn L(uther), pioneer American flier and airplane builder: b. Macksburg, Iowa, Jan. 17, 1886; d. Baltimore, Md., Dec. 4, 1955. A pioneer in many phases of aeronautics, from exhibition flying to airplane design, he became one of the largest airplane manufacturers in the United States and the creator of several of the most famous military and civilian planes, including the Clipper flying boats and the B-26 bomber.

After taking a business course at Kansas Wesleyan University, he worked for a time as an automobile mechanic. In 1905 the Martin family moved to Santa Ana, Calif., where Glenn opened a garage and spent his spare time building and flying gliders. With the assistance of his mother, he constructed his first motored biplane, which he flew for the first time in August 1909. In the same year he set up a small airplane factory, one of the first in the United States, and in 1911 he incorporated the Glenn L. Martin Company.

From 1910 to 1912, Martin was one of the world's outstanding airmen, appearing frequently as a stunt flier and racer at exhibitions and fairs throughout the western United States and Canada. At this time he achieved one of the first of many aviation records when, on May 10, 1912, he made the first flight over the ocean by flying a round trip between Newport Bay and Santa Catalina Island. During World War I he built the first armored airplanes for the United States government, as well as the famous model TT used by the army as a training plane. In 1917 he merged his company with the Wright Company, but in the following year withdrew and formed a new Glenn L. Martin Company.

In the decade after World War I some of the advances in aviation design and manufacture for which Martin was responsible were the first plane built specifically for mail service and the first metal monoplane. In the 1930's he introduced the B-10 bomber, the first large twin-engine all-metal monoplane, and designed and built the well-known Clipper flying boats. During World War II his factories turned out large numbers of B-26 Martin Marauder bombers and the U.S. Navy's PBM Mariner flying boat. He retired from active control of the Glenn L. Martin Company in 1953.

The recipient of many awards and honorary degrees, he was awarded in 1933 the Collier Trophy, the aeronautics industry's highest award, and in 1944 the Daniel Guggenheim Medal of the Institute of the Aeronautical Sciences.

MARTINIQUE. An island in the Windward Islands group of the Caribbean Sea, forming an overseas department of France. Area, 425 square miles; pop. (1954 census), 239,130, about 90% of whom are Negroes. French is the official language, although a Creole patois is the popular tongue. Fort-de-France (60,648) is the capital. The department is governed by a prefect aided by an elected General Council of 36 members. Martinique sends 3 deputies and 2 senators to the French Parliament in Paris, and 1 delegate to the Assembly of the French Union. The 1954 budget totaled 5,048.2 million francs. In 1953 there were 170 primary schools (47,230 pupils); 2 lycées (2,141); and 4 professional and technical schools (738).

Production of sugar and related products dominates the economy. The sugar crop in 1954 (prelim.) totaled 87,000 short tons (78,000 in 1953). Other crops are cassava, coconuts, mangoes, citrus fruits, bananas, sweet potatoes, coffee, cacao, tobacco, and vanilla. Industries are chiefly sugar mills, rum distilleries, and factories for the canning of pineapples and bananas. Exports in 1954 totaled 8,289 million francs; imports, 12,699 million. Chief exports were sugar, 62,248 metric tons (3,695 million francs); rum, 16,827; and fresh bananas, 51,041. Martinique has 636 miles of main and local roads. Air France and other lines operate regular services to the island. Passenger cars numbered 5,200 in 1955; telephones, 3,464; and radio receiver licenses, 4,000 (1952).

MARYLAND. Middle Atlantic state, United States; one of the original 13 states. The "Old Line State" ranks 41st in area and 23d in population (1955) among the 48 states.

Area and Population.—Area: 10,577 square miles (land, 9,881; inland water, 696), divided into 23 counties and the independent city of Baltimore. Population: (1950) 2,343,001; (est., July 1, 1955) 2,593,000. Urban places with 1950 populations above 7,500 are as follows:

Annapolis*.....	10,047	Hagerstown.....	36,260
Baltimore.....	949,708	Havre de Grace.....	7,809
Cambridge.....	10,351	Hyattsville.....	12,368
College Park.....	11,170	Mt. Rainier.....	10,989
Cumberland.....	37,679	Salisbury.....	15,141
Frederick.....	18,142	Takoma Park.....	13,341

* Capital; population given excludes that of the U.S. Naval Academy.

Executive.—Chief state officers in 1955:

Governor: Theodore R. McKeldin (Republican)
Secretary of State: Blanchard Randall
Treasurer: Hooper S. Miles
Attorney General: C. Ferdinand Sybert
Supt. of Public Instruction: Thomas G. Pullen, Jr.

Constitution and Judiciary.—The present constitution went into effect in 1867. The highest tribunal, the Court of Appeals, comprises five justices; chief justice in 1955 was Frederick W. Brune.

Legislature.—The General Assembly (Senate, 29 members; House of Delegates, 123) meets in regular session in odd-numbered years commencing the first Wednesday in January, and for a budget session starting the first Wednesday in February of even-numbered years. (See also below, *Principal Events*, 1955.)

The 1955 legislature enacted a budget of \$269 million for the fiscal year 1955-56. It also stiffened adoption laws; substituted the lethal gas chamber for hanging in capital punishment; set up a new state Division of Industrial Safety; revised state income tax laws to include, among other provisions, an increase in corporation income taxes from 4% to 4½% and a decrease in individual income tax exemptions from \$1,000 to \$800; made the use of voting machines mandatory in state elections; and provided for construction of a new toll road to be known as the Northeastern Expressway, run-

MARYLAND

ning northeasterly from Baltimore to the Pennsylvania and Delaware borders.

Four constitutional amendments were proposed for presentation to the voters. The first authorizes the councils of counties adopting a charter form of government to convene for a maximum of 45 days in any one year; the second prohibits the introduction of new bills in either house of the state General Assembly during the last 10 days of a regular session in even-numbered years and in the last 20 days in odd-numbered years; the third provides for recess appointments to be returned to the Senate on the first day of the next regular session; and the fourth requires the governor to submit his budget to the assembly within 20 days after its convening in odd-numbered years.

Finances.—State treasury receipts (1954-55 fiscal year), \$384,168,371.35; expenditures, \$386,080,567.71; treasury cash balance, \$35,263,469.18; bonded indebtedness, \$170,785,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$201,128,640.95, including \$35,004,891.89 from use taxes and a 2% general sales tax; \$47,177,433.41 from individual and corporate income taxes; \$43,569,915.88 from a motor vehicle fuel tax; and \$21,805,869.80 from motor vehicle taxes, fees, and fines. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 57 national banks had \$963,694,000 in assets, \$677,329,000 in demand deposits, and \$210,665,000 in time deposits; the state's 103 other banks had \$1,710,895,685.87 in assets, \$787,033,396.27 in demand deposits, and \$768,228,348.39 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$97,883,408 (\$253.12 per pupil) for public elementary and secondary education in the 1953-54 school year comprised \$59,923,713 from local school districts, \$35,561,124 from the state, and \$2,398,571 from the federal government. Expenditures for construction and improvements totaled \$49,178,643. Teachers' and principals' salaries averaged \$4,093 (in elementary schools, \$4,020; in high schools, \$4,186).

Integration continued in the public schools with only minor incidents during the 1955-56 school year. By Sept. 10, 1955, ten counties had complied with the U.S. Supreme Court ruling.

MARYLAND SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary (K-6, 7).....	800	8,803	280,634
Public secondary (7 or 8-12).....	211	6,649	147,658
Private and parochial elementary and secondary.....	338	3,125	86,091
Schools for the handicapped.....	17	144	1,414
Public junior colleges.....	4	100	962
State teachers colleges.....	5	178	2,307

Social Welfare.—Public welfare expenditures from federal and state funds for the 1954-55 fiscal year totaled \$17,383,523, including \$5,728,452 for old-age assistance, \$7,044,520 for dependent children, \$289,485 for the needy blind,

MARYLAND WELFARE INSTITUTIONS (As of June 30, 1955)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic..	1	1,714
Hospitals for the mentally ill.....	4	9,475
Sanatoriums for the tubercular (Sept. 7, 1955).....	1	1,164

* Included in prison and correction figures.

and \$2,699,169 for the disabled; a monthly average of 45,667 persons received public assistance. Expenditures for the operation of correctional and penal institutions amounted to \$4,187,576.

Labor Force.—The labor force (June 1955) numbered 1,022,700, including 65,000 agricultural workers. Nonagricultural employment was 917,500, and for the full year 1954 averaged 888,267. There were 40,200 unemployed workers in June 1955, and the state paid \$32,845,739 in unemployment compensation benefits during 1954.

Manufacturing.—Establishments numbered 3,201 in 1954. Investment in new plant and equipment in 1953 was \$115,935,000. Earnings of production workers in manufacturing averaged \$68.58 for an average work week of 39.8 hours in 1954 and \$73.54 for 41.1 hours in the first half of 1955.

Fisheries.—In 1953, commercial fisheries engaged 8,269 fishermen whose catch comprised 48,781,000 pounds of shellfish valued at \$8,906,000, and 15,931,000 pounds of fish valued at \$1,463,000. Total 1954 value of all species was \$11,100,000, excluding oysters which, between Sept. 1, 1954, and April 30, 1955, amounted to \$8,250,000 for 3 million bushels. Other leading species were crabs, 20,912,000 pounds (\$1,290,000) and striped bass, 2,100,000 pounds (\$524,000).

Agriculture.—Cash farm income in the first half of 1955 totaled \$107,686,000, and for the full year 1954 comprised \$164,563,000 from livestock and livestock products, \$84,001,000 from crops, and \$1,392,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$66,112,000; broilers, \$40,892,000; tobacco, \$21,054,000; eggs, \$17,970,000; and corn, \$10,037,000.

The state's 32,500 farms (3,896,608 acres; harvested cropland, 1,571,744) had an average of 119.9 acres and \$20,396 in value of land and buildings per farm in 1954. There were 22,137

farms with telephones and 30,155 with electricity. Livestock on farms on Jan. 1, 1955, included 540,000 cattle and 3,809,000 chickens (not including commercial broilers). During the week of Oct. 24-30, 1954, there were 65,993 family and hired workers engaged in farming.

MARYLAND CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.)	1,176	1,485	1,137

Transportation and Communications.—State and federal funds disbursed for highways and roads in 1954 totaled \$59,259,052.24, and newly completed construction and reconstruction aggregated 204.57 miles.

Highways and roads on Jan. 1, 1955, totaled 18,745.52 miles (16,892.52 surfaced). Registered motor vehicles numbered 907,926 on April 1, 1955, including 737,028 passenger cars. There were 13 railroads (1955) operating 1,320 line miles, and 9 regularly scheduled airlines and 106 airports and airfields (26 commercial and municipal, 12 military, and 68 private).

Communications media (1955) included 26 AM and 6 FM radio stations and 4 operating television outlets (3 VHF and 1 UHF); 12 daily newspapers (circulation, 730,352) and 80 other newspapers; and (Jan. 1, 1955) 242,562 business and 624,998 residential telephones.

Principal Events, 1955.—Measures adopted by the General Assembly in 1955 included legislation establishing the withholding of state income taxes and providing for annual property assessments to replace the former five-year and three-year assessment cycles. Also enacted was legislation to implement a recently adopted (1954) home rule amendment to the state constitution. Principal provisions of the enabling legislation relate to procedures for incorporating new municipalities, adopting and amending municipal charters, annexation of territory, and borrowing and issuance of bonds. The effect of these provisions will be to augment local autonomy greatly in municipal affairs.

Constitutional amendments proposed by the assembly, which will be voted on in November 1956 by the electorate, would require earlier submission of the governor's budget to the legislature and make minor changes in legislative procedures (see also above, *Legislature*).

The governor appointed a special 23-member commission to study water resources of the state, and a 12-member body to make recommendations for improving state governmental services and administrative organization.

In the three-year period since the opening of the Chesapeake Bay Bridge on July 30, 1952, 6,082,354 vehicles, carrying 8,810,559 passengers, have crossed the span. Receipts for the 36 months reached \$11,481,367, exceeding by more than \$2,000,000 the estimates originally made in planning for the facility.

On August 13, hurricane Connie swept through major portions of the state, leaving 14 dead and doing an estimated \$4,000,000 worth of damage. Five days later, on August 18, shoreline areas of the state were whiplashed by the somewhat less severe hurricane Diane.

Leading industrial events in 1955 included announcement of plans for a \$100,000,000 steel

plant expansion (Bethlehem Steel Company) near Baltimore City and for a \$15,000,000 cement plant expansion (Lehigh Portland Cement Company) in Carroll County. (See also BALTIMORE.)

Principal Events by: DON L. BOWEN,
Director, Bureau of Governmental Research,
University of Maryland.

MASSACHUSETTS. New England state, United States; one of the original 13 states. The "Bay State" ranks 44th in area and 9th in population (1955) among the 48 states.

Area and Population: Area: 8,257 square miles (land, 7,867; inland water, 390), divided into 14 counties. Population: (1950) 4,690,514; (est., July 1, 1955) 4,972,000. Towns (defining civil divisions) and cities with 1950 populations above 15,000 are as follows:

Arlington town	44,353	Methuen town	24,477
Attleboro	23,809	Milford town	15,442
Belmont town	27,381	Milton town	22,395
Beverly	28,884	Natick town	19,838
Boston (capital)	801,444	Needham town	16,313
Braintree town	23,161	New Bedford	109,189

Executive.—Chief state officers in 1955:

Governor: Christian A. Herter (Republican)
Lieutenant Governor: Sumner G. Whittier
Secretary of the Commonwealth: Edward J. Cronin

Treasurer: John F. Kennedy

Attorney General: George Fingold

Commissioner of Education: John J. Desmond, Jr.

Constitution and Judiciary.—The present constitution went into effect in 1780 and was rearranged in 1919. The state's highest tribunal, the Supreme Judicial Court, comprises seven justices; chief justice in 1955 was Stanley E. Qua.

Legislature.—The General Court (Senate, 40 members; House of Representatives, 240) meets annually commencing the first Wednesday in January. The 1955 session, third longest in state history, adjourned on September 16. It appropriated \$324,148,311 (an increase of \$25 million over 1954-55) and \$30 million for new buildings. State bond issues totaling \$90 million were authorized, including \$25 million to repair highways and bridges washed out by floodwaters beginning in August and \$30 million to reimburse cities and towns for losses to public buildings and to make up for losses in local taxes. A \$125 million highway bond bill was defeated by one vote, largely because there was available a \$200 million balance in the highway fund. Temporary taxes yielding \$78 million were extended for one year and the 1954 income tax decrease of 20.5% was canceled. Under a new law, nonresidents working in Massachusetts must pay income taxes at the same rate as residents.

New legislation reorganized the Youth Service Board and gives it increased powers. The board may now attempt to prevent juvenile delinquency, as well as care for those cases already before the courts.

A new penal law liberalizes credits for good conduct, provides for a new classification system for prisoners, sets up a training school for prison officers, and improves the prison industries program.

Other new legislation provides for stiffer penalties for sex criminals, an increase in minimum wages from 75 to 90 cents an hour, group insurance (life and health) for all state employees, with the state paying half the premiums.

Finances.—State treasury receipts (1954-55 fiscal year), \$976,984,225; expenditures, \$997,541,202; treas-

MASSACHUSETTS

ury balance, \$34,770,869; long-term indebtedness, \$550,259,369.

Taxation.—State tax revenue (1954-55 fiscal year): \$319,008,701, including \$112,256,489 from selective sales and gross receipts taxes; \$86,978,206 from individual income taxes; and \$66,804,574 from corporate income taxes. The state has no general sales or property taxes, but does have a poll tax of \$2 per person.

Banking.—As of June 30, 1955, the state's 111 national banks had \$3,353,553,000 in assets, \$2,513,209,000 in demand deposits, and \$464,878,000 in time deposits; the state's 422 other banks had \$9,473,848,126 in assets, \$6,311,023,010 in demand deposits, and \$41,727,798 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Estimated spending of \$175,000,000 (\$251 per pupil) for public elementary and secondary education in the 1954-55 school year comprised \$144,000,000 from local school districts, \$28,000,000 from the state, and \$3,000,000 from the federal government. Expenditures for construction and improvements were an estimated \$40,000,000. Teachers' salaries averaged \$4,045.

MASSACHUSETTS SCHOOL STATISTICS, 1953-54

and \$22,181,450 for other relief measures; a monthly average of 171,638 persons received public assistance. Operating expenditures for correctional and penal institutions: \$5,919,810.

Fisheries.—The commercial catch in 1953 comprised 477,049,000 pounds of fish valued at \$25,534,000 and 32,986,000 pounds of shellfish valued at \$12,312,000. Poundages and values of principal species were: haddock, 133,856,000 (\$10,146,000); scallops, 20,038,000 (\$8,948,000); flounder (except fluke), 38,090,000 (\$4,741,000); and cod, 27,465,000 (\$1,847,000).

Labor Force.—Employment as of mid-August 1955 was roughly estimated at 1,982,000; non-agricultural employment (as of July 1955) was 1,780,400, and for the 12 months ending July 31, 1955, averaged 1,771,000. There were (roughly estimated) 86,000 unemployed in mid-August 1955.

Manufacturing.—Establishments numbered 9,250 in 1953, and investment in new plant and

equipment amounted to \$157,212,000. Earnings of production workers in manufacturing averaged \$65.55 for an average work week of 39.4 hours in 1954, and \$69.43 for 40.6 hours in the first half of 1955.

Agriculture.—Cash farm income for the first half of 1955 totaled \$86,181,000, and for the full year 1954 comprised \$126,015,000 from livestock and livestock products, \$62,722,000 from crops, and \$484,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$46,990,000; eggs, \$39,105,000; greenhouse and nursery products, \$21,934,000; broilers, \$16,363,000; tobacco, \$8,759,000; and cranberries, \$6,825,000.

The state's 17,361 farms (1,439,080 acres; harvested cropland, 331,180) had an average of 82.9 acres and \$16,434 in value of land and buildings per farm in 1954. There were 15,519 farms with telephones and 17,019 with electricity. Livestock on farms (Jan. 1, 1955) included 190,000 cattle and 5,526,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 44,039 family and hired workers engaged in farming.

Transportation and Communications.—State and federal funds disbursed for highways and roads in 1954 totaled \$104,915,270, and construction and reconstruction aggregated 291.759 miles.

Highways and roads on Jan. 1, 1955, totaled 24,741,721 miles (23,692,921 surfaced). Registered motor vehicles numbered 1,500,346 on Aug. 31, 1955, including 1,315,383 passenger cars. There were 9 railroads (1954) operating 1,723.17 line miles and in 1955, 14 regularly scheduled airlines and 117 airports and airfields (51 commercial and municipal, 5 military, and 54 private, and 7 seaplane bases).

Communications media included (1955) 51 AM and 21 FM radio stations and 7 operating television outlets (3 VHF and 4 UHF); 61 daily newspapers (circulation, 1,572,061) and 197 other newspapers; and (Jan. 1, 1955) 528,116 business and 1,298,868 residential telephones.

Principal Events, 1955.—Hurricanes, accompanying heavy rains, and resulting floodwaters devastated large areas of western Massachusetts in August, September, and October. On August 18-19, as an aftermath of hurricane Diane, torrential rains fell, establishing the following records for given lengths of time: 4.05 inches in three hours on August 19; 8.40 inches for 24 hours on August 18-19; and 11.94 inches in a 48-hour period on the same two days. Approximately \$400 million in damage was caused to residential, industrial, business, and other properties. Southbridge was the worst-hit community, suffering some \$20 million in damage, especially to an extensive industrial area, when waters of the Quinebaug River went on the rampage. Berkshire, Franklin, Worcester, Hampshire, and Hampden counties were officially listed as disaster areas, and thousands of families were made homeless and destitute.

Transportation facilities were conspicuous victims of the storm. For more than a week, no through trains were running between Boston and New York. More than 50 miles of the roadbed of the Boston and Albany Railroad into Springfield were washed out, and for almost a month trains for the west were routed over the Boston and Maine.

After August rainfall had set a new record of 17.09 inches—more than 4 inches above that of May 1954, when 13.38 inches fell—above-normal rains continued during September and October. As a consequence floods again occurred (October 14-17) in many cities and towns where work was being carried on in rebuilding roads, bridges, and factories.

A new prison code (see above, *Legislature*) was enacted after a serious prison riot on September 19 at the ancient State Prison in Charlestown, parts of which were erected as early as 1805. Four armed convicts held five guards as hostages for 84 hours, until a committee of citizens, offering some changes in prison rules, interceded to effect release of the guards. Following appointment of a new commissioner of corrections and the strengthening of his powers, prisoners were transferred during November and December to a new \$9 million maximum security prison at Norwalk.

On May 17 the Sterling and Francine Clark Art Institute was officially opened at Williamstown with an exhibit of American, Dutch, English, and French art treasures.

Legislature and Principal Events by:

DENNIS A. DOOLEY,
State Librarian.

MATHEMATICS. The increased importance of mathematics for workers in the physical and social sciences received widespread recognition during 1955. This resulted in a considerable shortage of trained mathematicians in both education and industry, and stimulated high school and college teachers of mathematics in their ef-

forts to provide a modern course of study for their students.

Mathematics for Social Scientists.—The need for advanced mathematics in fields such as psychology, sociology, economics, and geography is being investigated by a committee of the Social Science Research Council, which has recommended that prospective social scientists receive mathematical training in the fields of logic, axiomatics, calculus, matrix algebra, and probability. These subjects are intended to provide the background needed for an understanding of the mathematical models now being constructed as aids to the development of sound theoretical foundations for the social sciences. Since many practicing social scientists do not have this mathematical training, the SSRC sponsored two institutes in the summer of 1955 at which these mathematical subjects were taught. These institutes, which were held at the University of Michigan and at Stanford University, also served as proving grounds for regular courses to be given at a number of universities.

The Undergraduate Curriculum.—The movement to modernize the standard freshman and sophomore curriculum in collegiate mathematics received new impetus from two sources. First, the new curricula developed for the training of mathematicians turned out to be surprisingly similar to those recommended for social scientists as outlined above. On the other hand, the American Society for Engineering Education has expressed its dissatisfaction with the standard curriculum. The number of experimental courses at this level increased quite sharply in 1955, and the curriculum will be in a state of flux for the next few years.

These changes and the general need for more trained scientists have stimulated similar studies by groups of high school teachers. Two significant developments are: (1) the program of the School and College Study of Admission with Advanced Standing, in which college-level courses are taken in high school for college credit; and (2) the appointment by the College Entrance Examination Board of a Commission on Mathematics which will formulate a high school mathematics curriculum agreeable to the schools and colleges concerned, to be used as a basis for the board's examinations.

Manpower Problems.—The shortage of trained mathematicians reached an acute stage in 1955. The supply of new Ph.D.'s was about equal to the number of retirements and resignations from academic positions. Many colleges and universities were unable to fill their increased needs for teachers to handle their booming undergraduate enrollments. The demand for mathematicians in industry increased sharply, partly because of the large-scale installation of high-speed computing machinery.

Research.—Particular recognition of research in applied mathematics was given in 1955 when the Society for Industrial and Applied Mathematics held its first joint meetings with other mathematical organizations. Research symposia in partial differential equations, in statistics, and in topology were held during the summer. Nathan Jacobson of Yale University gave the annual Colloquium Lectures, on "Jordan Algebras," before the American Mathematical Society.

Publications.—Noteworthy books published during the year include: *General Topology*, by J. L. Kelley; *Probability Theory*, by M. Loeve; *The Elements of Probability Theory and Some of Its Applications*, by H. Cramér; and *Higher Transcendental Functions*, vol. 3, edited by A. Erdélyi. The mathematical literature for the

year, including works of book length, is reviewed in volume 16 of *Mathematical Reviews*.

Executive Officer, Department of Mathematics,
University of Washington; Editor, "The
American Mathematical Monthly."

MAURITANIA. See FRENCH WEST AFRICA.

MAURITIUS. Annexed by Great Britain during the Napoleonic wars, this Indian Ocean colony comprises the island of Mauritius (area, 720 miles) and several scattered dependencies: Rodrigues (40 square miles; pop. est., 13,998 in 1953), Diego Garcia (11 square miles), Salomon Islands (2 square miles), and smaller island groups aggregating 45 square miles. The population, including dependencies, numbers 555,536 (est., Dec. 31, 1954), of whom 362,375 were descendants of Indian immigrants, most others being Creole descendants of 18th century French planters. French is widely spoken, and the French penal system was retained unchanged until the setting up of the first Court of Criminal Appeal in Mauritius on Jan. 1, 1955. Port Louis (pop., 90,978, including suburbs) is the capital and chief port.

A governor (Sir Robert Scott, appointed July 30, 1955) is assisted by an Executive Council and a 34-member Legislative Council. The Mauritius rupee equals U.S.\$0.21. Revenue surplus in 1953-54 was Rs.3,733,951. Estimated revenue in 1955-56 was Rs.142,328,133; expenditure, Rs.151,497,288. The British Treasury is contributing £1,750,000 toward development and welfare programs. The government conducted 79 primary and secondary schools and aided 84 others (75,358 pupils) in 1954; there were also 143 unaided schools.

The colony's principal crop is sugarcane, of which 499,000 metric tons was produced from 186,500 acres in 1954 (512,000 metric tons, from 184,500 acres, in 1953). Production in 1955 was estimated at 500,000 metric tons. Other acreages in 1954 included tea, 2,600 (crop, 519 metric tons); aloe fiber, 18,300; corn, 4,900; and manioc, 800. Rum, soap, matches, and tobacco products are manufactured. Major exports in 1954 were sugar (Rs.258,908,756), molasses (Rs.4,511,647), tea (Rs.591,769), rum (Rs.25,403), and aloe fiber (Rs.25,007). Imports include automobiles, fertilizers, textiles, foodstuffs, machinery, and petroleum products. Railways aggregate 82 miles; highways, 716 miles. Steamships and Air France and Qantas Empire Airways provide external communication.

MEANY, George, American labor leader, b. New York, N.Y., Aug. 16, 1894. For many years a prominent figure in labor's efforts to establish itself as a major factor in democratic government, he was unanimously elected president of the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) when the new body was formed in 1955.

Beginning as a plumber's apprentice in 1910, Meany attained journeyman's status in 1915, and by 1922 had become business representative of Plumbers Local Union No. 463, New York. His forceful manner, colorful personality, and first-hand acquaintance with the problems of labor won him the presidency of the New York State Federation of Labor in 1934.

On Jan. 1, 1940, following six successful years as a state leader, he became secretary-treasurer of the American Federation of Labor (AFL), in which capacity he was active in public relations.

He led the postwar fight against participation by United States labor in the Soviet-dominated World Federation of Trade Unions, advocating in its stead affiliation with the anti-Communist International Confederation of Free Trade Unions (founded in 1949).

Elected president of the AFL to succeed the deceased William Green on Nov. 25, 1952, Meany was re-elected in 1953. From the outset one of his primary objectives was the reunification of the United States labor movement, which had been split since 1935, when the Committee for Industrial Organization (CIO; in 1938 renamed Congress of Industrial Organizations) was formed. On Feb. 9, 1955, Meany signed a merger agreement with Walter Reuther, president of the CIO, and on December 5, after AFL and CIO conventions had ratified the agreement on December 1 and December 2, respectively, the new 15 million-member AFL-CIO was officially established, with Meany as its first president. In his address to the founding convention, Meany denied charges that labor was in the process of founding or taking over a political party, but he insisted on workers' rights as citizens to participate "in shaping the policies of our government."

MEAT INDUSTRY. The total slaughter of cattle and calves in 1955 was expected to approximate a new record of 40 million head, 2% greater than in 1954. There were no strong factors evident which would either increase or decrease marketings in 1956.

It appeared likely that market supplies for sheep and lambs in 1956 would be smaller than in 1955. It was expected that the sheep population on Jan. 1, 1956, would be about 30 million head, the second smallest number on record.

There was a big supply of pork in 1955. Production of pork under federal inspection during 1955 was up 13% over 1954. Hog slaughter for the last of October and middle of November 1955 exceeded 1.5 million head, representing an average increase of 23% over 1954.

The American Meat Institute predicted that meat production for 1956 would total about 27.2 billion pounds, slightly over 1955 output. Because population continues to increase significantly, per capita meat consumption in 1956 may decrease slightly from the 1955 figure of 161 pounds. However, the year 1956 would still boast the third largest meat consumption level on record.

U.S. MEAT PRODUCTION AND CONSUMPTION, 1954-56

* Estimates of American Meat Institute.

Sausage production for 1955 was about 5% above 1954. The year's output by federally inspected plants was expected to reach 1.8 billion pounds, exceeded only by the 1945 total of over 1.9 billion. One third of 1955's sausage output were wieners and frankfurters.

Canada.—According to the Dominion Bureau of Statistics, no other major industry in the Dominion spends so high a proportion (84 cents) of its sales dollar for raw materials as does the meat packing industry.

Fresh meat, including poultry, constitutes approximately 58% of the industry's total sales. Next are cured meats, cooked meats, and fresh sausage, representing about 28%. Beef is the largest single fresh-meat item. Of cured meats, bacon and other pork cuts are the leaders.

The Canadian industry is not dominated by any large firms. Of 152 reporting firms, 74 had an annual turnover of a million dollars or more. Distribution of slaughtering and meat packing establishments is as follows: Ontario, 61; Quebec, 36; the Prairie provinces, 33; British Columbia, 11; and the Atlantic provinces, 11.

JOHN CUTTING,
American Meat Institute.

MEDIATION AND CONCILIATION SERVICE, Federal. See FEDERAL MEDIATION AND CONCILIATION SERVICE.

MEDICINE. The year 1955 was another eventful period in the history of medicine. Two Nobel prizes were awarded to scientists for work in fields related to medicine. The conquest of tuberculosis had progressed so far that some hospitals dedicated to the treatment of that disease closed their doors, notably the famous Trudeau Sanatorium near Saranac Lake, N.Y. Vaccination against poliomyelitis was shown to be a practical procedure, although a few unfortunate but unpredictable complications resulted from the use of some early batches of the vaccine.

There was consideration of plans for federal re-insurance support for private insurance companies offering voluntary health insurance, but no such legislation was passed by the 84th Congress in 1955. The Ford Foundation, as a part of its magnificent gift of \$500 million to privately operated hospitals, colleges, and universities (see also EDUCATION), earmarked \$90 million for the 42 non-tax-supported medical schools. In many cases the schools will benefit further from additional grants by the foundation to their affiliated teaching hospitals. Toward the end of the year it was announced in Washington that the administration would ask Congress for an increase in funds for medical research, these to be allocated through the Public Health Service.

Antibiotics.—Based on the decline in fatality rate from certain diseases, it has been estimated that well over a million deaths from infections have been prevented since the introduction of sulfa drugs and antibiotics. The effect of such drugs has been apparent not only in acute infections such as pneumonia, but also in tuberculosis and syphilis, where striking changes in morbidity and mortality have been achieved.

The parade of new antibiotic agents has continued, undiminished. Worldwide search has been in progress now for years, seeking new sources of these valuable medicines. Most are derived from various fungus organisms found in soil. During the past year there have been reports of the preparation of new antibiotics from such microorganisms found in Russia, Sardinia, India and the Philippines, among other geographic sources.

However, microorganisms are not the only manufacturers of antibiotic substances. It is of interest to note the report from India of the preparation of a potentially valuable one from edible mushrooms, which represent the group of large fungi. Preliminary information indicated a pos-

sible use for this antibiotic in the treatment of typhoid fever, where there is definite need for additional effective drugs. Chloramphenicol, the best presently used drug for typhoid infections, at times produces serious toxic effects. Another antibiotic has been prepared from an Australian mushroom.

Perhaps the fact that antibiotics are derived chiefly from fungi explains why it has been so difficult to find compounds which are effective in treating infections due to pathogenic fungus organisms. Several new compounds active against experimental fungus infections in animals were reported at an antibiotics symposium held in Washington in November. Among these were *eulicin*, *amphotericins A and B*, and antibiotic 1968 (the latter known only by its laboratory code name). Another new antifungus antibiotic is known as *filipin* because it was obtained from a newly discovered soil fungus, *Streptomyces filipinensis*, found in the Philippines. Much additional experimental work will be required before usefulness of such compounds in the treatment of the often serious fungus diseases of human beings can be demonstrated.

Physicians frequently in recent years have administered two or more antibiotics for more potent effect, in the treatment of severe infections. A new naturally occurring combination of antibiotic substances has been reported. The combination is called *synergistin* because its fractions A and B have synergistic actions, that is, they are much more effective when administered together than is either fraction used alone. *Synergistin* also still is in the experimental stage.

For several years it has been common practice to include small amounts of antibiotics in the feed of meat animals, with the result that the animals gain weight more rapidly without consuming additional food. A minute amount of *chlortetracycline* (*aureomycin*) applied to poultry after dressing has been found helpful as a preservative, to delay spoilage. The antibiotic is applied in a water bath during chilling of the dressed poultry. The Food and Drug Administration (q.v.) has specified, however, that not more than seven parts per million of the antibiotic may remain on the uncooked meat. It is believed that cooking effectively destroys this small amount of the drug so that there is no danger to a consumer who may be sensitive to *aureomycin*.

Atomic Energy.—The 1955 International Conference on the Peaceful Uses of Atomic Energy (see ATOMIC ENERGY) furnished the first opportunity for free discussion of the medical aspects of the subject. The results of many previously described uses of isotopes in medical research and treatment were reviewed and some newer techniques were discussed.

The use of radioactive tracer atoms in the study of body chemistry and metabolism continues to expand. For instance, the incorporation of carbon-14 into glucose has contributed to the study of diabetes, where glucose metabolism is deranged. Inclusion of radioactive sulfur in a sulfone drug used for the treatment of leprosy furnishes a method of studying the distribution and action of this medicine in the body of patients with the disease. *Terramycin* also has been tagged with carbon-14 for similar purposes.

A new approach to the treatment of tumors has been described. By this technique, instead of administering a radioactive substance to the patient or exposing him to radioactive particles from outside his body, the radioactivity is created in the tumor under treatment.

Patients with certain types of brain tumor have been given boron by intravenous injection. This substance tends to localize in such tumors, and while it is there the tumors are irradiated with a beam of neutrons. Under these conditions the boron atoms capture neutrons, with the result that alpha particles are released for local irradiation. It is understood that a special nuclear reactor is under construction for further development of this and similar techniques.

Iodine-131 has been of great value in the diagnosis and treatment of disorders of the thyroid gland. The effect of this radioactive substance is limited largely to thyroid tissue because the gland takes up most of the iodine of the body. Additional reports have appeared on the use of this method of irradiating and decreasing the activity of the thyroid in patients with severe heart disease. The treatment does not alter heart disease itself, but decreased thyroid function slows down total body metabolism and thus reduces the load on the ailing heart.

During the past year there has been much discussion of the possibility of long-range harmful effects of atomic radiation. The immediately dangerous effects of excessive exposure are well known, and some progress has been made toward counteracting these in experimental animals. However, if an individual survives the immediate dangers of a nuclear blast, he still is subject to possible delayed effects. These have appeared in exposed persons who escaped death at Nagasaki and Hiroshima. Greatly increased incidence of leukemia, depending on the intensity of exposure, is one of the delayed risks in this group.

In addition, some geneticists, reasoning from animal experiments where many generations may be observed, have become increasingly concerned about the danger of unfavorable long-range effects on the human race, by alterations in heredity. They point out that there is slow accumulation of exposure to radioactivity from bomb tests and other sources. If a war should occur, with the use of nuclear weapons, the risks of mutations and hereditary defects would be greatly increased among the descendants of those who survived.

At present there appears to be considerable difference of opinion among responsible scientists concerning the magnitude of the danger to future generations from even the peacetime nuclear weapons program and proposed uses of atomic energy. A United Nations commission to study this problem thoroughly has been advised by the Federation of American Scientists. It has been suggested by others that over a period of years mankind must develop protective techniques to guard against the harmful effects of increasing radioactivity in his environment, just as he has learned to protect himself against other diseases and dangers.

Heart and Circulation.—If any additional stimulus was needed to arouse widespread interest in diseases of the heart and circulatory system, this was provided by the announcement in September 1955 that President Eisenhower had suffered a "heart attack." Hence there has been considerable discussion in the press of disease of the coronary (heart) arteries, coronary occlusion (blockage of a branch of an artery of the heart), and myocardial infarction (damage to an area of heart muscle deprived of adequate blood supply).

Medical scientists for years have been attempting to define the factors which predispose to such attacks, and these apparently are numerous and complex. However, there is wide varia-

tion in the incidence of this type of heart trouble in different parts of the world, and attacks are definitely less frequent among some peoples who consume less fat in their diet than does the average American.

Preliminary reports appeared in 1953 and 1954 of protection of animals from experimental atherosclerosis, and the lowering of blood cholesterol levels in persons on "normal" diets by the administration of plant sterols (sitosterol). Additional studies of this experimental approach to the problem now have been carried out, with encouraging results. It appears that the sitosterol hinders the absorption of cholesterol or fatty substances from the intestinal tract, but the mechanism of its action is not fully understood.

Gratifying improvement has been achieved in the symptomatic management of high blood pressure during the past five years, but the fundamental causes of the most common types of hypertension still are not known. Drugs now are available which may be used for the reasonably effective treatment of many patients. The various preparations of rauwolfia now have achieved particularly widespread usage, because in small dosage this drug produces comparatively few undesirable effects. Other antihypertensive drugs often are combined with it in the treatment of more difficult cases. (See also HEART DISEASE.)

Hormones and Enzymes.—Most of the vital processes of the body are controlled or mediated by hormones and enzymes. Some of the most important advances in the eventful modern era of medicine have been made in the study of these body chemicals. Two 1955 Nobel prizes were awarded for work in this field (see PRIZES AND AWARDS) and several others have been granted for similar work in recent years.

Hormones are made by glands but are released into the bloodstream to control body functions elsewhere. Some are of comparatively simple chemical structure; others, such as ACTH and insulin, are very complex. Vincent du Vigneaud (q.v.) of the Cornell University Medical College, New York, has synthesized two hormones of the pituitary gland, oxytocin and vasopressin, from the posterior portion of the gland. This work won for Dr. du Vigneaud the 1955 Nobel Prize in chemistry. He previously had the leading role in the extremely difficult synthesis of penicillin.

Body cells form numerous enzymes, of complex protein structure, which act as catalysts for the varied chemical reactions of body metabolism. One of the basic chemical processes of living cells is the conversion of food to energy, and enzymes are intimately concerned in the various reactions by which this is accomplished. The Nobel Prize in medicine for 1955 was awarded to Dr. Axel Hugo Thorell (q.v.) of the Nobel Medical Institute in Stockholm for his study of some of the enzymes and associated cellular processes of this type. Sharing one of the earlier Nobel prizes for work in a related field was Dr. Bernardo A. Housay; subsequently he was relieved of his important post at the University of Buenos Aires, for political reasons, by former President Juan Perón. Reinstatement of this eminent scientist has been announced by the new government of Argentina.

Other important advances in hormone chemistry were achieved by the clarification of the structure of ACTH, one of the anterior pituitary hormones, and the synthesis of aldosterone, another hormone of the adrenal cortex. Aldosterone is a "mineral corticoid" concerned with regulation of the excretion of certain salts through the kidneys. A newly recognized disease state was re-

ported in a few patients who had tumors of the adrenal cortex producing excessive quantities of aldosterone. The condition is called primary aldosteronism and is characterized particularly by retention of too much sodium in the body and the loss of excessive amounts of potassium. The potassium loss causes muscle weakness.

Chemically altered forms of "glucocorticoid" hormones of the adrenal cortex, cortisone and hydrocortisone, were described in 1954. Among these, prednisone (first called metacortandracin) and prednisolone (metacortandralone) have been used to the largest extent in clinical medicine. The first is closely related to cortisone, the latter to hydrocortisone. Fluorohydrocortisone also has been used to some extent. These substances are much more potent than the parent compounds so that smaller doses are adequate. However, while there may be some lessening of undesirable side effects with the new drugs, they still are subject to much the same limitations and precautions as the natural hormones. A valuable new freely soluble form of hydrocortisone (hydrocortisone hemisuccinate sodium) has been prepared. It may be injected rapidly intravenously in emergencies, whereas other preparations are poorly soluble and are absorbed relatively slowly after administration by mouth or intramuscular injection.

Infectious Diseases.—The more interesting developments in the study of infectious agents and diseases in 1955 concern viruses. Much publicity was given to the protective effects of polio vaccine and the cases of the disease which probably were caused by live virus in some early batches of the vaccine. A byproduct of the technique for growing polio virus in large quantities, as in the manufacture of the vaccine, was the crystallization of one strain of the virus. Several viruses which cause plant diseases had been crystallized previously. The incidence of polio in the United States as a whole was considerably lower in 1955 than in any year since 1951. Through the first week in December, 28,588 cases were reported, as compared with 37,771 for a comparable period in 1954, and a five-year average of 37,495. It is to be anticipated that there will be progressive decline in the number of cases as vaccination becomes more generally available. (See also BACTERIOLOGY; POLIOMYELITIS.)

The first virus to be crystallized was the one which causes tobacco mosaic disease. Two independent groups of investigators reported in 1955 that they had succeeded in breaking this virus down into inert chemical fractions and then recombining the fractions to produce active virus which could multiply and cause disease. This startling accomplishment has bearing on most basic concepts of life. In the experiments a protein fraction of large molecular weight was separated from nucleic acids of smaller molecular size. Neither fraction was capable of multiplying or causing disease alone. In the virus structure, nucleic acids are believed to run through rods of protein molecules, similar to lead in a pencil. These experiments undoubtedly will lead to new methods of studying viruses and virus diseases. The use of inert virus fractions, instead of intact potentially dangerous virus in vaccines, is one interesting possibility.

A new vaccine against three strains of APC virus, obtained chiefly from the throat and adenoids, and which cause grippelike illness or "colds," is expected to be ready for large-scale trial in the comparatively near future. Preliminary tests of a vaccine made from one strain gave very

WALTER REED ARMY MEDICAL CENTER

encouraging results. With recent progress in the technique of growing viruses in tissue cultures and preparing new vaccines, the number of protective "shots" available to the average citizen, and especially to children, is apt to increase to uncomfortable proportions.

Milk rich in antibodies is said to have been produced by special vaccination of cows by injecting killed bacteria into their udders. Experiments were reported in which chickens were protected against an infectious disease by feeding them milk from cows vaccinated against the disease. Possible application of this method to human diseases requires investigation because it has not been generally believed that antibodies are absorbed from the intestinal tract. (See also RESPIRATORY DISEASES.)

Malignant Tumors.—Increased emphasis on the search for drugs to control malignant growth is indicated by the formation of the Cancer Chemotherapy National Committee to coordinate the work in this important field into an intensive, integrated program. The committee is sponsored by private and governmental agencies interested in cancer research, as well as by representatives of the drug and chemical industries.

The logical key to the control of malignant growth would be the understanding of factors which initiate and perpetuate this change in cells. Hence much work continues on animals to study the action of chemicals which will cause cancer. Many such carcinogens are known, but the common properties responsible for their ability to initiate malignant growth in cells are not understood.

Chemical agents or irradiation will temporarily control some malignant tumors by interfering with vital metabolic processes or division of the tumor cells. However, malignant cells are extremely adaptable and apparently develop the ability to carry on their vital processes through different channels, and thus become resistant to treatment. The situation is somewhat analogous to the development of resistance to some antibiotics by certain bacteria. Hence it is important to develop and screen all manner of anti-cancer chemicals which may be used in sequence or in combination for more intensive and more permanent therapeutic effect.

Statistical studies indicate that two of the chief factors responsible for increase in cancer of the lung are heavy smoking and the pollution of the air in urban areas. In an interesting investigation, British scientists have pointed out that the death rate from lung cancer among non-smokers is much higher in Liverpool than in a rural area, but that there is little difference between the two areas among heavy smokers. They propose that benzyprylene, which is found both in cigarette smoke and city air, may be the common factor, and an important carcinogen.

The possibility of developing antibodies which might eventually be used to treat specific tumors has been suggested by the experimental production of such antibodies in mice. The detection of some activity of this type in the bodies of patients with malignant tumors also has been reported. This is only one of many experimental observations and approaches which in time may contribute to the solution of the cancer problem.

Additional evidence of the association of viruses with certain types of malignant tumors has been reported. Such association had been demonstrated previously in some malignant diseases of animals, and visualization of virus particles in breast cancer tissue from mice now may have been achieved. In addition, an infectious agent, presumably a virus, which caused disease in newborn mice, has been extracted from tissue of Hodgkin's disease, a malignant tumor of man. There has been considerable suspicion that this disease might be related to a virus but definite proof has not been obtained, nor do the above experiments constitute such proof. Further developments will be of great interest, however.

Work has continued in the effort to develop a diagnostic "blood test" for cancer. Reasonably accurate results have been reported, but no entirely satisfactory test is yet available. (See also CANCER.)

Other Developments.—One of the most interesting and potentially valuable fields of medical research at present has to do with the study of drugs which produce changes in mood and which are helpful in the treatment of some types of nervous disorders and mental conditions. Chlorpromazine (Thorazine) and reserpine (derived from *rauwolfia*) are the two most widely used "tranquilizing" agents at the present time. Both were introduced into medicine for other purposes: chlorpromazine for the control of vomiting, reserpine as one of the best drugs for the treatment of hypertension. Both have complex and little-understood effects in the brain. Chlorpromazine reinforces the antihypertensive effect of reserpine when the two drugs are given together. Jaundice is an occasional complication of treatment with Thorazine. Another new tranquilizing agent, meprobamate, is said also to possess muscle-relaxing properties and to be particularly useful in tension states.

For years drugs have been known which will produce hallucinations and temporary psychotic states. Scientists now are using these "hallucinogenic" drugs, such as lysergic acid (derived from rye fungus) and mescaline (used by Indians in tribal ceremonies), to test the ability of new compounds to prevent the abnormal emotional states. A piperidyl compound (Frenquel) has given protection against the effects of lysergic acid in preliminary human experiments and seems to be capable of blocking certain experimental effects of hallucinogenic drugs in laboratory animals. Frenquel and other new drugs are under study in mental patients, but results are

erratic. However, this new field of "psychopharmacology" is in its infancy and very little is known about the basic causes of mental disease and the action of drugs on the brain. There may be some interaction between serotonin, an important body chemical normally found in the brain, and both the tranquilizing and the hallucinogenic drugs. Much work is sure to follow, and beneficial developments may be anticipated, even if they do materialize only very slowly.

The extremely complex structure of cobalt-containing Vitamin B₁₂, the anti-pernicious anemia vitamin, finally has been clarified by chemists at Cambridge University. Commercial synthesis is not anticipated, however, because it may be prepared from liver or mold cultures.

A new agglutination test, using sheep red blood cells, has been developed and is proving of considerable value in the differential diagnosis of rheumatoid arthritis. Particularly in early stages it may be quite difficult to distinguish among certain types of arthritis.

An inexpensive model of the artificial kidney which is used in emergencies has been constructed. It may serve in place of more expensive and complex apparatus, but the team of doctors and laboratory technicians still will be needed to regulate its use.

A new anesthetic agent, which is a steroid chemical and thus distantly related to important body hormones, has been subjected to clinical trial, apparently with satisfactory results. The compound is called Viadril. It has no known hormone effects.

Aspirin is a versatile drug and has been used for many purposes, but the report that daily doses will discourage the formation of some types of kidney stones came as something of a surprise. The treatment was tried in patients who had been subject to repeated attacks of stones. It is believed the aspirin, in combination with other chemicals, helps prevent the precipitation of calcium salts during their excretion through the kidneys.

(For further information, see the Index entries on *Medicine* and specific diseases and drugs.)

JAMES PAISLEY HENDRIX,
Associate Professor of Medicine and Therapeutics, Duke University School of Medicine.

MELLANBY, SIR Edward, English medical educator and nutritionist: b. West Hartlepool, England, 1884; d. London, England, Jan. 30, 1955. An outstanding contributor to the study of nutrition, he demonstrated that the bone disease, rickets, is caused by the lack of vitamin D in the diet.

Having attended Cambridge University and served as a demonstrator in physiology (1909-11) at St. Thomas's Hospital in London, Mellanby was appointed lecturer in physiology at the University of London in 1913, and shortly afterward was promoted to professor. In 1920 he left the university to become professor of pharmacology at Sheffield University, a post he held until 1933. During these years and after his retirement from Sheffield, he lectured at several British and foreign universities, including Vanderbilt in Nashville, Tenn. (1947). From 1931 to 1933 he was a member of the Medical Research Council, and from the latter year until 1949 he was its secretary. In 1950 he helped found the Central Drugs Institute, a medical research center, at Lucknow, India.

Dr. Mellanby's research, especially in the field of nutrition, led to several important discoveries.

Between 1915 and 1919 he conducted a series of experiments which demonstrated that rickets is caused by an absence in the diet of a sterol which, altered by exposure to ultraviolet light (irradiation), has some control over the rate of calcification. The irradiated sterol later became known as vitamin D. In 1948 he discovered that nitrogen trichloride (Agene), used at that time in bleaching nearly all the bread flour in the United States, was injurious to the nervous systems of small animals. His discovery led to the banning by the U.S. Food and Drug Administration in 1949 of this substance as a flour bleaching agent.

Dr. Mellanby was the recipient of honors from several universities and governments, and was knighted in 1937. He served as chairman of the International Conference for the Standardization of Vitamins in 1931, 1934, and 1949. Besides writing numerous articles on biochemical and physiological subjects, he was the author of *Nutrition and Diseases* (1934) and *A Story of Nutritional Research* (1950).

MELLON INSTITUTE. In pure science, Mellon Institute has been steadily broadening the variety and scope of its researches. These investigations in the fiscal year 1954-55 were conducted by 147 scientists in 6 research departments and on 12 fellowships, for whose support \$1,033,172 was spent. The 64 other fellowships, in applied science, employing 390 specialists and aides, carried on projects of fundamental significance to technology. Publications of the past year included 7 books, 8 bulletins, 50 research papers, and 62 other scientific articles.

Pure Research Activities.—Facilities for micro-analysis, electron microscopy, and electron diffraction have increased the research strength. Investigations in spectroscopy have yielded new knowledge on the structural characterization of molecules. X-ray studies have enriched single-crystal structure analysis and diffraction instrumentation. Useful advancements have been made in rotary and packed thermal diffusion columns and in gas adsorption apparatus for measuring surface area, pore volume distribution, and density of finely divided solids. From research on new instruments have come a revolutionary recording balance, recording friction and surface tension equipment, and other electronic apparatus. Studies of the analytical chemistry of organic sulfur compounds have been quite productive.

The research of the Industrial Hygiene Foundation constantly strives for health maintenance in mining and manufacturing. During the fiscal year 1954-55, 25 environmental surveys or medical audits took the institute's industrial hygienists into 81 plants to evolve health programs. Close attention is accorded to uncovering and defining possible hazards in handling newly available chemicals. Much has been achieved in developing better orthopedic appliances in cooperation with the medical profession.

The program of research in glass science is wide. The largest undertaking, the construction of a laboratory for nuclear and paramagnetic resonance absorption studies, neared completion in 1955. New information has been gleaned from investigations of the mechanical properties of glassy systems and of the physics and chemistry of glass surfaces. In research on properties of synthetic elastomers there has been progress in studies of dynamic mechanical properties, stress-relaxation measurements, tensile strength, and physical testing procedures. Another fellowship

has developed a method of fireproofing a foam rubber. In the program on artists' materials, durable, colorless synthetic resins have been developed to replace natural resins, and a new picture varnish is being evaluated in collaboration with several prominent museums. Three projects in standardization have been finished: government purchasing and competition, company standards in industrial administration, and national standards in technology.

Applied Science Researches.—An electromagnetic flowmeter for liquids has been developed. Rapid strides have been effected in improving selenium rectifiers. A new heat-insulating material has been fully appraised. Structural clay products have been improved. Research has gone forward with success in evaluating castable refractories, and the preliminary phase of a cooperative study of the effect of grinding severity upon residual stresses and fatigue properties of steel has been completed. Much has been attained in developing new welding processes for higher strength alloy steels. Good painting practice for steel structures has been codified in specifications. The preparation of zirconium compounds is under investigation.

Air-pollution investigations are continually under way in laboratories of the Industrial Hygiene Foundation. Other groups are studying the effects of every kind of waste water discharged by steel mills, and the control of acid in coal mines. Long-range researches in petroleum chemistry have yielded much progress in separating and identifying sulfur compounds in crudes, in elucidating engine deposit theory, and in catalysis. Another large fellowship is investigating the basic properties of vinyl and ethylene resins. On a different fellowship, styrol resins have been adapted to specific reinforced plastics applications. The multiple fellowship on silicones has reported a new silicone-base gum, new leather- and textile-treating agents, and a nonwetting, scratch-resistant coating for glassware.

In programs concerned especially with therapeutic agents, preparational methods have been evolved for two drugs utilizable in the treatment of epilepsy and for an antispasmodic agent. There is extensive research on the synthesis of compounds for test in cancer, and of substances with antiviral properties.

WILLIAM A. HAMOR,
Director of Research.

MENOTTI, Gian-Carlo, Italian composer-librettist: b. Cadegliano, near Milan, Italy, July 7, 1911. He was awarded the 1955 Pulitzer Prize in music (announced May 2) for his opera, *The Saint of Bleeker Street*. It was the second time he won the award, the first being in 1950 for his opera, *The Consul*.

Arriving in the United States in 1928, Menotti obtained a scholarship at the Curtis Institute of Music in Philadelphia, Pa., where he studied under Rosario Scalero. He was graduated in 1933, was appointed to the institute faculty in 1941, and was promoted to director of the composition department in 1948. While still a student he had begun his first opera, *Amelia Goes to the Ball*, which was produced at the Academy of Music in Philadelphia in 1937, and later at the Metropolitan Opera House in New York City. His next work, another comic opera, was a radio production entitled *The Old Maid and the Thief* (1939). Thereafter he produced a number of highly successful operatic works, including *The Telephone*

and *The Medium*, companion pieces which had a successful Broadway run in 1947 (and which also established Menotti as a dramatist), and *The Consul*, winner of the 1950 Pulitzer Prize.

His prize-winning *The Saint of Bleeker Street*, which treats the recurrent Menotti theme of the conflict between faith and reason, depicts the relations of a sickly girl in New York's Little Italy (who is believed to be a saint) with her inexorably skeptical brother, who tries desperately to prevent her becoming a nun. Besides the Pulitzer Prize, *Bleeker Street* won the New York Drama Critics Circle award for the best musical of 1954, and the Music Critics Circle award for the best opera.

Other works by Menotti include: Variations on a Theme of Robert Schumann (awarded the Lauber Composition Prize, 1931); *The Island God* (opera, 1942); *Sebastian* (ballet, 1944); Concerto for Piano and Orchestra in F Major (1945); Concerto for Violin and Orchestra (1945); *Ricercare* and *Toccata* (for piano, 1947); and *Amahl and the Night Visitors* (opera for television, 1951).

MENTAL HEALTH. See PSYCHIATRY and the Index entry, *Mental Health*.

MENTAL TELEPATHY. See PARAPSYCHOLOGY.

MERCHANT MARINE, U.S. The year 1955 saw a notable start made in the addition of new ships to the American merchant marine. The conversion of three Mariner-type vessels for trans-Pacific service was completed. Four more Mariners being converted for round-the-world service were scheduled for completion at about the end of the year. Two Mariners were being converted to passenger liners for service between the west coast and Australia and New Zealand.

Bids were received on four large passenger ships for the Caribbean and South American trade. Formal agreements were signed by two major steamship companies to replace their entire fleets. This will involve the construction of over 50 ships, at a cost of nearly \$500 million in the next 10 to 20 years.

Under the government's trade-in-and-build program, six new tankers were ordered in 1955. Fourteen old tankers were traded in to the government, to be placed in the reserve fleet.

Applications involving the construction of over 30 roll-on-roll-off type vessels* were made under provisions of the Federal Ship Mortgage Insurance law, through which the government may insure loans made by private financing institutions for new ship construction.

The government also built or placed contracts for the building of a number of merchant vessels adapted for military use. The 35-ship Mariner program was completed. One of these vessels was wrecked, and one was taken by the Navy for conversion to a military type. The others were available for sale to private operators. Nine had been sold, and prospects were good for the sale of a number of others.

The Maritime Administration was completing conversion of 4 Liberty ships taken from its reserve fleets for experimental work. By installing more modern propulsion units and cargo-handling gear and improving the hull lines, it was expected that the speed and efficiency of these vessels could be improved. A program to repair the best of the naval auxiliaries in the reserve fleets

was carried on throughout the year, resulting in the reconditioning of 88 ships to Oct. 1, 1955.

In the year ending Aug. 31, 1955, 11 large ocean-going merchant vessels were built in United States shipyards. On Sept. 1, 1955, there were 13 tankers, an ore carrier, a roll-on-roll-off ship, a cargo ship dock, 2 Mariners, and 2 refrigerated ships, or a total of 20 new ocean-going ships under construction, of which six were being built for the government. In addition there were 10 vessels undergoing conversion, of which 4 were for the government. This was 15 more vessels than were under construction in the preceding year.

On Sept. 1, 1955, there were 1,172 active ocean-going merchant vessels in the United States merchant fleet, of which 1,050 were privately owned and 122 were owned by the government. There were 14 combination passenger-cargo ships, 3 tankers, and 105 freighters in the active government fleet. The private fleet contained 35 combination ships, 345 tankers, and 670 freighters.

The number of government-owned vessels under bareboat charter to private companies was 18, while 39 were assigned to general agents who were operating them on behalf of the Military Sea Transportation Service.

Vessels on which the government was paying operating-differential subsidies numbered 292, 13 more than a year before. Subsidies enabled these ships to compete with lower-cost foreign flag operators on essential United States trade routes.

In addition to ships of the active fleet there were 2,152 inactive ships, of which 2,101 were in the government's National Defense Reserve Fleets. The others were loading grain for storage, undergoing repair and conversion, or waiting for cargoes.

Compared with Sept. 1, 1954, the active and temporarily inactive fleet (excluding the reserve fleet) was smaller by 68 ships. The private fleet had suffered a net decrease of 116 ships, while the government fleet was larger by 48 ships. The government-owned vessels under charter had decreased by 3, while those under general agency had increased by 44. Most of the latter, however, were not active but were being used in the grain storage program. Five additional ships were being used by other government agencies, and two were in custody of shipyards undergoing conversion.

MERCHANT FLEETS OF THE WORLD AS OF JUNE 30, 1955

(Vessels of 1,000 gross tons and over, excluding those on the Great Lakes and inland waterways, and a few special types.)

Country	No. of ships	Deadweight tons
United States*	3,324	35,746,000
United Kingdom	2,531	22,874,000
Norway	1,082	10,332,000
Liberia	429	6,297,000
Panama	510	5,854,000
Italy	585	4,994,000
Japan	610	4,884,000
France	583	4,489,000
Netherlands	520	4,228,000
Sweden	574	3,797,000
Others	4,204	23,708,000
Total	14,952	127,203,000

* Includes 89 ships under other flags.

CLARENCE G. MORSE,
Maritime Administrator.

MERCURY. Production of mercury in the United States increased under the stimulus of advancing prices, from 14,337 flasks (of 76 pounds

* The roll-on-roll-off ship is a fairly new type of vessel which permits loaded trucks, trailers, trains, or other vehicles to enter or leave the ship under their own power, speeding up the time spent in loading and unloading the ship, and cutting cargo handling costs. It was hoped that the construction of a number of ships of this type would help to revive the declining coastwise and intercoastal trade and would provide auxiliaries of a type especially useful to the Defense Department.

each) in 1953 to 18,542 flasks in 1954 and to 8,950 flasks during the first half of 1955. Consumption declined from 52,259 flasks in 1953 to 42,796 flasks in 1954, but a decided gain (37,400 flasks) was recorded for the first half of 1955. The excess of consumption over domestic production is supplied by imports, which reached 85,784 flasks in 1953 (the second highest figure on record), but dropped to 65,316 in 1954 and to 8,166 in the first half of 1955. (See MINERAL PRODUCTION for table showing output by major producing countries.)

METALLURGY. Rising Price of Copper.—An increase of nearly 50 per cent in the price of a major metal within the period of a few months is a noteworthy occurrence, especially during a period of relative stability in commodity markets. The price of copper, which had been unchanged at 30 cents per pound during 1954, rose to 36 cents in March 1955, and to 43 cents at the end of August, with many consumers paying 46 cents or more. A combination of circumstances produced this rise, including a strong industrial demand, an increase in wage costs, and a tight supply aggravated by strikes, government stockpiling, and high prices in Europe, where widespread manufacturing activity was supported by generally prosperous conditions. Copper may now encounter further stepped-up competition from other metals, as well as a growing use of substitutes in some of its principal markets.

Flash Smelting.—An innovation in copper smelting is the flash smelting process developed by the International Nickel Company. Sulfide flotation concentrates are injected with oxygen into a reverberatory furnace, where matte and slag are formed and collect on the hearth. Oxidation of iron and sulfur supplies the necessary heat without use of fuel. A high-grade matte is made with unusually low loss of copper in the slag. The slag loss is minimized by flash smelting pyrrhotite at the skimming end of the furnace. The droplets of molten iron sulfide not only reduce oxidized copper in the slag, but also exert a mechanical cleansing action which washes out much of the entrained matte. The furnace gases contain as much as 75 per cent SO_2 , which is converted to liquid sulfur dioxide. Economically the success of the process depends on low-cost oxygen. The quantity of oxygen consumed is about 0.2 ton per ton of concentrates smelted.

Ductile Chromium.—Research on the problem of producing chromium in ductile form is progressing on a wide front in the United States and elsewhere. At the National Metal Exposition held in Philadelphia in October 1955, a conference on ductile chromium and high-chromium alloys was sponsored by the U.S. Army's Office of Ordnance Research and the American Society for Metals. The plant recently built at Marietta, Ohio, by the Electro Metallurgical Company has been very successful in producing pure chromium on a large scale by an electrolytic method. Another company also is planning production of pure chromium.

Rhenium.—A "New" Metal.—Publication of the results of research carried on at Battelle Memorial Institute has drawn attention to the valuable properties possessed by rhenium. Its melting point, 3180°C ., is nearly as high as that of tungsten. It has a remarkably high density—21.0, as compared with 19.3 for tungsten. Its electrical resistivity is extremely high, and its tensile strength in the annealed condition is 170,000 pounds per square inch. It is very ductile at room

temperature when annealed, and retains fair ductility when cold-worked. It has excellent resistance to corrosion at atmospheric temperature, but oxidizes at high temperature. A peculiarity is the formation of a low-melting and rather volatile oxide, presence of which renders rhenium hot-short unless completely protected.

The process of producing rhenium follows the lines for production of pure tungsten. It begins with preparation of a chemically purified salt, which is then reduced to metal powder with hydrogen. The powder is compacted by pressing, then presintered in hydrogen or a vacuum by passing an electric current through it, heating it to about 2700°C . It can then be swaged, rolled, or forged.

Applications of rhenium are in the field of electronics, especially as a filament in electron tubes; as an electrical contact material; and for pen points. Its present price is of the same order as that of platinum.

Nickel Plating without Electricity.—This method of nickel plating without electric current, first used about two years ago, is being applied to greater extent as the process is improved and its advantages realized. Because of its ability to coat the principal strong aluminum structural alloys, aircraft manufacturers are employing it for many parts. The nickel coating is deposited by chemical reduction of an aqueous solution of a nickel salt in which the piece to be plated is immersed. The reducing agent is usually sodium hypophosphite, and the plating is a hard nickel alloy containing 3 to 7 per cent phosphorus. A principal feature of the process is the uniform thickness of the deposit, regardless of the contour of the surface on which it is plated. Other advantages are good adhesion, greater protection against corrosion, close control of thickness (which is determined by temperature and time of immersion), ability to plate inner as well as outer surfaces, and to plate recessed areas and objects of complex design within close tolerances. There is no build-up at the edges as in electroplating. The unit cost is usually a little higher than in conventional plating.

Among the surfaces to which this type of nickel plating is applied are all types of carbon and alloy steels, copper and copper alloys, many aluminum alloys, and soldered and brazed parts.

METEOROLOGY. A brief summary of weather conditions from autumn 1954 through summer 1955 follows:

Autumn 1954.—The autumn season was warmer than average over most of the United States. In the East it was wet because of excessive rains from a series of hurricanes. After hurricane Edna struck a glancing blow at New England in mid-September, Hazel ripped through the Carolinas, Virginia, Pennsylvania, and New York into Ontario in October. In its last stages this vicious storm dumped as much as 10 inches of rain near Toronto, where over 100 persons were killed and extensive flood damage resulted. A little earlier the Chicago area had up to 12 inches of rainfall in 40 hours. Damage was estimated at \$25 million.

Winter 1954-55.—Winter in the Eastern and

Central states was near the average, while the Mountain states and the Southwest were colder than normal. The drought of earlier months continued in the western prairies, but elsewhere precipitation was near normal. Dublin, Ireland, had its worst flood in history in December. On Jan. 2, 1955, a tropical storm occurred, the earliest ever observed in the North Atlantic.

Spring 1955.—The spring season was cold in the West and Northwest, but was generally warm in the eastern half of the United States, even though a record-breaking late freeze struck the deep South in the last days of March, causing \$100 million damage to crops. An estimated 121 persons were killed in tornadoes in Oklahoma, Kansas, Texas, and Missouri on May 25-27.

Summer 1955.—The summer brought the most sustained heat on record to many Eastern and Central states, and drought continued in many sections of the Prairie states. The Eastern seaboard again had excessive rains from hurricanes. In August hurricanes Connie and Diane followed each other within a week on similar tracks through the South and Middle Atlantic states into New England. Unprecedented floods followed rainfalls which totaled 20 inches in many places and caused an estimated 179 deaths. Damage estimates exceeded the \$1 billion mark. Northern India and Hokkaido also suffered from floods, while in the Southern Hemisphere, Argentina had a cold winter with snowfall in Buenos Aires for the first time in 30 years.

Severe Storms.—Complete weather statistics for 1954 for the United States showed, aside from severe drought, a dismal record of disasters:

Type of storm	Number	Lives lost	Damages (in million \$)
Tornadoes	690	35	28
Hail	...	...	72
Hurricanes*	8	193	800
Other storms	...	100	130

* Total death toll from North Atlantic hurricanes in the United States and abroad exceeded 800. Lloyds of London estimated damages at \$.35 billion.

Technical Advances. Storm Research.—Prompted by the heavy storm losses of 1954-55, Congress appropriated funds for the Corps of Engineers for study of protective measures against storm surges, and for the Weather Bureau for research into severe storms and for an improved warning system. New upper-air observing stations and complete coverage of the east coast by

weather radar will be in operation by 1956. In view of the great stake of insurance underwriters in weather disasters, Travelers Insurance of Hartford, Conn., established the first major weather research center outside of academic institutions and government. (See also FLOOD CONTROL.)

Studies on causes and tracks of hurricanes were intensified, and the World Meteorological Organization held a conference on tropical storms in Japan. J. Namias hypothesized that the apparent northwest shift of storm tracks in the Atlantic is due to recent changes in the general circulation, with a northward displacement of the belt of westerly winds. Radar and airplane reconnaissance have disclosed more detail on hurricane structure. Very important seem to be semipermanent precipitation bands and squall lines 50 to 100 miles from the eye of the hurricane. Associated with these are dangerously high winds and thunderstorms.

Radar is also often capable of identifying tornadoes. A hook-shaped echo on the scopes has been discovered as the peculiar mark of the twisters. In Texas a tornado-tracking radar network, started with 8 stations in 1954, was expanded to 24 stations in 1955. Warnings from this net have proved valuable in reducing casualties.

Study of 160,000 case histories of histoplasmosis has led the U.S. Public Health Service to suspect tornadoes as spreaders of the fungus causing the disease. Apparently only exceptionally high winds are capable of dislodging the soil-dwelling agent, prevalent in the Midwest, so that it can affect the human respiratory system.

Reconnaissance of storms by rocket as a powerful meteorological tool is foreshadowed by the chance photography of cloud systems of a tropical storm. The pictures were taken on Oct. 5, 1954, from an Aerobee rocket fired at White Sands, N. Mex., when the storm was centered near Del Rio, Texas. The main vortex and several secondaries show clearly in the cloud patterns. (See illustration under PHOTOGRAPHY.) Pictures of this type regularly taken from above would be most helpful in weather analysis.

Telemetered information on cloud cover will be one of the foremost practical aims of the earth satellite vehicle, which is well along in design and planned for launching by the United States during the International Geophysical Year, 1957-58. (See SPACE FLIGHT.) Meteorological rockets

(Left) U.S. Navy jet, at 20,000 feet off the Florida coast, flies through hurricane Connie, whose "eye" is the turbulent area directly to the right of the plane's nose. (Right) Radarscope of year's first hurricane, Jan. 1, 1955.

for lower altitude work have been developed by the U.S. Navy. These Deacon rockets can be launched vertically by airplanes from 30,000 feet above the levels of high air density. This "rock-air" system permits reaching altitudes of 90,000 feet. It supplements the "rockoon" system, in which the rocket is carried to 70,000 feet by a "sky hook" plastic balloon.

Solar Constant.—Rocket-collected spectrographic data have made it possible to obtain a better estimate of the solar constant, that is, the amount of radiation received from the sun at the upper boundary of the earth's atmosphere. At mean solar distance the new value, 3 per cent above older calculations, is given as 2 calories per square centimeter per minute. This new estimate makes the solar illuminance constant 12,700 foot-candles.

Weather Prediction.—In April 1955, numerical weather prediction became operational in the United States. A giant electronic computer has been installed jointly by the Weather Bureau and the military weather services at Suitland, Md. From current upper-air data it predicts the heights of the 900-, 700-, and 400-millibar pressure surfaces. The computations for a 12-hour prediction take about 30 minutes; for a 24-hour prediction, 90 minutes. The forecasts of large-scale motions are quite remarkable. Errors in the mean vector wind predictions average about 10 per cent.

Further development work is directed toward three sources of errors. The first is caused by inaccuracies of data fed into the machine. The second, usually the source of greatest error, is caused by physical assumptions such as the geostrophic wind approximation and the neglect of topographic effects, heat sources, and friction. Mathematically induced errors comprise the third source; these can be kept small and are rapidly being overcome by development of new equations. In areas with a good observational network, subjective analysis of the initial data can soon be replaced by machine calculations. This is desirable because the numerical prediction is based on data located in regular grid fashion, whereas presently observations are taken at irregularly spaced airports and weather stations. By fitting second-degree polynomials with a least square adjustment to the original data, very satisfactory analysis of initial conditions for numerical prediction can be obtained.

Climatic Change.—Much effort has been devoted to the study of climatic change. The cause of terrestrial glaciations has been, according to a new hypothesis of Oepik, a nuclear refueling process on the sun with an initial reduction of radiation by 10 per cent and subsequent fluctuations in solar emissions. The latter have led to alternating warming and cooling. Paleontological evidence has shown that in the last North American interglacial period a moderate climate was prevalent in the midcontinent with temperatures and rainfall comparable to present conditions in coastal Virginia.

The upward trend of temperatures of the more recent past was still discernible in many places of the central and eastern United States. But analysis of past fluctuations has led some meteorologists to predict speculatively that colder winters are again impending in the next decade.

Weather Modification.—The problem of artificial weather modification has entered a phase of critical evaluation. As far as field operations are concerned it has become a problem of statistical analysis. Experimentation has adopted techniques

of randomized seeding of cloud and storm systems which are amenable to modification. This makes probability tests of significance possible. On this basis, essentially negative results were announced by Dr. J. Spar of New York University from Project Scud, carried out under U.S. Navy sponsorship with the purpose of modifying by cloud seeding the development of cyclones on the east coast of the United States. Similarly the Canadian Meteorological Service found no increase of precipitation from cloud seeding in the Canadian plains.

Results of cloud seeding tests in Oregon were compared with rain occurrence probabilities from similar unseeded storms in the past. The conclusion was that on all but one occasion rain would have fallen from the seeded systems naturally. However, the analysis did not disclose whether amounts on specific targets might have been increased.

Several new techniques have been introduced in field experiments. University of Chicago scientists studied cumulus clouds in Puerto Rico. A cloud census disclosed common existence of precipitation from warm clouds forming in the trade wind. Cumuli over sea with tops higher than 11,500 feet always contained precipitation but were lower than the freezing level. Hence, seeding with freezing nuclei is futile. Airborne seeding of such warm cumulus clouds on a randomized basis with water was undertaken. Many of the seeded clouds promptly developed radar echoes, and the statistical tests showed that artificial modification of these clouds was beyond reasonable doubt. No data were available on quantitative increases in rainfall on the ground. As another seeding agent, sulfur trioxide has been used with some success. In field work in Pakistan, finely powdered common salt was injected into the cloud by a small explosion on the ground. Some increase in rainfall was claimed.

The effect of cosmic dust or micro-meteorites, suggested by Bowen as possible explanation for worldwide singularities in rainfall, seems to be a hypothesis unverifiable by facts.

Laboratory investigations have shown that iodine and many of its metal compounds, such as the silver, lead, sodium, potassium, and tin salt, are active freezing nuclei. The nucleating ability is not, as was once postulated, a function of crystal structure, but rather is related to the ability of the solid to adsorb water vapor. Ice crystals are then directly formed by adsorption from the vapor phase. Presence of liquid water at sub-freezing temperatures is not necessary.

In the open atmosphere there is, according to Australian experiments, a rapid decay of silver iodide. The degradation depends critically on ambient temperature and pressure. In 8 minutes, concentration of effective nuclei from ground generators decreased by a factor of 10 down wind. Atmospheric stability in Australia is such that it would take several hours, equivalent to a decay factor of 10 million, for nuclei to reach the level in clouds where temperatures are suitable for silver iodide to become active. In practice this would require prohibitively costly quantities of seeding agent, but release from generators on mountain tops might in some areas be practical.

Nature seems to operate its condensation processes mostly with chlorides and sulfates as nuclei. Measurements in fogs and clouds in New England show that chlorides range from 0 to 100 parts per million, with lowest concentrations far from the coast. Sulfates are present in 7 to 50 parts per million, mostly in acidic form. These

nuclei are possibly sulfur dioxide photochemically oxidized and later hydrolized to sulfuric acid. In some cases ammonium sulfate is the prevalent compound.

Miscellaneous.—Belief in recurrence of certain weather conditions on fixed days of the calendar has been a part of persistent folklore. A few of these so-called weather singularities appear in far more years than chance alone would indicate. In the eastern United States, the January thaw, a warm spell in the third week of January, and a cold snap in the middle of October seem to have significance. To this can be added a rainy spell in Arizona which occurs with considerable regularity around the first of July. It is caused by the usual migration of the westerly jet stream and of a high-level anticyclone northward. This leads to a replacement of dry air by moist air in the Southwest.

The second congress of the World Meteorological Organization, one of the specialized agencies of the United Nations, was held in Geneva, Switzerland, in April 1955. It elected the head of the French weather service, André Jules Armand Viaut, as president. Among its important actions was a resolution to make a worldwide study of the radioactive debris in the air. As an aid to scientific studies and long-range radio communication engineering, the compilation of a series of world maps of thunderstorm occurrence was authorized. With an estimated 40,000 thunderstorms per day on the earth, patterns of distribution are also of interest as a primary mechanism by which the atmosphere dissipates part of the energy received from the sun. As a cooperative project among the nearly 90 member nations and territories, a world climatic atlas is also to be undertaken in the next few years.

H. E. LANDSBERG,

Chief, Climatic Service, U.S. Weather Bureau.

METHODIST CHURCH. A year of unbroken prayer for world peace began with the dawn of 1955. Twenty-four-hour vigils, held in selected churches across the United States, were initiated in the Upper Room Chapel of the Board of Evangelism in Nashville, Tenn.

High interest of Methodists in 1955 centered in the election by 148 annual conferences in the United States and overseas of 754 delegates for the quadrennial General Conference, which was scheduled to meet in Minneapolis, Minn., April 25–May 9, 1956. It will consider, among other matters, full clergy rights for women. Churchwide gatherings during 1955 included an experimental assembly of members of 30 boards and commissions in Cincinnati, Ohio (January 7–14); the quadrennial National Town and Country Conference at the University of Indiana (July 22–25); and the quadrennial National Conference of Methodist Youth at Purdue University (August 22–26), where Paul Bosley of Evanston, Ill., was elected president of the organization.

The church has a total membership of 9,313,278, with 39,854 pastors in the United States alone. Membership in Methodist organizations increased in 1955. Church school enrollment reached 6,811,498; youth organizations, after 12 years of losses, showed a gain of 77,000; and there were more than 500,000 members in 9,000 chartered local organizations of Methodist men.

The Methodist Publishing House, whose business rose to a new high of \$19,609,488, began the erection of an office building adjoining its printing plant in Nashville; and 144 new build-

ing and improvement projects were initiated among the denomination's 199 hospitals and homes, at a cost of \$51,600,000. In 1955, capital gifts of \$30,000,000 were made to the denomination's colleges and universities, in which enrollment reached 200,000. General benevolent gifts increased 8.2% in 1955 over the previous year's total of \$52,481,949. Giving for all purposes reached \$384,490,613, an increase of 11%.

A series of 13 half-hour dramatic television programs costing \$300,000 was produced by the Radio and Film Commission. Collectively entitled *The Way*, the films are a Methodist contribution toward Protestant broadcasting. Two motion pictures were produced by other agencies—one on civil liberties, by the Board of Social and Economic Relations, and another on the alcohol-free way of life, by the Board of Temperance. Circulation of the *Upper Room*, a devotional bi-monthly published in 26 languages and Braille, reached 3,000,000.

The Rev. Dr. Leon M. Adkins of Syracuse, N.Y., succeeded the Rev. Dr. John Q. Schisler as executive secretary of the Division of the Local Church of the Board of Education; and Bishop W. Earl Ledden of Syracuse was named to succeed Bishop Clare Purcell of Birmingham, Ala., on April 26, 1956, as president of the Council of Bishops. The autonomous affiliated Methodist Church of Brazil elected and consecrated two new bishops, the Rev. João Augusto do Amaral and the Rev. José Perdo Pinheiro. Attention on missions was being centered in Sarawak, the Congo, Bolivia, and Korea. Authorities reported that the Methodist Church has more than doubled its strength in the last five years in the latter country.

Deaths of notable Methodists in 1955 included Bishop Lewis O. Hartman of Boston, Mass., on June 30; John R. Mott (q.v.) on January 31; and Mary McLeod Bethune (q.v.) on May 18.

RALPH STOODY,

Executive Director, Commission on Public Relations and Methodist Information of The Methodist Church.

METROPOLITAN AND REGIONAL PLANNING. See CITY PLANNING.

MEXICO. Bordered on the north by the United States, on the west and south by the Pacific Ocean, on the southeast by Guatemala, British Honduras, and the Caribbean Sea, and on the east by the Gulf of Mexico, Mexico has an area of 760,373 square miles and is the third largest country in Latin America.

Population.—As of June 30, 1955, the estimated population of Mexico was 29,675,323. The Federal District which includes Mexico City, has an estimated population (1954 est.) of 3,795,567. Other cities and their 1954 populations are Guadalajara, 382,710; Monterrey, 340,625; Puebla, 229,976; Mérida, 159,405; León, 157,379; and San Luis Potosí, 156,850. Approximately 60% of the population is mestizo, 30% is Indian, and 10% is of European descent. The official language is Spanish, but 50 Indian dialects are spoken.

Government.—Although the constitution (1917) provides for a federal republic with a Federal District, 2 national territories, and 29 states, a large measure of authority rests with the central government. The president (currently Adolfo Ruiz Cortines, who took office on Dec. 1, 1952), elected for one 6-year term by direct vote and forever ineligible for re-election, wields wide legislative powers. The bicameral Congress is composed of 60 senators and 162 deputies, elected for 6- and 3-year terms, respectively, and ineligible for immediate re-election. The judicial power, which never challenges the major policies of the chief executive, lies in a 21-member Supreme Court (each member having life tenure) and in inferior federal and state courts.

Education and Religion.—Free and compulsory education until 15 years of age is guaranteed by the constitu-

tion, but in 1955 only 2,407,000 students out of 5,407,000 were enrolled in primary schools. Another 106,600 students attended 524 secondary schools, while 29,487 future teachers were being trained in 62 normal schools. There were 24,000 polytechnical students attending 31 institutions. During 1954-55, about one third million persons were taught to read and write; however, approximately half of the population was still illiterate.

Roman Catholicism is the dominant religion, but it is strictly controlled by constitutional law.

Finance.—The 1955 budget totaled 5,681 million pesos (1 peso equals U.S.\$0.08). This represented an 853.7 million increase over the previous year, but government income was estimated to reach 7,800 million pesos, permitting a large reduction in the public debt.

As of June 30, 1955, the national debt was 7,788 million pesos, of which 3,277 million represented internal debt; 1,857 million, external debt; and 2,654 million, obligations of Nacional Financiera guaranteed by the government.

General Economic Conditions, 1955.—After its mild recession in 1953-54, Mexico resumed rapid economic progress; in 1954 the national income increased 7% and rose another 10% during the first half of 1955, promising to exceed the national product of 67,000 million pesos for 1954.

A stronger international position was reflected in the \$45.7 million overall favorable balance of payments in June 1955. This compared with a deficit of \$87.6 million in the previous year. Rising prices for minerals, a greater volume of exports, and increased tourist expenditures contributed to this improved situation.

The major obstacle to continuing economic prosperity, however, was the serious threat of inflation. The index of food prices in Mexico City (1929 = 100) had increased from 693.1 in June 1954, to 797.8 a year later. The general price index in mid-1955 was 23% above the pre-devaluation level in March 1954. Labor contracts in 1955 called for further wage increases of approximately 15%.

Withal, the position of labor was enhanced by the organization of the Block of United Workers on March 7, 1955. Representing all Mexican unions except two small leftist groups, the new organization would promote trade union cooperation and counterbalance the growing strength of employers.

Agriculture and Food Production.—Mexico's record harvests of 1954 were surpassed in 1955. The value of overall agricultural production was estimated at approximately \$750 million, an increase of 81% in a period of 10 years. Food imports fell from a total of \$132 million in 1953 to \$98.5 million in 1954 and were negligible in 1955. Harvests of agricultural staples were estimated (after the disastrous storms and floods in September 1955) at 5 million tons of corn, as compared with 4.5 million tons in 1954; 29.4 million bushels of wheat; and 500,000 tons of beans, or 25% more than 1954.

In cash crops, 1,086,693 hectares of cotton were planted (210,693 more than in 1954) with a yield of 2,050,000 bales—more than enough to meet the estimated domestic market (300,000 bales) and export demands (1,640,000 bales). Coffee production of an estimated 1.5 million bags (44 pounds each) provided 1.25 million bags for export. Coffee exports provided Mexico with \$66 million in the first 7 months of 1955. Sugarcane planted on 235,532 hectares of land produced 910,000 tons of sugar, with 180,000 tons for export. Much of this agricultural productivity was due to a vigorous irrigation program. By 1955 a total of 3.1 million hectares were being irrigated.

With an average production of 14.8 million cattle during the last 4 years, Mexico ranks tenth as world producer. In 1955 the total increased to

15.3 million head, a 68% increase, compared with the 3% annual growth of population. In 1954, 4,631 head of cattle valued at 1.6 million pesos were exported, and after the United States quarantine for hoof-and-mouth disease was lifted in January 1955, a total of 203,516 cattle were driven across the border by May 1955.

Industry.—Industrial production, supported by public investments, increased during 1954 and again in 1955. Iron production reached 381,133 tons, and steel, 621,935 tons—increases of 57% and 18.5%, respectively, over the previous year. Automobile assembly plants were permitted to increase their quota to 16,500 units for the second half of 1955, as foreign exchange became more plentiful. Cement production, which was less than 1 million tons in 1954, rose to 1.2 million tons during the first half of 1955. Power and petroleum shortages prevented the industry from producing its annual 3-million-ton capacity.

Petroleum and Mining.—Expansion of the petroleum industry in 1955 was marked by the discovery of 11 new gas and oil wells and the drilling of 354 new wells, 262 of which were successful. Subsoil resources were estimated at 2,758 million barrels. Oil production reached 250,400 barrels a day, of which 77,500 barrels were exported. Total oil production in 1954-55 was 91.4 million barrels; export income from petroleum was 563 million pesos.

In 1954, the production value of minerals was \$228.4 million, as compared with \$253.8 million in 1953. Gold production totaled 386,925,000 troy ounces; lead, 216,624 metric tons; zinc, 223,749 metric tons; copper, 54,806 metric tons; and silver, 1,241 metric tons. Increasing world prices in minerals was accompanied by a recovery of Mexico's mining industry in 1955.

Foreign Trade.—Mexico ended 1954 with its best trade record since 1950, having successfully reduced its imports to \$787.1 million from \$811 million and increased its exports to \$604.7 million from \$561.3 million in 1953. Income from American tourists was \$219 million more than Mexican expenditures for foreign travel, and helped redress the unfavorable balance of trade.

The Mexican trade position improved during the first half of 1955. Exports were valued at \$373.2 million and imports at \$426.3 million during this period. The resulting trade deficit was less than half that for the corresponding period in 1954. While exports of coffee, cotton, petroleum, lead, copper, and zinc (in that order) represented 51.7% of the total, a trend towards greater diversification was apparent. Geographi-

A woman is rescued from her hut by a U.S. Navy helicopter, as Mexico's Caribbean coast is inundated by floods resulting from hurricanes in October 1955.

JAY LEVITON—BLACK STAR

cal distribution of Mexican trade was also increasing, although the United States continued to dominate the market, taking 63.8% of Mexico's exports, and supplying 73.4% of the imports in 1954.

Transportation and Communications.—Approximately a quarter of the 1955 budget was appropriated for communications and transportation. The Secretariat of Communications spent 660 million pesos on highways and feeder roads, and another 313 million pesos for railroads which were being renovated in a 6-year improvement program. There were 14,495 miles of railroad track in 1955. Administrative reorganization of the government-owned Mexican National Railway system accounted for the 63% increase in volume of passengers and freight during 1954-55. During 1953 there were available 37,300 miles of roads and highways, 15,425 of which were usable throughout the year for Mexico's 367,361 motor vehicles (1951 total). Mexico has a well-developed air transport system which links each of the major states with the capital and with other countries.

Principal Events, 1955.—President Adolfo Ruiz Cortines declared in his third annual message to Congress on September 1 that Mexico had been enjoying an atmosphere of political tranquility throughout the year. Elections for the national legislature on July 3 were noteworthy for their complete absence of violence and for the fact that women cast their first ballot. The official Partido Revolucionario Institucional (PRI) was accorded all but 20 of the 162 seats by the Electoral College. A riot involving 3,000 persons in the state of Tabasco was terminated promptly when the unpopular governor, Manuel Bartlett Bautista, who had raised the local bus fares, was relieved of his post at the end of March.

Mexico continued its policy of extending territorial asylum to political refugees. On May 24 the Foreign Office ruled that P. T. Mow, a Nationalist Chinese who was charged by the Formosan government with embezzling \$5 million and who had been imprisoned for 33 months in Mexico City, was entitled to asylum in Mexico, pending trial on a charge of illegal entry into the country. The Guatemalan political refugees who had been granted asylum the previous year were thought to be plotting against the year-old regime of Castillo Armas in July. They were accordingly brought under increased surveillance by the Mexican police.

Since the United States had doubled its patrols along the Mexican boundary in June 1954 to prevent Mexican workers from entering the country illegally, daily arrests had been reduced from 3,000 to 350, while discriminatory treatment by American employers had lessened. The success of these measures was reflected in the increased numbers of migrant labor (some 350,000) who registered legally for temporary employment in the United States. In July the U. S. Congress, despite strong labor opposition, approved a law which authorized the recruitment of seasonal Mexican laborers until June 30, 1959. The law conformed to the recommendations which the United States and Mexico had approved on April 14, looking forward to the conclusion of an improved Migrant Labor Agreement.

Optimistic assessments of Mexico's economy in 1955 had foreseen neither the devastation resulting from hurricanes Hilda on September 19 and Janet on September 28, nor the accompanying floods which washed out crops, roads, and bridges. Tampico (110,000 population) suffered

the most damage. Floods also endangered western Mexico; the states of Jalisco, Michoacán, and Colima were isolated as a result of torrential rains and near cyclonic winds during mid-October. Altogether the storms ruined 5% of the total farmland (750,000 acres), and took more than 300 lives.

MARTIN B. TRAVIS,
Assistant Professor of Political Science, Stanford University.

MICA. The United States is well supplied with scrap mica suitable for grinding into fine powders used in wallpaper, paints, roofing, and other products; but most of the supplies of sheet mica, required by the makers of electric and electronic equipment, are imported. Sales of domestic scrap mica reached about 93,000 short tons in 1954, as compared with 73,259 in 1953. Sales of sheet mica (preliminary estimates) were about 655,000 pounds, as compared with 849,394 pounds in 1953.

Imports of unmanufactured sheet mica totaled only 1,829,457 pounds in 1954, as compared with 2,599,007 pounds in 1953. Imports of films and splittings declined greatly, from 11,092,552 pounds in 1953 to 6,399,562 pounds in 1954. (See also MINERAL PRODUCTION for table showing output of major producing countries.)

MICHIGAN. North Central state, United States; admitted to the Union, Jan. 26, 1837. The "Wolverine State" ranks 22d in area and 7th in population (1955) among the 48 states.

Area and Population.—Area: 58,216 square miles (land, 57,022; inland water, 1,194), divided into 83 counties. Population: (1950) 6,371,766; (est., July 1, 1955) 7,222,000. Urban places with 1950 populations above 15,000 are as follows:

Executive.—Chief state officers for 1955:

Governor: G. Mennen Williams (Democrat)
Lieutenant Governor: Philip A. Hart
Secretary of State: James M. Hare
Treasurer: Sanford A. Brown
Attorney General: Thomas M. Kavanagh
Supt. of Public Instruction: Clair L. Taylor

Constitution and Judiciary.—The present constitution went into effect in 1909. The Supreme Court comprises eight justices; chief justice in 1955 was Leland W. Carr.

Legislature.—The Legislature (Senate, 34 members; House of Representatives, 110) meets annually commencing the second Wednesday in January.

Major enactments of the 1955 legislative session included those which authorized state borrowing of not more than \$100 million for loans to school districts for construction and expansion; created a Department of Workmen's Compensation and changed existing compensation provisions; formed a legislative advisory council on aging and a special unit of the Employment Security Commission to find work for persons over 65; and developed a new system of payments for foster care of children. Other bills extended social security coverage to school and public employees; appropriated \$5 million in supplementary funds for public assistance; increased the gasoline and liquefied petroleum tax by 1½ cents and weight taxes on commercial vehicles; created a highway

construction fund within the state treasury; amended the Uniform Support Act; passed a deficiency appropriation bill of \$3,025,760.31 for the 1954-55 fiscal year; wrote a School Code; established a Fair Employment Practice Commission; provided for payment of a Korean War bonus; and appropriated \$2 million for polio vaccine for "high risk" groups.

At a special session, opened on November 1 and continuing through December, the legislature authorized Michigan's first maximum speed law; added 200 men to the state trooper complement; authorized appropriation of \$177,500 to set up a traffic safety center at Michigan State University; and made \$13.5 million available to local school boards to raise the salaries of teachers and other school employees.

Finances.—State treasury funds (1954-55 fiscal year), \$1,128,694,089.21; expenditures, \$1,095,726,057.53; treasury balance, \$154,402,104.95; long-term indebtedness, \$248,111,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$645,877,000, including \$450,099,000 from a 3% general sales tax and selective sales and gross receipts taxes; \$119,642,000 from licensing; and \$34,969,000 from property taxes. The state has no individual or corporate income taxes or a poll tax.

Banking.—As of June 30, 1955, the state's 79 national banks had \$4,052,537,000 in assets, \$2,527,649,000 in demand deposits, and \$1,244,242,000 in time deposits; the state's 343 other banks had \$4,830,063,975.47 in assets, \$1,783,480,389.76 in demand deposits, and \$1,772,745,864.32 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 16, inclusive. Operating expenditures of \$352,362,250 (\$281.07 per pupil) for public elementary and secondary education in the 1953-54 school year comprised approximately \$115,401,414 from local school districts, \$191,667,712 from the state, and \$1,500,000 from the federal government. Expenditures for construction and improvements totaled \$107,753,570. Teachers' salaries averaged \$4,172.

There were (1953-54) 5,333 public elementary schools (kindergarten to grades 6 or 7), with 27,147 teachers and 830,272 students; 765 public secondary schools (grades 7-12), with 16,810 teachers and 423,331 students; and numerous private and parochial elementary schools with 5,394 teachers and 220,189 students.

Social Welfare.—Public assistance expenditures from state and federal funds in the 1954-55 fiscal year totaled \$96,705,572.67, including \$50,090,735.50 for old-age assistance, \$26,174,191.40 for dependent children, \$1,353,361 for the needy blind, and \$1,819,253 for the disabled; a monthly average of 147,723 persons received public assistance. Expenditures (1953-54) for health and welfare institutions totaled \$84,776,000; for correctional and penal institutions, \$12,313,000.

MICHIGAN WELFARE INSTITUTIONS

Type of institution	No.	Pop.

Labor Force.—The labor force on Aug. 15, 1955, numbered 2,841,000, including 183,000 agricultural workers. Nonagricultural employment was 2,524,000, and for the 12 months ending Aug. 15, 1955, averaged 2,490,000. There were 130,000 unemployed workers on Aug. 15, 1955, and the state paid \$106,730,254 in unemployment

compensation for the year ending Aug. 25, 1955.

Manufacturing.—The number of manufacturing employees in 1954 averaged 1,082,000. Investment in new plant and equipment in 1953 was \$708,306,000. Earnings of production workers in manufacturing averaged \$87.84 for an average work week of 40.8 hours in 1954, and \$91.69 for 41.6 hours in the first half of 1955.

MAJOR MICHIGAN MANUFACTURES, 1953

Product or industry	No. of employees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ² (thousands of dollars)

Mining.—In 1953 Michigan ranked first among the states in production of gypsum, marl, and salt, and second in iron ore, sand and gravel, and bromine. It ranked 14th in the value of its mineral output in 1953, with 1.99% of the United States total. There were 15,000 persons employed in the state's mineral industries in 1954.

MICHIGAN MINERAL PRODUCTION, 1953

(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	15,853,096	\$ 41,860,464
Clays	1,645,804	1,686,113
Coke ¹	3,220,133	49,518,010

Total		\$286,486,835

¹ Value for processed materials are not included in the total. ² Production in 1954: 23,350 tons. ³ Production in 1954: 9,581,000 long tons. ⁴ Excluding that used in making cement and lime. (Source: U.S. Bureau of Mines.)

Fisheries.—The commercial fish catch in 1954 was valued at \$3,223,173.95. Poundages and values of principal species were: lake trout, 1,609,144 (\$691,931.92); whitefish, 1,356,402 (\$610,380.90); and chubs, 3,483,013 (\$606,044.26). Commercial fishermen numbered 1,211 as of Dec. 31, 1954.

Agriculture.—Cash farm income in the first half of 1955 totaled \$292,153,000, and for the full year 1954 comprised \$392,996,000 from livestock and livestock products, \$270,929,000 from crops, and \$5,739,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$179,672,000; cattle, \$76,210,000; wheat, \$59,077,000; hogs, \$53,700,000; eggs, \$45,964,000; greenhouse and nursery products, \$26,996,000; beans, \$26,821,000; and corn, \$26,434,000.

The state's 138,922 farms (16,466,750 acres; harvested cropland, 7,659,696) had an average of 118.5 acres and \$15,466 in value of land and buildings per farm in 1954. There were 92,968

UNITED PRESS

farms with telephones and 136,060 with electricity. Livestock on farms on Jan. 1, 1955, included 2,003,000 cattle, 418,000 sheep, 818,000 hogs, and 11,274,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 262,880 family and hired workers engaged in farming.

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$69,366,000, and newly completed construction and reconstruction aggregated 5,662 miles. A decision of the state Supreme Court on Dec. 1, 1955, authorized construction of a 113-mile, north-south turnpike from Rockwood to Saginaw.

Highways and roads on Jan. 1, 1955, totaled 107,734 miles (93,283 surfaced). Registered motor vehicles numbered 3,347,710 on Sept. 30, 1955, including 2,657,094 passenger cars. There were 32 railroads (1955) operating 6,954 track miles and 11 regularly scheduled airlines and 240 airports and airfields (137 commercial and municipal, 5 military, and 98 emergency).

Communications media included (1954) 73 AM and 23 FM radio stations and 16 operating television outlets (11 VHF and 5 UHF); (1955) 56 daily newspapers (circulation, 4,332,713) and 295 other newspapers (circulation, 691,469); and (Jan. 1, 1955) 651,727 business and 1,838,687 residential telephones.

Principal Events, 1955.—The year was marked by very high production in the automotive industry, the key measure of prosperity in the state. As early as March 1 the industry was reaching new output records, perhaps in fear of strikes which, it

was felt, might follow labor's presentation of its contractual demands during the year. After three months of negotiations during the summer between the UAW-CIO and Ford, General Motors, and Chrysler, the so-called guaranteed annual wage was worked out without any serious strikes or stoppages. This arrangement initially affected 630,000 workers and was estimated to cost General Motors alone more than \$600 million for the first three years of its operation. This wage pattern was later extended to other industries in the Detroit area and elsewhere. With industrial peace assured and production at a record high, the year was one of general prosperity in Michigan.

The off-year elections of April 4 continued the trend started by the November 1954 contests, of electing Democrats to state offices, including such traditional Republican strongholds as the governing boards of the state's two major educational institutions.

On April 12, at Ann Arbor, Dr. Thomas Francis, Jr., announced the results of the field trials of the Salk poliomyelitis vaccine. His findings set in motion the widespread and controversial vaccination of most of the country's younger school children. (See also POLIOMYELITIS.)

During the year the state celebrated several major anniversaries. On July 1, 1955, the 150th anniversary of the formal establishment of the Territory of Michigan was observed. A centennial celebration was held throughout the summer at Sault Sainte Marie marking the opening in 1855 of the first canal and lock around St. Mary's Rapids, connecting Lakes Superior and Huron. This linking made possible the Great Lakes iron and coal trade and inaugurated the world's busiest canal.

Michigan State College at East Lansing celebrated the 100th anniversary of its founding as the first agricultural college in the United States. On July 1 the Michigan Legislature permitted the college to change its name to Michigan State University over the bitter protests of the University of Michigan at Ann Arbor.

MINERAL PRODUCTION. The accompanying table shows the trend of production of the more important mineral commodities in the major producing countries during recent years. (See also separate articles on the more important minerals.) Totals include outputs of minor countries not listed. In some cases production data are too incomplete to justify showing a total. Listing usu-

ally includes countries that have produced more than 1% of the total at any time since 1939. (These tables are based largely on data supplied by the Foreign Minerals staff of the U.S. Bureau of Mines, with gaps filled from other sources.)

Figures in parentheses are for the preceding year, as a substitute for those lacking for the year indicated. A figure with fewer decimal places indicated than others in the same table is an estimate. A question mark (?) means unknown or an estimate; a dash (—) means no production reported.

OLIVER BOWLES,
Consultant, Geology and Mining; and
BERENICE B. MITCHELL,
Foreign Minerals Staff, U.S. Bureau of Mines.

MINERALOGY. From the point of view of routine mineralogical research, 1955 was an average year. The usual number of new minerals was described, a few refinements were made in the application of X-ray fluorescence spectroscopy, and differential thermal analysis, and the mineralogy and paragenesis of uranium minerals re-

ceived their just share of attention. The year also was enlivened by a major advance in mineral synthesis, which involved the diamond.

Some ten new natural compounds were described in 1955 as new minerals in the *American Mineralogist* of the Mineralogical Society of America and at the annual meeting held in New Orleans. The journal also carried abstracts of the descriptions of some 32 or 33 additional minerals described elsewhere, particularly in the Soviet Union, where some 17 more or less acceptable compounds were involved.

The most attractive of the new American minerals is ordonezite, a well-crystallized zinc antimonate, in small brown lustrous tetragonal crystals, associated with cassiterite in Guanaquato, Mexico. The next best-defined is probably cerianite, a cerium-thorium oxide described as minute, translucent, dark greenish-amber octahedrons embedded in a carbonate rock from the Sudbury District of Ontario.

The other new minerals are rabbittite, a pale green, fibrous efflorescence of calcium-magnesium-uranium carbonate, forming secondarily on the rock surfaces of the Lucky Strike #2 Mine, San Rafael District, Utah; navajosite, a hydrated vanadium pentoxide (first described in 1954) which forms as a soft, fibrous, dark brown coating on pebbles and sand grains, or makes seams in sandstone and clay of the Monument #2 Mine in Apache County, Ariz.; goldichite, a hydrous potassium-ferric sulfate, formed in radiating clusters of pale green crystals and fine-grained crystalline encrustations at the Dexter #7 Mine, Calf Mesa, in the San Rafael Swell in Utah; and garselite, a hydrous barium-calcium-magnesium borosilicate in minute colorless crystals from a drill core in Uintah County, Utah.

Another newly described mineral is neomeselite, a greenish white, triclinic secondary phosphate mineral from the phosphate-rich Palermo pegmatite, North Groton, N.H., which is composed of calcium, iron, and manganese in addition to the phosphate radical and water. Beta-roselite is a hydrous calcium-cobalt arsenate found in a suite of roselite specimens at Schneeberg, Saxony. It appears to be a triclinic dimorphic modification of roselite. Murdochite, from the Mammoth Mine, Tiger, Ariz. (first described in 1953) appears as small black octahedrons of lead-copper oxide, to be found on the typical wulfenite-diopside specimens. Hewleyite, another new mineral, closely resembles its more common cadmium-sulfide polymorph, greenockite, and forms similarly bright yellow earthy coatings on sphalerite and siderite at the Hector-Calumet Mine, Galena Hill, Yukon Territory, Canada.

A number of minerals have been discredited, having proved on re-examination to be identified with older minerals. Most interesting was the discarding of wenzelite and baldaufite, two phosphates from Bavarian pegmatites now shown to be identical with hureaulite. Beyrichite is now considered identical with violarite.

Other developments in 1955 included the addition of valuable data for a number of other minerals. Most interesting of these, perhaps, if it is considered how long it has been known as a mineral, was a description of small free-growing crystals of jadeite. These were found projecting into a calcite vein in a boulder in the Russian River, near Cloverdale, Calif. They appear to have formed in two generations, the earlier making slightly larger milky monoclinic prisms on which are perched smaller clear crystals with green tips.

GENERAL ELECTRIC CO.

Synthetic diamonds in the photo at right were made by the Hall-Wentorf process in General Electric's 1,000-ton press (shown at left), which is capable of delivering pressures greater than 1.6 million pounds per square inch.

To collectors, the multiplication of mineral names which has resulted from uranium research is frustrating. In most cases it is impossible to identify the newer substances (and the older ones too, since so many turn out to be newer after all) without calling upon techniques and equipment beyond the reach of the amateur. One development, however, produced the most notable mineral find of the year. This was the discovery of an autunite occurrence in the Daybreak Mine, near Spokane, Wash., containing specimens of outstanding quality. Solid veins of greenish-yellow crystallized material were so vastly superior to anything previously known that they were difficult to recognize as autunite.

The announcement by the General Electric Company of the successful synthesis of diamonds startled the diamond trade, although it was inevitable that the day would come when this mineral, too, would succumb to research. More important than the actual cubic carbon created, however, was the proof that the expensive tool which was used—a press capable of combining enormous pressures with high temperatures—was able to create conditions for mineral growth previously unattainable in the laboratory. Its eventual importance may well lie in the formation of other polymorphic crystals now unknown, as other elements and combinations are forced to crystallize in closer-packed atomic arrangements. (See also GEOLOGY; MINING.)

FREDERICK H. POUGH,

Consulting Mineralogist; Author, "Fieldguide to Rocks and Minerals."

MINING. U.S. Bureau of Mines.—Highlights of Bureau of Mines attainments during 1955 included record helium production, progress in improving petroleum-recovery techniques, advances toward more effective utilization of coal (particularly lignite and anthracite), improvements in methods of extracting certain essential metals from ores and scrap, and expansion of safety training activities. These activities are reviewed briefly below.

Helium.—Helium shipments of 212 million cubic feet in 1955—25% above those of 1954—failed to pace demand, and the bureau contracted for a new \$6 million plant at Exell, Texas. An improved helium-separation cycle promised to reduce power requirements. Natural gas samples from new fields were analyzed for

helium content, liquefaction of helium was studied, and added uses for this inert gas were investigated.

Petroleum and Natural Gas.—A study of the effect of different drilling fluids on the permeability to oil of reservoir sands immediately around a well neared completion, and laboratory research indicated that iridium-192 promises to be a useful radioactive tracer of the flow of water injected into a formation to force oil to wells and increase recovery.

Underground natural-gas storage was studied in cooperation with industry in several fields. A significant study of the flow of gas through experimental pipelines was completed.

The bureau began studying nitrogen in petroleum, and made progress in developing methods for separating sulfur compounds from complex mixtures. Cooperating with an oil refiners' group and the U.S. Navy, it investigated causes of instability of diesel fuels in storage, and began preliminary stability studies on gasoline. It issued reports on the quality of motor gasoline, aviation fuels, and diesel fuels, and began a survey of burner fuels.

Experimental retorting of oil shale at Rifle, Colo., ceased, but Congress made funds available for further mining research. Meanwhile, laboratory experiments on retorting shale and treating shale oil continued at Laramie, Wyo.

Coal.—Besides studying the operation of continuous mining machines and completing its part of a national inventory of minable reserves of coking coal, the bureau continued efforts to develop effective methods of cleaning and recovering fine sizes of coal. Chars for mixing with metallurgical coke were prepared from low-rank western coals.

Fuel charges containing as much as 40% anthracite in the bureau's experimental blast furnace at Pittsburgh, Pa., yielded low-sulfur pig iron with good rates of production and fuel consumption. Anthracite also showed promise when used in a metallurgical blast cupola in amounts varying from 10 to 40% of the coke-anthracite fuel charge.

Coal was converted to liquid fuel by reaction with hydrogen at high temperatures in a one-step instead of the conventional two-step process in a small continuous reactor, but the product was mostly heavy oil with relatively little gasoline and gaseous hydrocarbons. Pilot-plant tests of

this process yielded similar products, but the reactor had to be redesigned because of overheating.

Development of a pilot plant for gasifying coal with oxygen and steam at high pressures was under way. In cooperation with the Atomic Energy Commission, the bureau began research to determine whether steam alone, created by nuclear energy, can be used to gasify coal. The AEC plans to develop a reactor, and the bureau will test materials and attempt to work out a practicable chemical process.

Research on production of high-B.t.u. gas from synthesis gas produced from coal developed a pilot-scale reactor that gave higher gasification rates and gas of higher heating value than those previously tested. In addition, experimental gasification of unmined coal was resumed at Gorgas, Ala., in cooperation with industry, including tests of a hydraulic fracturing method to open passages in the coal bed.

Metals and Other Minerals.—The bureau's research on metals and nonmetallic minerals was concentrated heavily on strategic commodities and low-grade ores. Development of equipment for photographing the inside of 3-inch boreholes up to 2,000 feet in length added to knowledge of the basic physics of mining. Long-range cooperative studies with industry at copper mines added to understanding of the structural behavior of rocks, and promised to improve ore extraction. Other research aimed at broadening the nation's lead and zinc reserve base dealt with ore discovery, beneficiation, recovery from scrap, and zinc-base alloys. Treatment of oxidized ores was studied, along with methods for reducing metal losses at the government's tin smelter in Texas. Methods of utilizing Alaskan mercury-antimony ores were sought.

Successful beneficiation tests were made on low-grade iron ores from the Pacific Northwest, the Southeast, and Texas, and more than 100 samples of Lake Superior taconites were classified. Other work on iron and steel included study of the effects of rare-earth elements on carbon and low-alloy steels, production of standard ferromanganese from Artillery Peak, Ariz., ore, and development of a manganese-copper alloy with exceptional vibration-damping qualities.

A two-year agreement with the General Services Administration will permit acceleration of research to improve beneficiation of nickel ore near Nicaro, Cuba, and recover the iron, chromium, and cobalt contents.

Having halted titanium production at its Boulder City, Nev., pilot plant, the bureau began research there, in cooperation with industry, to improve the process for making titanium sponge. More was learned about the extractive and physical metallurgy of titanium. In addition, a wider range of magnesium-lithium-aluminum alloys was developed, and research progressed in the reduction of low-grade aluminous materials.

During the year, American industrial plants, employing a process developed by the U.S. Bureau of Mines, attained high enough production of zirconium and hafnium to permit cessation of bureau production. The bureau, however, continued fundamental research on these new metals. For the AEC, the bureau discovered several potentially important deposits of fissionable elements, and analyzed some 25,000 samples submitted by the public and believed to contain fissionable elements; this compares with approximately 11,000 samples tested in 1954. Also for

the AEC, the bureau began a new thorium research program.

A new realm of research was entered to devise extraction and separation methods and determine the physical properties and uses of the rare earth metals and their compounds. Important industrial uses are anticipated for many of these, which only recently became available in quantity through ore discoveries and as byproducts of thorium production.

Studies on nonmetallic minerals included development of a "planer" for mining phosphate rock; research on recovering byproduct fluorine at phosphate mills; and a survey of cement materials and production facilities for the proposed national highway building program.

Safety Activities.—Investigations to determine the causes of accidents and injuries and make appropriate recommendations continued. Inspections of coal mines and enforcement of the Federal Coal Mine Safety Act resulted in elimination of many hazards. A national campaign was launched, in cooperation with labor and management, to reduce the number of fatalities due to roof falls. A new experimental coal mine was opened at Bruceton, Pa., for testing drill-dust collectors and studying other health hazards. The number trained in coal mine accident prevention since 1947 reached 125,000, and 130 chapters and six councils of the Holmes Safety Association were organized. A coal mine explosion occurred in West Virginia. This was only the second major disaster since enforcement of the Federal Coal Mine Safety Act began in 1952.

Other Activities.—The bureau also continued fact-finding and analysis of foreign mineral production and consumption, technical assistance to underdeveloped countries, and training foreign technologists in its laboratories. Its economic and statistical studies covered the whole range of mineral commodities. An 86-chapter volume, *Mineral Facts and Problems*, considered one of the most valuable reference publications on minerals ever prepared by the bureau, was compiled for publication early in 1956.

JOHN J. FORBES,
Director, U.S. Bureau of Mines.

MINNESOTA. North Central state, United States; admitted to the Union, May 11, 1858. The "Gopher State" ranks 11th in area and 18th in population (1955) among the 48 states.

Area and Population.—Area: 84,068 square miles (land, 80,009; inland water, 4,059), divided into 87 counties. Population: (1950) 2,982,483; (est., July 1, 1955) 3,169,000. Urban places (with 1950 populations unless otherwise indicated) above 10,000 are as follows:

¹ Special census, 1954. ² Special census, 1955.

Executive.—Chief state officers in 1955:

Governor: Orville L. Freeman (Democrat)

Lieutenant Governor: Karl F. Rolvaag

Secretary of State: Joseph L. Donovan

Treasurer: Arthur Hansen

Attorney General: Miles Lord

Commissioner of Education: Dean M. Schweickhard

Constitution and Judiciary.—The present constitution went into effect in 1858. The Supreme Court comprises 7 justices; chief justice in 1955: Roger L. Dell.

Legislature.—The Legislature (Senate, 67 members; House of Representatives, 131) convenes in odd-numbered years commencing on the first Tuesday after the first Monday in January.

The 59th legislature passed a record 881 new laws during its 1955 regular session. The legislators approved, after an eight-year campaign, a fair employment practices law; increased old age assistance and liberalized aid to the disabled; created a new Water Resources Board and gave it powers over watersheds and water control projects; authorized investigations of trade barriers to outside sales of Minnesota dairy products; provided for better enforcement of traffic laws and for reflectorized license plates; increased benefits under the workmen's compensation law; and authorized reorganization of the state government.

At the end of the regular session the Conservative-controlled Senate and the Liberal-controlled House were deadlocked on the tax and educational bills, and a one-day extra session on April 26 was needed to complete the legislature's work. During the extra session the legislators agreed to boost individual income taxes and taxes on iron ore, corporations, noncigarette tobacco, motor vehicle transfers, and insurance annuities. They also approved a new program of equalization aids to school districts and set basic school aid at \$82 per pupil, \$2 higher than in the 1953-55 biennium.

Total appropriations for the 1955-57 biennium set a new high of \$325,492,922.

Finances.—Net state treasury receipts (1954-55 fiscal year), \$495,937,575.74; net expenditures, \$532,836,605.10; cash balance, \$33,823,557.16; investments, \$445,082,348.70; long-term indebtedness, \$83,509,566.70.

Taxation.—Net state tax revenue (1954-55 fiscal year): \$242,595,560.31, including \$159,708,201.60 from selective sales and gross receipts taxes; \$45,892,420.85 from individual income taxes; \$15,356,472.11 from corporate taxes; and \$15,679,607.81 from property taxes. The state has no general sales tax or poll tax.

Banking.—As of June 30, 1955, the state's 178 national banks had \$2,505,574,000 in assets, \$1,696,995,000 in demand deposits, and \$592,366,000 in time deposits; the state's 503 other banks, had \$1,367,322,519.14 in assets.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$153,715,822 (\$306 per pupil) for public elementary and secondary education in the 1953-54 fiscal year comprised \$83,880,559 from local school districts, \$66,130,192 from the state, and \$3,705,071 from the federal government. Expenditures for construction and improvements totaled \$54,916,857. Teachers' salaries averaged \$3,479 (elementary school teachers, \$2,988; high school teachers, \$3,922).

MINNESOTA SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary	3,977	13,182	255,053
Public secondary	652	10,167	204,081
Public and private junior colleges	9	125	1,309
State teachers colleges (1954-55)	5	405	5,645

Social Welfare.—Public welfare expenditures from federal and state funds (excluding institu-

MINNESOTA WELFARE INSTITUTIONS

(As of June 30, 1955)

tional costs) for the 1954-55 fiscal year totaled \$67,411,864.80, including \$39,751,657.26 for old-age assistance, \$10,837,903.70 for dependent chil-

dren, and \$1,229,929.70 for the needy blind; a monthly average of 99,488 persons received public assistance. Operating expenditures for health and welfare institutions totaled \$19,788,052.07; for correctional and penal institutions, \$2,549,219.95.

Labor Force.—Wage and salary workers in non-agricultural establishments numbered 861,004 on July 1, 1955, and for the full year 1954 averaged 845,818. The state paid \$26,698,183 in unemployment compensation during 1954.

Manufacturing.—In 1953, 214,494 employees in manufacturing establishments earned \$868,804,000 in salaries and wages. Value added by manufacture amounted to \$1,554,405,000, and investment in new plant and equipment totaled \$96,113,000. Earnings of production workers in manufacturing averaged \$74.03 for an average work week of 40.6 hours in 1954, and \$76.65 for 40.9 hours in the first half of 1955.

Agriculture.—Cash farm income for the first half of 1955 totaled \$621,897,000, and for the full year 1954 comprised \$879,119,000 from livestock and livestock products, \$377,378,000 from crops, and \$9,161,000 from government payments. Receipts from principal crops and livestock in 1954 included: hogs, \$257,973,000; dairy products, \$232,969,000; cattle, \$216,742,000; corn, \$128,368,000; eggs, \$91,834,000; and soybeans, \$85,518,000.

The state's 165,225 farms (32,284,539 acres; harvested cropland, 19,492,565) had an average of 195.4 acres and \$21,054 in value of land and buildings per farm in 1954. There were 112,896 farms with telephones and 155,555 with electricity. Livestock on farms (Jan. 1, 1955) included 3,939,000 cattle, 961,000 sheep, 3,668,000 hogs, and 24,335,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2,

1954, there were 330,876 family and hired workers engaged in farming.

MINNESOTA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Barley (1,000 bu.)	26,116	28,050	28,298
Corn (1,000 bu.)	236,380	277,043	284,935

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in 1954-55 totaled \$46,971,697, and newly completed construction and reconstruction aggregated 944 miles.

Highways and roads on Jan. 1, 1955, totaled 122,726 miles (89,043 surfaced). Registered motor vehicles numbered 1,359,493 on Aug. 1, 1955, including 1,064,322 passenger cars. There were 28 railroads (1954) operating 8,327.61 line miles and, on Sept. 1, 1955, 5 regularly scheduled airlines and 439 airports and airfields (136 commercial and municipal, 1 military, and 302 private).

Communications media included (1955) 52 AM and 6 FM radio stations and 6 operating television outlets; 30 daily newspapers (circulation, 982,074) and 395 other newspapers; and (Jan. 1, 1955) 260,235 business and 782,165 residential telephones.

Principal Events, 1955.—Minnesota medical men continued to make advances in heart surgery. At the Mayo Clinic in Rochester a new heart-lung machine was developed, the first to work successfully in more than one case. University of Minnesota surgeons expanded their work in rerouting the blood stream during operations by the use of a dog's lung. At the end of 1955 the university's surgical team which developed the controlled cross-circulation technique received the Albert Lasker Award.

In November, two University of Minnesota scientists announced the development of a new principle for controlling certain diseases by the use of "protective milk." The university also announced completion of the most powerful straight-line "atom-smasher" in the world, a new linear accelerator for the energy region of 40 to 68 million electron volts.

Eric Hoyer was elected to his fourth term as mayor of Minneapolis on June 13. Liberals retained control of the City Council, 8-5. St. Paul voters rejected a charter amendment to raise taxing and spending limitations. As a result, schools and other services face a financial crisis.

In one of the first projects of its kind in the United States, three companies—Northern States Power, Minneapolis-Honeywell, and General Mills—joined with the University of Minnesota to form the Minnesota Nuclear Operations Group. The members will pool their resources to study peaceful uses of atomic energy of benefit to the state.

Minnesota's first large commercial taconite processing plant, the E. W. Davis Works of the Reserve Mining Company, began operations at Silver Bay in October. The \$190 million plant has an estimated capacity of 3,750,000 long tons of concentrate. Earlier in 1955 the world's biggest coated abrasives plant, a division of the Minnesota Mining and Manufacturing Company, opened in St. Paul.

For the first time in its 94-year history the Minnesota State Fair broke the million mark in

attendance with 1,006,688 visitors. Although it was a drought year, the state harvested 285 million bushels of corn and 45.5 million bushels of soybeans for new all-time records. Minnesota was the only major corn state to set a new high in production in 1955.

Legislature and Principal Events by:

JEANNE SINNEN,
Editor, University Press, University of Minnesota.

MINT ESTABLISHMENT, U.S. The U.S. Mint, a bureau of the Treasury Department, administers laws dealing with coinage of money, and the purchase, sale, deposit, assay, refining, and custody of the government's stock of monetary gold and silver. The Mint also administers in part Treasury controls over the acquisition, ownership, possession, and use of gold and silver. The Office of the Director in Washington, D.C., supervises operations of the coinage mints in Philadelphia, San Francisco, and Denver; the New York Assay Office; the gold bullion depository at Fort Knox, Ky.; and the silver bullion depository at West Point, N.Y. Coinage was discontinued at San Francisco in March 1955, but the institution continued to operate as an assay office. The Seattle Assay Office was closed in March 1955.

During the fiscal year 1955, production included 936,900,000 United States coins with a face value of \$38,600,000, and 69,530,000 coins for Costa Rica, the Dominican Republic, and Venezuela.

United States monetary stocks of gold and silver held by the Mint during the fiscal year 1955 totaled approximately \$24 billion.

LELAND HOWARD,
Assistant Director of the Mint.

MIQUELON ISLAND. See SAINT PIERRE AND MIQUELON.

MISSILES, Guided. See the Index entry, *Guided Missiles*.

MISSISSIPPI. South Central state, United States; admitted to the Union, Dec. 10, 1817. The "Magnolia State" ranks 31st in area and 28th in population (1955) among the 48 states.

Area and Population.—Area: 47,716 square miles (land, 47,248; inland water, 468), divided into 82 counties. Population: (1950) 2,178,914; (est., July 1, 1955) 2,085,000. Urban places with 1950 populations above 10,000 are as follows:

Biloxi	37,425	Laurel	25,038
Clarksdale	16,539	McComb	10,401
Columbus	17,172	Meridian	41,893
Greenville	29,936	Natchez	22,740
Greenwood	18,061	Pascagoula	10,805
Gulfport	22,659	Tupelo	11,527
Hattiesburg	29,474	Vicksburg	27,948
Jackson (capital)	98,271		

Executive.—Chief state officers in 1955:

Governor: Hugh White (Democrat)
Lieutenant Governor: Carroll Gartin
Secretary of State: Heber Ladner
Treasurer: Newton James
Attorney General: J. P. Coleman
Supt. of Public Education: J. M. Tubbs

Constitution and Judiciary.—The present constitution went into effect in 1890. The Supreme Court comprises nine justices; chief justice in 1955: Harvey McGehee.

Legislature.—The Legislature (Senate, 49 members; House of Representatives, 140) meets for a regular session in even-numbered years commencing the first Tuesday after the first Monday in January.

At a special session of the legislature (January 11-April 7), major enactments included those which authorized the Bond Commission to issue notes, not exceeding \$10 million, to prevent a General Fund deficit, and provided for additional General Fund revenue through various surtaxes; created a wholesale compensating tax; levied a use tax on motor vehicles purchased outside the state; altered the excise taxes on tobacco products; increased the retail sales tax from 2% to 3% and removed certain exemptions; created a municipal aid fund and a

Division of Budget and Accounting to prepare a balanced budget by December 1 preceding each regular biennial session; set up an adoption procedure; changed various election laws; and imposed fines and possible jail sentences for white persons attending Negro state-supported schools.

Finances.—State treasury receipts (1954-55 fiscal year), \$182,057,890.11; expenditures, \$204,634,533.09; treasury balance, \$45,491,097.16; long-term indebtedness, \$72,317,000 (in highway construction bonds payable from the gasoline tax).

Taxation.—State tax revenue (1954-55 fiscal year); \$125,302,320, including \$90,500,484 from a 2% general sales tax and selective sales and gross receipts taxes; \$10,360,146 from corporate income taxes; \$10,188,105 from licensing; and \$3,977,399 from individual income taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 26 national banks had \$280,068,000 in assets, \$203,926,000 in demand deposits, and \$55,343,000 in time deposits; the state's 170 other banks (Dec. 31, 1954) had \$758,851,000 in assets, \$432,695,000 in demand deposits, and \$113,046,000 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 14, inclusive. Operating expenditures of \$59,935,737 (\$135.37 per pupil) for public elementary and secondary education in the 1954-55 school year comprised \$26,191,917 from local school districts, \$32,844,784 from the state, and \$899,036 from the federal government. Expenditures for construction and improvements amounted to \$4,153,350. Teachers' salaries averaged \$2,352 (elementary school teachers, \$2,023; high school teachers, \$2,614).

Mississippi opened its first four-year medical school at Jackson in the \$9 million Medical Center, which also includes a 350-bed teaching hospital.

MISSISSIPPI SCHOOL STATISTICS, 1954-55

Type of school	No.	Teachers	Students
Public elementary (1-8).....	813	10,725	448,780

Total.....	---	\$107,867,705

(Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income in the first half of 1955 totaled \$144,121,000, and for the full year 1954 comprised \$151,855,000 from livestock and livestock products, \$375,310,000 from crops, and \$5,939,000 from government payments. Receipts from principal crops and livestock in 1954 included: cotton lint, \$285,722,000; dairy products, \$44,740,000; cattle, \$43,300,000; cottonseed, \$33,510,000; and broilers, \$25,055,000.

The state's 215,915 farms (20,702,412 acres; harvested cropland, 5,529,981) had an average of 95.9 acres and \$6,102 in value of land and buildings per farm in 1954. There were 29,715 farms with telephones and 183,346 with electricity. Livestock on farms (Jan. 1, 1955) included 2,080,000 cattle, 631,000 hogs, and 7,188,000 chickens (not including commercial broilers). During the week of Oct. 24-30, 1954, there were 468,992 family and hired workers engaged in farming.

MISSISSIPPI CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Corn (1,000 bu.).....	40,087	27,234	46,620

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$34,541,234, and newly completed construction and reconstruction aggregated 277.5 miles.

Highways and roads on Dec. 31, 1954, totaled 60,-478.6 miles (8,793.3 surfaced). Registered *motor vehicles* numbered 625,975 on Aug. 30, 1955, including 402,545 passenger cars. There were 18 *railroads* (1955) operating 3,742 main line miles, and 3 regularly scheduled *airlines* and 81 *airports and airfields* (54 commercial and municipal, 4 military, and 23 private).

Communications media (1955) included 54 AM and 3 FM *radio stations* and 4 operating *television outlets*; 21 daily *newspapers* (circulation, 245,540) and 121 other newspapers; and (Jan. 1, 1955) 83,252 business and 204,611 residential *telephones*.

Principal Events, 1955.—As a result of the Democratic primary held in August, Attorney General J. P. Coleman was nominated (or for practical purposes elected) governor, to take office on Jan. 17, 1956. The choice was surprising for several reasons, but above all because it was Coleman's first time to run for that office. Popular and handsome Lieut. Gov. Carroll Gartin was re-elected. The governor-elect's campaign addresses and his subsequent remarks indicated no major change in general policies.

Occurrences which attracted unusual attention followed the strange disappearance of a 14-year-old Negro, Emmett Till, from Money, Miss., on August 28. A body was found in the Tallahatchie River on August 31, but no absolute identification of it as that of Till was legally established. Two white citizens of the Delta community were alleged to have murdered him, but the case against them was not proved in court. In September they were acquitted by a jury in Sumner. They were then held (on bail) for consideration by a grand jury in Greenwood on the charge of kidnaping, but in November the grand jury declined to indict them. Pressure by groups outside the state made a national and even an international *cause célèbre* of the incident. (See also **NEGROES, AMERICAN.**)

Several petitions by Negro groups asked for school desegregation in several leading towns, but later most of the persons requested withdrawal of their signatures. According to press reports, they stated that they signed the petitions under a misapprehension of their contents. Integration, therefore, did not begin to appear in Mississippi during 1955, but external pressure was seeking to provoke court cases. Meanwhile the Citizens Councils (white groups advocating the maintenance of segregation by peaceful and lawful means) continued their phenomenal growth.

In Mississippi journalism, a new major daily-Sunday newspaper, the Jackson *State Times*, began publication on February 28. Within six months it had achieved a circulation of more than 28,000 (see also **JOURNALISM**).

MISSOURI. Central state, United States; admitted to the Union, Aug. 10, 1821. The "Show-Me" State" ranks 18th in area and 12th in population (1955) among the 48 states.

Area and Population.—Area: 69,674 square miles (land, 69,226; inland water, 448), divided into 114 counties and the city of St. Louis. Population: (1950) 3,954,653; (est., July 1, 1955) 4,094,000. Urban places with 1950 populations above 10,000 are as follows:

Cape Girardeau.....	21,578	Maplewood.....	13,416
Carthage.....	11,188	Mexico.....	11,623
Clayton.....	16,035	Moberly.....	13,115

* Capital

Executive.—Chief state officers in 1955:

Governor: Phil M. Donnelly (Democrat)
Lieutenant Governor: James T. Blair, Jr.
Secretary of State: Walter H. Toberman
Treasurer: George Hubert Bates
Attorney General: John M. Dalton
Commissioner of Education: Hubert Wheeler

Constitution and Judiciary.—The present constitution went into effect in 1945. The Supreme Court comprises seven justices; chief justice in 1955 was C. A. Leedy, Jr. (succeeding Ernest M. Tipton who died on February 25).

Legislature.—The General Assembly (Senate, 34 members; House of Representatives, 157) convenes regularly in odd-numbered years commencing the first Wednesday after the first day of January and must adjourn by May 31.

At the regular 1955 session, a record-breaking \$806 million biennial appropriation was passed, but it was reduced through the veto of certain items by the governor to approximately \$800 million. Other enactments revised the state mental hospitals program and provided six traveling psychiatric clinical teams; set up a new probation and parole system; further revised the Criminal Code; and promulgated new laws affecting state banking, slum clearance, and redevelopment projects in the cities.

Four important matters were referred to the people. The first two, passed overwhelmingly at a special election on Oct. 4, 1955, provided for a \$22 million increase in state aid for public elementary and secondary schools, guaranteeing in state and local aid a minimum of \$185 per pupil in average daily attendance; and for a 2-cent cigarette tax for the partial financing of this program. The third, to be voted on on Jan. 24, 1956, proposed a \$75 million bond issue to provide funds for rebuilding the penal and eleemosynary institutions and for construction of facilities at the state universities and colleges. The fourth, a constitutional amendment providing for an annual legislative session which could extend for six months, instead of the present five-month session in odd-numbered years, will be voted on in November 1956.

Finances.—State treasury receipts (1954-55 fiscal year), \$338,025,253.31; expenditures, \$335,240,607.66; treasury balance, \$143,251,361.26; long-term indebtedness, \$6,500,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$225,824,392, including \$92,383,996 from a 2% general sales tax; \$54,791,899 from selective sales taxes; \$39,-217,388 from licensing; and \$27,382,446 from individual and corporate income taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 77 national banks had \$2,115,692,000 in assets, \$1,671,857,-000 in demand deposits, and \$290,979,000 in time deposits; the state's 527 other banks had \$3,397,393,084 in assets, \$2,434,202,193 in demand deposits, and \$664,-021,686 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 14, inclusive. Operating expenditures of \$138,129,262 (\$229.86 per pupil) for public elementary and secondary education in the 1953-54 school year comprised 66.1% from local school districts, 31.5% from the state, and 2.4% from the federal government. Expenditures for construction and improvements totaled \$41,647,488. Teachers' salaries averaged \$3,240 (elementary teachers, \$3,010; high school teachers, \$3,637).

MISSOURI SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary (K-8).....	5,113 ¹	18,299	548,854 ²
Public secondary (9-12).....	650 ¹	7,299	154,815

Colleges and universities.....	21	4,424	43,266

¹ 1952-53 figures. ² Including 32,176 kindergarten pupils.

Labor Force.—The state's labor force on July 15, 1955, numbered 2,041,300, including 296,-700 agricultural workers. Nonagricultural employment totaled 1,264,200, and for the year ending July 15, 1955, averaged 1,264,200. There were 75,700 unemployed workers on July 15, 1955, and the state paid \$29,608,343 in unemployment benefits for the year ending Aug. 31, 1955.

Social Welfare.—Public welfare expenditures from federal and state funds (excluding institutional costs) in the 1954-55 fiscal year totaled

MISSOURI WELFARE INSTITUTIONS

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic (1954-55).....	2	2,467
Hospitals for the mentally ill (1954-55).....	5	12,169
Trachoma hospitals (Aug. 1, 1955).....	1	35

Training schools for delinquent girls (1954-55).....	1	121
Reformatories for males (1954-55).....	1	555
Prisons (1953-54).....	1	3,122

\$110,348,703.60, including \$79,211,161 for old-age assistance, \$17,214,092 for dependent children, and \$2,326,425 for the needy blind; a monthly average of 215,770 persons received public assistance. Expenditures for health and welfare institutions totaled \$136,017,757.42; for correctional and penal institutions, \$4,192,654.69.

Manufacturing.—Establishments numbered over 7,000 in 1953, and produced \$2,786,829,000 in value added by manufacture. Investment in new plant and equipment was \$112,844,000. Earnings of production workers in manufacturing averaged \$67.63 for an average work week of 39 hours in 1954, and \$69.86 for 39.5 hours in the first half of 1955.

MAJOR MISSOURI MANUFACTURES, 1954

(Source: *The Blue Book of Southern Progress*, 1955.)

Mining.—Missouri usually ranks first among the states in production of lead, second in barite and tripoli, and third in lime. In 1953 it ranked 23d among the states in value of mineral output, which comprised 0.89% of the United States total. There were 8,396 persons employed in the state's mineral industries in 1954.

Agriculture.—Cash farm income in the first half of 1955 totaled \$405,161,000, and for the full year 1954 comprised \$724,698,000 from livestock and livestock products, \$310,937,000 from

crops, and \$9,068,000 from government payments.

Receipts from principal crops and livestock in 1954 included: hogs, \$261,803,000; cattle, \$223,088,000; dairy products, \$129,586,000; cotton lint, \$81,138,000; wheat, \$71,023,000; soybeans, \$67,475,000; and eggs, \$54,312,000.

The state's 201,614 farms (34,195,379 acres; harvested cropland, 12,365,630) had an average of 169.6 acres and \$13,468 in value of land and buildings per farm in 1954. There were 106,306 farms with telephones and 188,595 with electricity. Livestock on farms (Jan. 1, 1955) included 3,910,000 cattle, 3,610,000 hogs, and 18,642,000 chickens (not including commercial broilers). During the week of Oct. 24-30, 1954, there were 336,653 family and hired workers engaged in farming.

* Average, 1949-53. (Source: U.S. Department of Agriculture.)

Transportation and Communications.—State funds disbursed for roads and highways in 1954 totaled \$69,328,000.

Highways and roads on Dec. 31, 1953, comprised 11,676 miles of municipal roads and 99,482 miles of rural roads (78,714 surfaced; 20,768 unsurfaced). Registered *motor vehicles* (1954) numbered 1,513,831, including 1,137,095 passenger cars. There were 23 *railroads* operating 8,169 line miles, and 9 regularly scheduled *airlines* and 127 *airports and airfields* (97 commercial and municipal, 3 military, 14 private, and 13 personal use).

Communications media (1955) included 66 AM and 7 FM *radio stations* and 13 operating *television outlets*; 58 daily *newspapers* (circulation, 1,770,686) and 371 other newspapers; and (Jan. 1, 1955) 367,988 business and 967,084 residential *telephones*.

Principal Events, 1955.—Agricultural production in Missouri during 1955 was much higher than during any of the previous three years. The corn crop of 165 million bushels was above the 10-year average and, for the second year in succession, there were record wheat and near-record oat crops. Soybean, cotton, and hay production were approximately normal. Good crop yields coupled with a very high population of hogs and cattle led to a heavy outpouring of farm products. Farmers, however, were plagued by the low prices paid for their livestock products, causing their income to go down despite larger output.

Missouri cities were prosperous in 1955, and manufacturing and building were going forward at a rapid pace. Home building was at an all-time high, and public works were being pushed forward swiftly, especially in Kansas City and St. Louis, where important arterial highways were also recently completed. Kansas City's new airport was scheduled to be ready some time in 1956.

No general elections were held in the state in 1955. Kansas City elected Fusionist H. Roe Bartle as mayor by an overwhelming majority in its April election. Municipal elections in the smaller towns generally favored the Democrats.

Dr. Elmer Ellis was elected the new president

Former President Truman breaks ground, May 8, 1955, in Independence, Mo., for the Harry S. Truman Library.

of the University of Missouri in April. The university, the state colleges, and the public junior colleges showed greatly increased enrollments in the fall of 1955.

Kansas City public schools began their school year on September 7 on a new nonsegregated basis. The 90 schools in the city limits achieved integration without any noticeable friction.

The former Philadelphia Athletics were enthusiastically welcomed to their new home in Kansas City on April 11. In a completely refurbished stadium the new Kansas City Athletics attracted 1,393,054 fans (compared with 304,666 in Philadelphia in the 1954 season) and improved the team's American League finish from last to sixth place.

On May 8, former President Harry S. Truman broke ground for the \$1,750,000 Harry S. Truman Library at Independence.

Legislature; Constitution and Judiciary; and Principal Events by:

W. FRANCIS ENGLISH,
Dean, College of Arts and Sciences,
University of Missouri.

MITCHELL, James Paul, American public official: b. Elizabeth, N.J., Nov. 12, 1902. Appointed U.S. secretary of labor on Oct. 8, 1953, he was sworn in on the following day.

After taking a position with the Western Electric Company in 1929, Mitchell gravitated toward personnel work. From 1942 to 1945 he was director of the industrial personnel division at the headquarters of the Army Service Forces. Following two years as director of personnel and industrial relations for R. H. Macy & Co., he became, in 1947, vice president in charge of labor relations and operations at Bloomingdale Bros. in New York. In May 1953, he went on leave from Bloomingdale's to serve as assistant secretary of the army.

Since his appointment as secretary of labor, Mitchell has favored an increase in the minimum wage, and in August 1955 he recommended that President Dwight D. Eisenhower sign the law raising it to \$1.00 an hour, which was 10 cents

more than the administration had requested. A strong opponent of racial and religious discrimination, Mitchell stated on August 27 that the administration would increase its efforts to eliminate such discrimination from plants doing business with the government.

MITCHELL, William DeWitt, American lawyer: b. Winona, Minn., Sept. 9, 1874; d. Syosset, Long Island, N.Y., Aug. 24, 1955. Regarded during his lifetime as one of the foremost lawyers in the United States, he served as attorney general in the cabinet of President Herbert Hoover.

After graduating from the University of Minnesota (A.B. 1895; LL.B. 1896), he began practice in St. Paul, Minn. During the Spanish-American War, he served as a 2d lieutenant in the 15th Minnesota Volunteer Infantry and later as engineering officer of the 3d Brigade, 1st Division. In 1899 he returned to legal practice as a junior partner in a St. Paul law firm.

During World War I, he had duty as a colonel in the 6th Minnesota Infantry Regiment and later entered the Officers' Training School at Camp Taylor, Ky. In 1925, Mitchell was appointed U.S. solicitor general by President Calvin Coolidge, and on March 4, 1929, despite his Democratic Party affiliations, he was appointed U.S. attorney general by President Hoover. One of his chief duties during his tenure was the enforcement of the controversial Prohibition (18th) Amendment.

In April 1933, after the defeat of President Hoover, Mitchell returned to private practice in New York City. In 1935 he was appointed chairman of the Supreme Court's advisory committee on federal rules of procedure, retaining the post until his death. On Sept. 26, 1945, he was chosen chief counsel for the joint congressional committee investigating the Pearl Harbor disaster, but resigned in December because of what he believed to be the Republican members' obstruction of the committee's work. His last major case came in December 1952, when he served as one of three members of a board of jurists which upheld the right of the United Nations secretary general to discharge any staff employee who was found to belong to the U.S. Communist Party.

MOHAMMEDANISM. See Index entry, *Moslems*.

MOLOTOV, Vyacheslav Mikhailovich, Soviet public official: b. Kukarka (now Sovetsk), Kirov District, Russia, March 9, 1890. As the USSR's foreign minister, he reflected the fluctuating course of Soviet international policy in 1955.

Prominent in Communist affairs since 1917, Molotov became a full member of the Politburo in 1925. He served as chairman of the Council of People's Commissars (premier) from 1930 to 1941, and as foreign minister from 1939 to 1949 and again from 1953. He concluded the non-aggression pact with Nazi Germany in 1939, and he was present at the Teheran, Yalta, San Francisco, and Potsdam conferences.

In a widely reported speech to the Supreme Soviet on Feb. 8, 1955, Molotov claimed leadership for the USSR in atomic arms production. He was a signatory of the Austrian State Treaty on May 15, and in June visited the United States for the first time since 1946 to participate in the celebration of the 10th anniversary of the signing of the U.N. Charter. In the following month he met with the other Big Four foreign ministers at the Geneva Conference (q.v.). When the ministers met again at Geneva on October 27–November 16, Molotov's adamant expression of

Soviet views on German unity and European security made the West realize that there was little left of the Geneva spirit.

A possible indication that Molotov's importance as a Soviet political leader had declined in 1955 was a letter, published on October 8, in which he confessed that he had made a "theoretically and politically dangerous" error in his February speech to the Supreme Soviet.

MOLYBDENUM. Production of molybdenum (metal content of concentrates) in the United States reached 58,426,000 pounds in 1954, which was about 90% of the world output. Production in 1953 was 57,243,000 pounds, and it reached 36,184,000 pounds in the first 7 months of 1955. Consumption declined substantially, from 31,193,000 pounds in 1953 to 24,710,000 in 1954; but increased to 23,191,000 during the first 7 months of 1955. Although consumption was low in 1954, exports attained an all-time high of 13,546,510 pounds. Accordingly, stocks of concentrates were reduced from 11,326,000 pounds in 1953 to 5,317,000 pounds in 1954. (See also MINERAL PRODUCTION for table showing output of major producing countries.)

MONACO. A principality on the Mediterranean shore of France. Area, 370 acres; pop. (est. 1954), 22,000. Language and currency are French. Prince Rainier III (acceded in 1949) is the titular ruler. The National Council of 18 members is elected for 4 years. The ministry is headed by a minister of state. The budget for 1954 was: revenue, 2,121,371,000 francs; expenditure, 2,512,555,000. Tourism is of chief importance; 70,276 tourists entered Monaco in 1953. In late June 1955 a run took place on the Société Monégasque de Banque et de Metaux Precieux, following a decline in stocks in which the bank had invested heavily. Despite a government advance of 250 million francs, the bank went into bankruptcy on August 1 and did not reopen until November 14. The incident resulted in the resignation of the government ministry on July 3. Prince Rainier III arrived in New York on December 16 on a two-month tour of the United States; and on Jan. 5, 1956, his engagement to Grace Kelly (q.v.), American actress, was announced.

MONGOLIA. A vast plateau region of east-central Asia between China and Siberia, traditionally separated into Inner Mongolia (q.v.) in the south, and Outer Mongolia (Mongolian People's Republic, q.v.) in the north.

MONGOLIAN PEOPLE'S REPUBLIC (OUTER MONGOLIA). A republic of central Asia, lying between Soviet Siberia and China. Estimated area, 591,100 square miles; pop. (est. 1954), 920,000, chiefly Khalkha, with some Mongols, Kazakhs, Tuvinians, Chinese, and Russians. Ulan Bator (est. 100,000) is the capital.

Government.—Soviet influence has been paramount since the 1920's. The Great Hural (Huraldan), or People's Assembly, is elected every 8 years by universal suffrage and meets at least once a year. It chooses from its number a 7-member presidium which carries on current functions. Yumzhagiyn Tsedenbal, leader of the Politburo of the Mongolian People's Revolutionary Party, has been premier since 1952. Revenue in 1954 was estimated at 439.3 million tughricks; expenditure, 434.8 million. The tughrick is equal to the Soviet ruble.

Education and Religion.—There were 420 elementary schools, 32 middle schools, and 15 secondary schools in 1952, with 73,000 pupils; and 15 technical schools and 3 higher schools with 3,500 students. National Choy-Balsan University at Ulan Bator has about 1,100 students. An Academy of Sciences was founded in 1953. Buddhist Lamaism is the chief religion. The once-powerful lamasteries have been stripped of their power and wealth by the revolutionary government.

Economy.—Livestock raising is the chief economic activity. Sheep and goats number in the millions of head, and the breeding of cattle, horses, and camels is also important. Cultivation of grains and other crops is on a relatively small scale. Industry is either nationalized or organized in cooperatives and consists mainly of the processing of meat and dairy products and the manufacture of leather goods, sheepskin coats, woolen garments, and felt. Gold, coal, marble, and building materials are mined in small quantities. The country's Second Five-Year Plan (1953-57) is in progress. Foreign trade consists principally of the export of cattle, skins, furs, and other animal products to Soviet Russia and Communist China in exchange for industrial equipment and other manufactures. Transport is largely by caravan. Railways and airlines connect Ulan Bator with Soviet Siberia and Communist China.

Principal Events, 1955.—Track-laying on the Ulan Bator-Tsining (China) railway was completed to the Chinese border in the early spring; while the Chinese segment (Tsining to Erhlien) was finished in November. The entire line, linking Communist China and Soviet Siberia via the Mongolian People's Republic, was to be open to traffic in early 1956.

Ho Chi Minh, president of North Viet-Nam, visited Ulan Bator en route to Moscow on July 8. East German Premier Otto Grotewohl headed an East German delegation which visited Ulan Bator on December 27, on its return route from Peking. Admission of the Mongolian People's Republic to the United Nations was vetoed in the U.N. Security Council by Nationalist China on December 13.

MONTANA. Northwestern state, United States; admitted to the Union, Nov. 8, 1889. The "Treasure State" ranks 3d in area and 42d in population (1955) among the 48 states.

Area and Population.—Area: 147,138 square miles (land, 145,878; inland water, 1,260), divided into 56 counties. Population: (1950) 591,024; (est., July 1, 1955) 628,000, including 16,606 Indians. Major urban places with 1950 census figures and 1955 local estimates are as follows:

	1955 est.	1950 census		1955 est.	1950 census
Anaconda...	12,927	11,244	Havre.....	10,286	8,086
Billings.....	41,177	31,854	Helena*	21,581	17,581
Bozeman.....	13,223	11,325	Kalispeul.....	12,785	9,737
Butte.....	41,528	33,251	Missoula.....	30,128	22,485
Great Falls...	46,187	39,214			* Capital

Executive.—Chief state officers in 1955:

Governor: J. Hugo Aronson (Republican)
Lieutenant Governor: George M. Gosman
Secretary of State: S. C. Arnold (succeeded Sam Mitchell, who died in June 1955)
Attorney General: Arnold H. Olsen
Treasurer: Mrs. Edna J. Hinman
Auditor: John J. Holmes
Supt. of Public Instruction: Mary Condon

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises five justices; chief justice in 1955, Hugh Adair.

Legislature.—The Legislative Assembly (Senate, 56 members; House of Representatives, 94) meets in odd-numbered years commencing the first Monday in January.

The 1955 legislative session appropriated more than \$49 million for each year of the 1955-57 biennium. It also adopted a 1% withholding tax on wages and salaries after exemptions; raised the gasoline tax from 6 to 7 cents a gallon and the diesel fuel tax from 6 to 9 cents; and

extended the coverage limits of the gross vehicle weight taxes. Other legislation created a "Little Hoover" Commission (see below, *Principal Events, 1955*) to consider governmental reorganization and an appointive State Pardon Board. Legislators' salaries were raised from \$10 to \$20 a day and those of the president of the Senate and the speaker of the House from \$12 to \$25 daily. A new salary schedule for elective officers was set up, ranging from an increase from \$4,500 to \$6,000 for Supreme Court clerk to one of from \$10,000 to \$12,500 for governor. The level of minimum foundation support for public school districts was raised about \$1.3 million a year; and \$3 million extra was appropriated for the University of Montana system. A Uniform Highway Code was also enacted, as was a measure ordering racial equality in places of public accommodation, although no enforcement machinery was provided.

Finances.—State treasury receipts (1954-55 fiscal year): \$111,827,440; expenditures, \$109,358,260; treasury net cash balance (June 30, 1955), \$65,292,021; long-term indebtedness (Aug. 1, 1955), \$36,449,250. Permanent assets on June 30, 1955, included 4,240,000 acres of land, valued at \$89,670,420, and \$54,798,778 in invested funds.

Taxation.—State tax revenue (1954-55 fiscal year): \$41,581,000, including \$21,134,000 from selective sales and gross receipt taxes; \$6,259,000 from licensing; \$5,308,000 from individual income taxes; \$1,573,000 from corporate income taxes; and \$4,336,000 from property taxes (at a rate of \$7.50 per \$1,000 assessed valuation). The state has no general sales or poll taxes.

Banking.—On June 30, 1955, Montana's 40 national banks had \$347,064,000 in assets, \$258,694,000 in demand deposits, and \$67,555,000 in time deposits; the state's 71 other banks held \$349,315,129 in assets, \$205,792,105 in demand deposits, and \$57,630,608 in time deposits. Montana's 15 building and loan associations had \$45,981,905 in resources and \$41,657,115 in real estate loans.

Education.—School attendance is compulsory for all between the ages of 8 and 16, inclusive. Operating expenditures for public elementary and secondary education in the 1954-55 fiscal year amounted to \$35,159,209 (\$330 per pupil). Teachers' salaries (1954-55) averaged \$2,782 in rural elementary and \$3,824 in city elementary schools; and \$4,120 in high schools.

There were 1,296 public elementary schools (4,452 teachers; 91,635 pupils), 178 public secondary schools (1,784 teachers; 29,794 students), 84 private and parochial schools (476 teachers; 14,541 students), and two junior colleges (51 teachers; 747 students). Registration in the various units of the University of Montana system totaled 6,238 on Oct. 1, 1954.

Social Welfare.—Public assistance expenditures for the 1954-55 fiscal year included \$6,431,556 for old-age assistance; \$2,664,909 for 2,154 needy families and 5,714 dependent children; \$347,767 for 451 needy blind; and \$1,087,015 for aid to 1,438 disabled.

MONTANA WELFARE INSTITUTIONS, 1953-54

Type of institution	Operating cost	Population
Training school.....	\$ 464,782	544
Hospital for mentally ill.....	2,035,376	1,914
Sanatorium for the tubercular.....	601,020	163

Home for the aged.....	119,000	60
Soldiers and sailors home.....	80,698	77
Training school for delinquent boys.....	213,210	75
Vocational school for delinquent girls.....	98,672	28
State prison.....	553,419	673

Labor Force.—Nonagricultural employment in August 1955 numbered 163,000 but declined later in the year; during 1954 it averaged 150,157. In 1954, unemployment compensation benefits of \$3,463,083 were paid to 18,369 insured workers. The number of unemployed in September 1955 was greater than that for the corresponding month of 1954. On the whole, employment in Montana is subject to more seasonal variations than in most states, especially in lumbering, construction, mining, and agriculture.

Mining shows the highest employment increase in February; the others, in August.

Manufacturing.—Establishments numbering 1,604 had 19,100 employees who received \$81,208,586 in salaries and wages in 1954. Value added by manufacture amounted to \$153,000,000. Earnings of production workers in manufacturing averaged \$79.20 for an average work week of 39.9 hours in 1954 (\$79.76 for 41.4 hours in 1953) and for the first six months of 1955 averaged \$81 for 39.9 hours.

Major manufactured or processed products in 1954 included: 276,000,000 board feet of lumber; 298,473,000 gallons of gasoline; 2,038,666 hundredweight of beet sugar; 5,775,000 pounds of cheese; 6,370,000 pounds of butter; 2,893,000 gallons of ice cream; and 229,088 barrels of beer. A total of 4,616,507,000 kilowatt-hours of electricity were generated. Metal manufactures achieved a wholesale value of \$47,000,000.

Mining.—Montana, which in 1953 ranked first in the production of manganese and zinc, fell to second place in 1954 in manganese production, with a drop of 55%; zinc declined 24% from its 1953 level. Copper was also down 24% and lead output fell 26%. The declines were due in part to smaller demand and in part to strikes. Mineral production in 1954 was valued at \$125,629,685, and involved an average of 7,400 employees.

During the first eight months of 1955, zinc output continued to decline, although copper, lead, and crude oil showed increases.

MONTANA MINERAL PRODUCTION, 1954

(In short tons, except as noted)

Mineral	Quantity	Value
Chromite concentrate.....		\$ 4,132,475
Coal.....	1,500,961*	3,875,730

Zinc.....	60,952	13,165,632
Other minerals.....		17,939,470

* Preliminary. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income in the first half of 1955 totaled \$115,166,000, and for the full year 1954 comprised \$160,027,000 from livestock and livestock products, \$230,641,000 from crops, and \$5,493,000 from government payments. Receipts from principal crops and livestock in 1954 included: wheat, \$187,274,000;

MONTANA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Barley (1,000 bu.).....	16,861	33,332	41,910

(Source: U.S. Department of Agriculture.)

cattle, \$104,170,000; dairy products, \$15,346,000; barley, \$14,235,000; and sheep, \$13,199,000.

The state's 33,059 farms (61,359,303 acres; harvested cropland, 8,415,208) had an average of 1,856.1 acres and \$43,258 in value of land and buildings per farm in 1954. (While the number

of farms had decreased from the 35,085 of 1950, the average size of the farms had increased from 1,689 acres.) Livestock on farms on Jan. 1, 1955, included 2,441,000 cattle, 1,741,000 sheep, 125,000 hogs, and 1,700,000 chickens (not including commercial broilers), and was valued at almost \$250 million. During the week of Sept. 26—Oct. 2, 1954, 63,761 family and hired workers were engaged in farming. There were 12,784 farms with telephones; 29,187 with electricity.

Transportation and Communications.—State and federal funds disbursed for highways in the 1954–55 fiscal year totaled \$24,625,913, of which \$16,533,913 was for construction.

Highways and roads in 1955 comprised 16,860 miles of primitive roads, 18,122 miles of unimproved roads, 14,619 miles of graveled roads, 13,999 miles of graded and drained roads, 6,608 miles of surfaced roads, and 800 miles of improved streets. Registered *motor vehicles* on June 30, 1955, numbered 293,413; trailers, 16,590. There were 9 *railroads* operating 5,241 track miles, and 2 regularly scheduled *airlines* and 450 *airports and airfields* (139 municipal, military, and forest service and 321 private).

Communications media (1955) included 26 AM *radio stations* and 4 operating *television outlets*; 18 daily *newspapers* (circulation, 159,836) and 78 other newspapers; and (Jan. 1, 1955) 51,574 business and 129,856 residential *telephones*.

Principal Events, 1955.—State governmental operations were somewhat confused in 1955 by conflicts between Republican and Democratic officials. Ex-officio boards largely direct administration, and these boards are composed generally of the governor (a Republican in 1955) and of the attorney general, secretary of state, and superintendent of schools (all Democrats in 1955). The death in June of the Democratic secretary of state, Sam W. Mitchell, allowed the governor to appoint S. C. Arnold, a Republican, to succeed him, thus shifting the balance of power.

The state attorney general appealed to the courts to upset laws limiting royalties on oil leases to 10% and establishing a second "Little Hoover" commission, and succeeded in having the latter declared unconstitutional.

Some results of legislative actions were the ordering of an investigation into the high cost of gasoline; reduction of the number of inmates of the state penitentiary by 250, following liberalization of the parole law; and the joining of the federal social security system by state employees. (See also above, *Legislature*.)

The Anaconda Aluminum Company formally opened its new \$65 million primary aluminum plant at Columbia Falls on August 15. This marked the first venture into the primary aluminum field in the United States since 1946. The plant was expected to reach its planned capacity of 120 million pounds by Jan. 1, 1956. (See also ALUMINUM.)

The year 1955 was notable for unseasonable weather, including a late spring, hail in July, which damaged an estimated \$10 million in crops, and an unprecedented cold spell in November. (See also DAMS.)

PAUL C. PHILLIPS,
Professor of History, Montana State University.

MONTREAL. The largest metropolis of Canada, Montreal, in the Province of Quebec, is considered the second largest French-speaking city of the world, although most of its inhabi-

tants (two thirds French, one third English and foreign) speak both official French and English languages. The population of the city proper (1955 est.) is 1,080,000; of the metropolitan area, 1,565,000.

The city's government, elected every third year, is operated by a council (legislature) of 99 members, of whom 66 are elected from 11 electoral districts and 33 are appointed by public bodies. The council appoints a 6-man executive committee which, with a popularly elected mayor, administers the city.

The city possesses the world's largest inland port. In 1955 the harbor was opened on April 5; by the end of October, port tonnage totaled 12,751,143; 4,398 vessels had arrived with 171,527 passengers, and 79,933,338 bushels of wheat had been shipped. Also the site of an international airport, Montreal is the headquarters of International Civil Aviation Organization (ICAO) and the International Air Transport Association (IATA), which celebrated their tenth anniversaries in 1955. Air France's improved Chicago-Montreal-Paris flight, with Super Constellations, has been reduced to 11 hours 30 minutes.

Montreal is Canada's manufacturing, financial, and transportation center. Major production items include railway rolling stock, aircraft, electrical supplies, tobacco, and textiles and clothing; it also has expanding refineries and a large petrochemical industry. Construction contracts (residential, commercial, industrial and engineering) awarded in Greater Montreal during 1955 amounted to a record \$394 million; the number of new dwellings (19,700) also set a record. The city's 1955 budget totaled \$91.5 million, with school appropriations amounting to \$112.9 million. Bank debits in the first 9 months of 1955 totaled \$43 billion. Tourists spent more than \$70 million in the city in 1955; convention business alone accounted for \$15 million.

On Nov. 20, 1955, Mayor Jean Drapeau and Executive Committee Chairman Pierre Desmarais, addressing a large public meeting, gave a report of the Civic Action League's first year in office.

The "clean-up" drive is to continue throughout their three-year term (in spite of reprisals), and will be aimed especially at enforcing night club closing hours set by the Quebec liquor licensing laws, closing gambling dens, destroying pinball machines, and arresting publishers of scandal sheets and obscene literature. This reform campaign is being facilitated by a complete reorganization of the Police Department.

Following a ten-year modernization program, the newly created Circulation Service has already completed 105 miles of street widening and resurfacing, finished the 2½-mile, 6-lane-wide Dorchester Boulevard in the heart of the city, opened two tunnels and completed plans for one under Mount Royal, arranged 11 new parking sites, and planned a two- or three-story garage for 1,000 cars under Champ-de-Mars.

The creation of the St. Lawrence Municipal Bureau, to study Montreal interests while canalization is going on, resulted in a federal decision to build a \$25 million bridge to south shore Laprairie, spanning the newly acquired Nun's Island, a future residential development.

Following an announcement by the Montreal Transportation Commission of an increase in tram and bus fares (from three for 30 cents to two for 25 cents), a demonstration was held by some 2,500 students at City Hall on December 9. Although the demonstration began good-naturedly, it turned into a riot when others joined the students and began inciting the crowd to violence. Before the night was over, 62 buses and 172 streetcars were wrecked, shops were looted, a few people were injured, and the transportation system was nearly halted. Student leaders refused to accept responsibility for the incident.

CÉCILE SAINT-JORRE,
Civic Librarian, Montreal.

MONTERRAT. See LEeward ISLANDS.
MORMONS. See CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS.

MOROCCO. A sultanate of northwestern Africa, divided into the French and Spanish zones and Tangier. The majority of the population are Sunni Moslems, chiefly Berbers and Arabs. The

NORTH AFRICAN TROUBLE SPOTS

French Zone in 1951 had 362,814 Europeans (304,000 French) and 199,156 native Jews. The Spanish Zone contained 72,184 Europeans and 14,196 native Jews in 1945. Tangier in 1953 had 64,110 non-natives (40,000 Spanish) and 15,000 native Jews. Chief cities in the French Zone (1951-52 census): Casablanca, 682,388; Marrakech, 245,312; Fes, 179,372; and Rabat, 156,209; and in the Spanish Zone (1945): Tetuán (93,658); Larache, 41,286; and Alcazarquivir, 35,786.

Zone	Area (sq. mi.)	Population (est. 1954)	Capital
French.....	150,888	8,340,000	Rabat (156,209)
Spanish:*			
Northern Zone....	7,589	1,017,000	Tetuán (93,658)
Southern Zone....	10,039	13,000	
Tangier.....	135	183,000	
Total.....	168,651	9,553,000	

* Not including the Spanish settlements in North Africa (see SPANISH COLONIES).

FRENCH ZONE

Government.—French Morocco has been a protectorate of France since the Treaty of Fez (1912). Authority

French Foreign Legionnaires on guard duty at the desert village of Oued Zem, Morocco, following nationalist riots of Aug. 20, 1955, which took a heavy toll of lives.

nominally emanates from the sultan, but actual power under the protectorate has been exercised by the French resident general. André Dubois was appointed French resident general on Nov. 9, 1955. Sultan Sidi Mohammed ben Youssef returned to the throne on Nov. 16, 1955, after having been deposed and exiled on Aug. 20, 1953. Sultan ben Youssef dismissed the Makhzen (sultan's viziers and ministers) on November 12, and on December 7 a representative cabinet took office, headed by Premier M'barek Bekkai. Under agreements between French and Moroccan leaders arrived at in 1955, Morocco is to obtain home-rule within a relationship of interdependence with France. The United States maintains four airbases in French Morocco. (See also below, *Principal Events, 1955.*)

Education.—Less than a third of the indigenous school-age population attends school. In 1953 there were 1,716 public primary schools (219,942 indigenous and 61,563 nonindigenous pupils); 30 public secondary schools (7,775 indigenous and 13,513 nonindigenous pupils); 15 vocational schools (8,971 indigenous and 6,350 nonindigenous pupils); and 5 higher institutions (400 indigenous and 1,490 nonindigenous students). In addition, 16,453 pupils attended independent primary and vocational schools, and about 224,700 indigenous pupils attended modernized traditional schools and Koranic schools.

Finance.—The budget estimate for 1954 was: revenue, 68,692 million francs; expenditure, 68,688 million. Additional funds (including appropriations by France) are devoted to the modernization and equipment program. The Moroccan franc is equal to the metropolitan franc.

Production.—About 80% of the population derives a livelihood from agriculture. Chief crops and 1954 yields in thousands of bushels were: wheat, 46,410; barley, 93,120; oats, 4,750; maize, 10,080; and flaxseed, 1,024. Output of citrus fruits (mainly oranges) in 1954 (prelim.) was 6,554,000 boxes; olive oil (1954 prelim.), 27,560 short tons; and wine (1953), 1,200,000 hectoliters. Other crops include sorghum, beans, peas, and other vegetables, and almonds, oilseeds, dates, and tobacco. Large herds of sheep and goats, as well as some 2 million cattle, provide animal products. Coastal fishing is important.

Chief industries are foodstuffs, chemicals, construction materials, textiles, oils, fats, tobacco products, glassware, engineering, metal-lurgy, and petroleum products. Handicraft items include rugs and leather goods. Electricity output totaled 825.3 million kw.-hr. in 1954, a rise of 10% over 1953. Output of chief minerals in 1954, in metric tons, was: phosphates, 5,020,000; manganese ore, 357,000; lead ore, 114,500; zinc ore, 62,800; iron ore, 334,500; cobalt, 7,360; anthracite, 486,100; and petroleum, 117,948.

Foreign Trade.—Exports in 1954 totaled 99,898 million francs; imports, 168,031 million. Chief exports in order of value were: phosphates (4,943,000 metric tons valued at 19,550 million francs), barley, preserved fish, wheat, and manganese ore. Imports are mainly sugar, petroleum products, machinery and parts, cotton fabrics, and other manufactures and foodstuffs. France took 43% of 1954 exports and supplied 54% of imports.

Transportation and Communications.—Permanent roads adequate for heavy traffic totaled 9,920 miles in 1954. Railroads totaled 1,089 miles. The principal airport is at Casablanca; there are 5 other major airports and 20 secondary fields. Motor vehicles in 1954 included 80,418 passenger cars and 38,224 trucks. Telephones numbered 89,538 in 1955; licensed radio receivers, 261,000 (1954).

Principal Events, 1955.—The deposition and exile of the nationalist-minded Sultan Sidi Mohammed ben Youssef in 1953 backfired against the French in 1955. The exiled sultan became a symbol for the Moslem nationalists, and his return their rallying cry, while the French-sup-

ported Sultan Sidi Mohammed ben Moulay Arafa was castigated as a usurper and a puppet. The mounting toll of violence in 1955 finally convinced the Paris government that the Moroccan nationalist movement had somehow to be conciliated, and a policy of home-rule was projected by French Premier Edgar Faure. By the end of the year the nationalists had secured the restoration of ben Youssef and the formation of a representative cabinet to negotiate with the French on the institutions of self-government.

The first large-scale outbreak of violence in 1955 took place in mid-May, when 23 persons were killed in Casablanca in the week ending May 23. On July 14 a bomb explosion among a group of Europeans in Casablanca set off a chain of lynchings and counter-riots by Europeans, and further riots, arson, and pillage which took a toll of 60 lives. Clashes between police and nationalists resulted in over 55 deaths in Marrakech, Meknes, and Khénifra in late July and early August. The peak of violence came in the 48 hours beginning on August 20, the second anniversary of ben Youssef's deposition. Outbreaks throughout French Morocco, followed by repressive operations by French infantry, tanks, and aircraft, resulted in over 800 killed and thousands injured. Some 50 French, including women and children, were massacred by hitherto pro-French Berber tribesmen in Oued Zem, in the Middle Atlas region.

Meanwhile, French policy in Paris had taken a decisive turn following the disorders of mid-July. Gilbert Grandval, who had been appointed on July 20 to succeed Francis Lacoste as resident general, developed a plan looking toward Moroccan self-rule. At a major policy conference at Aix-les-Bains, France, August 22-27, between French leaders including Premier Faure and Foreign Minister Antoine Pinay, and Moroccan leaders including Thami el-Glaoui and Grand Vizier Mohammed el-Mokri, it was agreed that Sultan ben Moulay Arafa would vacate the throne in favor of a regency council, and that a Moroccan cabinet would be selected to negotiate on home-rule. Grandval, whose plan had antagonized French colonial interests, was replaced as resident general by Lieut. Gen. Pierre Georges Boyer de Latour du Moulin on August 30, although the substance of the Grandval plan was retained. French consultations with ben Youssef at Antsirabé, Madagascar, September 8-9, secured the exiled sultan's assent to the plan. The French cabinet then voted its approval of the plan on September 12 and issued a declaration (made public on October 1) terming the projected French-Moroccan relationship one of "interdependence," including recognition of the permanency of French interests in Morocco.

The first step in the implementation of the new policy took place on October 1, when, at the behest of the French government, Sultan ben Moulay Arafa left the throne and went to Tangier, delegating his powers to his cousin, Moulay Abdallah ben Moulay Abdel Hafid. A four-man Council of the Guardians of the Throne was installed on October 17, and Fatmi ben Slimane, independent nationalist, sought to form a cabinet. However, the Istiqlal, the strongest nationalist force in Morocco, refused to enter a government which still theoretically derived from ben Moulay Arafa, and continued its pressure for the return of ben Youssef. A decisive turn was taken on October 25, when Thami el-Glaoui, the powerful pasha of Marrakech who had played a leading role in ben Youssef's ouster

Smala tribesmen, who participated in August 1955 uprisings against the French, gather near Oued Zem, Morocco, with their wives and children, to surrender their arms.

in 1953, went over to the side of the nationalists and urged the restoration of ben Youssef. After the issue had been decided, ben Moulay Arafa announced his own abdication on October 30, and also called for the return of the deposed sultan. On November 5 the Faure cabinet declared France's recognition of ben Youssef as sultan, appointing André Dubois as resident general on November 9 to implement the new French policy in Morocco.

Ben Youssef, who had arrived in France from Madagascar on October 31, returned to Rabat on November 16 and was acclaimed by some 200,000 triumphant nationalists. A nationalist cabinet headed by Premier M'barek Bekkai, independent, was sworn in on December 7, comprising a coalition of nationalist parties with the Istiqlal holding the largest number of posts.

The return of the sultan produced no auto-

Thami el-Glaoui, pasha of Marrakech, pledges his loyalty to Sultan Sidi Mohammed ben Youssef (seated), before the latter's return to French Morocco on Nov. 16, 1955.

INTERNATIONAL NEWS PHOTO

matic end to the bloodshed in French Morocco. Although anti-French violence had abated following the severe French reprisals in late August, attacks by Berber tribesmen in the northern Riff Mountains region on October 1 began a period of guerrilla warfare which continued to the end of the year. The rebel forces in Morocco and Algeria were united within a "North African Liberation Army," according to an announcement from Cairo, Egypt, on October 4 by Istiqlal leader Si Allal el-Fassi. The rebels, representing the extreme nationalist wing, refused to accept the permanency of French interests in North Africa and demanded total independence. A large-scale clash between the rebels and French forces took place near Tamchecht, close to the Spanish Moroccan border on December 30, with French planes and artillery taking part in the engagement. The French charged on several occasions that the rebels were obtaining sanctuary and aid in the Spanish Zone.

SPANISH ZONE

The population consists largely of Berber mountain tribesmen. The powers of the sultan are delegated to a caliph subject to control by the Spanish governor general. Chief crops are wheat, barley, sorghum, and olives. Livestock raising is important. Output of iron ore (60% metal content) totaled 933,600 metric tons in 1954. Lead, antimony, manganese ore, and graphite are mined in small quantities. Imports in 1952 totaled 933.9 million paper pesetas; exports, 571.5 million.

TANGIER ZONE

A temporary international administration was established by a Big Four agreement in 1945. Government is vested in an administrator, an appointive Legislative Council presided over by a mendoub representing the sultan, and a Committee of Control consisting of the consuls general of Britain, Belgium, France, Italy, the Netherlands, Portugal, Spain, and the United States. Spain controls the zone's special police. The official currency is the Moroccan franc. Pupils in primary schools numbered 4,793 in 1952; in secondary and technical schools, 850. There is some agriculture and fishing. The zone serves as an entrepôt point for the Mediterranean area. Imports were valued at 11,628.2 million francs in 1953; exports, 969.6 million.

MOTION PICTURES. Encouraged at the end of 1954 by standing solidly on its feet again, the motion picture industry became elated during 1955 when it realized that it had already gone through the period of recovery and now was enjoying a boom. Audiences were again spending money at the box offices. Thanks to the new, large-screen processes, motion pictures could offer an entertainment form different from that of TV; and furthermore, some of the novelty of TV was wearing off. Theaters were being redecorated by their owners. The foreign market was picking up. There were fewer pictures made, but they were bigger and better. And the main topic of discussion in this boom year was not profits and losses but an abstract subject that in the long run increased interest at the box office: censorship.

Most leaders in the film industry agreed that the biggest factor in the rise of the industry since the slump of the early 1950's was the new

screening processes. Starting in 1952 with Cinemascope (which gave the illusion of depth and third dimension through the use of an enormous curved screen and three cameras) and then continuing in 1953 with CinemaScope (which used a camera with an anamorphic lens that compressed a large scene to a 35-mm. size, and another lens on its projector that expanded this scene to a 2.55-to-1 proportion on a large curved screen) and advancing in 1954 with VistaVision (which ran the negative horizontally rather than vertically through the camera, and had picture frames with almost three times the area of an ordinary 35-mm. frame, thus providing an especially sharp, clear image), these large-screen processes definitely rekindled interest in motion pictures.

All of the processes were improved in 1955. CinemaScope, which by 1955 was installed in 15,979 theaters in the United States and Canada, demonstrated (in advance showings of a few scenes from *Carousel*, a 1956 release) its new 55-mm. development with its greater depth of focus and elimination of print grain and distortion on the sides. SuperScope, which did not require expensive installation and could be transformed to fit any screen of reasonable proportions, was used by many of the independent producers. Cinerama, installed in only 15 theaters in the United States because of its expensive equipment, grossed more than \$21 million with its first picture, which was still running, and came out in 1955 with its second, *Cinerama Holiday*, which also did phenomenal business.

The new Todd-AO process (named for Producer Michael Todd and the American Optical Company, which developed it under Dr. Brian O'Brien) released its long-awaited *Oklahoma!* in New York in October 1955. This very expensive process, which used a 70-mm. film and one camera with a large lens capable of taking a 128-degree shot, flashed a picture 50 feet wide and 25 feet high on a large curved screen. Its effect was more like that of Cinerama than any of the other processes, but while it had great depth of focus in the outdoor scenes, its third-dimensional qualities were evident only when the camera moved across plains or through cornfields, and distortions from the off-center theater seats were disconcerting. Its six-channel, high-fidelity Orthosonic sound track, however, was excellent and did full justice to the magnificent score.

Undoubtedly the ultimate in audience participation and large-screen processes was demonstrated at the Walt Disney Studio where Circarama was displayed. This was a 360-degree screen with a continuous image that completely surrounded and engulfed the audience. Although made for Disneyland Amusement Park and not planned for theatrical presentation, Circarama interested film makers who were impressed with its possibilities.

If the day ever comes when the motion picture and TV industries are really one, Walt Disney will undoubtedly get as much credit as anyone for the amalgamation. It was he, more than any other movie producer, who used TV first and most daringly. He publicized his *20,000 Leagues under the Sea* by showing (on his TV show, *Disneyland*) how the film was made; he showed parts, and in some cases the whole, of many of his old films; and he successfully released as a theatrical picture a shortened version of *Davy Crockett* after using it first as a three-part TV presentation. While the Disney Studio happily made films for TV and for theaters (the

full-length cartoon, *The Lady and the Tramp*; nature films, such as *The African Lion*; and *Peoples and Places* (shorts) the other studios slowly decided to follow suit. Warners, 20th Century-Fox, and MGM started their own TV programs—but without too much success, because the shows were unimaginative and crowded with commercial advertising of the studios' forthcoming movies. Columbia and Republic started making half-hour "telefilms" to be sold directly to advertisers.

When the Screen Producers Guild (which represented some 140 top producers) was asked to do an annual series of 39 weekly TV shows, the producers refused, saying that the present standards and practices of TV might impair the producers' prestige; they referred mainly to the time limits imposed by a TV program, the insertions of commercials, and the lack of worthy dramatic material. But the producers shut no doors on the possibility of the motion picture and TV industries working together in the future. Each group had much to offer the other; and furthermore, TV proved a good training ground for new actors, writers, directors, and even ideas and controversial issues.

Hollywood released only some 250 pictures in 1955, and of these about 60 were made by independent producers. The rise of the "independents" was inevitable during the past few years as the major studios realized more and more that big pictures were more profitable than little ones. Color was more in demand than ever (about 60 per cent of the 1955 crop was in color), and the color-processing companies were kept busy. This was undoubtedly due to the extensive use of CinemaScope, VistaVision, and SuperScope—all of which utilized color. Of course, color and large-screen techniques added to the cost of a film. Whether or not the new five-day workweek contract (signed in October by the studios and the International Alliance of Theatrical Stage Employees) would add to production costs could not be foreseen by studio executives; but in any case, the cost of motion pictures was on the increase.

Because of the shortage of films in 1955, the year saw the revival of many old films, which were welcomed both by the exhibitors and by the moviegoers. It was mainly the theater owners who complained about the major studios' policy of making fewer pictures. In 1955 there were in the United States 15,039 regular motion picture houses and 4,062 drive-ins. So successful were the open-air drive-in theaters that some of them stayed open all year and even provided electric heaters for the customers' automobiles. Exhibitors were especially grateful to the independent producers who eased the shortage of pictures a little; and in some cases, the exhibitors helped finance the "independents." The major studios, realizing that they need the theaters (although they own very few since the government forced the divorcement of theaters and studios), also encouraged independent producers and frequently aided them by financing and distributing their films.

Many of the film stars (Danny Kaye, John Wayne, Burt Lancaster, Tyrone Power, and others) formed their own film companies and produced their own pictures. This was due partly to the stars' preference for working independently and because some of the studios no longer kept stars under contract.

While the well-known older actors were still the favorites, many newcomers were rising in popularity. An audience poll, the first of its kind,

held in November in 6,500 theaters at which more than 15 million moviegoers voted, and conducted by the Council of Motion Picture Organizations, resulted in the following choices: best actress, Jennifer Jones in *Love Is a Many Splendored Thing*; best actor, the late James Dean in *East of Eden*; best picture, *Mister Roberts*; most promising new personalities, Tab Hunter and Peggy Lee.

Outstanding among the pictures made by independent producers were *Summertime*, *Not As a Stranger*, *Guys and Dolls*, *Marty*, *End of the Affair*, *Cinerama Holiday*, *Unchained*, *Night of the Hunter*, *Vera Cruz*, *Oklahoma!*, *Man with the Gun*, and *The Man with the Golden Arm*. The year saw very few trends. Best of the war pictures were *The Bridges at Toko-Ri*, *Mister Roberts*, and *To Hell and Back*. Concerned with preparedness in the air were *The Court-Martial of Billy Mitchell* and *Strategic Air Command*. There were fewer outdoor and Western films than usual, and the best of these spoke up for social justice: *Bad Day at Black Rock*, *The Man from Laramie*, and *Man with the Gun*. Speaking in favor of better understanding for American Indians were: *White Feather* and *Chief Crazy Horse*. Among the many films about juvenile delinquency (such as *Running Wild*, *Teen-Age Crime Wave*, *Cell 2455*, *Death Row*) two created much pro-and-con comment: *Blackboard Jungle* and *Rebel without a Cause*, both being praised for their approach to the subject and criticized adversely for their frank visualization of delinquents' misbehavior. *Trial* won applause for its vigorous anti-communism message and its good entertainment as a courtroom thriller. Anna Magnani won huzzahs for her first-rate performance in *The Rose Tattoo* as the obsessed widow in Tennessee Williams' script.

Although comedy teams Abbott and Costello, Martin and Lewis, Majorie Main and Percy Kilbride continued to appear, there were too few such light and joyous comedies as Director Charles Walters' *The Tender Trap* and Alfred Hitchcock's funny thriller, *To Catch a Thief*. Musical comedies tended to be big and elaborate, like *Guys and Dolls* and *Oklahoma!*, but few had the delightful buoyancy of *Daddy Long Legs* and *It's Always Fair Weather*.

The one cycle that boomed in a boom year was the unusually large group of biographical and historical films. Those dealing with American history included *Seven Angry Men* (John Brown), *Far Horizons* (Lewis and Clark), *Davy Crockett*, *The Last Command* (the Alamo), *Seven Cities of Gold* (Father Junípero Serra), and *The Scarlet Coat* (Major André). Those going farther back in history included *The Virgin Queen* (Bette Davis as Queen Elizabeth I, Richard Todd as Sir Walter Raleigh), *Lady Godiva*, and *Land of the Pharaohs*. Among those dealing with outstanding modern personalities were *A Man Called Peter* (Peter Marshall), *The Eternal Sea* (Rear Admiral John M. Hoskins), *The McConnell Story* (Capt. Joseph McConnell), and *The Long, Gray Line* (Marty Maher at West Point). And those dealing with famous musicians and entertainers included *Love Me or Leave Me* (Ruth Etting), *Magic Fire* (Richard Wagner and his contemporaries), *The Seven Little Foys*, *Prince of Players* (Edwin Booth), and *Interrupted Melody* (Marjorie Lawrence).

Fortunately for exhibitors, films from abroad continued to flow into the United States—from Italy, France, England, Mexico, the Soviet Union, Japan, Germany, Spain, Sweden and other coun-

Ernest Borgnine plays the title role in *Marty*, voted the best picture of 1955 by the New York Film Critics.

tries—but unfortunately those of high quality were few. Critics and audiences appreciated *The Sheep Has Five Legs*, *The Wages of Fear*, and *Diabolique* from France; *The Divided Heart*, *The Prisoner*, *The Dam Busters*, *Doctor in the House*, and *The Deep Blue Sea* from England; *Green Magic* and *Umberto D.* from Italy; and *The Great Adventure* from Sweden. Hollywood film makers were anxious to keep up good relations with foreign producers and foreign audiences. Many American films were made abroad; and furthermore, 45 per cent of the American companies' profit came from outside the United States.

Hollywood had two brush-ins with the federal government in 1955, although neither proved serious. In an antitrust action, the government

HARRISON AND DAVIDSON

insisted that studios that made 16-mm. prints of their regular feature films for nontheatrical distribution must license them for TV exhibition. In this strange suit, the federal court ruled in favor of the motion picture companies, which were allowed to regulate their own distribution of films.

The other minor disturbance came when Sen. Estes Kefauver appeared in Los Angeles as a one-man Senate subcommittee to investigate juvenile delinquency, especially as it resulted from brutality, violence, and sex in motion pictures. The investigation ended in generalities and nothing conclusive, especially when Senator Kefauver made it clear that the purpose of his study was not government censorship, and the producers made it clear that they followed and continued to approve of the Production Code.

The Production Code was first written in 1930 as a self-regulating series of rules, mostly "don'ts," to guide the picture makers who belonged to the Motion Picture Association (then known as the Hays Office). It was hoped that the code would rid film makers of the state censorship boards. But in 1955 there were still five states and about 60 cities that had censors. Through the years the code has changed little, but in 1955 the Roman Catholic Legion of Decency reminded the studios that they were getting lax about adhering to the code, and as a consequence the legion found it necessary to put a larger number of films on its objectionable list.

Two of the year's pictures that brought the issues out into the open violated the code so blatantly that they were refused the necessary seal of approval: *I Am a Camera*, a comedy about an amoral woman; and *The Man with the Golden Arm*, a very serious and grim picture about a code-taboo subject: dope addiction. In spite of pressure from the distributors in both cases, who insisted that the code administrators were not as fair to them as to the large producing studios, the seal was still withheld after the pictures were released. United Artists, distributors of *The Man with the Golden Arm*, resigned from the Motion Picture Association. The issues were further confused by the fact that since the divorcement of studios from exhibitors, the studios no longer controlled theaters, so both of these pictures could be shown in whatever theaters wanted to exhibit them.

Also complicating the issue, the state and city boards of censorship had been put in an ambiguous, almost useless, position when the U.S. Supreme Court ruled in *The Miracle* case in 1952, as well as in several subsequent suits, that motion pictures were included in the free-speech and free-press guaranty of the 1st and 14th amendments to the Constitution. No one denied that the Legion of Decency had the right to list for its members films that it found objectionable. Nor did anyone deny the need for some form of a motion picture code. But almost everyone entering into the involved argument agreed that the code should be flexible and that each film should be judged on its own merits—or demerits.

Perhaps the trouble lay with the film makers, who insisted on pleasing too large an audience with each film. Their problem was in mass appeal. Lacking a certain degree of courage and imagination, the producers wanted every film to be a moneymaker—a guarantee not possible in the entertainment business. They needed only to remember that motion pictures were an art as well as a business, and not every film could attain the success of *Gone with the Wind*, which

grossed \$35 million since it appeared in 1939, or *The Robe*, which has taken in more than \$20 million since 1953.

(See also CENSORSHIP; LAW; PHOTOGRAPHY; PRIZES AND AWARDS.)

MOTION PICTURES OF 1955

The following, although not a complete list of films released in 1955, represents a cross-section of the work of the leading producers, directors, writers, and actors in the motion picture field. Because funds, sources, and the film makers themselves in connection with any single picture are not necessarily confined to one country, the nationality labels indicated below are somewhat arbitrary.

AMERICAN FILMS

The African Lion (Buena Vista). Producer, Walt Disney; director, James Algar; photography by Alfred C. and Elma Milotte; narration by James Algar, Winston Hibler, Ted Sears, Jack Moffitt; read by Winston Hibler.

Bad Day at Black Rock (MGM). Producer, Dore Schary; director, John Sturges; screenplay by Millard Kaufman. With Spencer Tracy, Robert Ryan, Anne Francis, Dean Jagger, Walter Brennan, Ernest Borgnine, John Ericson.

Battle Cry (Warners). Director, Raoul Walsh; screenplay by Leon M. Uris from his novel. With Van Heflin, Aldo Ray, Mona Freeman, Nancy Olson, James Whitmore, Raymond Massey, Tab Hunter, Dorothy Malone, Anne Francis, Fess Parker, John Lupton.

The Big Knife (United Artists). Producer-director, Robert Aldrich; screenplay by James Poe, from the play by Clifford Odets. With Jack Palance, Ida Lupino, Shelley Winters, Wendell Corey, Rod Steiger, Jean Hagen, Everett Sloane.

Blackboard Jungle (MGM). Producer, Pandro S. Berman; director-writer, Richard Brooks; based on the novel by Evan Hunter. With Glenn Ford, Anne Francis, Louis Calhern, Richard Kiley, Margaret Hayes, Vic Morrow, Sidney Poitier.

Blood Alley (Warners). Producer-director, William A. Wellman; screenplay by A. S. Fleischman from his novel. With John Wayne, Lauren Bacall, Paul Fix, Joy Kim, Berry Kroger, Mike Mazurki.

The Bridges at Toko-Ri (Paramount). Producers, William Perlberg, George Seaton; director, Mark Robson; screenplay by Valentine Davies, from the novel by James A. Michener. With William Holden, Fredric March, Mickey Rooney, Grace Kelly, Robert Strauss.

Cinerama Holiday (Stanley Warner-Cinerama Corp.). Producer, Louis de Rochemont; directors, Robert Bendick, Philippe de Lacy; adaptation by Otis Carney, Louis de Rochemont III; narration by John Stuart Martin, read by Martin Weldon. This second film to be made in the three-dimensional Cinerama process shows an American couple, John and Betty Marsh, touring Europe and a Swiss couple, Fred and Beatrice Troller, sight-seeing in the United States.

The Cobweb (MGM). Producer, John Houseman; director, Vincente Minnelli; screenplay by John Paxton, from the novel by William Gibson. With Richard Widmark, Lauren Bacall, Charles Boyer, Gloria Grahame, Lillian Gish, John Kerr, Susan Strasberg, Oscar Levant.

The Court-Martial of Billy Mitchell (Warners). Producer, Milton Sperling; director, Otto Preminger; screenplay by Emmet Lavery, Milton Sperling. With Gary Cooper, Charles Bickford, Ralph Bellamy, Rod Steiger, Elizabeth Montgomery, Jack Lord, Fred Clark.

Daddy Long Legs (20th Century-Fox). Producer, Samuel G. Engel; director, Jean Negulesco; music by Johnny Mercer; screenplay by Phoebe and Henry Ephron, from the novel by Jean Webster. With Fred Astaire, Leslie Caron, Thelma Ritter, Fred Clark.

Davy Crockett (Buena Vista). Producer, Bill Walsh; director, Norman Foster; screenplay by Tom Blackburn. With Fess Parker, Buddy Ebsen, Basil Ruysdael, Hans Conried. Made by Walt Disney for his TV program; later edited for presentation in theaters.

Day of Triumph (Century Films). Producer, James K. Friedman; directors, Irving Pichel, John T. Coyle;

(Top to bottom): (1) Gordon MacRae and Shirley Jones in film version of Rodgers and Hammerstein's *Oklahoma!* (2) William Powell "manufactures" scotch in *Mister Roberts*, with Henry Fonda (center) and Jack Lemmon. (3) Burt Lancaster cajoles Anna Magnani, the distraught widow in *The Rose Tattoo*. (4) A tense scene from *Bad Day at Black Rock*, starring Spencer Tracy (seated at left).

- screenplay by Arthur T. Horman, based on events in the last three years of the life of Christ. With Robert Wilson, Lee J. Cobb, Joanne Dru, James Griffith, Lowell Gilmore.
- The Desperate Hours* (Paramount). Producer-director, William Wyler; screenplay by Joseph Hayes from his novel. With Humphrey Bogart, Fredric March, Arthur Kennedy, Martha Scott, Dewey Martin, Gig Young, Mary Murphy, Robert Middleton, Richard Eyer.
- East of Eden* (Warners). Producer-director, Elia Kazan; screenplay by Paul Osborn, from the novel by John Steinbeck. With Julie Harris, James Dean, Raymond Massey, Burl Ives, Richard Davalos, Jo Van Fleet.
- End of the Affair* (Columbia). Producer, David E. Rose; director, Edward Dmytryk; screenplay by Lenore Coffee, from the novel by Graham Greene. With Deborah Kerr, Van Johnson, Peter Cushing, John Mills, Michael Goodliffe, Stephen Murray.
- The Eternal Sea* (Republic). Producer, Herbert J. Yates; director, John H. Auer; screenplay by Allen Rivkin, from the story by William Wister Haines, based on the life of Rear Admiral John M. Hoskins. With Sterling Hayden, Alexis Smith, Dean Jagger, Ben Cooper, Virginia Grey.
- The Far Country* (Universal). Producer, Aaron Rosenberg; director, Anthony Mann. With James Stewart, Ruth Roman, Corinne Calvet, Walter Brennan, John McIntire.
- Far Horizons* (Paramount). Producers, William H. Pine, William C. Thomas; director, Rudolph Mate; screenplay by Winston Miller, Edmund H. North, from Della Gould Emmons' novel, *Sacajawea of the Shoshones*. With Fred MacMurray, Charlton Heston, Donna Reed, Barbara Hale, William Demarest.
- Five Against the House* (Columbia). Producers-writers, Stirling Silliphant, John Barnwell; director, Phil Karlson; based on a novel by Jack Finney. With Guy Madison, Kim Novak, Brian Keith, Alvy Moore, Kerwin Matthews.
- Francis in the Navy* (Universal). Producer, Stanley Rubin; director, Arthur Lubin; screenplay by Devery Freeman, based on the *Francis* character created by David Stern. With Donald O'Connor, Martha Hver, Richard Erdman, Jim Backus and Francis the talking mule.
- Gentlemen Marry Brunettes* (United Artists). Producers, Richard Sale, Robert Waterfield; director, Richard Sale; screenplay by Mary Loos, Richard Sale. With Jane Russell, Jeanne Crain, Alan Young, Scott Brady, Rudy Vallee.
- The Glass Slipper* (MGM). Producer, Edwin H. Knopf; director, Charles Walters; screenplay by Helen Deutsch, stemming from *Cinderella*. With Leslie Caron, Michael Wilding, Keenan Wynn, Estelle Winwood, Elsa Lanchester.
- Good Morning, Miss Dove* (20th Century-Fox). Producer, Samuel G. Engel; director, Henry Koster; screenplay by Eleanor Griffin, from the novel by Frances Gray Patton. With Jennifer Jones, Robert Stack, Kipp Hamilton, Robert Douglas, Peggy Knudsen, Marshall Thompson, Chuck Connors, Biff Elliot.
- Guys and Dolls* (MGM). Producer, Samuel Goldwyn; director-writer, Joseph L. Mankiewicz; music and lyrics by Frank Loesser; choreography by Michael Kidd; based on the stage musical comedy from a Damon Runyon story. With Marlon Brando, Jean Simmons, Frank Sinatra, Vivian Blaine, Robert Keith, Stubby Kaye, B. S. Pully, Johnny Silver, Sheldon Leonard, Regis Toomey.
- House of Bamboo* (20th Century-Fox). Producer, Buddy Adler; director, Samuel Fuller; screenplay by Harry Kleiner. With Robert Ryan, Robert Stack, Shirley Yamaguchi, Cameron Mitchell, Sessue Hayakawa.
- How To Be Very, Very Popular* (20th Century-Fox). Producer-director-writer, Nunnally Johnson. With Betty Grable, Sherree North, Bob Cummings, Charles Coburn, Tommy Noonan, Orson Bean.
- Interrupted Melody* (MGM). Producer, Jack Cummings; director, Curtis Bernhardt; screenplay by William Ludwig, Sonya Levien, from the life story of Marjorie Lawrence. With Eleanor Parker, Glenn Ford, Roger Moore, Cecil Kellaway, Peter Leeds.
- It Came from Beneath the Sea* (Columbia). Producer, Charles H. Schneer; director, Robert Gordon. With Kenneth Tobey, Faith Domergue, Donald Curtis, Ian Keith.
- It's a Dog's Life* (MGM). Producer, Henry Berman; director, Herman Hoffman; screenplay by John Michael Hayes, from Richard Harding Davis' story, *The Bar Sinister*. With Jeff Richards, Jarna Lewis, Edmund Gwenn, Dean Jagger.
- It's Always Fair Weather* (MGM). Producer, Arthur Freed; directors, Gene Kelly, Stanley Donen; music, Andre Previn; screenplay by Betty Comden, Adolph Green, with Gene Kelly, Dan Dailey, Michael Kidd, Cyd Charisse, Dolores Gray, David Burns.
- Jupiter's Darling* (MGM). Producer, George Wells; director, George Sidney; music David Rose; screenplay by Dorothy Kingsley, from the play, *Road to Rome*, by Robert E. Sherwood. With Esther Williams, Howard Keel, Marge and Gower Champion, George Sanders, Richard Haydn.
- The Kentuckian* (United Artists). Producer, Harold Hecht; director, Burt Lancaster; screenplay by A. B. Guthrie, Jr., based on Felix Holt's novel, *The Gabriel Horn*. With Burt Lancaster, Dianne Foster, Diana Lynn, John McIntire.
- Kismet* (MGM). Producer, Arthur Freed; director, Vincente Minnelli; screenplay by Charles Lederer, Luther Davis from their musical play which was based on the play by Edward Knoblock; music adapted from themes by Alexander Borodin. With Howard Keel, Ann Blyth, Dolores Gray, Vic Damone, Monty Woolley, Mike Mazurki.
- The Lady and the Tramp* (Buena Vista). Producer, Walt Disney; directors, Hamilton Luske, Clyde Geronimi, Wilfred Jackson; screenplay by Ward Greene. A feature-length animated cartoon with the voices of Peggy Lee, Barbara Luddy, Larry Roberts, Bill Thompson.
- Land of the Pharaohs* (Warners). Producer-director, Howard Hawks; screenplay by William Faulkner, Harry Kurnitz, Harold Jack Bloom. With Jack Hawkins, Joan Collins, Dewey Martin, Alexis Minotis, James Robertson Justice, Luisa Boni, Sydney Chaplin.
- The Last Command* (Republic). Producer, Herbert J. Yates; director, Frank Lloyd; screenplay by Warren Duff. With Sterling Hayden, Anna Maria Alberghetti, Richard Carlson, Arthur Hunnicutt, Ernest Borgnine.
- The Left Hand of God* (20th Century-Fox). Producer, Buddy Adler; director, Edward Dmytryk; screenplay by Alfred Hayes, from the novel by William E. Barrett. With Humphrey Bogart, Gene Tierney, Lee J. Cobb, Agnes Moorehead, E. G. Marshall.
- The Long, Gray Line* (Columbia). Producer, Robert Arthur; director, John Ford; screenplay by Edward Hope, based on *Bringing Up the Brass* by Marty Maher and Nardi Reeder Campion. With Tyrone Power, Maureen O'Hara, Ward Bond, Betsy Palmer, Phil Carey, Robert Francis, Donald Crisp.
- Love Is a Many-Splendored Thing* (20th Century-Fox). Producer, Buddy Adler; director, Henry King; screenplay by John Patrick, based on the semi-autobiographical novel by Han Suyin. With Jennifer Jones, William Holden, Torin Thatcher, Isobel Elsom.
- Love Me or Leave Me* (MGM). Producer, Joe Pasternak; director, Charles Vidor; screenplay by Daniel Fuchs, Isobel Lennart. With Doris Day, James Cagney, Cameron Mitchell, Robert Keith, Tom Tulley.
- Magic Fire* (Republic). Producer-director, William Dieterle; screenplay by Bertita Harding, E. A. DuPont, David Chantler, based on the novel by Bertita Wagner, stemming from the life of Richard Wagner. With Alan Badel, Yvonne de Carlo, Carlos Thompson, Rita Gam, Valentina Cortese.
- A Man Alone* (Republic). Producer-director, Ray Milland; screenplay by John Tucker Battle. With Ray Milland, Mary Murphy, Ward Bond, Raymond Burr.
- A Man Called Peter* (20th Century-Fox). Producer, Samuel G. Engel; director, Henry Koster; screenplay by Eleanor Griffin, from Catherine Marshall's biography of Peter Marshall. With Richard Todd, Jean Peters, Marjorie Rambeau, Jill Esmond, Billy Chapin.
- The Man from Laramie* (Columbia). Producer, William Goetz; director, Anthony Mann; screenplay by Philip Yordan, Frank Burt, based on Thomas T. Flynn's story. With James Stewart, Arthur Kennedy, Donald Crisp, Cathy O'Donnell, Alex Nicol.
- The Man with the Golden Arm* (United Artists). Producer-director, Otto Preminger; screenplay by Walter Newman, Lewis Meltzer, from the novel by Nelson Algren. With Frank Sinatra, Eleanor Parker, Kim Novak, Arnold Stang, Darren McGavin, Robert Strauss, John Conte, Doro Merande, George Mathews.
- Man with the Gun* (United Artists). Producer, Samuel Goldwyn, Jr.; director, Richard Wilson. With Robert Mitchum, Jan Sterling, Karen Sharpe, Henry Hull, Emile Meyer.
- Marty* (United Artists). Producer, Harold Hecht; director, Delbert Mann; screenplay by Paddy Chayefsky from his original TV play. With Ernest Borgnine, Betsy Blair, Esther Minciotti, Augusta Ciolli, Joe Mantell.
- The McConnell Story* (Warners). Producer, Henry Blanke; director, Gordon Douglas; screenplay by Ted Sherdeman, Sam Rolfe. With Alan Ladd, June Allyson, James Whitmore, Frank Faylen, Robert Ellis.
- Mister Roberts* (Warners). MOTT, John Raleigh, American religious and social worker: b. Livingston Manor, N.Y., May 25, 1865; d. Orlando, Fla., Jan. 31, 1955. A co-winner of the Nobel Peace Prize in 1946, he dedicated his entire life to the promotion of international understanding and goodwill through the medium of Christianity.

Considering religion an obstacle to his political aspirations, John Mott in 1885 transferred from Upper Iowa University, a Methodist institution in Fayette, Iowa, to Cornell University, a nondenominational institution, where, ironically, he experienced in the following year a religious awakening. On graduating from Cornell in 1888, Mott became student secretary of the International Committee of the Young Men's Christian Association (YMCA) until 1915, when he assumed the position of general secretary (1915-31). He also successfully undertook the chairmanship (1888-1920) of the founding Student Volunteer Movement for Foreign Missions.

In 1895, Mott helped establish the World's Student Christian Federation, which he led as general secretary (1895-1920) and chairman (1920-28). In June 1910 he was chosen chairman of the World Missionary Conference in Edinburgh, Scotland. As presiding officer of the committee appointed to continue the work between conferences, he journeyed to the Far East and organized conferences from which developed national missionary councils in India, China, Japan, and other areas. In 1921 the Continuation Committee was succeeded by the International Missionary Council, the chairmanship of which Mott held until 1942.

He was general secretary of the National Council of the YMCA's of the United States from 1915 to 1928, and chairman of the World's Committee of YMCA's from 1926 to 1937. With the entrance of the United States into World War I, he directed the YMCA-sponsored welfare work among the Allied armies and prisoner-of-war camps. For his efforts as general secretary of the National War Work Council and chairman of the United War Work Campaign, which in 1918-19 raised \$203 million for the YMCA and various other organizations, he was awarded the Distinguished Service Medal by the United States government.

Acclaimed by governments and universities the world over, Dr. Mott received his greatest honors in 1946 when he was awarded, first, the Prince Carl Medal for distinguished humanitarian service, and later, with Emily Greene Balch, the Nobel Peace Prize. He was further honored in 1948 with appointment as honorary president of the World Council of Churches, a position he retained until his death.

Among Mott's numerous publications, several of which have been translated into as many as six languages, are included *Strategic Points in the World's Conquest* (1897); *Evangelization of the World in This Generation* (1900); *Pastor and Modern Missions* (1904); *The Future Leadership of the Church* (1909); *The Present World Situation* (1914); *World Student Christian Federation* (1920); *The Moslem World of Today* (1924); *Liberating the Lay Forces of Christianity* (1932); *Five Decades and a Forward View* (1939); and *The Larger Evangelism* (1944).

MUSIC. Orchestras.—Charles Munch began his sixth year as conductor of the Boston Symphony when the orchestra began its 74th season, which extended from Oct. 6, 1954, through April 30, 1955. A total of 70 concerts were presented in Boston and Cambridge, Mass. In addition, the orchestra gave its customary concerts in New York City, Brooklyn, N.Y., Washington, D.C., and Providence, R.I., and went on a national tour, beginning on October 18. On October 9 the Boston Symphony, replacing the NBC Symphony, began broadcasting its Saturday night concerts (except during tour) over the National Broadcasting Company radio network. After the orchestra's regular season, many of its members formed the Boston Pops orchestra, which played in the Esplanade Concerts in Boston during July and August under Arthur Fiedler's direction. Also during the summer the orchestra appeared at the Berkshire Music Festival. (See below, *Summer Music and Festivals*.)

The Philadelphia Orchestra Association, under Eugene Ormandy's direction, originally scheduled its 1954 opening for October 8. Union difficulties, however, forced a postponement of the opening until October 11 and the cancellation of the Conductors' Workshop, which had been planned for the first week of the season. During the 1954-55 season, the orchestra's 55th, 28 pairs of concerts, as well as a children's series, were presented. In May 1955 the orchestra embarked on an European tour, arranged under the sponsorship of the U.S. Department of State and the American National Theater and Academy (ANTA). Three concerts were given in Paris as part of ANTA's "Salute to France" program, as

well as concerts in Belgium, Spain, Portugal, Italy, Austria, Switzerland, West Germany, and Finland.

The Philharmonic-Symphony Society of New York, in addition to its regular season (Oct. 7, 1954, to April 17, 1955), toured the United States and Europe, the latter tour being under the auspices of the U.S. Department of State. The orchestra gave 6 concerts at the Edinburgh Festival, 2 in London, and 18 on the Continent. Dimitri Mitropoulos (the orchestra's permanent conductor), George Szell, and Guido Cantelli were the conductors.

The Symphony of the Air, its membership consisting of players from the former NBC Symphony, which had been disbanded by the National Broadcasting Company following Arturo Toscanini's resignation on April 4, 1954, made its debut, without a conductor, on Oct. 27, 1954, in New York's Carnegie Hall. With Don Gillis, producer of the radio concerts, as its general representative, the orchestra gave 24 concerts during the 1954-55 season. On two occasions (March 20 and 22, 1955) Kirsten Flagstad was soloist with the orchestra. In May and June 1955 the orchestra, under the sponsorship of the U.S. Department of State, undertook a tour of the Orient, with Walter Hendl and Thor Johnson as conductors.

The Chicago Symphony, under Fritz Reiner's direction, opened its season on Oct. 14, 1954. It replaced the Boston Symphony on NBC's Saturday night broadcasts while the latter orchestra was on tour. The Chicago orchestra was the beneficiary of more than a million dollars from the estate of Sarah and Alice Robson, two spinster sisters who had been subscribers to its concerts for 50 years.

In 1955 there were 30 orchestras in the United States and 4 in Canada which were classified as "major" by the Conference of Orchestra Managers. In addition to those mentioned above, these include, with their conductors and opening dates of their 1954-55 seasons, symphony orchestras in Baltimore (October 20; Massimo Freccia), Cincinnati (October 8; Thor Johnson), Cleveland (October 7; George Szell), Detroit (October 28; Paul Paray), Los Angeles (November 4; Alfred Wallenstein), St. Louis (October 23; Vladimir Golschmann), and San Francisco (November 11; Enrique Jorda).

Two foreign orchestras visited the United States in 1954-55: the Amsterdam Concertgebouw in October, under the direction of Eduard Van Beinum and Rafael Kubelik; and the Berlin Philharmonic in March, under the direction of Herbert von Karajan, who on April 5, 1955, succeeded the late Wilhelm Furtwängler as the Berlin orchestra's permanent conductor. Despite protests that both the conductor and the manager of the Berlin Philharmonic were former Nazis (both had formerly been cleared by a denazification board), the American tour was a critical success.

Opera.—For its 1954-55 season, the Metropolitan Opera Company of New York engaged two new conductors: Rudolf Kempe, music director of the Munich Opera since 1952, and Dimitri Mitropoulos. The Metropolitan gave a total of 215 performances, including 48 on its tour, which extended from April 10 to June 1, 1955. For the opening night of its 70th season (Nov. 8, 1954), it presented over closed-circuit television in 32 theaters throughout the country parts of four operas: the Prologue from *Pagliacci*, by Ruggiero Leoncavallo; Act I from *La*

Bohème, by Giacomo Puccini; Act II of *The Barber of Seville*, by Gioachino Rossini; and Act I, scene 1 and Act II of *Aida*, by Giuseppe Verdi.

On Feb. 10, 1955, the Metropolitan presented the American première of Richard Strauss' *Arabella*. The company's revivals included Richard Wagner's *Die Meistersinger von Nürnberg* (Nov. 11, 1954); Umberto Giordano's *Andrea Chénier* (November 16); Strauss' *Salome*, with Christel Goltz of the Vienna State Opera in the title role (December 15); and Christoph Willibald Gluck's *Orfeo ed Euridice* (Feb. 24, 1955).

Of the 13 new singers added to the personnel of the Metropolitan, two made notable debuts. On Jan. 7, 1955, Marian Anderson, the first Negro to be engaged by the Metropolitan, made her initial operatic appearance in the contralto role of Ulrica in Verdi's *Masked Ball*. (On January 27, Robert McFerrin, another Negro, made his debut as Amonasro in *Aida*.) On January 31, Renata Tebaldi of Milan's La Scala made her New York debut as Desdemona in Verdi's *Otello*.

The New York City Opera offered its usual fall and spring seasons at New York's City Center, beginning, respectively, on Sept. 29, 1954, with *Aida*, and on March 17, 1955, with Strauss' *Der Rosenkavalier*. Between its fall and spring seasons the opera company was the subject of much controversy because of the replacement of Lincoln Kirstein by Joseph Rosenstock as managing director of the City Center of Music and Drama. In spite of this, the New York City Opera's tour, beginning November 1, was highly successful and the most extensive that had yet been undertaken by the company.

The San Francisco Opera Company opened its 32d season on Sept. 17, 1954, with Verdi's *Rigoletto*, and gave 22 performances in San Francisco and 13 in Los Angeles. The principal novelties of the west coast company's season were the American première of Maria Cherbini's *The Portuguese Inn* on September 24, and the local première of Arthur Honegger's *Joan of Arc at the Stake* on October 15.

The highlight of Chicago's Civic Opera House season was the presence of Maria Callas with the newly-formed Lyric Theatre. Miss Callas opened the 1954 season (November 1 to 20) in the title role of Vincenzo Bellini's *Norma*. In addition, the Lyric Theatre performed six additional Italian works and one American opera, *The Taming of the Shrew*, by Vittorio Giannini.

In Philadelphia, the City Council's Recreation Committee granted \$25,000 to the Philadelphia Grand Opera Company, which represented a merger of the Philadelphia La Scala Opera Company and the Civic Grand Opera Company. During the 1954-55 season, however, the parent companies continued separate operations. In Boston, the New England Opera Theatre produced on March 27, 1955, the first American performance of Hector Berlioz's *The Trojans*, which was staged and conducted by Boris Goldowsky.

The NBC-TV Opera Theatre presented a televised performance of Bellini's *Norma* on Jan. 23, 1955, with the Negro soprano, Leontyne Price, in the title role. The television opera season also included *The Saint of Bleecker Street* on May 15 (see below, *New Music*) and the fifth annual Christmas performance of *Amahl and the Night Visitors*, both by Gian-Carlo Menotti (q.v.).

Summer Music and Festivals.—The 38th season of summer concerts at the Lewisohn Stadium in New York began on June 20, 1955, and con-

tinued for 6 weeks, with 30 concerts offered. In Chicago in June, the Ravinia Festival opened its 20th seven-week season, which included performances by the Ballet Theatre with the Chicago Symphony. In Philadelphia, nine conductors led the Philadelphia Orchestra in the 25th season of Robin Hood Dell Concerts, which ran from June 21 to July 28, 1955.

At California's Hollywood Bowl the "Symphony of the Stars" was presented from July 7 to Aug. 30, 1955, and included a five-day "Festival of the Americas," in which Leonard Bernstein conducted music of the United States and Carlos Chavez conducted music of Latin America. The Toronto Philharmonic gave its annual Thursday night Promenade Symphony Concerts from June 2 to Sept. 15, 1955. The Goldman Band in New York City began its 38th season in Central Park on June 17, 1955. This concert was the 2,079th since the inception of the series. Of the band's 50 concerts in 1955, four were given weekly in Central Park, and two were given weekly in Prospect Park, Brooklyn.

The Berkshire Festival at Tanglewood, Mass., ran from July 6 through Aug. 14, 1955. The 12 concerts by the Boston Symphony were variously conducted by Charles Munch, the festival's musical director, Leonard Bernstein, and Pierre Monteux, who had celebrated his 80th birthday on April 4, 1955. In addition, there were six chamber music programs and two weekends of chamber orchestra concerts. The Berkshire Music Center inaugurated a fund-raising campaign in order to take advantage of an offer from the Rockefeller Foundation, which agreed to match for five years all gifts in excess of \$15,000, the total not to exceed \$125,000.

Two newcomers entered the field of summer music festivals in 1955. A four-week festival was begun on July 10 at Stratford, Ont., in connection with the Stratford Shakespearean Festival Foundation, which gave \$50,000 toward the establishment of the new venture. At Ellenville, N.Y., the Empire State Music Festival offered concerts for the first time from August 3 through September 4. The Symphony of the Air presented three concerts each week, with Eduard Van Beinum, Alfred Wallenstein, and Erich Leinsdorf as its various conductors. In addition, two weekly performances of operas were given.

Altogether more than 85 summer music and dance festivals were held throughout the United States and Canada in 1955. These included the 95th Worcester (Mass.) Festival; the 62d Ann Arbor (Mich.) Festival; the 48th Bach Festival at Bethlehem, Pa.; and the 25th Festival of American Music in Rochester, N.Y. The United States was also represented at numerous European festivals in 1955. The Philadelphia Orchestra played in the Netherlands, France, Finland, and Germany; and the New York City Ballet danced in France, Switzerland, and the Netherlands. The Philharmonic-Symphony Society of New York played at the Edinburgh Festival, which was held from August 21 to September 10.

New Music.—To celebrate its 75th anniversary in 1955-56, the Boston Symphony, in collaboration with the Serge Koussevitzky Foundation and the Library of Congress, commissioned, for \$2,000 each, 15 new compositions by leading contemporary composers. The Americans so honored are: Samuel Barber, Leonard Bernstein, Aaron Copland, Howard Hanson, Bohuslav Martinu, Walter Piston, William Schuman, and Roger Sessions. The foreign composers include Benjamin Britten of Great Britain; Darius Mil-

haud, Jacques Ibert, and Henri Dutilleux of France; Gottfried von Einem of Austria; Goffredo Petrassi of Italy; and Heitor Villa-Lobos of Brazil.

The Louisville Philharmonic Society, under a \$400,000 grant from the Rockefeller Foundation, ended in January 1955 its first year of commissioning, performing, and recording new works, with a total of 32 compositions receiving their first performances. Twelve long-playing recordings of the music were released monthly to subscribers, and the commissioned compositions included Luigi Dallapiccola's *Variations for Orchestra*, Henry Cowell's *Symphony No. 11*, and Carlos Surinach's *Sinfonietta Flamenca*.

In January 1955 the New York Music Critics Circle made its awards for outstanding works performed during the preceding year. These included Menotti's *The Saint of Bleeker Street*, which had received its première performance at New York's Broadway Theatre on Dec. 27, 1954; Dimitri Shostakovich's *Tenth Symphony*; Carl Orff's choral work, *Carmina Burana*; and Vittorio Rietti's *String Quartet No. 3*. Vittorio Gianinni's *The Taming of the Shrew*, which had received its initial performance on the NBC-TV Opera Theatre, received a special citation. (See also, PRIZES AND AWARDS.)

Other significant first performances of operas included Sergei Prokofiev's fourth opera, *L'Angé de Feu* (*The Flaming Angel*), at the Champs-Élysée Théâtre, Paris, on Nov. 25, 1954; Sir William Walton's *Troilus and Cressida*, Covent Garden, London, Dec. 2, 1954; Darius Milhaud's *David*, La Scala, Milan, Jan. 2, 1955; and Louis Mennini's *The Rope* (the libretto of which is based on a play by Eugene O'Neill), Berkshire Music Center, Tanglewood, Mass., Aug. 8, 1955. At the festivals of Salzburg (July 24 to Aug. 30, 1955) and Wuppertal, Germany (June 4 to 6, 1955), première performances were given, respectively, of Werner Egk's opera, *Irish Legend*, and Paul Hindemith's oratorio, *Ite Angeli Verlores*.

Miscellany.—In 1955, two of New York City's

venerable music halls were threatened with future demolition. The Metropolitan Company decided on Oct. 17, 1955, to acquire land on Lincoln Square for the erection of a new opera house. The company hopes to vacate the present opera house, built in 1883, by the fall of 1959. In the spring of 1955, John J. Totten, manager of Carnegie Hall, formed the Committee to Save Carnegie Hall. The group sought to raise immediately \$50,000 as a guarantee for a fund to purchase the building, whose replacement by apartment houses is being considered.

In Austria, the Vienna State Opera House was reopened on Nov. 5, 1955, for the first time since its demolition during World War II. Beethoven's *Fidelio* was presented for the opening performance, which was attended by world notables, including U.S. Secretary of State John Foster Dulles. The Berlin State Opera House on East Berlin's Unter den Linden held its postwar opening on Sept. 4, 1955. On the preceding March 19, Erich Kleiber, its renowned director, resigned his post and fled to West Berlin. Also in Europe in 1955, George Gershwin's *Porgy and Bess*, which is being presented by a touring American company, was a popular and critical success. The company, which played for 9 performances at Milan's La Scala, is planning to present the opera in Moscow.

The American Society of Composers, Authors, and Publishers (ASCAP) celebrated its 40th birthday in 1954. The society, which was formed for the purpose of protecting the performance rights of composers and authors of music, had a charter membership of 170 composers and lyricists and 22 music publishers. By June 1955, however, the membership had grown to 3,413 composers and authors and 736 publishers. The group licenses approximately 35,000 commercial users of music, including television and radio networks and stations, nightclubs, restaurants, and hotels, as well as symphony orchestras and concert artists.

Statistics tabulated by the National Music League showed that during 1953, 30,000,000

Japanese children attend a Tokyo concert by the Symphony of the Air, which toured the Orient in May and June 1955.

(LEFT AND CENTER) SEDGE LEBLANG; (RIGHT) LYRIC THEATRE OF CHICAGO

(Left) Christel Goltz in *Salome*, presented by the Metropolitan Opera Company in New York on Dec. 15, 1955. (Center) Renata Tebaldi in the Metropolitan's production of *Orelio*. (Right) Nicola Rossi-Lemeni and Maria Callas in *Norma*, which opened the Chicago Lyric Theatre's 1954 season on November 1.

people attended performances of serious music, as compared with the 15,000,000 who attended major league baseball games during the same period. According to the American Music Conference, 7,250,000 children and young people are learning to play musical instruments or are participating in school bands and orchestras. During 1954, the sales of classical music phonograph rec-

ords totaled \$60,000,000, or 24% of all record sales.

NARCOTICS. Increased awareness and interest in the social aspects of narcotic addiction were revealed during the tenth session of the U.N. Commission on Narcotic Drugs, held in New York from April 18 through May 12, 1955. The commission recommended the following significant resolutions for adoption by the U.N. Economic and Social Council:

(1) That governments comply with their obligations under the 1925 and 1931 international narcotics conventions to transmit to the Permanent Central Opium Board complete and accurate estimates and statistics, regularly and promptly, explaining methods used to calculate the quantities involved.

(2) That the U.N. Food and Agriculture Organization and the U.N. Secretariat act as a coordinating agency for research in developing strains of *Cannabis sativa*, Linn. devoid of harmful resins, and that they assist governments in this regard on request, and, if possible, report progress to the eleventh meeting of the Commission on Narcotic Drugs.

(3) That all states not parties to the Protocol of 1948 for control of synthetic narcotics report on steps taken to become parties in accordance with Article 5 thereof, and that they prohibit production and use of any synthetic narcotics they do not consider indispensable to public health.

(4) That the secretary-general, in consultation with the World Health Organization, the U.N. Social Commission, and other bodies concerned, continue to gather data and pursue his studies on drug addiction; that ambulatory treatment methods (including the so-called clinic method) in the treatment of drug addiction be

recognized as inadvisable; that the World Health Organization prepare a study of methods for treating drug addicts, and that it seek information on methods and precautions to assist the medical profession in prescribing narcotic drugs; that governments concerned which have not done so, collect and submit information on the extent and character of drug addiction in their countries.

Illicit International Traffic. *Opium.*—Incomplete figures for 1954 indicate seizures of 34,766 kilograms of raw opium and 3,529 kilograms of prepared opium. Burma has been suppressing illicit traffic in opium, much of which is smuggled into that country from Communist China, which produces more than 2,500 tons annually. Possible indication of a new trend in illicit traffic was the seizure of 3 kilograms of opium, thought to be of Bulgarian origin, in Milan, Italy. Mexico has exerted strenuous efforts to suppress opium traffic. In Lebanon, which is believed to be the source of large quantities of morphine base smuggled into Canada, France, Italy, and the United States, authorities seized considerable amounts of the drug in 1954.

Heroin.—Although therapeutic use of heroin has been discontinued in all except a few countries in the world, illicit traffic of the drug continues to flourish. Much heroin reaches Japan from Communist China via Korea. Heroin from Communist China was seized on both coasts of the United States in 1954.

Cocaine.—Addiction to cocaine has been increasing. In early 1955 more cocaine had been seized in the United States than in the entire year 1954. Traffic in France has also increased. Clandestine factories in Bolivia, Ecuador, and Peru have been manufacturing crude cocaine in

considerable quantities. Of these countries, Peru has exerted great effort to control the problem.

Cannabis.—Abuse of cannabis has become increasingly serious in many countries. In 1954, 127,781 kilograms were seized. About 3.5 tons of hashish were seized in Egypt. Lebanon has some illicit cultivation of cannabis and production of hashish; large seizures have been made there.

Synthetic Drugs.—In 1954, 2,187 grams of synthetic drugs were seized. Italy reported several seizures of pethidine, some of which was manufactured in an illicit laboratory in Milan. A recent study of pethidine addiction by the World Health Organization revealed an alarming extent of abuse of this drug by addicts and by medical and allied professions.

The Commission on Narcotic Drugs urged governments that have not already done so, to prohibit the manufacture, import, and export of ketobemidone and its derivatives.

United States.—A U.S. Senate committee has been investigating illicit narcotic traffic with a view to strengthening narcotic legislation. The total number of addicts in the United States is estimated at between 50,000 and 60,000, or an incidence of about 1 in 3,000 of the population. An interim report on the survey of drug addiction begun by the Bureau of Narcotics in January 1953 indicated that 28,514 addicts had been counted. It is believed that this count, consolidated monthly from reports received from federal, state, and local authorities throughout the United States, will approach the above estimate in two to three years.

About 80% of the addicts are men; about 50% are between the ages of 21 and 30 years; and 13% are under 21 years of age. Most addicts live in cities of at least 1,000,000 population. Addiction among adolescents reached its height about 1951; since then it has been decreasing, except in a few metropolitan areas.

H. J. ANSLINGER,
U.S. Commissioner of Narcotics.

NASSER, Gamal Abd el-, premier of Egypt; b. Beni Mor, Asyût Province, Egypt, Jan. 15, 1918. Founder of the Egyptian Revolutionary movement, Lieutenant Colonel Nasser planned the *coup d'état* which resulted in the dethronement of King Faruk and the rise to power of Gen. Mohammed Naguib in July 1952. Rivalry between the two leaders was resolved on Nov. 14, 1954, when Nasser deposed Naguib and assumed control of the government. As head of one of the principal states of the Arab League (q.v.), Premier Nasser endeavored in 1955 to influence its members to assume a neutralist position in world affairs and, with Prime Minister Jawaharlal Nehru of India and Marshal Tito of Yugoslavia, himself became one of the chief spokesmen for that position.

After the announcement of a proposed Turkish-Iraqi mutual defense treaty, Nasser called a conference of Arab League states, which met in Cairo on January 22–February 6. His proposal that Arab states refrain from concluding defense pacts outside the orbit of the league was rejected, however, and on February 24 the Iraqi government signed the treaty (the Baghdad Pact, q.v.) with Turkey. When Prime Minister Nehru visited Cairo on February 16 and July 12, the Indian and Egyptian heads of government issued joint communiqués denouncing military alliances as fomenting international tensions; and at the Asian-African Conference (q.v.) held in Bandung, Indonesia, on April 18–24, Nasser urged

peaceful coexistence between East and West.

With the intensification of violence on the Egyptian-Israeli border in 1955, Nasser attempted to solidify world—and particularly Arab—sentiment against Israel. On September 27, he caused widespread concern among the Western powers when he announced that Egypt had arranged to buy arms from a Soviet satellite, Czechoslovakia. On December 15, in a letter to U.N. Secretary General Dag Hammarskjöld, he warned that further Israeli attacks would force Egypt “to take matters into her own hands.”

At home, Nasser continued during the year to further industrial expansion and agricultural improvement, particularly land reclamation and redistribution. (See also EGYPT.)

NATIONAL ACADEMIES AND ASSOCIATIONS. For private organizations whose titles begin with the word National (excepting National Geographic Society, which is reviewed below) see the article SOCIETIES AND ORGANIZATIONS.

NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS. The discovery and experimental development of a new concept in airplane design, leading to very marked performance improvement in the transonic speed range, was announced in September 1955 by the NACA. Speed gains of as much as 25 per cent were attained by application of the new concept, without addition of power. Called the “area rule,” the new design principle was developed by Richard T. Whitcomb, research scientist at the Langley Aeronautical Laboratory. On Dec. 17, 1955, Whitcomb received the Collier Trophy for his work.

First made available on a highly classified basis to the nation's aircraft industry in September 1952, the area rule principle has been applied to two supersonic tactical airplanes which the military services have unveiled: the Grumman F11F-1 Tiger and the Convair F102-A. In simplest terms, it is a rational way of reducing very greatly the sharp drag rise which occurs at transonic speeds; its utilization often results in a pinch-waisted fuselage shape variously identified as “coke bottle,” “wasp waist,” and “Marilyn Monroe.”

During 1955 the NACA observed its 40th anniversary. Referring to the reasons for congressional establishment of the government's aeronautical research agency, Chairman Jerome C. Hunsaker* said that “a compelling reason for its creation was the fact that in the United States, birthplace of the airplane, aeronautical progress had been so slow that several other nations had gained leads over the United States . . . In the years that followed World War I, definite leadership in aeronautics was regained by the United States. This continuing achievement has been the result of a partnership in which the Congress, the military air services, the aircraft industries, and the NACA have joined. As its part, the NACA undertook research to provide basic information which talented designers in industry used in developing superior planes, both civil and military . . . We will do well to remember that to maintain such a lead depends on the vigor and skill with which we press our fundamental and applied research.”

In 1955, eight years after first attainment of faster-than-sound flight, it was apparent that

* Dr. Hunsaker was awarded the Langley Gold Medal for “specially meritorious investigations in connection with the science of aerodynamics and its application to aviation” by the Smithsonian Institution on April 14, 1955.

much remained to be done before the airplane could demonstrate its great potential as a supersonic vehicle of commerce and as a supersonic weapon of war. Stability and control remained vexing problems. The extension of speed from less than 100 mph. in 1915 to 1,000 mph. and more in 1955 served only to increase the airplane's complexity and severity. Respecting engines, lightest possible construction with reliable operation, and the maximum economy of fuel and oil consumption remain essential elements in the unending drive for more power.

Intensive research was concentrated on the difficult problems posed by flight at hypersonic speeds, thus to enable exploiting the potential advantages of intercontinental ballistic missiles traveling between 10,000 and 15,000 mph. Such a missile would be extremely difficult to intercept; only seconds would elapse between the time such a missile could be detected and the time it would reach its target.

The true ballistic missile is accelerated to hypersonic speed in the first 15 or 20 miles of its flight, and this initial push carries it to altitudes well beyond the earth's thin mantle of atmosphere. Its flight path, under the influence of gravity, resembles the trajectory of an artillery shell. As it re-enters the atmosphere, resistance of the air reduces its speed to about 5,000 mph. at the end of its flight. Aerodynamic heating—caused by the friction generated when the missile passes through the atmosphere—appears to be the most troublesome problem, although some progress is being made to overcome it. Temperatures high enough to melt or even vaporize most metals quickly develop in the air next to the skin of a hypersonic missile. Even at only half the speeds envisioned, or about 7,000 mph., sustained flight would produce temperatures of up to 8,000°F. Despite the magnitude of the temperatures to be dealt with, a number of promising techniques were under study as possible solutions to the problem. One of these, called transpiration cooling, requires a porous skin through which a liquid may be evaporated. The human body is cooled in this way, through sweating, and a similar system may be devised as the answer to the temperatures of hypersonic flight.

The successful effort in recent years for higher speeds has been marked by a rise in speed of other types of airplanes besides the more dramatic supersonic aircraft. A corollary problem has been that of how to hold down speed during landings and take-offs. Any means to slow down landing and take-off speeds, to permit operations from unprepared places, or ultimately to achieve vertical flight itself, is of great value both to civil and military aviation. Some research answers are evident in the helicopter, the vertical take-off (VTO) airplane, the seaplane hydro-ski, and the thrust vector. Use of boundary layer control, especially through devices which utilize the air supply of a turbojet engine, hold promise of giving a half-century-old idea new importance.

A new type of aircraft, disclosed for the first time in 1955, was the thrust vector, or "flying platform." It is based on a concept that holds that a man can fly naturally and control his movements without complex machinery or training. First studied with jets of air attached to a man's feet, the principle was extended to the teetering rotor platform design under development in industry in 1955.

The reduction of launching and landing speeds is best achieved in the vertical take-off or landing which the familiar helicopter performs

so well. But the helicopter has a limited top speed and is therefore not useful for some purposes. Research, however, is continuing on problems of rotary-wing aircraft and their application.

One type of VTO aircraft capable of a wide speed range is the one which rests on its tail. Provided with enough thrust to exceed its own weight, this type of VTO takes off vertically, then tips over to climb and cruise in the normal attitude. On landing, it "backs down" tail first.

Still another type of VTO utilizes the principle of deflecting the propeller slipstream downward through sets of large wings or turning vanes. The objective is a system which can produce vertical lift while the airplane remains in the horizontal position, or nearly so. This system, moreover, should be so devised that it can permit retraction, as of landing gear, to form a clean aerodynamic shape in flight. NACA research scientists are studying various flap and slot combinations, using models of transport and small airplane types in their work. Thrust may be provided by either propellers or turbojets.

Since World War II, hydrodynamic research has attacked the problems of cumbersome seaplane floats and hulls to find solutions without compromising performance either in flight or on water. From this work has come the hydro-ski, a flotation device which retracts into the airplane body like a set of wheels. The hydro-ski has been proved capable of attractive performance, and has reduced landing loads by as much as three fourths. Its use also permits landings on and take-offs from such surfaces as snow and ice. (See also AERONAUTICS.)

WALTER T. BONNEY,
Assistant to the Executive Secretary, NACA.

NATIONAL ARCHIVES AND RECORDS SERVICE.

This branch of the General Services Administration (q.v.) is responsible for developing and implementing an economical, efficient system for the management of federal records, including those that are preserved for their enduring value. It consists of the National Archives, the Records Management Division, the Federal Register Division, and the Franklin D. Roosevelt Library at Hyde Park, N.Y. Its head is the archivist of the United States, who also serves as chairman of the National Historical Publications Commission.

The National Archives Exhibition Hall, in which are enshrined the Declaration of Independence, the Constitution, and the Bill of Rights, has become one of the most popular tourist attractions in the nation's capital.

Among the 7,000 cubic feet of records deposited in the archives in 1955 were thousands of photographs relating to the design of monuments and buildings in Washington, and top-level administrative and policy records of the Department of Labor and the Reconstruction Finance Corporation.

The program of concentrating the most valuable records in the safest parts of the Archives Building and of bringing together related records that were received at different times was half completed. More than 1.5 million running feet of historically valuable motion pictures on deteriorating nitrate film were copied on safety acetate film.

As the importance and availability of the archives become known, their use by scholars constantly increases. Government officials and the public made 75,000 requests for information and consulted 340,000 documents in 1955.

The Records Management Division published

Plain Letters, a handbook showing how to write letters that are short and easily understood. More than 60,000 copies were sold in 3 months. It and its companion piece, *Form Letters*, should reduce the cost of the billion letters the federal government writes each year.

In connection with its work of publishing laws and agency rules, the Division of the Federal Register published a new type of guide, a list of federal requirements for the retention of records by industry.

Several thousand Roosevelt "family letters" and the official correspondence of Franklin D. Roosevelt as governor of New York and of Herbert Lehman as lieutenant governor were deposited in the Franklin D. Roosevelt Library. About 190,000 persons visited the museum in the library.

WAYNE C. GROVER,
Archivist of the United States.

NATIONAL BUDGET. See TREASURY OF THE U.S.

NATIONAL BUREAU OF STANDARDS. Established by act of Congress in 1901, the National Bureau of Standards serves the federal government as a scientific laboratory and provides basic standards for American science and industry. In carrying out these related functions, it conducts research, development, calibration, and testing programs in physics, mathematics, chemistry, and engineering.

At the close of 1955, the bureau staff numbered a little over 2,800, of whom about half were scientists and engineers. Most of the staff was stationed at the bureau's principal laboratories in Washington, D.C. However, the bureau also maintained major research laboratories in Boulder, Colo., as well as a number of field stations in various parts of the world. At the Washington laboratories technical programs were conducted in electricity and electronics, optics and metrology, heat and power, atomic and radiation physics, chemistry, mechanics, organic and fibrous materials, metallurgy, mineral products, building technology, applied mathematics, data processing systems, weights and measures, and basic instrumentation. The work at Boulder was concentrated in cryogenic (low-temperature) engineering and radio propagation.

Standards and Measurement.—As in previous years, the bureau's basic program in 1955 was primarily concerned with scientific standards of precise measurement. Several improvements in equipment and measurement techniques led to increased accuracy of electrical measurements, particularly at audio frequencies. Among these were improved guarding and shielding for resistance and capacitance standards and development of a bridge circuit for measuring core loss in steel alloys. A technique was devised for studying the performance of the highly sensitive microbalances used in such fields as atomic energy, where minute samples must be weighed with high accuracy. Two devices were developed that precisely measure radiation in terms of the heating effect it produces. One of these, a radiation-balance microcalorimeter, will aid materially in meeting the increased demand for calibration of radioactive sources. The other, an X-ray calorimeter, will serve as a basic standard for measurement of the high-energy X-rays now being used in medical treatment and industrial radiography.

During 1955 the bureau redetermined the velocity of light in two independent measurements

by quite different methods. The two values are in close agreement and thus provide confirmation for the higher values of electromagnetic wave velocity which have been consistently obtained by microwave measurements since World War II. In one method, the velocity of light was determined from measurement of the molecular constants of carbon monoxide by infrared spectroscopy. The other determination made use of phase-shift measurements on very-high-frequency radio waves to obtain their velocity of propagation. Before World War II, the value $299,776 \pm 4$ kilometers per second was generally accepted as an average of the findings of the various laboratories. However, since the war higher values have been obtained by most investigators (average value, $299,793 \pm 1$ km/sec.). The results obtained by the bureau give $299,792 \pm 6$ km/sec. by the molecular constants method and $299,795.1 \pm 3.1$ km/sec. by the radio interferometer.

Properties of Materials.—Much of the 1955 research program dealt with the basic properties of materials, particularly those inorganic materials which are stable at extremely high temperatures. Cermets—heat-resistant ceramic-metal combinations—were studied in connection with their use in jet engines and rockets. The need for nuclear reactor design data prompted an investigation of the high-temperature reactions of uranium dioxide with other heat-resistant compounds. High-temperature concretes were studied to obtain materials for jet aircraft aprons which can withstand exposure to high variable temperatures. As part of a cooperative interlaboratory study of the extractive metallurgy of titanium, the bureau prepared selected titanium compounds of high purity. Included were titanium tetrachloride of 99.999 per cent purity and 99.998 per cent titanium tetrabromide. Other work concerned ceramic coatings for protection of high-temperature alloys or for utilization as high-temperature insulation.

In the field of high polymers, pressure porosimeter and electron microscope studies provided new insight into the microstructure of leather. This work revealed the presence of large numbers of extremely small pores—less than a millionth of an inch in radius—in both leather and its parent substance, collagen. The quantitative information obtained on pore-size distribution within the individual collagen fibrils should aid the leather technologist in understanding the swelling and shrinkage accompanying water-leather interactions. The research findings are also expected to shed additional light on the ability of leather to transmit or absorb water vapor, tannins, or impregnants.

Electronic Computing.—A comprehensive program was conducted during 1955 in the field of high-speed data processing. Combining work in electronic digital and analog computers, this program includes research, development, and systems design and analysis. It also includes technical advisory services to other government agencies on the use of high-speed computing techniques in new areas of potential application, such as massive paperwork operations, automatic control systems, and simulation.

During 1955 the bureau's high-speed electronic digital computer, SEAC, was operated continuously seven days a week except for a six-week period required to move it to a new permanent location on the bureau grounds. Problems were solved in government procurement and industrial mobilization as well as in aerodynamics, atomic energy, meteorology, thermome-

try, optics, nuclear physics, thermodynamics, sound, and navigation.

In computer components work sponsored by the Naval Research Laboratory, a gas-diode memory circuit was developed for use in a data correlator and classifier. This circuit should find application wherever computed data must be presented for rapid visual analysis. In another project sponsored by the U.S. Air Force, packaged circuitry was designed which combines increased logical capabilities with greatly decreased power consumption. These computer packages should make feasible the building of larger and more powerful computing machines without the need for excessively large power supplies and air conditioning equipment.

Services.—The technical service activities of the bureau in 1955 included the performance of nearly 174,000 calibrations and tests and the distribution of 32,500 standard samples of certified chemicals, metals, and alloys. Typical services included the following calibrations and tests: 694 standard cells, 994 water current meters, 757 hydrometers, 839 radium sources, 491 radioactive cobalt sources, 2,400 dilution pipettes, 33,110 clinical thermometers, and the sample testing of 3 million lamps and 15 million barrels of cement.

Publications.—Results of the bureau's work are available through three monthly periodicals (*Journal of Research*, *Technical News Bulletin*, and *Basic Radio Propagation Predictions*) and a series of nonperiodical publications. An indexed list of publications (*Publications of the National Bureau of Standards*, Circular 460 and Supplement, \$2.00) is available from the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C.

NATIONAL GEOGRAPHIC SOCIETY. With 2,150,000 members on its rolls in 1955, the society is numerically the largest scientific and educational organization in the world. Founded in 1888 "for the increase and diffusion of geographic knowledge," it occupies buildings at Sixteenth and M Streets, N.W., Washington 6, D.C., from which it publishes the illustrated monthly *National Geographic Magazine*. It regularly issues maps prepared by its large cartographic division, school bulletins for classroom use, and news bulletins. It also publishes occasional books, and monographs on its scientific projects.

John Oliver La Gorce, president of the society and editor of its magazine, on Sept. 22, 1955, completed 50 years in the service of the society. Other officers are: Gilbert Grosvenor, chairman of the board; Melville Bell Grosvenor, vice president and associate editor; Thomas W. McKnew, vice president and secretary; Robert V. Fleming, treasurer. Lyman J. Briggs is chairman and Alexander Wetmore is vice chairman of the Research Committee.

Chief Justice of the United States Earl Warren and Benjamin M. McKelway, editor of the *Washington Star*, were elected to the 24-man Board of Trustees at its January 1955 meeting.

A notable 1955 addition to the memorabilia, paintings, and photographs of world geography in Explorers Hall at society headquarters is Adm. Robert E. Peary's 45-starred United States flag,

flown at the North Pole on April 6, 1909, and carried on Peary's extensive Arctic travels. Mrs. Marie Peary Stafford presented the emblem on behalf of the Peary family at ceremonies in Constitution Hall on May 6. She accepted for her mother a special gold medal of the society honoring Mrs. Peary for her important part in her husband's early explorations.

Two major publishing events marked the society's year. In October it issued the 432-page book, *Indians of the Americas*, with 400 illustrations, 262 in color. Matthew W. Stirling, Neil M. Judd, and Frank H. H. Roberts are among its contributing authorities. In August it began distribution of the *Sky Atlas* as noted below.

Research, 1955.—The year marked the successful conclusion of the National Geographic Society—Palomar Observatory Sky Survey, cosponsored with the California Institute of Technology since 1949. The result is a 1,758-plate "portrait of the universe" made with the unique Schmidt 48-inch phototelescope, probing space to the unprecedented depth of 600 million light years (3 sextillion 600 quintillion miles). The first section of the *Sky Atlas*, consisting of photographic prints from 200 plates, was distributed internationally to observatories and scientific institutions ordering it, and additional sections were to be delivered in following months.

A dark region the size of Texas on a large desert area of Mars was reported by E. C. Slipher in September after preliminary study of 20,000 new photographs of the planet, and attributed to lichenlike plant life. Dr. Slipher described it as the greatest change observed since Mars was first mapped 125 years ago. The photographs were taken at the Lamont-Hussey Observatory, Bloemfontein, Union of South Africa, by the National Geographic Society—Lowell Observatory Expedition in 1954. (See also ASTRONOMY.)

In their third year, the continuing National Geographic Society—*Calypso* Oceanographic Expeditions made extensive still and motion pictures in color underwater in the western Indian Ocean and Red Sea. Dr. Harold E. Edgerton, Massachusetts Institute of Technology, joined Capt. Jacques-Yves Cousteau in July on a project in Greek and Turkish waters, devoting his third summer to improvement of the group's undersea camera and lighting equipment. (See also OCEANOGRAPHY.)

Continuing earlier research on southern Mexico's pre-Aztec culture at La Venta, scientists directed 40 native workmen in uncovering carved stone monuments, mosaic courts, jade, and pottery representing three separate periods of construction. Leaders of the National Geographic-cosponsored expedition were anthropologists Philip Drucker, Smithsonian Institution, and Robert F. Heizer, University of California at Berkeley.

Off the Florida coast, the Marine Laboratory of the University of Miami continued its study of plankton and life stages of Atlantic pelagic fish to improve knowledge of the world's sea food supply. In northern New York, Dr. Carl W. Gartin continued his study of the patterns and recurrence of auroras and their possible bearing on wire and radio communications disturbances.

JOHN OLIVER LA GORCE,
President and Editor.

NATIONAL GUARD. The conversion in 1955 of the 48th Division from infantry to armor

changed the composition of the National Guard to 21 infantry divisions; 7 armored divisions, 9 regimental combat teams, 9 armored cavalry regiments, 123 antiaircraft artillery battalions, and 74 field artillery battalions. At the end of September, the total strength of the organization was 364,272 men, with a goal of 425,000 men by June 30, 1956. Although the effect of the Reserve Forces Act of 1955 on the National Guard was not clear by the end of 1955, it had produced in the October and November increments a total of 793 recruits under the six-month plan.

Training and Equipment.—A program established in June 1955, under which enlisted men of the National Guard can volunteer for eight weeks of basic training, provided for increments of 1,000 men per month. By September 30, some 2,675 men had taken advantage of the plan. Special officer candidate courses produced 138 graduates at the Infantry Center and 66 at the Artillery Center, and an eight-week course in atomic warfare was completed by 19 officers during the fiscal year 1955.

During 1955, 338,000 officers and men (94.5% of the National Guard) completed summer training; attendance at armory drills was 94% for officers and 88% for enlisted men.

Activities.—Operation Minuteman, a practice emergency alert, was conducted on April 20, 1955. Over 318,000 members of the Army and Air National Guard reported for duty within two hours after the alert was sounded.

Under the program for manning antiaircraft sites, begun in 1954, elements of 20 nondivisional battalions were on duty at 57 sites. These units were fully responsible for the operation of the batteries and had a nucleus of personnel on duty 24 hours a day. The rest of the 89 nondivisional antiaircraft battalions were being prepared for similar duty in an emergency.

The Air National Guard.—The Air National Guard had attained a total strength of 61,908 by the end of September. Twenty-seven Air National Guard wings operate from 153 facilities, including 85 flying fields, nine of which are permanent field training sites. According to the current program, there will be 7,900 officers (3,950 pilots) and 62,500 airmen in 716 units by June 30, 1956.

The program for 11 weeks of training was expanded so that 3,789 entered USAF basic military training courses during the fiscal year 1955. A pilot training program with an annual objective of 398 graduate pilots produced 369 in the fiscal year 1955. About 60,000 officers and men in 87 tactical and support units participated in summer field training.

By mid-1955, Air National Guard units had 90% of their material; 60% of the day fighter units and 90% of the night photograph and light bomber units were fully jet-equipped.

The runway alert program begun in 1954, involving 17 Air National Guard squadrons, was fully established and tested by numerous alerts in 1955. A surprise practice alert for the 73 fighter-interceptor squadrons, and a gunnery exercise and competition involving about 1,000 men and 150 planes from 33 states took place in the month of October.

Colonel, USA; Formerly Assistant Commandant, The Strategic Intelligence School.

NATIONAL INCOME AND PRODUCT. See INCOME.

NATIONAL LABOR RELATIONS BOARD. During the eighth year of the administration of Title I of the Labor Management Relations Act, President Eisenhower appointed a new general counsel, Theophil C. Kammholz of Illinois, and two new members to the board, Boyd Leedom of South Dakota and Stephen S. Bean of Massachusetts. On Nov. 18, 1955, President Eisenhower designated Mr. Leedom as chairman of the board. At the close of 1955, the board was composed of: Boyd Leedom, chairman; Abe Murdock, Ivar H. Peterson, Philip Ray Rodgers, and Stephen S. Bean.

Among the board's major decisions in the fiscal year 1955 was the ruling that a stock purchase plan, involving employment relations and company contributions, is a subject on which an employer is required to bargain if requested to do so by a union representing the employees. Such plans come within the meaning of "wages" and "other conditions of employment" as used in the act.

The validity of "hot cargo" clauses in labor contracts also was before the board during the year. By these clauses, an employer agrees to permit employees to refuse to handle goods of other employers who have been designated by the union as "unfair." The board held that a "hot cargo" clause in the contracts of two truck drivers' unions did not permit the two unions to induce employees of three trucklines to refuse to handle freight of a nonunion trucking company after the union had designated the company as "unfair." The majority held that this activity violated the secondary boycott ban of the act, despite the "hot cargo" clauses. In another case, a board majority held that such a clause did not make it lawful for a union to appeal directly to employees to refuse to handle goods designated as unfair.

In the first case to come before the board in which a union was charged with committing unfair labor practices in dealing with its own employees, a majority dismissed the complaint, holding that unions come under the board rule against taking cases involving nonprofit organizations.

In another case, the board ruled that a company did not violate the act when it discharged 20 employees who went on strike in breach of a contract providing for "compulsory and exclusive grievance and arbitration machinery." In dismissing the complaint, the board noted particularly that there was no evidence of any union animosity or unfair labor practices on the part of the company.

The board, in another precedent-setting decision, unanimously ruled a national union to be out of compliance with the filing requirements of the act because the union failed to show that it had distributed its financial reports to its members as required by the law. As a consequence, the national union and its affiliated locals were disqualified from bringing cases before the board, participating in representation elections, and making valid union shop agreements.

During the fiscal year 1955, individual employees filed more charges of unfair labor practices against employers and unions than in any prior year in the 20-year history of the NLRB. A sharp upward trend started during the fiscal year 1954, when 2,147 individuals filed charges, as compared with 1,656 such charges in 1953. During the fiscal year 1955, individual employees filed charges of unfair practices in a total of 2,668 cases (1,576, or 59%, against employers;

1,092, or 41%, against unions), constituting 43% of the 6,163 charges of unfair labor practices of all types filed.

A total of 4,358 charges were filed against employers, or 71% of the total; and 1,805 charges were filed against unions, or 29% of the total.

The board closed a total of 13,679 cases of all types during the year, issuing formal decisions in 2,108 cases. Of these, 360 were in unfair labor practice cases and 1,748 were in representation cases.

The independent general counsel, who is the prosecuting officer of the agency, closed 5,320 unfair labor practice cases without the necessity of formal action; 614, or 12%, were adjusted by various types of settlements; 1,634, or 31%, were dismissed after investigation; and the remaining 57% were withdrawn. In many cases the withdrawals actually reflected settlements of the matter at issue. The general counsel also issued 373 formal complaints alleging violations of the act: 211 against employers, 112 against unions, and 50 against both employers and unions. (See also LABOR.)

LOUIS G. SILVERBERG,
Director of Information.

NATIONAL PARKS. The national parks of the United States are under the jurisdiction of the National Park Service, which was established as a bureau of the Department of the Interior by an act of Congress on Aug. 25, 1916.

Increased use of the national parks by the American people, the appropriation of funds by Congress for starting an urgently needed long-range road and trail construction program, and the installation of additional overnight accommodations were some of the noteworthy developments of the fiscal year ended June 30, 1955.

Nearly 48,000,000 persons visited the parks in the 1954 calendar year, an increase of some 1,600,000 over the previous year's total. In the first six months of 1955, travel was 3% ahead of that of the same months of 1954.

Special ceremonies marked completion of the multimillion dollar Jackson Lake Lodge development in Grand Teton National Park, Wyoming. This project, largest of its kind to be provided in a park area for many years, was built with funds provided by Jackson Hole Preserve, Inc., a non-profit distributing corporation established by John D. Rockefeller, Jr.

Another important development in the concessions field was the purchase by the Fred Harvey interests of visitor facilities on the south rim of the Grand Canyon in Grand Canyon National Park, Arizona, from the Santa Fe Railroad. The Harvey interests plan to spend \$1,000,000 on modernizing and expanding these facilities.

Some \$2,500,000 of federally appropriated funds were earmarked by the National Park Service for an initial large-scale development program in Everglades National Park, Florida, involving construction of roads, parking areas, a water system, a marina, and a boat canal. In addition, negotiations were carried on to interest private investment in dining and boating facilities in the park's Flamingo area.

Approval was given to the purchase of telephone facilities in Yosemite National Park, California, by the Pacific Telephone and Telegraph Company, and negotiations were started for the purchase by private concerns of similar facilities in several other park areas. At Grand Canyon National Park, the Arizona Public Service Com-

pany began supplying commercial power to park residents, for the first time in the area's history. Approval of these utility services is in line with the government's policy of getting out of operations which private enterprise can handle as well as or better than federal agencies.

Many important donations were made for park purposes during the year. Most significant was the \$500,000 provided by Jackson Hole Preserve, Inc., for land acquisition, on condition that an equal sum would be provided by Congress, which was done. An anonymous donation made possible a two-year study and appraisal of the varied interpretive facilities for visitors in park areas. This study is being made by Freeman Tilden, author of the book, *The National Parks: What They Mean To You and Me* (1951).

In June 1955, the handsome new Museum of North Carolina Minerals at Gillespie Gap, on the North Carolina portion of the Blue Ridge Parkway, was dedicated and opened to the public. Funds for this structure, as well as for the preparation of its exhibits, were provided by North Carolina.

A major subsequent development was the formal establishment on September 14 of the Cumberland Gap National Historical Park of some 20,100 acres in Kentucky, Tennessee, and Virginia. This is the largest of the seven national historical parks. Big Bend National Park, in Texas, was dedicated by Secretary of the Interior McKay on November 21.

CONRAD L. WIRTH,
Director, National Park Service.

NATIONAL SCIENCE FOUNDATION. In 1955 the foundation established two special groups to study specific questions involving science and the federal government. One, the Special Commission on Rubber Research, was charged with developing recommendations concerning the long-range role of the federal government in research on synthetic rubber. The commission found that the national interest no longer required government support of research especially directed toward synthetic rubber, and recommended that government contracts supporting such research end in June 1956.

The other group was the Special Committee on Medical Research, set up by the foundation at the request of the secretary of health, education,

and welfare, to review and evaluate the medical research programs of that department. The committee submitted its findings to the National Science Board, which transmitted them to the secretary in December.

The foundation, in cooperation with the National Academy of Sciences-National Research Council, pressed forward with plans for United States participation in the International Geophysical Year, 1957-58. On July 29, 1955, the White House announced that these plans would include the launching of small unmanned earth-circling satellites that will be used for gathering basic scientific data outside the earth's atmosphere. (See SPACE FLIGHT.)

Conferences in support of science, sponsored by the National Science Foundation in cooperation with universities, scientific societies, and other organizations, included the International Arid Lands Symposium; Evaluation of Behavior; Theory of Numbers; Radiocarbon Dating; History, Philosophy and Sociology of Science; Molecular Quantum Mechanics; and Man's Role in Changing the Face of the Earth.

The education in the sciences program was expanded in 1955 to include nine summer institutes for teachers of mathematics and science. In the field of exchange of scientific information, the foundation is giving support to the American Institute of Physics for the translation and publication of an English edition of the Russian journal, *Zhurnal Eksperimentalnoi i Teoreticheskoi Fiziki*; to the American Mathematical Society for translation of selected Russian mathematical articles; and to Massachusetts Institute of Technology for fundamental research on language problems, with special reference to developing methods for mechanical translation.

Collection of data for the foundation's survey of scientific research and development in the United States was completed in several categories, and the publication of results is under way. Three reports were issued during the year: *Federal Funds for Science, IV; Preliminary Report of the Survey on Industrial Research and Development*; and *Scientific Research Expenditures by the Larger Private Foundations*. Other foundation publications for the year include *Scientific Personnel Resources—A Summary of Data on Supply, Utilization, and Training of Scientists and Engineers and Soviet Professional Manpower—Its Education, Training, and Supply* (with the National Academy of Sciences-National Research Council).

Continuing activities in support of basic research and education in the sciences included the award (for the fiscal year 1955) of 558 grants totaling \$7,857,395 in the biological, medical, mathematical, physical, and engineering sciences; and the award of 785 fellowships for the academic year 1955-56.

ALAN T. WATERMAN,
Director.

NATIONAL SECURITY—U.S. MILITARY POLICY.

Developments in national defense matters in 1955 were, in essence, an evolution of programs and policies established in previous years. The increase in influence of the National Security Council in defense matters, and the concentration of power in the hands of the secretary of defense and his civilian assistants continued, and military policies established in 1953 and clarified in 1954 were further defined in 1955.

Military Policy.—At the request of Secretary of Defense Charles E. Wilson, President Eisen-

hower, in January, reduced to writing and released the fundamental tenets of United States military policy. They were, in general, as follows:

(1) The security of the United States is bound up with that of the other nations of the free world.

(2) The United States will not commit aggression, but must be prepared to meet it whenever and wherever it may occur.

(3) A strong and expanding economy is essential for the defense of the United States.

(4) Maximum use must be made of science and technology to economize on manpower.

(5) Civil defense is an integral aspect of United States military policy.

(6) The military program of the United States must be one which will deter an aggressor or blunt any attack he may make; priority must be given to protecting the continent and insuring a capacity to retaliate.

(7) An effective Reserve program is essential and perhaps decisive for the success of military policy.

(8) While it is hoped that local forces can be developed to the point where they are able to meet the demands of localized wars, the United States must be prepared to provide forces when there is danger of the expansion of such a conflict.

These tenets, indicating no essential changes in military policy since 1954, formed the basis of President Eisenhower's pronouncements on national defense and proposals for defense legislation throughout the year.

The Partnership for Defense.—Mutual defense activities between the United States and the free nations of the world were characterized in 1955 by development of existing alliances rather than by expansion of memberships. United States support of the Baghdad Pact, incorporating Turkey, Iraq, Pakistan, Iran, and Great Britain in a mutual defense alliance sometimes referred to as the Middle East Treaty Organization, was an important exception to this generalization.

In 1955, the Soviet Union, considering the North Atlantic Treaty Organization (NATO) as the keystone of Western defense, gave high priority to efforts designed to reduce the organization's effectiveness. First, it tried to defeat or delay ratification of the Paris agreements, which, among other provisions, provided for the entry of West Germany into NATO. Second, it established, in Warsaw, Poland, on May 14, a military defense agency somewhat similar to NATO, incorporating the East European satellites and East Germany.

At the Geneva Conference (q.v.) of the heads of government, held in July, the Soviet Union manifested a spirit of conciliation which aroused hopes of relief from the dangers of war and the burden of rearmament to the peoples of Europe. These hopes were negated, however, when at the conference of foreign ministers, held at Geneva in October and November, it became apparent to the United States, France, and Great Britain that the dissolution of NATO was the principal goal of Soviet diplomacy. Despite growing suspicion of Soviet motives, widened by activities in other areas, particularly in the Middle East, the proposals made by the Soviet Union at Geneva had a significant propaganda effect. It became difficult for the governments of NATO nations to fulfill their defense commitments. In October, Gen. Alfred M. Gruenther, NATO commander, was forced to make a strong appeal for adherence to agreed military programs and for improvement in the quality and quantity of forces, particularly air forces, made available to the NATO command. (See also NORTH ATLANTIC TREATY ORGANIZATION.)

The Southeast Asia Treaty Organization (q.v.), established in 1954, made some progress in the coordination of military matters in 1955.

The continuing disturbances in Indochina provided both a spur and a threat to that agency.

Although the Formosan situation reached the critical stage on several occasions, and Korea had its tense moments, it was in the Middle East that Soviet moves appeared most menacing as the year drew to a close. Here the Soviet Union protested Iranian association (October 11) with the Baghdad Pact countries; but more significant was the furnishing (through Czechoslovakian sources) of arms and training cadres to Egypt (q.v.). Israel promptly asked for corresponding support from the West. A mounting scale of border incidents led the United States to make a strong plea that both sides accept a plan for settlement which the United Nations had proposed.

The United States has earmarked \$705 million in new funds and \$302 million carried over from the previous year for mutual defense (military aid) for the fiscal year 1956. In addition to providing funds, equipment, and troops, the United States took other steps in support of mutual security in 1955. A cabinet rank office for disarmament, with Harold Stassen (q.v.) in charge, was established on March 19. On April 13 the president approved an agreement for sharing some restricted atomic energy data with NATO nations; by October 6 the United Nations completed a draft charter for an agency designed to direct an Atoms for Peace program based on proposals made by President Eisenhower in December 1953.

Armed Forces Strength and Distribution.—Reduction in military manpower continued during 1955. There was some opposition to reduction in U.S. Army and Marine Corps strength, but administration policy prevailed. When Congress provided funds for a larger Marine Corps than the Department of Defense had requested, the secretary imposed restrictions on spending the increase. Strength of the armed forces was as follows:

	Actual Sept. 30, 1955	Planned for June 30, 1956
Army.....	1,109,543	1,027,000
Navy.....	660,390	664,000
Marines.....	201,683	205,000*
Air Force.....	957,620	975,000
Totals.....	2,929,236	2,871,000

* Tentative.

The proportion of forces abroad in September 1955 was about 55% of the army, 30% of the air force, and 67% of the navy, including those afloat and ashore. With the dispatch of 280-mm. cannon and Honest John free-flight rocket batteries to the Far East in 1955, the United States was in a position to employ land weapons capable of firing nuclear projectiles promptly in almost any likely theater of operations.

Defense Department Personnel.—Appointments to senior positions in the Department of Defense included Reuben B. Robertson, Jr., deputy secretary of defense, on July 12 (sworn in August 5); Gordon Gray, assistant secretary for international security affairs, on June 10 (took office on July 14); Robert T. Ross, assistant secretary for legislative and public affairs, on February 25 (confirmed March 14); and Admiral Arthur W. Radford, reappointed chairman of the Joint Chiefs of Staff on May 25 (effective August 15).

On August 17, a 6-point code of military conduct, including guidance for conduct in combat and in captivity, was promulgated by executive order. The code was drafted by the Advisory

WIDE WORLD

"Texas Tower," 100 miles off Cape Cod, is the first radar "island" to be constructed off the U.S. Atlantic coast as part of the American air defense network.

Committee on Prisoners of War appointed by Secretary Wilson.

Important moves to make the military career more attractive, begun in 1954, were continued in 1955. (See ARMY OF THE UNITED STATES.) These steps have been relatively effective, but the fact that the navy has had to resort to selective service indicates that the aim has not been fully achieved. Furthermore, there are important areas in which legislation requested by the administration has not yet been provided. They include improved medical care for dependents, fewer restrictions on post exchanges and commissaries, better survivor benefits, adjustment of rental allowances when only substandard quarters are available, an increase in the number of regular officers, and revision of the code of military justice.

The Defense Budget.—New obligational authority for the military functions of the Department of Defense are shown, in relation to previous years, in the table below.

	Fiscal 1954	Fiscal 1955	Fiscal 1956
(Billions of dollars)			
Army.....	12.9	7.6	7.3
Navy.....	9.4	9.8	9.1
Air force.....	11.4	11.6	14.7
Secretary of defense.....	.8	.6	.7
Total.....	34.5	29.6	31.9

Although it had \$35.75 billion available (new obligational authority plus amounts carried for-

Four top officials of the National Military Establishment are (l. to r.): Secretary of the Army Brucker; Secretary of the Navy Thomas; Secretary of Defense Wilson; and Secretary of the Air Force Quarles.

UNITED PRESS

ward), the department announced \$33 billion as its goal for actual expenditures for the year ending June 30, 1956. When it developed that this goal could not be achieved, Deputy Secretary Robertson estimated, on November 6, that spending would amount to approximately \$34.5 billion and that the same or a slightly larger sum would have to be expended in the year beginning July 1, 1956.

Air Defense.—Gen. Earle E. Partridge, USAF, became commander of the Continental Air Defense Command (CONAD) on May 31, when Gen. Benjamin W. Chidlaw retired.

Contributions of the armed forces and the National Guard to air defense are described under their respective titles elsewhere. Prominent accomplishments in this vital area of national defense in 1955 included the operational installation of electronic computers and the letting of the contract for construction of the distant early warning (DEW) line, authorized as a joint Canadian-United States effort in 1954.

Administration.—During the year the Department of Defense put into effect a number of recommendations made by the Hoover Commission (q.v.) designed to further efficiency and economy in the administration of the defense establishment. One of the recommendations made by the commission called for the establishment of a civilian-operated supply and administrative agency as a fourth component of the Department of Defense to provide services common to all the forces. In what might be viewed as an alternative to such a plan, the department, on November 7, directed that in the future the army handle all matters relating to the provision of food for all the armed forces.

To relieve the armed forces of production activities that it considered superfluous, the department directed the closing of 46 installations. Congress, however, reserved the right to review and veto such action. The department also directed that certain services, mostly related to buildings, be performed by the General Services Administration (q.v.).

Research and Development.—The chief functions of the Department of Defense in the matter of research are allocation of responsibility and funds among the services, and coordination with other governmental and private agencies. In accordance with the first function it designated the navy as executive agent for Project Vanguard, under which a space satellite is to be developed for launching in the International Geophysical Year, 1957-58 (see SPACE FLIGHT), in the same way that it previously charged the air force with development programs for intercontinental ballistic missiles (IBM). Coordination with civilian agencies was illustrated in the provision of Nike guided missiles to the National Advisory Committee for Aeronautics (NACA) for testing at Wallops Island beginning in September, and the testing of new shapes of planes and wings by the same agency. A new type of engine for helicopters, developed by the air force with army funds, and the navy's development of gear to make the air force's C-123 waterborne, are examples of results attained by interservice coordination.

Reserve Forces.—The major event concerning the Reserves in 1955 was the signature of the Reserve Forces Act of 1955 on August 9 by President Eisenhower, who nevertheless declared that the bill fell short of the necessary requirements. (See ARMY OF THE UNITED STATES; NATIONAL GUARD.) The provisions for voluntary enlistments, particularly that providing for 6 months

of active Reserve training, followed by 7½ years of Reserve training, for youths in the 17-18½-year age group as an alternative to being drafted, produced less than expected results for the Regular Army, Reserves, and National Guard alike. Proposals for important changes were in preparation as the year closed.

(For further references, see the Index entries, *Military and National Security*.)

NATURAL GAS. See GAS.

NATURALIZATION. See IMMIGRATION, EMIGRATION, AND NATURALIZATION.

NAURU. This phosphate-bearing coral island (area, 8.22 square miles) lying south of the equator about 2,200 miles northeast of Sydney, New South Wales, has been since 1947 a trust territory of the United Nations, administered jointly by the United Kingdom, New Zealand, and Australian governments, the latter appointing the administrator. The population of 3,503 on June 30, 1955, comprised 1,762 Nauruans; 911 other Pacific islanders; 568 Chinese, recruited from Hong Kong; and 262 Europeans.

The administrator (Reginald Sylvester Leydin in 1955) is advised on native affairs by a local Government Council, which is collaborating in a study of the problem of resettlement of the population—an objective recommended after the visit to the island of a United Nations mission in 1953. Revenue totaled £A303,674 in 1954-55; expenditure, £A276,783 (the Australian pound equals U.S.\$2.24). Services provided by the administration for the Nauruan people include medical services, maternity and infant welfare, and education services up to fourth year secondary school standard. On June 30, 1955, there were 630 native and other pupils in primary and secondary schools; a modern secondary school to accommodate 200 pupils was completed in 1954. A new hospital, costing an estimated £A60,000 was under construction in 1955.

Seven eighths of the male inhabitants are employed by the British Phosphate Commission (owned jointly by the trusteeship powers), which also mines the deposits on Ocean Island, Gilbert and Ellice Colony (see WESTERN PACIFIC ISLANDS, BRITISH), and on Christmas Island (q.v.), a dependency of the colony of Singapore. Phosphate production, totaling 1,237,236 tons for the year ended June 30, 1955, was valued at £A2,165,163. Out of royalty payments on phosphate production, £A108,097 was reserved as of June 30, 1954, in a trust fund for expenditure on social welfare.

NAVAL AFFAIRS. From time immemorial, control of the seas has been exercised by naval ships employing bows and arrows, guns, torpedoes, airplanes, or whatever was the latest weapon. With the U.S. Navy's forward-looking research and development program, and with American industry's full and continued support, the United States is assured that the navy will have the current weapon for the current situation. Currently the United States is moving into complex weapons systems requiring modernizations of great magnitude and urgency.

The navies of the free world can prove to be a great deterrent to a future war. A full-scale war would probably begin with the strategic air forces of each side attempting to destroy each other and the bases from which they fly. The

(Left) U.S.S. *Seawolf*, second atomic-powered submarine, is launched at Groton, Conn., July 21, 1955. (Right) U.S. Navy crew mans diving stations of U.S.S. *Nautilus*, world's first atomic submarine, during test dive early in 1955.

UNITED PRESS: WIDE WORLD

locations of these bases are probably known to potential enemies. But potential enemies do not know where aircraft carrier task forces might be located. These forces would be armed with long-range aircraft carrying atomic bombs, which would be protected by their own defensive screen above, upon, and beneath the seas. Though not invulnerable, they would be difficult to find, difficult to attack, and would possess great strategical striking power. Guided-missile ships might at some future time replace carriers, but the technique would remain the same. Naval air power, therefore, can readily join with land-based power in providing a great deterrent to war.

Minesweeping by Helicopter.—In March 1955 the U.S. Navy announced that recent tests in the Gulf of Mexico employed helicopters of the HRP-1 and the more powerful H-21 types. These helicopters were both equipped with mechanisms for picking up and towing standard minesweeping equipment. The tests showed that a helicopter tows the minesweeping equipment more rapidly than can the navy's fastest minesweepers. The helicopter is capable of sharper turns than a minesweeper, allowing better access to awkwardly placed areas. The helicopter can also tow its equipment through rough water and strong currents without difficulty. Its most important feature, however, is that it is not hazardously exposed to enemy mines.

Experiments encourage the belief that the helicopter, equipped with electronic devices capable of reaching a maximum useful depth of 100 fathoms, can also be used as a mine detector. Helicopters employed in the immediate future would be limited to clearing a channel through which standard surface minesweepers could safely pass to clear adjacent waters. New surface minesweepers have been designed, and new wooden-hulled ships, which have no magnetism to activate hostile magnetic mines, have been added to the fleet.

Biscay Exercise.—During the return of the British Home Fleet from the Mediterranean, a maritime exercise involving ships and aircraft of the fleet and shore-based aircraft of the Fleet Air Arm and the Royal Air Force was held on March 30-31 in the Bay of Biscay and the English Channel. With the Home Fleet were warships of the Royal Netherlands Navy and the U.S. Navy, and submarines of the Royal Navy.

United States Navy. Building Program.—On

July 13, 1955, Congress appropriated \$31,882,815,726 for the Department of Defense, of which \$9,118,079,556 was allotted to the U.S. Navy and Marine Corps. Of this total, \$1,387,634,000 was set aside for the construction of 34 new warships and the reconversion of 28 other vessels. One new carrier of the *Forrestal* class, to be named the *Congress*, is planned, and will be the fifth of this class to be built or to be under construction. Also included are 6 destroyer leaders, 7 destroyers, 4 atomic submarines (one for radar picket work), 3 conventional type submarines, one guided-missile submarine, 2 destroyer-escorts, 2 inshore minesweepers, 2 ammunition ships, one general stores issue ship, 5 patrol vessels, and a number of landing craft to total 14,000 tons. Conversions will include 6 attack aircraft carriers, one heavy cruiser, one guided-missile light cruiser, one guided-missile destroyer, 12 radar picket escort vessels, 2 cable-repairing and cable-laying ships, one seaplane tender, and 4 ocean radar station ships.

Twenty-six new vessels, including the carriers *Forrestal* (commissioned Oct. 2, 1955) and *Saratoga* (launched Oct. 8, 1955) from previous shipbuilding programs, will have been added to the fleet by June 30, 1956. The *Forrestal* class of carriers have canted decks, four high-speed elevators, and heavy arresting gear. They will carry the new A3D's, the navy's heaviest type of plane. The four atomic submarines contemplated in the 1955-56 construction program will be in addition to the *Nautilus*, in commission, and the *Seawolf*, launched July 21, 1955, at Groton, Conn. The navy's first midget submarine, the X-1, arrived at Groton on October 6. This five-man craft weighs only 25 tons and is only 50 feet long. She will be used to test hostile harbor defense installations.

Aircraft.—The president's budget for 1956 called for \$1,101,000,000 to be allotted for naval aircraft and related facilities, as compared with \$1,135,160,000 for 1955. This would provide for 1,600 new modern planes as replacements or new additions.

One of 1955's most important developments was the unveiling by the navy and the Glenn L. Martin Company of the world's first multijet attack seaplane—the XP6M-1 Martin Sea Master. It is a water-based aircraft designed primarily for minelaying and photoreconnaissance, but it can perform other combat tasks. This plane is seen as

indicative of an entirely new concept in naval warfare—creation of a seaplane striking force. It is powered by four Allison J-71 turbojet engines, cruises normally at 40,000 feet, and is capable of speeds of over 600 miles per hour.

In June 1955 the Bureau of Aeronautics revealed that a series of successful test flights had been made with the navy's newest carrier-based jet fighter, the XF8U-1. Its specifications call for a high rate of climb, exceptional combat ceiling, and penetration of the sound barrier in level flight. The new Cutlass F7U-3 all-purpose fighter plane has a top speed of more than 650 miles per hour and is equipped with folding wings and arresting gear for carrier use. The elongated "stinger" tail on the P2V5 Neptune plane is the latest development in antisubmarine warfare weapons. It can seek out enemy submarines hundreds of feet beneath the ocean's surface. Another plane in the 600-mile-per-hour class is the F3H-2N, with a powerful turbojet engine. This was delivered to the navy in June 1955.

Another new aviation development, a "drone" helicopter, has been flown by remote control under the navy's watchful eye for over a year. During recent Caribbean exercises the navy refueled a twin-engine P5M Martin Marlin patrol seaplane from the submarine-oiler, U.S.S. *Gauvina*. This submarine-seaplane refueling will aid in implementing the navy's new concept of mobile sea bases. (See also AERONAUTICS.)

Personnel and Fleet Strength.—On June 30, 1955, the U.S. Navy had about 74,000 officers and 608,000 enlisted men; by June 30, 1956, the navy expects to have 72,800 officers and 584,200 enlisted men, representing a total decrease of 25,000. Officers and men of the U.S. Marine Corps numbered 220,727 on Dec. 31, 1954, and 205,000 on June 30, 1955, a net loss of 15,727.

On June 30, 1955, the navy had 1,066 ships on active duty and 1,374 in reserve. By June 30, 1956, these figures will be changed to 1,001 ships on active duty and 1,464 in reserve. There were about 16,000 planes in the navy; 13,027 on active duty and 3,000 in "mothballs." There will be 10,061 navy and U.S. Marine Corps aircraft in operation in 1956, as opposed to 9,941 on June 30, 1955.

Administration.—Admiral Arthur W. Radford continued through 1955 as chairman of the Joint Chiefs of Staff, but Admiral Robert B. Carney was succeeded as chief of naval operations by Admiral Arleigh A. Burke. Admiral Jerauld Wright continued in command of NATO's Atlantic forces, and Admiral Felix B. Stump remained in command of the Pacific Fleet. Vice Admiral John H. Cassady continued in command of the U.S. Naval Forces, Eastern Atlantic and Mediterranean, and Admiral William M. Fechteler remained as commander, Allied Forces, Southern Europe. Charles S. Thomas continued to serve as secretary of the navy, and Lieut. Gen. Randolph Pate was appointed on Oct. 17, 1955, to succeed Gen. Lemuel C. Shepherd as commandant of the Marine Corps after the turn of the year.

Canadian Navy.—During 1954 the personnel of the Canadian Navy increased by 2,000 officers and men. By the end of 1955, it is hoped that it will reach 21,000. In 1955 there were 49 ships in commission, including an aircraft carrier, the *Magnificent*; 2 cruisers, the *Ontario* and the *Quebec*; 10 destroyer-escorts; one Arctic patrol vessel; 8 frigates; 5 coastal escorts; 8 coastal minesweepers; a repair ship; and 13 small craft. In addition there are 112 naval auxiliary vessels

manned by civilians. The *Magnificent*, on loan from the Royal Navy, will be replaced in 1956 by the *Bonaventure* (formerly the *Powerful*). Work on the *Powerful*, suspended in 1946 by her Belfast builders, was resumed in July 1952. As the *Bonaventure*, she is being redesigned for jet aircraft. Her flight deck will be strengthened, and heavy arresting gear and the new British steam catapult will be installed.

To provide submarines for antisubmarine training in the Canadian Navy, as arranged in 1954 by the Admiralty and the Canadian Naval Board, a new submarine squadron of the Royal Navy has been formed. Known as the 6th Submarine Squadron, it will be made up of three underseas craft, and will be based at Halifax. Canadian personnel, now being trained in Great Britain, eventually will make up 50% of the combined complement.

British Navy.—Since the end of World War II, Great Britain has been cautious about building new large ships because the major navies of the world may be on the eve of great changes. The development of atomic propulsion for ships, ship specialization, and guided missiles will have a profound effect on future naval strategy and tactics. British naval leaders are inclined to wonder whether big ships will have a place in a future navy. It is possible that fleets will consist of small ships, none larger than cruisers and light carriers. The British are disposed to follow a "wait and see" policy, but meanwhile are doing a great deal of small ship building and conversion to strengthen their antisubmarine, antiaircraft, minesweeping, and coastal forces.

Ships under construction in 1955 included 2 cruisers, one of which is being completed for Australia; three 9,950-ton Tiger class cruisers; 26 frigates; 2 experimental type submarines; 101 minesweepers, including 7 for the NATO countries; and 10 coastal craft. New vessels launched by March 31, 1955, included one submarine, the *Excalibur*, 9 frigates, 21 coastal minesweepers, 11 inshore minesweepers, 6 fast patrol boats, and 4 seaward defense boats. Ships accepted into service by the Royal Navy by March 31, 1955, included the 36,800-ton fleet carrier, *Ark Royal*, which was commissioned on February 22; two 20,000-ton light fleet carriers, the *Albion* and the *Bulwark*; 32 coastal minesweepers; 35 inshore minesweepers; 5 fast patrol boats; 12 seaward defense boats; and 3 small submarines.

Estimates (appropriations) of £391,550,000 (\$1,096,340,000) for the Royal Navy for 1955-56 were presented to Parliament on February 22. After allowing for aid from the Mutual Defense Assistance Program and other appropriations-in-aid, the net sum amounted to £340,500,000 (equal to \$963,400,000). This represents a reduction of £12,500,000 from the grant for 1954-55. These appropriations provide for a maximum strength of 133,000 officers and men in April 1956, a reduction of about 6,000 from the previous year.

The active fleet as of May 1955 consisted of one battleship, the *Vanguard*, which the Admiralty announced on Sept. 12, 1955, would go into the "ready" reserve in a few months, 8 carriers, 10 cruisers, one fast minelayer, 7 *Daring*-class 2,610-ton destroyers, 25 smaller destroyers, 52 frigates, 55 minesweepers, 30 coastal craft, 8 large landing vessels, and 7 surveying ships. The following ships were in reserve, undergoing refitting, modernization or conversion: 4 battleships, 7 carriers, 14 cruisers, one ship being converted into a guided-missile ship, 2 fast mine-

layers, one *Daring*-class destroyer, 57 smaller destroyers, 167 frigates, 220 minesweepers, 72 coastal craft, 66 large landing craft, and 8 surveying ships.

In improvements in deck-flying technique, with their angled decks, mirror landing devices, and the development of the steam catapult to full operational standards, the Royal Navy has made definite and lasting contributions to naval aviation, but in actual aircraft it has not kept pace with the U.S. Navy. A single-seat day fighter, the N113, has been ordered for the Fleet Air Arm. The de Havilland 110 has shown great promise as an aircraft and as a gun platform. An order for these planes has been placed for service with the Fleet Air Arm. The Westland Wyvern strike aircraft has proved successful in carrier operation. The Fairey Gannet antisubmarine aircraft is in service, and several squadrons of these planes have been formed. The Sea Venom all-weather fighter has also been brought to a high state of efficiency.

Australian Navy.—The budget for the year 1955-56 was submitted to the Australian Parliament in August 1955. Of a total defense allocation of £190,000,000, £48,834,000 was provided for the navy. The navy's personnel on July 1, 1955, comprised 1,315 officers and 11,899 enlisted men, a total expected to rise to 13,242 by June 30, 1956, including 310 in the women's reserve. There are 27 ships now in commission: 2 light fleet carriers, 2 *Battle*-class and 2 *Tribal*-class destroyers, 6 frigates, one training ship converted from a frigate, one sloop, 5 ocean minesweepers, 3 "T" class 1,090-ton submarines, on loan from the Royal Navy, 3 boom working vessels, one fleet tug, and one fleet tanker. Nine frigates and 22 ocean minesweepers are in reserve. Under a new building program, 8 new ships will be commissioned in 1961, and 5 others reconverted and refitted. The 8 new ships will include 3 *Daring*-class 2,610-ton destroyers, 4 antisubmarine frigates, and a boom defense ship. (These boom defense vessels of 770 tons displacement are designed to remove booms, wrecks, and other harbor and channel obstructions.)

French Navy.—On July 24, 1955, the French National Assembly voted 178.4 billion francs for the navy in 1956. This represents a reduction from a planned 30,000 tons to 21,000 tons in new construction. It was estimated that the French Navy should have 540,000 tons to meet its national and international obligations. With the reduced budget this goal cannot be attained before 1970. The 1956 budget does provide for about 70,000 officers and men and for the construction of one fast destroyer-escort of the Killer type, six 1,750-ton "avisos" (approximate counterparts of American or English frigates or corvettes), six 325-ton coastal escorts, three 750-ton submarines, one midget submarine, three motor patrol boats, and one LST (landing ship tank). The U.S. Senate has approved a measure under which the loan of the carrier *Bois Belleau* has been extended to June 1958.

Construction has commenced at Brest on the 22,000-ton carrier *Clemenceau*, authorized in the 1955 budget. The ship will be 824½ feet long with a designed speed of 32 knots. She will be able to carry 60 airplanes. Construction will be spread over four years at a cost of 22 billion francs. The *Narval*, first submarine built for the French Navy since World War II, was launched on Dec. 12, 1954. She is the 45th French warship to be launched since 1945.

U.S. NAVY

The aircraft carrier U.S.S. *Forrestal*, world's largest naval vessel, moves from her pier at Newport News, Va.

Soviet Navy.—The Soviet Navy has in service 3 old battleships, the *Novorossisk* (the ex-Italian *Giulio Cesare*), the *Oktjabrskaya Revoliutsia*, and the *Sevastopol*, all launched in 1911. Also in service are 6 modern *Kirov*-class heavy cruisers, one old heavy cruiser, 17 new 12,800-ton *Sverdlov*-class light cruisers, one old light cruiser, and 180 destroyers, of which 123 are of the seagoing type. The Soviet Navy has about 375 to 400 underwater craft, including 40 long-range submarines of new construction, most of them fitted with snorkel tubes; 83 long-range, fleet-type submarines, which are less modern but of fairly new construction; 73 medium-range underseas craft; and a large number of small coastal submarines of no great potential value.

At least three cruisers, each displacing about 15,000 tons, are under construction, and perhaps two more. Two large destroyer leaders and 12 smaller coastal-type destroyers are being built, and there are indications that vessels of still another class are being built. Some 25 submarines, and possibly others, may be under construction. It is reported from Sweden that the Soviet Union is building at Nikolaev on the Black Sea two aircraft carriers approaching in size the latest *Forrestal*-type carriers. They are said to displace 55,000 tons, to be 800-1,000 feet long, and to be powered with engines developing 150,000 horsepower, which will enable them to reach a speed of 35 knots.

Spanish Navy.—Despite the age and size of the Spanish Navy, which comprises about 65 combat craft of all categories and 39,000 officers and men, including marines, American naval planners apparently feel that it could be a valuable asset in the naval defenses of the Mediterranean. On May 3, 1955, the United States embassy in Madrid announced that Spain and the United States had signed an agreement on naval aid designed to give Spain a substantial modern naval fleet. The agreement provides for the mod-

ernization of Spanish ships with new armament, radar, fire-control apparatus, and modifications to provide greater comfort for the crews. Some of the equipment will be furnished by the United States and the remainder manufactured in Spain and in other European countries. On June 3, the third American warship (an antimagnetic minesweeper) to be transferred to Spain under the mutual defense agreement signed in 1953, was handed over to the Spanish ambassador at the Brooklyn Navy Yard. (See also the Index entry, *Naval Affairs*.)

Librarian, United States Naval Academy.

NAVY, U.S. See **NAVAL AFFAIRS.**

NEBRASKA. Central state, United States; admitted to the Union, March 1, 1867. The "Cornhusker State" ranks 14th in area and 34th in population (1955) among the 48 states.

Area and Population.—Area: 77,227 square miles (land, 76,663; inland water, 564), divided into 93 counties. Population: (1950) 1,325,510; (est., July 1, 1955) 1,369,000. Urban places with 1950 populations above 10,000 are as follows:

Beatrice.....	11,813	Lincoln (capital)....	98,884
Fremont.....	14,762	Norfolk.....	11,335
Grand Island.....	22,682	North Platte.....	15,433
Hastings.....	20,211	Omaha.....	251,117
Kearney.....	12,115	Scottsbluff.....	12,858

Executive.—Chief state officers in 1955:

Governor: Victor E. Anderson (Republican)
Lieutenant Governor: Charles J. Warner
Secretary of State: Frank Marsh
Treasurer: Ralph Hill
Attorney General: Clarence S. Beck
Commissioner of Education: Fremont Decker

Constitution and Judiciary.—The present constitution went into effect in 1875. The Supreme Court comprises seven justices; chief justice in 1955 was Robert Simmons. On Feb. 11, 1955, the court ruled that the Nebraska "fair trade" act of 1937 was unconstitutional.

Legislature.—Nebraska is the only state having a unicameral legislature. This nonpartisan body of 43 members meets in odd-numbered years commencing the first Tuesday in January. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$123,911,105.03; expenditures, \$121,213,741.02; long-term indebtedness, \$35,640,904.51.

Taxation.—State tax revenue (1954-55 fiscal year): \$93,192,660.43, including \$27,996,664.21 from selective sales and gross receipts taxes, and \$19,096,989.36 from property taxes. The state has no general sales, individual income, corporate income, or poll tax.

Banking.—On June 30, 1955, the state's 123 national banks had \$1,106,575,000 in assets, \$896,402,000 in demand deposits, and \$117,153,000 in time deposits; the state's 292 other banks had \$451,091,638.26 in assets, \$360,027,640.80 in demand deposits, and \$48,964,033.98 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary schools in the 1953-54 school year were \$57,250,740.62 (\$254.54 per pupil); revenue receipts comprised \$55,849,213 from local school districts, \$3,126,391 from the state, and \$1,950,571 from the federal government. Teachers' salaries averaged \$2,829.28 (high school teachers, \$3,695.81; elementary school teachers, \$2,510.51).

In the 1953-54 school year there were an estimated 4,500 public elementary schools with 9,080 teachers and 189,022 pupils; 485 public secondary schools with 3,341 teachers and 60,898 pupils; 255 private and parochial elementary and secondary schools with 1,338 teachers and 35,584 pupils; and (1955-56) 4 state teachers colleges with 219 teachers and 2,886 students.

Social Welfare.—Public welfare expenditures from state and federal funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$15,576,566.40, including \$12,096,453.80 for old-

age assistance, \$2,913,623.73 for dependent children, and \$566,488.93 for the needy blind; a monthly average of 27,787 persons received public assistance. Expenditures for health and welfare institutions were \$8,617,269.55, excluding \$1,136,970.46 for construction and improvements; and for correctional and penal institutions totaled \$2,061,165.90, excluding \$473,337.74 for construction and improvements.

NEBRASKA WELFARE INSTITUTIONS

(As of July 1, 1955)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic...	1	2,008
Hospitals for the mentally ill.....	3	4,746
Sanatoriums for the tubercular.....	1	143
Schools for the blind.....	1	46
Schools for the deaf.....	1	167
Hospitals for crippled children.....	1	62
Homes for dependent children.....	1	95
Soldiers and sailors homes.....	1	193*
Training schools for delinquent boys.....	1	189
Training schools for delinquent girls.....	1	83
Reformatories for males.....	1	303
Reformatories for females.....	1	35
Prisons.....	1	692
Psychiatric institutes.....	1	35

* Includes veterans widows.

Labor Force.—The labor force in June 1955 numbered 615,200, including 172,300 agricultural workers. Nonagricultural employment was 360,600, and for the year ending August 1955 averaged 351,600. There were 1,660 registered unemployed workers in August 1955, and the state paid \$5,003,076 in unemployment compensation during 1954.

Manufacturing.—Establishments numbered 1,600 in 1955. There were 57,558 workers in 1953 who received \$210,973,000 in salaries and wages; value added by manufacture totaled \$401,398,000 and investment in new plant and equipment was \$36,031,000. Earnings of production workers in manufacturing averaged \$67.50 for an average work week of 41.7 hours in 1954, and \$71.46 for 42.9 hours in the first six months of 1955. The state's leading industry, food and kindred products, paid \$93,864,000 in wages to 25,892 employees in 1953, and added \$203,237,000 in value by manufacture.

Mining.—Nebraska ranked 37th among the states in 1953 in the value of its mineral output, which represented 0.23% of the United States total.

NEBRASKA MINERAL PRODUCTION, 1955¹

(In short tons except as noted)

Mineral	Quantity	Value
Clay.....	190,000	\$ 190,000
Natural gas (million cu. ft.).....	7,000	819,000
Petroleum (1,000 bbl.).....	9,158	25,184,500
Sand and gravel.....	9,000,000	7,200,000
Stone.....	1,950,000	2,830,000
Other minerals ²	...	10,708,500
Total.....	...	46,932,000

¹ Preliminary. ² Excluding uranium. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income in the first half of 1955 totaled \$469,765,000, and for the full year 1954 comprised \$723,222,000 from livestock and livestock products, \$336,028,000 from crops, and \$8,629,000 from government payments: Receipts from principal crops and livestock in 1954 included: cattle, \$413,940,000; hogs, \$179,325,000; wheat, \$144,460,000; corn, \$122,230,000; and dairy products, \$50,145,000.

The state's 100,846 farms (47,486,580 acres; harvested cropland, 18,870,341) averaged 470.9 acres and \$34,482 in value of land and buildings

per farm in 1954. There were 73,132 farms with telephones and 95,366 with electricity. Livestock on farms (Jan. 1, 1955) included 5,016,000 cattle, 778,000 sheep, 2,453,000 hogs, and 12,342,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 183,796 family and hired workers were engaged in farming.

NEBRASKA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Barley (1,000 bu.)	7,560	4,500	4,000
Beans, dry edible (1,000 bags)	967	1,226	1,247
Corn (1,000 bu.)	228,658	196,000	95,200
Hay (1,000 tons)	5,102	6,443	5,491
Oats (1,000 bu.)	57,982	68,266	54,470
Popcorn (1,000 lb.)	18,714	21,600	12,650
Potatoes (1,000 bu.)	8,969	4,620	4,600
Rye (1,000 bu.)	2,458	1,550	1,886
Sorghum grain (1,000 bu.)	2,346	13,416	7,843
Sugar beets (1,000 short tons)	699	786	666
Wheat (1,000 bu.)	77,578	61,623	78,255

(Source; U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$28,312,093, and newly completed construction and reconstruction aggregated 516 miles.

Highways and roads on Dec. 31, 1954, totaled 104,257 miles (44,324 surfaced). Registered *motor vehicles* numbered 705,575 in 1954, including 483,839 passenger cars. There were 6 *railroads* (1954) operating 6,290.12 line miles and, 1955, 3 regularly scheduled *airlines* and 248 *airports and airfields* (86 commercial and municipal, 2 military, 20 private, 134 personal use and 6 state).

Communications media (1955) included 28 *AM radio stations* and 5 *VHF operating television outlets*; 20 daily *newspapers* (circulation, 488,434) and 300 other newspapers (circulation, 454,529); and (Jan. 1, 1955) 111,450 business and 342,759 residential *telephones*.

Principal Events, 1955.—Rainfall during the 1955 growing season was only about 70% of normal, except in the western section, where it was slightly above normal. July and August, critical months for corn, the state's principal crop, were particularly hot and dry. As a result, corn production was less than half of the average for the preceding 10 years. Wheat, the second crop, was not so seriously affected, and output was slightly above the 10-year average. The drought emphasized the importance of irrigation: irrigated corn, growing on 11% of the state's corn acreage, accounted for 43% of the total crop. Irrigation, particularly from wells, continued to increase.

By December 10, 11-month figures indicated that Omaha had supplanted Chicago as the nation's chief livestock center. Some 6,099,642 cattle and calves, hogs, and sheep had been received in the Nebraska city, as compared with 5,710,616 in Chicago.

The legislature, holding the longest session in the state's history, adopted a record budget for state government of \$223,664,676. Among the 354 laws passed—second only to the 369 adopted in 1953—were measures creating a retirement system for district and Supreme Court judges; providing for forming or enlarging junior college districts; providing for the establishment of a historical museum and state park at Fort Robinson, a military post in northwestern Nebraska used since World War II primarily as a beef cattle research station; furnishing funds for the construction of a new governor's mansion;

and prohibiting the depositing of refuse along the state's highways. A controversial proposal for a ton-mile tax on trucks was defeated, and the Nebraska Turnpike Authority, created in 1953, was abolished.

A series of riots in August by convicts at the state penitentiary in Lincoln resulted in the destruction by fire of five buildings, with damage estimated in excess of \$100,000. These disorders, combined with disturbances at the state reformatory for men on August 22 and September 9, and previous troubles at the penitentiary on March 27-30, brought extensive discussion of the administration of the state's penal institutions.

At the beginning of 1955, Omaha dedicated a new civic auditorium. During the summer, construction began on a similar building in Lincoln.

Principal Events by: JAMES C. OLSON,
Director, Nebraska State Historical Society;
Author, "History of Nebraska" (1955).

NECROLOGY, 1955. Following is a selected list of prominent persons who died in 1955. Biographical articles on those whose names are marked with an asterisk (*) may be found under their own headings in this volume.

- Abend, Hallett (66), former Far East correspondent of *New York Times* and author of books on Far East: d. Sonoma, Calif., Nov. 27
- Abt, Isaac A. (87), pioneer in pediatrics; author of works on pediatrics and editor (for nearly 40 years) of *Yearbook of Pediatrics*: d. Chicago, Nov. 22
- *Adler, Maj. Gen. Julius Ochs (62), first vice president and general manager of *New York Times*: d. New York City, Oct. 3
- Agee, James (45), poet, motion picture critic, author of film scenarios and other writings: d. New York City, May 16
- Agganis, Harry (25), first-baseman of Boston Red Sox and former football star of Boston University: d. Cambridge, Mass., June 27
- Aiton, Arthur S. (61), professor of Hispanic-American history, University of Michigan, after 1929; author of historical works: d. Battle Creek, Mich., Dec. 29
- Allee, Warder C. (69), head of department of biology, University of Florida, after 1950; authority on animal sociology: d. Gainesville, Fla., Mar. 18
- Allen, William R. (70), professor of zoology, University of Kentucky, after 1930; author of works on zoology: d. Lexington, Ky., Apr. 7
- *Allward, Walter S. (78), Canadian sculptor; designed Canada's World War I memorial on Vimy Ridge, France: d. Toronto, Apr. 24
- Altrincham, Lord (Edward Grigg) (76), British politician and administrator; head of British home defense system, 1940-42: d. Badminton, Eng., Dec. 1
- Amery, Leopold S. (81), British Conservative member of Parliament for 34 years; secretary of state for India and Burma, 1940-45: d. London, Sept. 16
- Archibald, Raymond C. (79), professor of mathematics, Brown University, 1923-43; authority on history of mathematics: d. Sackville, New Brunswick, July 26
- Arciszewski, Tomasz (78), premier of Polish Government-in-Exile, 1944-45: d. London, Nov. 20
- Arnheim, Gus (57), band leader and songwriter; wrote *I Surrender Dear* and other hits: d. Los Angeles, Jan. 19
- Arnold, Seth (70), veteran stage and screen actor: d. New York City, Jan. 3
- Arze, José A. (51), Bolivian professor of law and sociology; a founder of Party of the Revolutionary Left and twice a presidential candidate: d. Cochabamba, Bolivia, Aug. 23
- Ascarei, Alberto (86), Italian auto racing champion; winner of world championships in 1952 and 1953: d. Monza, Italy, May 26
- *Avila Camacho, Manuel (58), president of Mexico, 1940-46: d. near Mexico City, Oct. 13
- Ayers, Lemuel (40), scenic designer for *Oklahoma!* and many other Broadway hit shows and plays: d. New York City, Aug. 14
- Ayers, Roy E. (72), Democratic governor of Montana, 1936-41: d. Lewistown, Mont., May 23
- Baird, David, Jr. (74), Republican senator from New Jersey, 1929-30; lumber and insurance executive: d. Camden, N.J., Feb. 28
- Baker, Leonard T. (87), former dean and president of University of South Carolina: d. Columbia, S.C., Jan. 5
- Ball, George A. (92), glass-jar industrialist, railroad financier, and philanthropist: d. Muncie, Ind., Oct. 22

- Ball, Suzan (22), motion picture and TV actress: d. Hollywood, Calif., Aug. 5
- Ballou, Richard B. (44), chairman of department of social bases of education, Rutgers University, after 1954: d. Highland Park, N.J., Apr. 18
- *Bara, Theda (Theda Bara Brabin) (65), star of silent motion pictures: d. Los Angeles, Apr. 7
- Barclay, Edwin James (73), president of Liberia, 1930-44: d. Liberia, Nov. 6
- Barou, Noah (65), Russian-born British leader of world Jewry; chairman of European Executive of World Jewish Congress after 1948: d. London, Sept. 5
- Battle, William J. (84), classical scholar and acting president of University of Texas, 1914-16: d. Rocky Mount, N.C., Oct. 9
- Bauer, Marion E. (67), composer, music teacher, and author of books on music: d. South Hadley, Mass., Aug. 9
- Baumeister, Willi (66), German abstractionist painter: d. Stuttgart, Germany, Sept. 1
- Baumgartner, Stanwood F. (60), former major league baseball pitcher and sports writer for Philadelphia *Inquirer*: d. Philadelphia, Oct. 4
- Bay, Charles U. (67), ambassador to Norway, 1946-53: d. New York City, Dec. 31
- Beecher, Janet (70), veteran actress of Broadway stage and screen: d. Washington, Conn., Aug. 6
- Bentley, Madison (84), chairman of department of psychology, Cornell University, 1928-38; author and editor: d. Palo Alto, Calif., May 29
- Benziger, August (88), Swiss-born portrait painter; subjects included presidents, popes, and other prominent personages: d. New York City, Apr. 13
- Berge, Wendell (52), head of Anti-trust Division, Department of Justice, 1943-47; author of books on monopoly and competition: d. Washington, D.C., Sept. 24
- Bergstrom, George E. (79), architect; president of American Institute of Architects, 1939-40: d. Orange, Calif., June 17
- Berkey, Charles P. (88), geologist and water supply expert; head of geology department, Columbia University, 1914-39: d. Palisade, N.J., Aug. 22
- *Bernardes, Artur da Silva (79), president of Brazil, 1922-26: d. Rio de Janeiro, Mar. 23
- *Bethune, Mary McLeod (79), Negro educator and public official: d. Daytona Beach, Fla., May 18
- Bhatnagar, Sir Shanti Swarup (59), Indian scientist; professor of chemistry and director of chemical laboratories, University of the Punjab, 1924-40: d. (reported) New Delhi, Jan. 1
- Bigelow, Maurice A. (82), professor of biology, Columbia University, 1907-39; author of books on hygiene and sex education: d. Peekskill, N.Y., Jan. 6
- Birchall, Frederick T. (84), journalist; acting managing editor of the *New York Times*, 1926-1931: d. near Bridgewater, Nova Scotia, Mar. 7
- Bishop, William W. (93), librarian for University of Michigan, 1915-41; president of International Library Federation, 1932-35: d. Ann Arbor, Mich., Feb. 19
- Black, William H. (87), justice of New York State Supreme Court, 1922-39; author of books on travel and legal subjects: d. Atlanta, Ga., Aug. 23
- Blackwell, Carlyle (71), star of silent films; appeared in some 300 movies: d. Miami, Fla., June 17
- Blake, Edwin M. (87), mathematician and scientist; professor of mathematics and mechanics, University of Arizona, 1904-10: d. Chappaqua, N.Y., Dec. 20
- Bliss, Henry E. (85), librarian and author; developed system of bibliographic classification: d. Plainfield, N.J., Aug. 9
- Boas, Ernst P. (64), authority on heart and chronic diseases; teacher and author of books on medical problems: d. New York City, Mar. 9
- Boucher, Chauncey S. (69), educator and historian; chancellor of University of Nebraska, 1938-48: d. Petoskey, Mich., Aug. 13
- Boyce, Sir Leslie (59), lord mayor of London, 1951-52; Conservative member of Parliament, 1929-45: d. Gloucester, Eng., May 30
- Brace, Donald C. (73), publisher; cofounder and former president of Harcourt, Brace & Co.: d. New York City, Sept. 20
- Braun, Otto (83), German Social Democratic leader; premier of Prussia during Weimar Republic: d. Locarno, Switzerland, Dec. 15
- Breguet, Louis (75), French pioneer in aircraft development; leading airplane manufacturer: d. Paris, May 4
- Brett, Agnes B. (79), numismatist; author of books on ancient Greek and Roman coins: d. Marblehead, Mass., Dec. 26
- Bridoux, Gen. Eugène (67), secretary of state for war, in Vichy government of France during World War II: d. Madrid, Spain, June 6
- Brown, Benjamin W. (57), director of dramatic productions, Brown University, after 1939; author of books and articles on theater: d. Providence, R.I., Jan. 7
- Brown, Fred H. (75), Democratic governor of New Hampshire, 1923-24, and U.S. senator, 1933-39: d. Somersworth, N.H., Feb. 3
- Brown, Louis F. (77), professor of history, Vassar College, 1934-44; author of several historical works: d. Norfolk, Va., May 1
- Brown, William R. (80), forestry management expert and conservationist; former director of American Forestry Association: d. Dublin, N.H., Aug. 4
- Brues, Charles T. (76), professor of entomology, Harvard University, 1935-46; author of works on insects: d. Crescent City, Fla., July 22
- Bruno, Frank J. (81), head of sociology department and professor of applied sociology, Washington University (St. Louis), 1926-52: d. Lebanon, Ind., Aug. 7
- Bryan, Charles F. (43), American composer and authority on folk music: d. Pinson, Ala., July 7
- Bryan, William L. (95), president of Indiana University, 1902-37: d. Bloomington, Ind., Nov. 21
- Bryant, Vice Adm. Eliot H. (59), submarine commander in Pacific during World War II: d. Annapolis, Md., Oct. 16
- Buchanan, Vera D. (53), Democratic representative from Pennsylvania after 1951: d. McKeesport, Pa., Nov. 26
- Buck, Carl D. (88), professor of comparative philology, University of Chicago, 1900-33; author of *A Dictionary of Selected Synonyms* (1949) and other works: d. Chicago, Feb. 8
- Bukofzer, Manfred (45), German-born musicologist and authority on medieval music; professor of music, University of California, after 1947: d. Oakland, Calif., Dec. 7
- Burkhard, Willy (55), Swiss composer of choral music and other works: d. Zurich, Switzerland, June 18
- Burns, Robert E. (63), author of *I Was a Fugitive from a Georgia Chain Gang*: d. East Orange, N.J., June 5
- Burns, Tommy (Noah Brusso) (73), world's heavyweight boxing champion, 1906-1908: d. Vancouver, B.C., May 10
- Busse, Henry (61), German-born orchestra leader and trumpet player; leader in "sweet" jazz: d. Memphis, Tenn., Apr. 23
- Butler, Robert (58), first U.S. ambassador to Australia, 1946-48: d. New York City, Sept. 15
- Byrd, Sam (47), actor, producer, and novelist; played in original Broadway production of *Tobacco Road*: d. Durham, N.C., Nov. 14
- Cahill, Lily (69), actress of Broadway and London stage: d. San Antonio, Texas, July 20
- Calder, Curtis E. (64), utilities executive; director general of War Production Board during World War II: d. New York City, Apr. 2
- Cameron, Donald (66), Canadian-born actor of stage and screen: d. West Cornwall, Conn., July 11
- Cameron, George T. (82), editor and publisher of *San Francisco Chronicle*: d. San Francisco, Oct. 3
- Carlyle, William L. (84), Canadian animal husbandry specialist and educator: d. Calgary, Alberta, Aug. 5
- *Carnegie, Dale (66), author of *How to Win Friends and Influence People* (1936): d. New York City, Nov. 1
- Carter, Amos G. (75), publisher of *Fort Worth Star-Telegram*: d. Fort Worth, Texas, June 23
- Casati, Alessandro (74), Italian minister of war in 1944 and 1945: d. Milan, June 4
- Cash, William W. (75), bishop of Worcester, Eng., after 1941; general secretary of Church Missionary Society, 1926-41: d. Worcester, Eng., July 18
- Chace, Malcolm G. (80), financier; leader in Northeast textile and electric power industries: d. Hyannis, Mass., July 16
- *Chase, Harry W. (72), university administrator; chancellor of New York University (1933-51): d. Sarasota, Fla., Apr. 20
- Chaumeix, André (80), French journalist; member of French Academy after 1930: d. Paris, Feb. 23
- Chekhov, Michael (64), Russian-born stage and film actor and director: d. Hollywood, Calif., Sept. 30
- Clarendon, Earl of (George H. H. Villiers) (78), lord chamberlain to King George VI; governor general of South Africa, 1930-37: d. London, Dec. 13
- Clark, Alva B. (65), research engineer in telephone industry; vice president of Bell Telephone Laboratories, 1944-55: d. New York City, Nov. 14
- Clark, D. Worth (53), Democratic senator from Idaho, 1939-44: d. Los Angeles, June 19
- Clark, Edgar M. (85), former vice president and director of Standard Oil Company of New Jersey, and co-inventor of cracking process: d. Phoenix, Ariz., July 31
- Clarke, William H. (52), Canadian publisher; president of Clarke, Irwin & Co.: d. Toronto, July 31
- *Claudel, Paul (86), French poet, playwright, and diplomat: d. Paris, Feb. 23
- Coe, William R. (85), insurance executive, philanthropist, and sportsman; operated large racing stable: d. Palm Beach, Fla., Mar. 14
- *Coffin, Robert P. Tristan (62), American poet and educator: d. Portland, Me., Jan. 20
- Colby, Charles W. (88), Canadian historian and business-

- man; author of works on Canadian history: d. Montreal, Dec. 10
- Coleman, Sydney H. (69), executive vice president of ASPCA, 1930-51; president of American Humane Association, 1927-46: d. Hollywood, Fla., Mar. 22
- *Collier, Constance (Laura Constance Hardie) (75), English-born stage and screen actress: d. New York City, Apr. 25
- Colvin, Mamie W. (72), president of Woman's Christian Temperance Union, 1944-53: d. Clearwater, Fla., Oct. 30
- Comfort, William W. (81), president of Haverford College, 1917-40: d. Haverford, Pa., Dec. 23
- Concheso, Aurelio F. (56), Cuban educator and diplomat; ambassador to U.S., 1941-44: d. Mexico, Nov. 11
- Corbett, Col. James E. (Jim) (80), British big-game hunter; author of *Man-Eaters of Kumaon* (1946) and other books: d. Nyeri, Kenya, Apr. 19
- *Côté, Alcide (52), postmaster general of Canada after 1952: d. Ottawa, Aug. 7
- Coudert, Frederic R. (84), international lawyer; president of American Society of International Law, 1942-46: d. New York City, Apr. 1
- Crane, Arthur G. (77), Republican acting governor of Wyoming, 1949-51; president of University of Wyoming, 1922-41: d. Cheyenne, Wyo., Aug. 11
- Crouch, Paul (52), former Communist who later served as informer in trials of Communists: d. San Francisco, Nov. 18
- Crowther, Frank (85), Republican congressman from New York, 1918-42: d. Pueblo, Colo., July 20
- Crozier, William J. (63), authority on vision; professor of general physiology, Harvard University, after 1927: d. Cambridge, Mass., Nov. 2
- *Culbertson, Ely (64), Russian-born contract bridge expert; author of books on peace: d. Brattleboro, Vt., Dec. 27
- Curley, William A. (81), editor of *New York Journal-American*; assistant editor in chief of Hearst Consolidated Publications, after 1942: d. New York City, Oct. 23
- Curtis, Lionel G. (83), British author of works on international politics; adviser on Commonwealth problems: d. near Oxford, Eng., Nov. 24
- Cushing, Harry A. (84), lawyer and historian; former acting dean and professor of criminal law at Columbia University Law School: d. Winsted, Conn., Sept. 6
- *Dávila, Carlos (68), Chilean diplomat; secretary general of Organization of American States: d. Washington, D.C., Oct. 19
- Davis, Edward K. (75), American aluminum industrialist; president of Aluminium Limited, of Montreal, 1928-47: d. Marston Mills, Mass., Mar. 9
- Davis, George H. (79), grain executive; president of U.S. Chamber of Commerce, 1937-38: d. Kansas City, Mo., May 5
- Davis, Jesse B. (84), dean of School of Education, Boston University, 1935-42: d. Newton, Mass., Nov. 2
- *Davis, John W. (81), constitutional lawyer; Democratic candidate for president in 1924: d. Charleston, S.C., Mar. 24
- Deakin, Arthur (64), British labor leader; general secretary of Transport and General Workers Union after 1945: d. Leicester, Eng., May 1
- *Dean, James (24), American actor: d. (automobile crash) near Paso Robles, Calif., Sept. 30
- Dearborn, Walter F. (76), pioneer in educational psychology; professor of education, Harvard University, 1917-47: d. St. Petersburg, Fla., June 21
- Deat, Marcel (60), pro-Nazi French minister in Vichy government in World War II; condemned to death *in absentia*: d. Turin, Italy, Jan. 5
- Deimel, Richard F. (74), professor of mechanical engineering, Stevens Institute of Technology, 1934-52; expert on gyroscope: d. North Adams, Mass., Sept. 28
- *de Jong, Johannes Cardinal (69), archbishop of Utrecht: d. Amersfoort, Netherlands, Sept. 8
- de la Huerta, Adolfo (72), provisional president of Mexico in 1920: d. Mexico City, July 9
- de Matos, Gen. José Mendes Ribeiro Norton (88), Portuguese military and political leader; ambassador to Britain, 1923-26: d. Ponte do Lima, Portugal, Jan. 2
- de Mille, William C. (76), playwright and film director and producer; author of *The Warrens of Virginia*: d. Los Angeles, Mar. 5
- Denny, George H. (84), educator; president of Washington and Lee University, 1901-11, and University of Alabama, 1912-37: d. Lexington, Va., Apr. 2
- Dession, George H. (49), professor of law, Yale University, after 1938: d. Boulder, Colo., June 20
- Deutsch, Monroe E. (76), educator and author; vice president of University of California, after 1930: d. San Francisco, Oct. 21
- Deviny, John J. (72), public printer of U.S., in charge of Government Printing Office, 1948-53: d. Washington, D.C., Feb. 10
- Devoe, Alan (45), naturalist and author of books and articles on animals: d. New York City, Aug. 17
- *De Voto, Bernard (58), literary critic and historian: d. New York City, Nov. 13
- d'Humy, Fernand E. (82), communications engineer, inventor, and executive; author of religious books: d. Chappaqua, N.Y., Dec. 22
- Dingell, John D. (61), Democratic congressman from Michigan after 1933; led fight for national health insurance plan: d. Washington, D.C., Sept. 19
- Donaldson, Arthur (86), Swedish-born actor, singer, and producer; credited with producing first talking picture: d. Long Island, N.Y., Sept. 28
- *Downes, Olin (69), music critic, author, and lecturer: d. New York City, Aug. 22
- Drexel, Mary Katherine (96), founder of Sisters of the Blessed Sacrament for Indians and Colored People: d. Philadelphia, Mar. 3
- *Duff, Sir Lyman P. (90), chief justice of Supreme Court of Canada, 1933-44: d. Ottawa, Apr. 26
- Duffy, Frank (94), secretary general of United Brotherhood of Carpenters and Joiners, 1902-50; vice president of AFL, 1918-50: d. Indianapolis, Ind., July 11
- Dunn, Robert (78), explorer, author, and newspaper correspondent: d. Katonah, N.Y., Dec. 24
- Durkin, Martin P. (61), union leader and secretary of labor (1953): d. Washington, D.C., Nov. 13
- Duval, Gen. Raymond-Francis (63), commander in chief of French forces in Morocco after 1950: d. (air crash) near Kasba Tadla, French Morocco, Aug. 22
- Egas Moniz, Antonio Caetano de Abreu Freire (81), Portuguese surgeon; winner of Nobel Prize in medicine, 1949: d. Lisbon, Dec. 13
- Egloff, Gustav (69), petroleum scientist; held some 300 patents and wrote several works on petroleum processing: d. Chicago, Apr. 29
- *Einstein, Albert (76), world-known physicist, mathematician, and author of relativity theory: d. Princeton, N.J., Apr. 18
- Elliott, Madge (59), London-born stage and TV actress and dancer: d. New York City, Aug. 8
- *Enesco, Georges (73), Rumanian-born composer, violinist, and conductor: d. Paris, May 4
- Engstrand, Stuart (51), author of *The Sling and the Arrow* (1947) and other novels: d. (suicide) Los Angeles, Sept. 8
- Espiña de Serna, Concha (76), Spanish author of over 30 novels and other works: d. Madrid, May 19

- *Putnam, Herbert (93), librarian of Congress, 1899-1939; d. Woods Hole, Mass., Aug. 14
- Raemisch, Waldemar (67), German-born sculptor; head of sculpture department, Rhode Island School of Design, after 1939; d. Rome, Italy, Apr. 14
- Ray, E. Lansing (71), editor and publisher of *St. Louis Globe-Democrat*; d. Rye Beach, N.H., Aug. 30
- Raycroft, Joseph E. (87), first chairman of department of physical education and athletics, Princeton University, 1911-36; d. Trenton, N.J., Sept. 30
- Reavis, William C. (73), professor of education, University of Chicago, 1929-47; author of many studies on education; d. Chicago, June 1
- Redmond, Daniel G. (59), editor and publisher of *Current History* magazine; d. Philadelphia, Feb. 21
- Reed, Guilford B. (67), Canadian medical scientist; professor of bacteriology, Queen's University, 1919-54; d. Montreal, Feb. 21
- Reid, Albert T. (83), muralist, cartoonist, and illustrator; national vice president, American Artists Professional League, after 1928; d. New York City, Nov. 26
- Renner, George T. (55), professor of geography, Teach-

- ers College, Columbia University, after 1939; author and editor: d. Leonia, N.J., Oct. 14
- Reynolds, Richard S. (73), financier and industrialist; chairman of board, Reynolds Metal Company: d. Richmond, Va., July 29
- Rice, Richard A. (77), professor of English, Smith College, 1916-46; expert on Byron: d. Northampton, Mass., Aug. 6
- Riezler, Kurt (73), German-born philosopher and scholar; professor of philosophy, New School for Social Research, 1939-52: d. Munich, Germany, Sept. 7
- Riskin, Robert (58), screen writer; winner of "Oscar" for *It Happened One Night* (1934): d. San Fernando, Calif., Sept. 20
- Rist, Charles (81), French economist and financial adviser; founder of Institute of Scientific Economics and Social Research: d. Paris, Jan. 11
- Robbins, Reginald C. (85), author of poetical and philosophical works; founder of Robbins Library of Philosophy and Psychology, Harvard University: d. Santa Barbara, Calif., Nov. 19
- *Roberts, Owen J. (80), justice of U.S. Supreme Court, 1930-45: d. Chester Springs, Pa., May 17
- Roberts, William A. (57), industrialist; president of Allis-Chalmers Manufacturing Co., after 1951: d. Milwaukee, Wisc., Apr. 12
- Robertson, Robert S. (84), Canadian jurist; chief justice of Ontario, 1938-52: d. Toronto, May 28
- Robins, Edward H. (74), veteran actor of Broadway stage: d. Paramus, N.J., July 27
- Rochas, Marcel (53), French perfume manufacturer and former dress designer: d. Paris, Mar. 14
- Roechling, Hermann (82), former head of Roechling Steel Works in Saar: d. Mannheim, Germany, Aug. 24
- Rosenfarb, Joseph (51), labor arbitrator and author of books on law, labor relations, economics, and military strategy: d. New York City, Sept. 9
- Rosenthal, Nathan (65), pioneer in hematology; authority on leukemia and other diseases of blood: d. New York City, June 29
- Ross, Anthony (46), actor on Broadway stage; featured in *Bus Stop* and other plays: d. New York City, Oct. 25
- Rothschild, Baron Louis de (72), member of famous banking family and former head of Vienna bank; ransomed from Nazis for \$21 million in 1939: d. Jamaica, B.W.I., Jan. 15
- Rubinstein, Serge (46), Russian-born financier and convicted draft-dodger: d. (murdered) New York City, Jan. 27
- Rudd, Thomas B. (56), president of Hamilton College, 1947-49; president and treasurer of Munson-Williams-Proctor Arts Institute (Utica, N.Y.), after 1935: d. Clinton, N.Y., Apr. 11
- Rupprecht, Crown Prince (86), descendant of British royal house of Stuart, and pretender to throne of Bavaria: d. near Starnberg, Germany, Aug. 2
- Sack, Alexander N. (64), Russian-born professor of law, New York University, 1933-44, and author of numerous legal studies: d. New York City, May 30
- Sakall, S. Z. (62), Hungarian-born character actor of films: d. Hollywood, Calif., Feb. 12
- Salter, Robert M. (63), chief of soils research, Department of Agriculture, after 1953: d. Washington, D.C., Sept. 13
- Sauer, William E. (80), medical educator; professor of otolaryngology, St. Louis University School of Medicine, 1922-45: d. St. Louis, Mo., Sept. 3
- Schachner, Nathan (60), historian, lawyer, and author of biographies, novels, and other works: d. New York City, Oct. 2
- Schenck, Eunice M. (70), professor emeritus of French, Bryn Mawr College, and dean of graduate school, 1929-42: d. Port Jefferson, N.Y., May 6
- Schieffelin, William J. (89), wholesale drug industrialist; crusader for Negro education and other humanitarian causes: d. New York City, Apr. 29
- Schlichter, Rudolf (65), German surrealist painter; founder of Dadaism in Germany: d. Munich, May 4
- Schneider, Hannes (64), Austrian-born ski instructor; developed Arlberg technique: d. North Conway, N.H., Apr. 26
- Schulman, Samuel (91), leader of Reform Judaism; former rabbi of Temple Emanu-El (New York City): d. New York City, Nov. 2
- Schuyler, Montgomery (78), banker and state department aide; envoy extraordinary and minister plenipotentiary to El Salvador, 1921-25: d. Middletown, N.Y., Nov. 1
- Schwartz, Harry H. (86), Democratic senator from Wyoming, 1937-42: d. Casper, Wyo., Apr. 24
- *Scott, Walter D. (86), president of Northwestern University, 1920-39: d. Evanston, Ill., Sept. 23
- Seiberling, Frank A. (95), pioneer rubber industrialist; founder of Goodyear Tire and Rubber Co. (1898): d. Akron, Ohio, Aug. 11
- Seidlin, Samuel M. (59), endocrinologist; among first to use radioisotopes in treatment of thyroid diseases: d. New York City, Jan. 2
- Seillière, Baron Ernest (89), French philosopher, historian, and biographer; member of French Academy: d. Paris, Mar. 15
- Sherman, Henry C. (79), emeritus professor of chemistry, Columbia University; head of Bureau of Human Nutrition, U.S. Department of Agriculture, in World War II: d. Rensselaer, N.Y., Oct. 7
- Sherrill, James W. (64), authority on metabolic diseases; devised standard treatment for diabetes: d. La Jolla, Calif., Jan. 4
- Sherwin, Belle (87), suffragette; president of National League of Women Voters, 1924-34: d. Cleveland, July 9
- *Sherwood, Robert E. (59), playwright and author: d. New York City, Nov. 14
- Sherwood, Margaret P. (90), professor of English literature, Wellesley College, 1912-30; author of novels and other works: d. Wellesley, Mass., Sept. 24
- *Shulman, Harry (51), educator, legal scholar, and labor arbitrator: d. Hamden, Conn., Mar. 20
- Simmons, George F. (60), president of Montana State University, 1936-41: d. Glen Ellyn, Ill., July 19
- Simon, Viscountess (Kathleen Harvey Simon) (83), British welfare worker and foe of slavery; author of *Slavery* (1929): d. London, Mar. 27
- Simpson, Alfred D. (64), professor of education, Harvard University, after 1941; author of studies on education: d. Cambridge, Mass., Aug. 24
- Singer, Edgar A., Jr. (81), philosopher, educator, and author of works on philosophy and psychology; professor of philosophy, University of Pennsylvania, 1909-1944: d. Philadelphia, Apr. 3
- Slaton, John M. (88), governor of Georgia, 1913-15: d. Atlanta, Ga., Jan. 11
- Sloan, George A. (61), industrialist and music patron: d. New York City, May 20
- Smathers, William H. (64), Democratic senator from New Jersey, 1937-43: d. Asheville, N.C., Sept. 24
- Smith, Bruce (63), criminologist; director of Institute of Public Relations after 1954 and author of books on police methods: d. Southampton, N.Y., Sept. 18
- Snider, Joseph L. (60), professor of business economics, Harvard University Business School, after 1925; author of economic studies: d. Lincoln, Mass., Mar. 4
- *Somervell, Gen. Brehon B. (62), commander of U.S. Army Service Forces in World War II: d. Ocala, Fla., Feb. 13
- Soucek, Rear Adm. Apollo (58), chief of U.S. Navy Bureau of Aeronautics, 1953-55; set records in altitude flights: d. Washington, D.C., July 22
- Spaulding, Huntley N. (86), leather industrialist; governor of New Hampshire, 1927-28: d. Rochester, N.H., Nov. 14
- Speers, Robert I. (72), Canadian racing leader and breeder of thoroughbreds: d. Winnipeg, Manitoba, July 19
- Sprague, Vice Adm. Clifton A. F. (58), commander of group of U.S. aircraft carriers, destroyers, and destroyer escorts in Battle of Leyte Gulf, 1944: d. San Diego, Calif., Apr. 11
- Steenstrup, Christian (81), Danish-born inventor; developed refrigeration unit: d. Schenectady, N.Y., Nov. 28
- Steiner, Herman (50), U.S. chess champion, 1948-51; chess editor of *Los Angeles Times*: d. Los Angeles, Nov. 25
- Stephens, Harold M. (69), chief justice of U.S. Court of Appeals for District of Columbia, after 1948: d. Washington, D.C., May 28
- Sterling, Andrew B. (80), composer of *Wait Till the Sun Shines, Nellie* and other hit songs: d. Stamford, Conn., Aug. 11
- *Stevens, Wallace (75), poet; winner of Pulitzer Prize for poetry, 1955: d. Hartford, Conn., Aug. 2
- Stokes, Frank W. (96), American artist noted for paintings of Arctic and Antarctic scenes as member of polar expeditions: d. New York City, Feb. 12
- Stone, Herbert L. (84), editor of *Yachting*, 1908-52; author of numerous books on yachting and related subjects: d. New York City, Sept. 27
- Storrs, Sir Ronald (73), English author, archaeologist, and governor of Cyprus (1926-31): d. London, Nov. 1
- *Stryker, Lloyd P. (70), criminal lawyer who defended Alger Hiss and other famous defendants: d. New York City, June 21
- Subasic, Ivan (63), premier of Yugoslav government in exile in World War II; foreign minister of Yugoslavia, 1945: d. Zagreb, Yugoslavia, Mar. 23
- *Summerall, Gen. Charles P. (88), chief of staff of U.S. Army, 1926-30: d. Washington, D.C., May 14
- Sumner, James B. (67), professor of biochemistry, Cornell University, 1929-55; co-winner of Nobel Prize in chemistry (1946): d. Buffalo, N.Y., Aug. 12
- Sutherland, Edward A. (90), educator; founder of Madison College: d. Nashville, Tenn., June 20
- Suydam, Henry (64), chief of news division, State Department, after 1953: d. Washington, D.C., Dec. 11

- Tanguy, Yves (55), French-born surrealist painter: d. Waterbury, Conn., Jan. 15
- Tarlé, Eugene (81), Russian historian; authority on Napoleonic wars: d. USSR, Jan. 6
- Taylor, Joseph R. (97), professor emeritus of Greek, Boston University, after 1938; author and translator: d. West Newton, Mass., Aug. 13
- Taylor, William O. (84), editor and publisher of *Boston Globe* after 1921: d. Marion, Mass., July 15
- Teilhard de Chardin, Rev. Pierre (73), French-born paleoanthropologist; codiscoverer of Peking Man: d. New York City, Apr. 10
- Templeton, Charles A. (84), Republican governor of Connecticut, 1923-25: d. Waterbury, Conn., Aug. 15
- Thackrey, Vice Adm. Lyman A. (57), senior U.S. naval planner in Normandy landing operation in World War II: d. San Diego, Calif., Apr. 14
- Thimmes, James G. (60), international vice president of United Steel Workers of America, CIO: d. Los Angeles, Jan. 16
- Thorpe, Merle (75), journalist and business analyst; editor of *Nation's Business*, 1916-44: d. Washington, D.C., Oct. 31
- Thurston, Harry (Marcus Cowan) (81), American actor and writer: d. Red Bank, N.J., Sept. 2
- Thurstone, Louis L. (68), professor of psychology, University of Chicago, 1924-52; developed aptitude tests: d. Chapel Hill, N.C., Sept. 29
- Tobey, Frank T. (64), mayor of Memphis, Tenn., after 1953; fought Dixon-Yates contract: d. Memphis, Sept. 11
- *Tobin, Daniel J. (80), president of Teamsters Union, AFL, 1907-52: d. Indianapolis, Ind., Nov. 14
- Toohy, John J. (81), Catholic educator and philosopher; professor emeritus of philosophy, Georgetown University: d. Washington, D.C., Apr. 14
- *Towers, Adm. John H. (70), pioneer in naval aviation; commander in chief of Pacific Fleet and Pacific Ocean Areas, 1945-47: d. New York City, Apr. 30
- Tracy, Daniel W. (68), assistant secretary of labor, 1940-46; vice president of AFL after 1947: d. Washington, D.C., Mar. 22
- *Tribhuvana Bir Bikram (48), king of Nepal (acceded to the throne in 1911): d. Zurich, Switzerland, Mar. 13
- Troncoso de la Concha, Manuel de Jesús (77), president of Dominican Republic, 1940-42: d. Ciudad Trujillo, May 30
- Troyanovsky, Alexander A. (73), Soviet ambassador to U.S., 1934-39: d. USSR, June 23
- Turquetil, Arsene (79), French-born Canadian bishop of Hudson Bay and the Arctic; noted for missionary work among Eskimos: d. Washington, D.C., June 14
- *Utrillo, Maurice (71), French painter noted for scenes of Paris and suburbs: d. Dax, France, Nov. 5
- Vail, Richard B. (59), Republican congressman from Illinois, 1947-48 and 1951-52: d. Chicago, July 29
- Van Ingen, Bernard J. (65), financier who specialized in financing roads, power projects, utilities, and other public enterprises: d. New York City, July 31
- Van Ingen, William Brantley (96), American artist; painted murals for Congressional Library, Washington, and other famous public buildings: d. Utica, N.Y., Feb. 5
- Vollmer, August (79), criminologist; pioneer in modern police science: d. (suicide) Berkeley, Calif., Nov. 4
- von Dirksen, Herbert (73), German diplomat; ambassador to Japan, USSR, and Great Britain before World War II: d. Munich, Dec. 19
- von Prittwitz und Gaffron, Friedrich W. (71), German ambassador to U.S., 1928-33: d. Munich, Sept. 1
- Vonnoh, Bessie P. (Bessie Potter Vonnoh Keyes) (82), American sculptor whose works are represented in several major museums: d. New York City, Mar. 8
- Vukovich, William (Bill) (36), auto-racing driver; winner of Indianapolis Speedway races in 1953 and 1954: d. (in race crash) Indianapolis, Ind., May 30
- Wade, Herbert T. (82), editor of *New International Encyclopedia*: d. New Canaan, Conn., Mar. 18
- *Wagner, John (Honus) (81), baseball star of early 1900's: d. Carnegie, Pa., Dec. 6
- Walker, Rollin H. (90), professor of English Bible, Ohio Wesleyan University, 1900-36; author of religious books: d. Delaware, Ohio, Aug. 4
- *Wallace, Robert C. (73), Canadian educator; advisory editor for Canada for *THE ENCYCLOPEDIA AMERICANA*: d. Kingston, Ont., Jan. 29
- Walrath, Russell J. (73), cartographer for New York *Times*: d. New Brunswick, N.J., June 7
- Wambaugh, Sarah (73), authority on plebiscites; adviser to League of Nations and United Nations: d. Cambridge, Mass., Nov. 12
- Ward, Arch (58), sports editor of Chicago *Tribune*; originator of all-star baseball games; author of sports books: d. Chicago, July 8
- Warner, Langdon (73), curator of Oriental art, Fogg Museum, Harvard University, 1925-50: d. Cambridge, Mass., June 9
- Wertenbaker, Charles C. (54), American journalist and author; wrote *The Death of Kings* (1954) and other novels: d. Ciboure, France, Jan. 8
- West, Charles F. (60), Democratic congressman from Ohio, 1931-35; undersecretary of interior, 1935-38: d. Bradenton, Fla., Dec. 27
- Weyl, Hermann (70), German-born mathematician and philosopher: d. Zurich, Switzerland, Dec. 8
- White, Paul W. (53), radio newsman; founder of Columbia Broadcasting System's news bureau (1933): d. San Diego, Calif., July 9
- *White, Sir Thomas (88), Canadian banker; finance minister of Canada, 1911-19: d. Toronto, Feb. 11
- *White, Walter F. (61), executive secretary of National Association for the Advancement of Colored People (NAACP), after 1931: d. New York City, March 21
- Wildman, Clyde E. (66), Bible scholar; president of DePauw University, 1936-51: d. Carlisle, Pa., Nov. 1
- Willard, Gerald W. (54), physicist on staff of Bell Laboratories; specialist in piezo-electric crystals and superionics: d. Fanwood, N.J., Nov. 18
- Williams, Horatio B. (78), professor of physiology, Columbia University, 1922-42: d. New York City, Nov. 1
- Wischnitzer, Mark (73), Russian-born professor of Jewish history, Yeshiva University, after 1948; contributor to *THE ENCYCLOPEDIA AMERICANA*: d. Tel Aviv, Israel, Oct. 16
- Wolgast, Adolph (Ad) (67), world's lightweight boxing champion, 1910-12: d. Camarillo, Calif., Apr. 14
- Wolgast, Midget (Joseph R. Loscalzo) (45), flyweight boxing champion, 1930-35: d. Philadelphia, Oct. 19
- *Wood, Robert W. (87), physicist and authority on spectrum research: d. Amityville, N.Y., Aug. 11
- Woodward, William, Jr. (35), financier and sportsman, owner of racehorse Nashua: d. (accidental shooting) Oyster Bay, N.Y., Oct. 30
- Wormser, I. Maurice (68), authority on corporation law; professor of law, Fordham University, after 1913: d. New York City, Oct. 22
- Wyer, James I. (86), director of New York State Library, 1908-38; president of American Library Association, 1909-11: d. Salt Lake City, Utah, Nov. 1
- Yaskin, Joseph C. (64), neurologist; head of neurology department, Graduate School of Medicine, University of Pennsylvania: d. Philadelphia, Aug. 10
- Ylla (Camilla Koffler) (44), photographer who specialized in animal photography: d. (auto accident) Bharatpur, India, Mar. 30
- *Young, Cy (Denton True Young) (88), baseball pitcher, 1890-1911; member of baseball's Hall of Fame: d. Newcomerstown, Ohio, Nov. 4
- Young-Hunter, John (81), Scottish-born portrait painter known also for studies of American Indian life: d. Taos, N. Mex., Aug. 9
- Zimmerman, Rufus E. (68), former head of research policy committee of United States Steel Corp.: d. Summit, N.J., June 21

NEGROES, American. Racial affairs in the United States during 1955 centered around one principal issue—desegregation. The frequent use of this word itself connoted a growing realism in discussion of racial relationships. There was less reference to abolition of racial discrimination as a soon-to-be-won objective. There was even less expectancy that total integration of nonwhites into all phases of American living would be achieved within the life-span of any living American. Liberal public sentiment seemed willing to settle for the present on abolition of formal and legalized segregationist practices as a long step toward later removal of less obvious forms of racial discrimination.

Thus the May 31 decision of the U.S. Supreme Court, directing the states to end racial segregation in the public schools within a "reasonable time," provided a focus for public attention relating to the whole racial question. Public reaction to the court's decision was mixed. In some quarters, principally Negro, there was keen disappointment that the Supreme Court had not issued a "here-and-now" ultimatum. In other quarters, there was relief that the court had been "reasonable" in allowing time for adjustment. In still other opinion areas it was bitterly charged that the court was "invading states' rights" by seeking to dictate "social equality," with the school room as an implementing device.

On one hand, Georgia, South Carolina, Alabama, Mississippi, and Louisiana studied the question of the constitutionality of abolishing the public school systems as a last resort against integration, and turning them over to state-subsidized private direction. There was also an increase in the numbers and activities of organized prosegregationist groups in both Southern and border states.*

On the other hand, the Southern Education Reporting Service released figures showing that by September 1955, 134,000 Negro students were attending classes with whites for the first time. Moreover, in 1955 Oklahoma opened all of its 18 state colleges to qualified students regardless of race. On June 21, the El Paso (Texas) Board of Education voted to abolish segregation in its public schools, and full-scale integration was scheduled for the beginning of the fall term. El Paso thus became the first city in Texas—and perhaps in the deep South—to comply fully with the court decree.

The new ferment in race relations spread over into church groups. The Episcopal Seminary of the University of the South at Sewanee, Tenn., admitted Negro students for the first time. The General Convention of the Protestant Episcopal Church, scheduled to meet at Houston, Texas, in 1955, shifted the convention to Honolulu, when it was made clear that Houston could not or would not provide equal accommodations to all delegates regardless of race. In a number of Southern cities, Catholic diocesan leaders ordered parochial schools and Catholic religious services open to all of the church's faithful, without distinction as to race. When white parishioners of a Louisiana rural Catholic parish to which a Negro priest had been assigned barred him from holding mass, his superior, Archbishop Joseph F. Rummel of New Orleans, suspended services in that church until the worshipers should rid themselves of "un-Christian practice."

In other major matters affecting Negroes, the U.S. Interstate Commerce Commission on November 25 ordered the elimination of racial segregation on all trains and buses involved in interstate travel, and made the decree applicable also to waiting rooms in bus and railway stations. The U.S. Supreme Court, on Nov. 7, 1955, outlawed racial segregation in public playgrounds, parks, and golf courses.

A New York Times correspondent, surveying racial developments in 13 Western states, reported on May 28 that this area had moved far during 1955 toward equal protection of civil rights for all their residents. For example, Arizona passed a fair employment practice law covering public works employment, and Washington and Colorado strengthened existing fair employment practice laws. New Mexico and Montana passed legislation guaranteeing equal accommodation in places of public convenience, and California outlawed racial discrimination in the issuance of automobile insurance.

In Washington, D.C., the Fair Employment Board of the Civil Service Commission was abol-

* The Southern Education Reporting Service listed 15 active prosegregationist organizations, the largest of which were so-called secret citizens councils. These councils originated in Mississippi and claimed more than 60,000 members, but were also active in Alabama, Louisiana, and South Carolina. Other such groups included Georgia's State Rights Council, the Organization of Patriots of North Carolina, and Virginia's Defenders of State Sovereignty and Individual Liberties. White America, Inc., sprang up in Arkansas; the National Citizens Protective Association branched out from St. Louis into the South; and the Federation for a Constitutional Government was active in Tennessee.

ished, and a new board, with greater power and with direct responsibility to the president, was assigned the job of eliminating racial discrimination in federal employment.

The early fall of 1955 witnessed the kidnapping and murder in Mississippi (q.v.) of 14-year-old Emmett Till, a Negro from Chicago who was visiting relatives in Tallahatchie County. Although the kidnapers were plainly identified and evidence of their guilt as murderers seemed clearly proved, an all-white jury at the Sumner court house required only an hour and a half to acquit the accused. Mass meetings of protest, attended by half a million persons, were held throughout the United States. (See also CIVIL LIBERTIES; EDUCATION; LAW; and the Index entry, *Negroes*.)

LESTER B. GRANGER,
Executive Director, National Urban League.

NEHRU, Jawaharlal, prime minister of India: b. Allahabad, United Provinces, India, Nov. 14, 1889. A determined advocate of peaceful co-existence, he sought in 1955 to impress the nations of both East and West, particularly the United States, with India's desire to remain neutral in the cold war.

Educated in England at Harrow, Cambridge University, and the Inner Temple, Nehru returned to India in 1912 to become a leader in the movement for independence. In 1946 he was named head of the Executive Council and minister of external affairs in the interim Indian government. With the establishment of the dominions of Pakistan and India on Aug. 15, 1947, he became prime minister of India, a post he retained, with the post of ministry of external affairs, after India was proclaimed a republic in 1950.

During the Formosa crisis early in 1955, Nehru maintained that the offshore islands and Formosa were legal possessions of Communist China and protested what he called the "mad-house" diplomacy of the West. He nevertheless declared on several occasions that India was prepared to play the role of mediator in the area.

Desiring to foster unity and neutrality among the Asian and African nations at the Asian-African Conference (q.v.) held on April 18-24, Nehru successfully opposed the inclusion of the Formosa question in its formal agenda. His principle of neutrality was rebuffed, however, when a number of Western-oriented countries made a strong stand against Communist colonialism. In defense of his neutralism, Nehru declared to the conference that adherence to either bloc in the cold war was tantamount to relinquishing the national identity these nations had gained.

In June, Nehru embarked on a 37-day state tour that took him to Egypt, Czechoslovakia, the Soviet Union, Poland, Austria, Yugoslavia, Italy, and Great Britain. In Moscow, where he was enthusiastically received, he issued a joint statement with Premier Nikolai A. Bulganin (June 22) which called for wider application of the principles of peaceful coexistence and world recognition of Communist China's rights in regard to Formosa and to a seat in the United Nations. In Great Britain (July 8-10) his suggestion that the Formosa issue and other Asian problems be discussed at the forthcoming Geneva Conference (q.v.) of the heads of government was unfavorably received by British leaders.

On November 20, during the goodwill visit to India of Premier Bulganin and Nikita S. Khrushchev, Nehru reaffirmed his concept of

neutrality, declaring that peace and security could not be attained "by military pacts and alliances and by piling up armaments." To reassure the West that anti-Western remarks made in India by the Soviet leaders were not necessarily his own sentiments, he made it clear that India was not and had no intention of becoming a member of any military alliance. On December 13, along with the issuance of a joint statement reiterating the propositions of the Moscow statement, he announced the conclusion of a trade agreement between India and the Soviet Union. (See also INDIA.)

NEPAL. Bordered by Tibet on the north and India on the south, this independent Himalayan kingdom (area, 56,000 square miles) contains Mount Everest (29,000 feet), the world's highest mountain, and other famous peaks. The first interim census, completed in April 1955, showed a population of 8,431,537. Katmandu (est. pop., 300,000) is the capital; other principal centers are Patan (104,928) and Bhatgaon (93,176).

Government and Political Events.—King Tribhuvana (q.v.), whose reign began Dec. 11, 1911, died at Zurich, Switzerland, on March 13, 1955. His eldest son, Crown Prince Mahendra Bir Bikram Shah, who in the king's absence had headed the Council of Regency and who on March 2, 1955, had assumed responsibility for the government "for the time being," was enthroned as king of Nepal on March 14. Negotiations between King Mahendra and principal political parties on the formation of a new government continued for several months, but without result. On June 10, 1955, the king dissolved the nominated 99-member Advisory Council (boycotted by the Nepali Congress as unrepresentative and prorogued in February 1955) and announced that general elections would be held in October 1957.

John Sherman Cooper, United States ambassador to India, was accredited also to Nepal in June 1955. Negotiations begun at Katmandu in July 1955 were followed by the signing on August 1 of an agreement establishing diplomatic relations between Nepal and Communist China, which was to be represented by its ambassador to India, Gen. Yuan Chung-hsien. On December 14, Nepal was elected to membership in the United Nations.

Permission has been granted to teams representing Argentina, Japan, Switzerland, the United Kingdom, and New Zealand, planning to climb Mount Everest and other peaks in 1956.

Finances and Foreign Aid.—It was proposed that the budget deficit recorded in 1955 be met by a progressive income tax imposing a 25% maximum on annual incomes exceeding Rs.50,000, and a 5% tax on income from industrial undertakings.

Foreign trade of Nepal is chiefly with India, using in different areas the Nepali rupee and the Indian rupee (160 Nepali rupees = 100 Indian rupees). In order to promote importation of food grains, sugar, and other essentials, and at the same time to support the Nepali rupee, the Ministry of Finance announced in April 1955 that the Nepal Bank would provide Indian currency, at a fixed exchange rate, to finance importations of essential commodities.

By January 1955 the Indian government had furnished Nepal the rupee equivalent of \$13,910,000, including long-term loans and an outright grant of \$4 million under the Colombo Plan, toward development plans, including agricultural projects and construction of the Katmandu-Raxaul road (Nepal's first motor highway, linking the capital with Indian territory). In addition India gave 10,000 tons of rice, together with financial aid, to relieve acute food shortages which developed in Nepal in April 1955.

Education.—Educational facilities include Sanskrit, English middle and high schools, and primary and basic schools. In June 1955 the United States contributed \$220,000 of Point Four Program funds and the Nepalese

government, \$147,000, for the opening of 1,050 primary schools and the establishment of a training institute for teachers.

Economy.—Nepal's resources include valuable forest reserves. Principal articles of export are jute, timber, oil seeds, hides and skins, cattle, and medicinal herbs. There are 30 route miles of narrow-gauge railways. Air services are maintained between Katmandu and New Delhi.

NERVOUS SYSTEM. The renewal of brain research during the last score of years was gathering acceleration in 1955, and could be regarded as perhaps the most interesting phase of medicobiological investigation.

Severed nerve fibers of the brain and spinal cord never recover, although they do in nerves. The difference has been sought in the barrier imposed by the regrowing glia cells. Attempts to inhibit their growth, notably by Pyramen, a bacterial extract, have given conflicting results in different hands, but it now seems unlikely that any anatomical reconstitution can be expected in the central nervous system.

It is instructive to classify current anatomicophysiological studies of neural pathways as of specific or topic systems and generalized or activating systems. On the side of specific systems, each investigation accentuates the localizing aspect of organization of pathways and centers. Thus individual auditory nerve or tract fibers are found to transmit all pitches up to a certain frequency, varying with the fiber selected. Those of highest pitch are lowest in the cochlear spiral, and vice versa. Localized groups or cells in the olfactory bulb respond to certain classes of odors and not to others. For the most part, electronic analysis has confirmed the obvious function of anatomical pathways long known, but is also demonstrating the conditions of their functioning.

Anatomy was not prepared, however, for the demonstration, in the last few years, of an ascending unspecific activator system as shown by physiologic analysis. Efforts are being made to determine the structures contributing to its upper reaches. In this way the previously neglected thalamic nuclei and cerebral structures not forming a link in the specific systems are being scrutinized, with the result that interesting leads in other directions have come to notice. The intralaminar and reticular thalamic nuclei and the central nucleus of Luys are currently regarded as forming a part of this system.

Combined with this, in its leavening effect on research, is an attempt to find a plausible function for the rhinencephalon, the assemblage of interconnected paths which received its original impetus from the sense of smell, but whose development seems to have transcended the requirements of that function. One theory is that the rhinencephalon and limbic lobe of the cerebral cortex are involved in the elaboration of the emotions. Disturbed affective reactions characterize neurotic and psychotic disorders, so researchers are seeking here for a key to this problem. Thus, the septal region shows spikes in the electroencephalography (EEG) of schizophrenics, while stimulation of the septal region produces an arousal reaction. Stimulation of the activator system does not, however, improve performance of animals being subjected to training. "Thalamotomy" is said to give improvement in states of schizophrenia.

A third stimulus to localizing research is supplied by the bizarre observations after extirpation or stimulation in the temporal lobe. Extirpations of the hippocampal region result in an inability to integrate and benefit from recent experience, without affecting old memories. Perturbations in

emotional and sexual behavior continue to point to the amygdaloid region as a source, and attention is now being paid to the many subdivisions of the amygdala, formerly held to be of only remote academic interest. The amygdala is singularly devoid of obvious connections, however, and the involvement of adjacent cortical areas has never been ruled out.

In the clinical sphere, progress in the diagnosis and treatment of epilepsy continues, especially in the psychomotor type, and aided by electroencephalography. For major seizures the new drug, Mysoline, gives promise. Mesartoin may be injurious when long continued. In Parkinsonism, Artane and Pagitane are, perhaps, the most useful drugs to control the tremor.

Cervical sympathetic blocking has been reported effective in Ménière's disease, cerebral edema, and delirium tremens. General sympathetic blocking has been employed in eczema and Pick's disease.

In the field of psychosurgery, a detailed French report attempts to distinguish between the effects of the various frontal resections. Orbital resections diminish psychotic manifestations, while operations on the frontal convexity do not, although both reduce neuroticism and introversion. Anterior cingulectomy reduces irritability and violence in extroverts. There is a swing toward lateral cordotomy for relief of intractable pain, and away from lobotomy. (See also PSYCHIATRY.)

WENDELL J. S. KRIEG,
Professor of Anatomy,
Northwestern University Medical School.

NETHERLANDS, The, or HOLLAND. A country of northwestern Europe, bounded by Germany, Belgium, and the North Sea. Area (excluding inland water) 12,505 square miles; pop. (est. July 1, 1955), 10,747,697. About a fourth of the area lies below sea level and is protected by some 1,500 miles of dikes. Chief cities and populations (January 1955): Amsterdam, the constitutional capital, 863,802; Rotterdam, 712,513; The Hague, seat of government, 596,675; Utrecht, 243,884; and Haarlem, 166,154.

Vital Statistics.—The crude birth rate in 1954 was 21.6; the crude death rate, 7.5; and the infant mortality rate, 21.1. Life expectancy in the period 1950–52 averaged 70.6 years for men and 72.9 for women (highest in the world for both sexes). Emigrants numbered 61,411 in 1954; immigrants, 42,425.

Government.—The Netherlands is a constitutional monarchy. Queen Juliana of Orange and Nassau (b. 1909) succeeded to the throne in 1948. The Netherlands States-General is bicameral. The First Chamber, or upper house, has restricted powers; its 50 members are elected by the provincial councils for a six-year term. The Second Chamber, or lower house, has 100 members elected every four years by proportional representation. The franchise is held by subjects over 23 years of age. Principal parties are the Labor Party, which won 30 seats in the 1952 elections to the lower house, and the Catholic People's Party, which also obtained 30 seats. Dr. Willem Drees of the Labor Party headed a coalition cabinet installed on Sept. 2, 1952.

A new Statute of the Realm came into effect on Dec. 29, 1954, whereby the Netherlands, Surinam, and the Netherlands Antilles are constituted a single realm under the House of Orange. The three states have autonomy in domestic affairs, with defense and foreign relations the concern of the realm as a whole. Defense and foreign policy come under a Council of the Realm consisting of ministers appointed by the Netherlands crown and ministers plenipotentiary appointed by the two former colonies.

Education.—Illiteracy is virtually nonexistent in the Netherlands. In 1953–54 there were 9,089 elementary schools (1,580,273 pupils); 989 secondary schools (237,617); and 10 institutions on the university level (27,987). There are also many infant, technical, agricultural, housewifery, and commercial schools.

Religion.—Freedom of worship exists for all faiths. Religious affiliation in 1947 was: Netherlands Hervormde

Church, 2,988,839; other Protestant groups, 1,103,372; Roman Catholics, 3,703,526; Jews, 14,369; other creeds, 174,057; and nondenominational, 1,641,296.

Finance.—The revised estimate of the 1955 budget placed total expenditure at 7,744 million guilders (the guilder equals U.S.\$0.263), and revenue at 6,631 million, for a deficit of 1,113 million (as compared with a deficit of 610 million in the original estimate). Defense expenditure amounted to 1,356 million guilders.

Production.—The Netherlands postwar industrial advance reached new peaks in 1954. National income totaled a record 21,060 million guilders, about 9% over that of 1953. Real national income per capita rose about 5% in 1954. Industry, which employed 42% of the total working population of 4,091,000, contributed 44% of the national income (30% in 1938). The index of industrial production (1948 = 100) rose from 144 in 1953 to 158 in 1954. Output of pig-iron and ferroalloys (610,500 metric tons), crude steel (927,600 metric tons), and electricity (10,584 million kw.-hr.) set new records. Coal production (12,071,000 metric tons) was slightly below that of 1953, but output of crude petroleum (938,000 metric tons) was 14% above the 1953 level. The important textile industry recorded new highs in output of cotton yarn (68,640 metric tons), wool yarn (27,600), and rayon and acetate filament yarn (29,520). A record 68,487 dwellings were completed in 1954, making a total of 379,058 constructed since liberation. The Netherlands shipbuilding industry was the third greatest in the world in 1954. Other important Dutch industries are foodstuffs, electrical equipment, nonferrous metals, rubber goods, chemicals, leather goods, polished diamonds, pottery, and paper.

Agricultural and fishing industries employed 13% of the working population in 1954 (19% in 1938) and contributed 12% of national income. Postwar rationalization and mechanization have resulted in greater output, despite the decline in workers employed. Chief crops and 1954 yields were (in thousands of bushels): wheat, 14,590; rye, 20,290; barley, 9,540; oats, 32,150; and flaxseed, 902. Potatoes (2,762,153 metric tons in 1953) and sugar beets (2,970,779) are also important. Production of milk in the crop year ended June 30, 1955, was 4,904,400 metric tons (supplied to factories); butter, 77,600; cheese, 153,100; and condensed milk, 241,400. Fish landings in 1953 totaled 343,300 metric tons.

Foreign Trade.—Imports in 1954 totaled 10,853 million guilders; exports, 9,164 million. Chief exports are dairy products, metals and their manufactures, textiles and clothing, machinery and apparatus, and chemicals; chief imports: textile fibers and manufactures, machinery and vehicles, coal, petroleum and its products, grains, and iron and steel and their manufactures. West

Germany, taking 15.9% of Dutch exports in 1954, was the Netherlands' leading customer, followed by Belgium-Luxembourg, Great Britain, and the United States. Belgium-Luxembourg supplied 17% of Dutch exports, followed by West Germany (16.7%), the United States, and Great Britain.

Transportation and Communications.—Railway lines in operation at the end of 1954 totaled 1,980 miles, of which 42% was electrified. The road network in 1954 included 8,567 miles of classified and about an equal length of unclassified roads. The Dutch merchant marine aggregated 3,375,610 gross registered tons at the beginning of 1955. K.L.M., the Dutch national airline, carried 14% more passengers and 20% more freight in 1954 than in 1953. Passenger cars numbered 258,800 in July 1955; licensed radio receivers (1953), 2,333,000; telephones (1955), 1,021,202; television licenses (April 1954), 9,000. Daily newspapers in 1952 numbered 108, with a circulation of 2,581,000.

Principal Events, 1955.—The Netherlands government in 1955 continued its support of organizations for international cooperation and liberalization of trade. On March 30, the lower house, by a vote of 71-6, approved the 1954 Paris agreements on the rearmament of Germany and the establishment of the revised Western European Union. The Senate completed parliamentary ratification on April 28 by a vote of 32-2. Addressing a Dutch student assembly at Leyden on June 18, Queen Juliana urged that the West devote itself to ending hunger and poverty in the world by providing economic aid through the United Nations and other multilateral agencies. On October 18, Queen Juliana and Prince Bernhard arrived at Willemstad, Curaçao, in the first royal tour of the newly autonomous territories of the Netherlands Antilles and Surinam. Problems outstanding between the Netherlands and Indonesia were dealt with at a ministerial conference between the two nations which began at The Hague on December 11.

Queen Juliana and Prince Bernhard visit Willemstad, Curaçao, during Netherlands Antilles tour in October 1955.

WIDE WORLD

In the domestic sphere, a major issue of the year concerned tax reductions and a rent rise. On May 17 the lower house, 50-48, rejected the government's proposed 10% rent increase for about a third of the country's dwellings. The defeat of the measure caused Premier Willem Drees to submit his resignation. After two weeks of deliberations among the government parties, it was decided on June 2 that the Drees cabinet would remain in office. The government then submitted a revised bill providing for a 5% rent rise (plus other benefits to the landlords), a 6% reduction in wage and income taxes, and abolition of turnover taxes on textiles and sugar. This measure was enacted by the lower chamber on July 8.

The Roman Catholic bishops' warning to Dutch Catholics in 1954 to shun the Labor Party and other socialistic organizations evoked further opposition by labor leaders in 1955. On February 22, at the Labor Party's fifth congress at Leyden, J. M. Willems, chairman of the Catholic Working Group within the Labor Party, rejected the bishops' admonition, declaring that "the place of the Catholic working group is and remains within the party of labor."

In a memorandum presented to the States-General on July 20, it was revealed that a foundation known as the Netherlands Reactor Center would assume responsibility for the peaceful development of atomic energy under government supervision. The foundation would also be in charge of the development of a new type of reactor designed by Netherlands scientists.

The Dutch economy in 1955 was at the crest of a boom. Industrial output in the first eight months of the year averaged 5% over the record 1954 level, foreign trade set new records, and unemployment was minimal. Nevertheless, there was some uneasiness, as rising costs accompanied capacity output levels. Exports, while high, were being outpaced by rising imports, and Finance Minister Johan van de Kieft warned in October against exchange difficulties, particularly in the dollar balance.

NETHERLANDS ANTILLES (formerly NETHERLANDS WEST INDIES). An autonomous unit of the Kingdom of the Netherlands comprising two groups of islands in the Caribbean Sea. Area, 366 square miles; pop. (Dec. 31, 1953), 180,776, chiefly Negroes and persons of mixed descent. Willemstad (44,062) on Curaçao is the capital. Dutch is the official language, although a lingua franca called Papiamentu is popularly used.

The three larger islands—Curaçao (173 sq. mi.; pop., 114,683), Aruba (69 sq. mi.; pop., 57,303), and Bonaire (95 sq. mi.; pop., 5,386)—lie off the coast of Venezuela. The three smaller islands—St. Martin (of which the northern part is French), St. Eustatius, and Saba—are east of Puerto Rico.

Government.—Under the Statute of the Realm, promulgated on Dec. 29, 1954, the Netherlands Antilles has internal autonomy. Defense and foreign affairs are decided by a Council of the Realm (at The Hague), to which the Netherlands Antilles appoints a minister plenipotentiary. A Dutch governor represents the Netherlands sovereign in the Antilles. A 6-member executive council appointed for 4 years is responsible to the Staten, whose 22 members are popularly elected for a 4-year term. The 1954 budget of the central government placed revenue at 32,821,061 Netherlands Antilles guilders and expenditure at 32,713,797.

Education and Religion.—In 1954 there were 129 schools with 38,378 pupils. Higher education is offered by the Peter Stuyvesant College at Willemstad and by 2 Roman Catholic schools. The population is predominantly Roman Catholic.

Economy.—Of chief importance are the huge petroleum refineries (two on Aruba, one on

Curaçao) which refine crude oil imported from Venezuela. Exports of petroleum products totaled 41,458,666 metric tons in 1953. Phosphate is mined on Curaçao. Crops include aloes, sorghums, beans, corn, and tropical fruits, but the islands depend on imports for most foodstuffs. Imports in 1954 totaled 1,544 million Netherlands Antilles guilders; exports (predominantly petroleum products), 1,455 million. Trade is mainly with the Netherlands, the United States, and the United Kingdom.

Transportation and Communications.—Surfaced highways totaled 459 miles in 1953. Hato Air Field on Curaçao is an important air depot. Motor vehicles on Curaçao and Aruba numbered 13,767 in 1953; telephones, 7,215 (1955). Steps were being taken in 1955 to create Willemstad a free port.

Principal Events, 1955.—Queen Juliana and Prince Bernhard of the Netherlands arrived at Willemstad on Oct. 18, 1955, on a 10-day royal tour of the Netherlands Antilles. The visit—the first by a Dutch sovereign to the territory—stressed the theme of the former colony's newly won autonomy.

NETHERLANDS EAST INDIES. See INDONESIA.
NETHERLANDS GUIANA. See SURINAM.

NETHERLANDS NEW GUINEA (WEST IRIAN). The western half of the island of New Guinea in the southwestern Pacific, including the Schouten Island, Japen, Noemfoor, Salawati, Frederik Hendrik Island, and other adjacent islands. Area, 159,375 square miles; pop. (est. 1954), 700,000, including 14,235 Europeans (mainly Dutch), and 16,115 nonindigenous Asians (chiefly Indonesians and Chinese). The natives are Papuan, Negrito, and Melanesian tribesmen. Hollandia (11,322) is the capital.

The territory is ruled by a Dutch governor aided by a council of the heads of the administrative services. The population of the area brought under administration is about 400,000. The 1954 budget provided for expenditures of 106,530,600 guilders, of which 57,599,100 was contributed by the Netherlands and the remainder derived locally. In 1954 there were 521 village schools (23,918 pupils), 15 continuation schools (1,792), 10 general primary schools (2,009), and 11 European primary schools (1,230). There are also schools for technical and specialized instruction. Christians number about 200,000; Moslems, about 16,000.

The natives subsist chiefly on coconuts, yams, taro, bananas, sago, and other food plants. There is some livestock raising and fishing. Oil deposits at Sorong, exploited by the Netherlands New Guinea Petroleum Company, yielded 554,265 metric tons of crude petroleum in 1954, roughly double the 1953 output. Exports totaled 31,415,400 guilders in 1954 (provisional); imports, 74,216,600. Chief exports were petroleum (500,471 metric tons valued at 26,443,800 guilders), copra, crocodile skins, and copal. The territory is served by 2 international airlines.

Sovereignty over Netherlands New Guinea (termed West Irian by the Indonesians) has been in dispute between the Netherlands and Indonesia since 1949, when Indonesia obtained independence. Following several alleged Indonesian infiltration raids on coastal areas in the territory, it was announced at The Hague on Jan. 26, 1955, that Dutch reinforcements had been sent by air to Netherlands New Guinea.

NETHERLANDS WEST INDIES. See NETHERLANDS ANTILLES.

NEUROLOGY. See NERVOUS SYSTEM.

NEVADA. Western state, United States, admitted to the Union, Oct. 31, 1864. The "Silver

State" ranks 6th in area and last in population (1955) among the 48 states.

Area and Population.—Area: 110,540 square miles (land, 109,789; inland water, 751), divided into 17 counties. Population: (1950) 160,083; (est., July 1, 1955) 216,000. Populations (1950) unless otherwise specified) of the state capital and of urban places with more than 5,000 inhabitants are: Carson City, the capital, 3,082; Elko, 3,393; Las Vegas (special census, April 1, 1955), 44,795; Reno, 32,497; and Sparks, 8,203.

Executive.—Chief state officers in 1955:

Governor: Charles H. Russell (Republican)

Lieutenant Governor: Rex Bell

Secretary of State: John Koontz

Treasurer: Dan W. Franks

Attorney General: Harvey Dickerson

Supt. of Public Instruction: Glenn A. Duncan

Constitution and Judiciary.—The present constitution went into effect in 1864. The Supreme Court comprises three justices; chief justice in 1955 was Charles M. Merrill.

Legislature.—The Legislature (Senate, 17 members; Assembly, 47) meets in odd-numbered years commencing the third Monday in January.

Major tax enactments of the 1955 session of the legislature included establishment of a 2% sales tax; a half cent increase in gasoline and diesel fuel taxes; increased taxes on the gross intake of gambling casinos; a mandatory 70-cent school tax on all property in each county; and an increase in fees for car registration and for motor carriers. Other laws initiated a state and federally financed program of aid to dependent children; approved the Uniform Reciprocal Enforcement of Support Act; stiffened narcotics laws; outlawed the sale of lurid comics; enacted an 87%-cent minimum hourly wage law for female employees over 18; restricted the sale of firearms to anyone under 18; took initial action on an amendment to provide annual legislative sessions; and made extensive revision of laws pertaining to school organization and administration. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1953–54 fiscal year), \$33,055,090.28; expenditures, \$33,492,134.06; treasury balance, \$10,935,273.90; long-term indebtedness, \$1,530,000.

Taxation.—State tax receipts (1954–55 fiscal year): \$18,282,468.99, including \$7,439,515.78 from selective sales and gross receipts taxes; \$7,718,790.07 from licensing; and \$3,124,163.14 from property taxes. The state has no individual or corporate income taxes but does have a poll tax of \$3 per male.

Banking.—As of June 30, 1955, the state's 5 national banks had \$232,250,000 in assets, \$142,361,000 in demand deposits, and \$73,426,000 in time deposits; the state's 3 other banks had \$72,295,175.75 in assets, \$36,725,813.70 in demand deposits, and \$17,705,989.13 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 18, inclusive. Operating expenditures of \$9,664,312 (\$271.16 per pupil) for public elementary and secondary schools in the 1953–54 fiscal year comprised \$4,851,485 from local school districts, \$4,001,025 from the state, and \$811,802 from the federal government. Expenditures for construction and improvements totaled \$5,449,806. Teachers' salaries averaged \$4,067 (elementary school teachers, \$3,966; high school teachers, \$4,253).

In the 1953–54 school year there were 194 public elementary schools with 1,311 teachers and 33,982 pupils; 36 public secondary schools with 433 teachers and 9,176 pupils; and 12 private and parochial elementary and high schools with 64 teachers and 1,907 pupils.

Social Welfare.—Public welfare expenditures of state and federal funds (excluding institutional costs) for the 1954–55 fiscal year totaled \$989,806.12, including \$892,121.14 for old-age as-

NEVADA WELFARE INSTITUTIONS

(As of July 1, 1955)

Type of institution	No.	Pop.
Hospitals for the mentally ill.....	1	439
Homes for dependent children.....	1	73
Training schools for delinquent boys.....	1	6
Training schools for delinquent girls.....	1	38
Prisons.....	1	331
Prison farms.....	1	17

sistance and \$97,684.98 for dependent children; a monthly average of 2,748 persons received public assistance. Operating expenditures for health and welfare institutions amounted to \$660,801.24; for correctional and penal institutions, \$427,614.85.

Labor Force.—The estimated labor force in March 1955, according to Nevada Employment Security Department figures, was 96,300, including 6,900 agricultural workers. "Covered" employment for the same date was 61,600, and for the 12 months ending March 1954 totaled 52,300. Total estimated unemployment in March 1955 was 5,200. The state paid \$3,444,748 in unemployment compensation during 1954.

Manufacturing.—Establishments numbering 190 in 1954 employed 4,564 workers who received \$20,681,342 in salaries and wages. Value added by manufacture was an estimated \$36,700,000. In 1953, \$4,794,000 was invested in new plant and equipment. Earnings of production workers in manufacturing in 1954 averaged \$86.43 for an average work week of 40.2 hours, and in the first six months of 1955 averaged \$86.69 for 38.7 hours.

Principal manufactures in 1954 were: iron, steel, and allied products (1,019 employees; \$5,502,783 in salaries and wages); chemicals and allied products (758; \$3,281,262); printing and publishing (698; \$2,427,092); lumber and timber products (543; \$2,336,077); food and kindred products (524; \$2,241,582); stone, clay, and glass products (417; \$1,576,786); and non-electrical machinery (287; \$1,037,874).

Mining.—Nevada ranked first among the states in 1953 in output of tungsten concentrates, second in magnesite, manganese, mercury, perlite, and diatomite, and third in barite and antimony. The state ranked 28th in the value of its 1953 mineral output, with 0.51% of the United States total. There were 7,404 persons employed in the state's mineral industries on March 15, 1955, including 799 in the processing of chemicals and 1,140 in the processing of minerals in manufacturing.

NEVADA MINERAL PRODUCTION, 1953

¹ Production in 1954: 71,630 tons (\$42,548,220). ² Excluding that used in making lime. ³ Production in 1954: 5,080 tons (\$20,357,000). (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income in the first half of 1955 totaled \$16,599,000, and for the full year 1954 comprised \$33,948,000 from livestock and livestock products, \$5,646,000 from crops, and \$373,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$22,648,000; sheep, \$3,675,000; dairy products, \$3,440,000; and hay, \$3,144,000. The state's 2,857 farms (8,230,240 acres; harvested cropland, 359,859) had an average of 2,880.7 acres and \$59,774 in value of land and buildings per farm in 1954. There were 1,772

farms with telephones and 2,319 with electricity. Livestock on farms (Jan. 1, 1955) included 625,000 cattle and 454,000 sheep. During the week of Sept. 26–Oct. 2, 1954, 7,086 family and hired workers were engaged in farming.

Transportation and Communications.—State funds disbursed for roads and highways in 1954 totaled \$12,624,000.

Highways and roads on Oct. 20, 1954, totaled 27,000 miles (3,915 surfaced). Registered *motor vehicles* numbered 115,940, on the same date, including 82,479 passenger cars. There were 6 *railroads* (1955) which, in 1954, operated 1,586.55 line miles, and (1955) there were 4 regularly scheduled *airlines* and (1954) 79 *airports and airfields* (26 commercial and municipal and 53 limited-use fields).

Communications media (1955) included 10 AM and 2 FM *radio stations* and 2 operating *television outlets*; 8 daily newspapers (circulation, 69,602) and 22 other *newspapers*; and (Jan. 1, 1955) 28,667 business and 39,779 residential *telephones*.

Principal Events, 1955.—Southern Nevada's proving ground for atomic and hydrogen bomb tests at Yucca Flat, near Las Vegas, saw a new series of atomic explosions during 1955 (see ATOMIC ENERGY). Reno's Stead Air Force Base survival school was nationally spotlighted in the press in September for its alleged "torture chamber" and "brainwashing" training techniques.

The University of Nevada was being investigated in 1955 by the American Association of University Professors and also by an outside group set up by the state legislature. These actions were an outgrowth in part of the ouster of Biology Department chairman Frank Richardson in 1953 by President Minard Stout and the Board of Regents, and Richardson's reinstatement in 1954 by order of the Nevada Supreme Court.

In the meantime the university was continuing to expand by establishing a new Nevada Southern branch at Las Vegas, by sponsoring college-level work in Libya, and by creating new colleges on the Reno campus, especially in agriculture, with a \$3 million grant from the Max Fleischmann estate.

Although Las Vegas gambling resorts experienced a slump in 1955, six new plush casino-hotels were scheduled to open. The first interracial gaming resort and hotel was closed, after five months, owing to creditor claims. Former boxing heavyweight champion Joe Louis was a sponsor. Entertainers at top rates at other hotels included Marlene Dietrich, Eartha Kitt, Frank Sinatra, Noel Coward, and Patrice Munsel.

Nevada's 1955 legislature (see above, *Legislature*) voted a 2% sales and use tax, the state's first such levy. It was imposed primarily to meet costs of fulfilling recommendations from the Peabody Institute, after a survey, as to the needs of state schools. Later in the year, petitions were filed which resulted in a popular referendum vote scheduled for November 1956 on repeal of the tax. In other actions the legislature raised gambling taxes, with the new sliding scale tax of from 3% to 5½% on gross receipts expected to double the annual \$2 million revenue from the old 2% gambling tax. With a new three-man Gambling Control Board established, the state

Tax Commission was given tighter controls over gambling licenses.

Principal Events by:

AUSTIN E. HUTCHESON,

Professor of History, University of Nevada.

NEW BRUNSWICK. This Maritime province of Canada has an area of 27,985 square miles, of which 512 square miles are water. Its population (1955 est.) was 535,000. The cities are Fredericton, the capital, 16,018; St. John, 50,779; Moncton, 27,334; Edmundston, 10,753; and Lancaster (St. John West), 10,901.

Government.—New Brunswick is represented in the Canadian Parliament by 10 senators and 10 members of the House of Commons. In the province, the crown is represented by a lieutenant governor (Hon. D. Laurence MacLaren, since Nov. 1, 1954), appointed by the federal government, usually upon a recommendation from the province. The premier presides over a Legislative Assembly of 52 members, elected for terms of five years. In 1953, Hon. Hugh John Flemming, premier and minister of public works, headed a Progressive Conservative regime of 36 members. The Liberal opposition held the remaining 16 seats.

Finances.—For the fiscal year ending March 31, 1955, revenues amounted to \$53,387,000; expenditures, \$53,311,000; and surplus, \$75,773.

Education.—Primary and secondary education are nonsectarian and free, and attendance is compulsory for all children, aged 7 to 16, inclusive. Enrollment at the conclusion of the June 1955 term was 120,643. The province has 8 institutions granting degrees: the provincially controlled University of New Brunswick, Fredericton; Mount Allison University, Sackville; St. Joseph's University, Memramcook; St. Thomas College, Chatham; Sacred Heart College, Bathurst; St. Louis University, Edmundston; and College de L'Assomption, and College Notre Dame, at Moncton. Total reported enrollment for college institutions in 1955 was 2,607.

Fisheries.—New Brunswick's fisheries comprise a \$20 million to \$22 million-a-year industry and employ over 12,000 persons in the province. More kinds of fish are taken in commercial quantities than in any other Canadian province, chief varieties being flounder, pollack, herring, sardines, cod, salmon, smelt, alewives, lobsters, oysters, and clams. New Brunswick has long been known as the center of the Canadian sardine industry; it has the largest sardine cannery in the Commonwealth, and it is the largest exporter of live lobsters.

Agriculture.—Gross farm income from agriculture in 1954 amounted to \$64,721,000. Potato acreage in 1955 was 47,000, yielding 13,630,000 bushels. Wheat acreage was 2,200, yielding 42,000 bushels; oats, 137,000 acres, yielding 4,110,000 bushels; barley, 6,700 acres, yielding 134,000 bushels; mixed grain, 7,400 acres, yielding 200,000 bushels; buckwheat, 7,200 acres, yielding 180,000 bushels; hay, 458,000 acres, producing 916,000 tons; field roots, 3,000 acres, yielding 38,000 tons. Grain production in 1955 showed a good average crop, but yield was somewhat below the 1954 crop. The 1955 hay, potato, and apple crops showed good yield. Livestock, poultry, apples, and small fruits are also important agricultural products.

Electric Power.—The government, through the New Brunswick Electric Power Commission, is increasing available power for a greater utilization of natural resources. Under way in 1955 was a new project at Beechwood, 15 miles south of Perth and Andover. The design under study in 1953 suggested a maximum of 135,000 hp. from three units of 48,000 hp. each. The newly opened hydroelectric plant at Tobique Narrows has added 27,000 hp. to the system. Estimated annual output from Tobique is 80,000,000 kw.-hr. The overall power plan for the province aims at a combination of hydro- and steam-generated current. At the Grand Lake Steam Electric plant,

fired by coal from the Minto-Chipman field, the last of three recent extensions embraces a 200-pounds-per-hour steam plant and a 25,000 hp. steam turbine.

Minerals.—The value of New Brunswick mineral production exceeded \$12,600,000 in 1954. Coal, the chief item, totaled 784,385 tons, compared with 722,463 in 1953. Coal production for 1954 was valued at \$6,230,000. In both 1954 and 1955 there was intensive activity in mining exploration throughout the province. It was initiated by the announcement in January 1953 of the finding of an exceptionally large base metal ore body near Bathurst in the northeastern part of the province. There have also been discoveries of radioactive minerals near Harvey and in Restigouche County, nickel deposits at St. Stephen, manganese near Woodstock, titanium in the northern section, tungsten in York, and other base metals near Bathurst and in the central section. Ore is now being shipped from the Bathurst area.

Forest Industries.—The seven pulp and paper mills in New Brunswick used 1,050,000 cords of pulpwood in 1954. Total value of products of the forest industries in 1954 is estimated as follows: products of pulp and paper mills, \$102,000,000; products of sawmills, \$29 million; pulpwood and pit props, \$12 million; and firewood, \$8 million.

Transportation.—The province is served by sections of the Canadian National Railways; and the Canadian Pacific, which crosses the southwestern part of the province, has its Atlantic terminal in St. John. Airports are located at Moncton, Chatham, Fredericton, and St. John, with Trans-Canada Air Lines linking with all Canadian and United States airways. New Brunswick's highway system comprises 13,121 miles, with 1,487 main trunks, 1,014 secondaries, and 10,620 branches.

Principal Events, 1955.—Important events of the year 1955 included intensive development of the province's new base metal finds; start of the great Beechwood hydroelectric power project; further expansion and building of a major military training area between Welsford and Oromocto; an increased paving and road-building program; and more intensive effort in the development of the tourist industry.

R. A. TWEEDIE,

Director, New Brunswick Travel Bureau.

NEW CALEDONIA. A French territory in the eastern South Pacific. Area (with dependencies), 9,401 square miles; pop. (est. 1953), 62,315, including 34,143 native Melanesians, 20,415 Europeans (mostly French), and 7,757 workers from Viet-Nam and Java. Nouméa (pop. 1946, 10,466) is the capital. The dependencies include the Loyalty Islands, Wallis and Futuna Islands, Isle of Pines, and the smaller Huon Islands, Chesterfield Islands, Walpole Island, and Belep Islands. The governor, who is also the French high commissioner in the Pacific, is aided by a privy council and an elected General Council of 25 members. The budget for 1954 totaled 595 million francs CFP (the franc CFP equals 5.50 metropolitan francs). In 1954 there were 201 primary schools (12,163 pupils); 4 secondary schools (591); and 7 technical schools.

Mining and metallurgy are of chief economic importance. Output of nickel ore in 1954 was 520,000 metric tons; chromite, 83,900; and manganese ore, 5,600 (1953). Other products are coffee, copra, cotton, manioc, tobacco, and bananas. Industries include metallurgical plants,

coffee and cotton mills, and meat-preserving factories. In 1955 the General Council approved a plan for the construction of a \$29 million hydroelectric plant to lessen the cost of nickel production. Exports (mainly ores and metals) totaled 1,576 million francs CFP in 1954; imports, 1,435 million. Roads totaled 1,658 miles in 1953; motor vehicles numbered 4,255 (1955); telephones, 1,989 (1955). Nouméa is serviced by international steamship lines and airlines. The territory's first domestic airline was formed in 1955.

NEW GUINEA. This second largest island in the world, lying north of Australia in the western Pacific, has an area of 342,912 square miles and a population exceeding 2,500,000; it comprises Netherlands New Guinea (q.v.), and two Australian-administered areas: the Territory of Papua, and North Eastern New Guinea, the latter being part of the United Nations trust territory of New Guinea (see PAPUA AND NEW GUINEA, TERRITORY OF).

NEW HAMPSHIRE. New England state, United States; one of the original 13 states. The "Granite State" ranks 43d in area and 44th in population (1955) among the 48 states.

Area and Population.—Area: 9,304 square miles (land, 9,017; inland water, 287) divided into 10 counties. Population: (1950) 533,242; (est., July 1, 1955) 553,000. Urban places with 1950 populations above 10,000 are as follows:

Berlin.....	16,615	Laconia.....	14,745
Claremont.....	12,811	Manchester.....	82,732
Concord (capital).....	27,988	Nashua.....	34,669
Dover.....	15,874	Portsmouth.....	18,830
Keene.....	15,638	Rochester.....	13,776

Executive.—Chief state officers in 1955:

Governor: Lane Dwinell (Republican)

Secretary of State: Enoch D. Fuller

Treasurer: Alfred S. Cloues

Attorney General: Louis C. Wyman

Commissioner of Education: Austin J. McCaffrey

Constitution and Judiciary.—The present constitution went into effect in 1784. The Supreme Court comprises five justices; chief justice in 1955, Frank R. Kenison.

Legislature.—The General Court (Senate, 24 members; House of Representatives, 400) meets in odd-numbered years commencing the first Wednesday in January.

In a 93-day legislative session (January 5-August 5) encompassing the greatest volume of legislative business in the state's history, the General Court appropriated almost \$100 million for the 1955-57 biennium, including \$40 million for highway construction and \$1.5 million for capital improvements in institutions. Tax measures increased from 5% to 6% the state's share of parimutuel horse racing, and effected minor rises in business fees. The state's program of equalized aid to education was increased to \$2.4 million, and state aid for school construction was authorized. Funds were provided for a 1956 constitutional convention; bonuses were voted for Korean War veterans; political campaign spending was restricted; the state retirement system was integrated with social security; an Industrial Development Authority was established, with a \$1 million bond issue for its activities; the legal minimum wage was increased to 75 cents an hour; maximum benefits were increased under unemployment and workmen's compensation; and various measures were passed concerning agriculture, highway safety, abandoned ice-boxes, and refusal to yield a party telephone line in cases of emergency. Other enactments approved recodification of state laws; coordinated developments in atomic energy as they may affect business and industry; liberalized veterans tax exemptions; authorized advisory regional planning commissions; directed a study of the redistricting of senatorial districts; and ratified interstate compacts on juveniles and higher education.

Finances.—State treasury receipts (1954-55 fiscal year), \$70,117,746.31; expenditures, \$79,854,035.49; treasury balance, \$8,454,824.64; long-term indebtedness, \$37,715,000; temporary notes outstanding (June 30, 1955), \$3,500,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$27,554,000, including \$14,642,000 from selective sales and gross receipts taxes; \$7,289,000 from licensing; \$1,426,000 from individual income taxes; and \$1,712,000 from property taxes. The state has no general sales

or corporate income taxes but does have a poll tax of \$5 per person.

Banking.—As of June 30, 1955, the state's 51 national banks had \$244,445,000 in assets, \$170,546,000 in demand deposits, and \$46,336,000 in time deposits; the state's 58 other banks had \$547,155,781.82 in assets, \$20,119,799.98 in demand deposits, and \$456,171,089.68 in time deposits.

Education.—In municipalities which have a high school, school attendance is compulsory for all between the ages of 6 and 16, inclusive; in those with no high school, attendance is compulsory for all between the ages of 6 and 14, inclusive. Estimated expenditures for public elementary and secondary education in the 1954-55 school year were \$20,901,000 (\$253 per pupil) and estimated income comprised \$19,998,000 from local school districts, \$949,000 from the state, and \$713,000 from the federal government. Expenditures for construction and improvements were an estimated \$2,990,000, and teachers' salaries averaged approximately \$3,360 (elementary school teachers, \$3,175; high-school teachers, \$3,650).

Estimated pupil enrollment in the 1954-55 school year totaled 83,733, including 59,290 elementary school pupils and 24,443 secondary school pupils (including grades 7 and 8 of junior high schools).

Social Welfare.—Public welfare expenditures (exclusive of institutional costs) from state and federal funds in the 1954-55 fiscal year totaled \$7,546,582.21, including \$4,771,267.96 for old-age assistance, \$1,505,060.57 for dependent children, and \$223,759.02 for the needy blind; a monthly average of 10,735 persons received public assistance. Operating expenditures for health and welfare institutions in the 1953-54 fiscal year totaled \$4,745,402; for correctional and penal institutions, \$686,756.

NEW HAMPSHIRE WELFARE INSTITUTIONS

(As of Sept. 1, 1955)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic....	1	695
Hospitals for the mentally ill.....	1	2,711
Sanatoriums for the tubercular.....	2	86
Soldiers and sailors homes.....	1	32
Training schools for delinquent boys and girls....	1	130
Prisons.....	1	182

Labor Force.—The labor force in March 1955 totaled 218,250, including 13,700 agricultural workers. Nonagricultural workers numbered 173,793, and for the full year 1954 averaged 174,690. In March 1955 there were 10,550 unemployed workers, and the state paid \$8,626,352 in unemployment compensation during 1954.

Manufacturing.—In 1953, 88,771 workers received \$272,833,000 in salaries and wages. Value added by manufacture was \$427,126,000, and investment in new plant and equipment was \$14,581,000. Earnings of production workers in manufacturing averaged \$57.46 for an average

Agriculture.—Cash farm income for the first half of 1955 totaled \$31,299,000, and for the full year 1954 comprised \$55,795,000 from livestock and livestock products, \$11,029,000 from crops, and \$250,000 from government payments. Receipts from principal crops and livestock in 1954 included: eggs, \$19,804,000; dairy products, \$19,457,000; broilers, \$6,078,000; chickens, \$5,446,000; greenhouse and nursery products, \$2,290,000; and apples, \$2,045,000.

The state's 10,411 farms (1,457,293 acres; harvested cropland, 246,583) had an average of 140 acres and \$11,650 in value of land and buildings per farm in 1954. There were 8,207 farms with telephones and 10,131 with electricity. Livestock on farms (Jan. 1, 1955) included 118,000 cattle and 2,995,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 17,768 family and hired workers engaged in farming.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$24,798,291, and newly completed construction and reconstruction aggregated 65 miles.

Highways and roads on Jan. 1, 1955, totaled 13,675 miles (6,671 surfaced). Registered *motor vehicles* (April 1-Sept. 1, 1955) numbered 219,976, including 161,123 passenger cars. There were (1954) 7 *railroads* operating 877.33 line miles and (1955) 2 regularly scheduled *airlines* and 27 *airports and airfields* (17 commercial and municipal, 2 military, and 5 private, and 3 seaplane bases).

Communications media (1955) included 12 AM and 4 FM *radio stations* and 1 operating *television outlet*; 9 daily *newspapers* (circulation, 98,374) and 42 other newspapers; and (Jan. 1, 1955) 43,349 business and 123,531 residential *telephones*.

Principal Events, 1955.—Politically, 1955 was an off-year in New Hampshire. Only at the local level were elections held. At the town meetings in March the state's 223 towns chose their officers, and in November eight of the state's 12 cities elected their councils and, in most cases, a mayor. Inasmuch as most of the contests were nonpartisan and were decided on local issues, no significant trend toward either political party was discernible. The nearly successful attempt in the

President Eisenhower (left), with N.H. senators Cotton and Bridges, Governor Dwinell, and Press Secretary Hagerly, shown on June 24, 1955, at the Old Man of the Mountains sesquicentennial celebration, Franconia Notch, N.H.

legislature to legalize a state lobby aroused the most interest, politically, in 1955. (See also above, *Legislature*.)

Late in June, President Dwight D. Eisenhower made a three-day tour of the state. On June 23 he spoke briefly to 15,000 people from the steps of the State House in Concord and to 3,500 others at a barbecue outing at Belknap State Park in Gilford. On June 24 he and his party drove to Lincoln, home of former Gov. Sherman Adams, presidential chief of staff, and then to Franconia Notch, where he spoke to a crowd of 2,500 gathered to commemorate the white man's discovery of the Old Man of the Mountains 150 years earlier. The next day the president visited Lancaster and Berlin. At the farm of Secretary of Commerce Sinclair Weeks, in Lancaster, he signed the ratification document of the Austrian State Treaty.

On August 20 the Frederick E. Everett Turnpike was opened from Manchester to the Massachusetts border, a distance of 21.6 miles, and construction continued on the Spaulding Turnpike from Portsmouth to Rochester and on the jet-bomber base at Newington.

New Hampshire was spared the torrential rains which flooded much of southern New England in August and October. Except for a few local forest fires and flash floods, the state passed through the year without a major disaster.

Associate Professor of Government, University of New Hampshire.

NEW HEBRIDES. See WESTERN PACIFIC ISLANDS, BRITISH.

NEW JERSEY. Middle Atlantic state, United States; one of the original 13 states. The "Garden State" ranks 45th in area and 8th in population (1955) among the 48 states.

Area and Population.—Area: 7,836 square miles (land, 7,522; inland water, 314), divided into 21 counties. Population: (1950) 4,835,329; (est., July 1, 1955) 5,370,000. Incorporated places with 1950 populations above 15,000 are as follows:

Asbury Park.....	17,094	Millville.....	16,041
Atlantic City.....	61,657	Montclair.....	43,927
Bayonne.....	77,203	Morristown.....	17,124
Belleville.....	32,019	New Brunswick.....	38,811
Bergenfield.....	17,647	Newark.....	438,776
Bloomfield.....	49,307	North Arlington.....	15,970

Lodi.....	15,392	West Orange.....	28,605
Long Branch.....	23,090	Westfield.....	21,243

* Created a city in 1952 by the merger of Vineland borough (1950 pop., 8,155) and Landis Township (21,418).

Executive.—Chief state officers in 1955:

Governor: Robert B. Meyner (Democrat)
Secretary of State: Edward J. Patten
Treasurer: Archibald S. Alexander (resigned Dec. 5, 1955)

Attorney General: Grover C. Richman, Jr.
Commissioner of Education: Frederick M. Raubinger

Constitution and Judiciary.—The present constitution went into effect in 1948. The Supreme Court comprises seven justices; chief justice in 1955 was Arthur T. Vanderbilt.

Legislature.—The Legislature (Senate, 21 members; General Assembly, 60) meets annually commencing the second Tuesday in January.

In a series of legislative meetings extending throughout the year, the legislature approved appropriations of \$284,396,748 for the 1955-56 fiscal year, including \$5.6 million for flood relief, \$1.5 million for a program for mentally retarded children at the Bordentown Manual Training School, and an increase of \$5 million in the highway construction appropriation. Truck overloading minimum fines were reduced from \$200 to \$50; more effective enforcement of motor vehicle safety laws was insured; and motor vehicle registration and licensing laws were revised, including the introduction of a new mail order system for auto licensing and registration. Maximum unemployment and temporary disability benefits were increased from \$30 to \$35 (effective after October 1) for persons who had earned \$55.01 or more weekly, and a commission was established to study child labor laws. The teachers' pension system was integrated with social security, and new rules were effected for the organizing and financing of school districts. The Turnpike Authority was authorized to build an east-west superhighway from Somerville to South Amboy, and air pollution and metropolitan rapid transit studies were authorized. (See also below, *Principal Events*, 1955.)

Finances.—State treasury receipts (1954-55 fiscal year), \$500,341,096.91; expenditures, \$506,701,627.21; treasury balance, \$42,530,857.48; long-term indebtedness, \$115,106,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$238,081,000, including \$136,257,000 from selective sales and gross receipts taxes; \$86,160,000 from licensing; and \$12,795,000 from death and gift taxes. The state has no general sales, individual or corporate income, or poll taxes.

Banking.—As of June 30, 1955, the state's 194 national banks had \$3,291,971,000 in assets, \$1,788,730,000 in demand deposits, and \$1,249,586,000 in time deposits; the state's 134 other banks had \$3,845,446,000 in assets, \$1,502,177,000 in demand deposits, and \$2,016,071,000 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$228,836,781.01 (\$306.85 per pupil) for public elementary and secondary education in the 1953-54 school year comprised \$200,574,513.82 (87.6%) from local school districts, \$27,000,123.60 (11.8%) from the state, and \$1,262,143.59 (0.6%) from the federal government. Expenditures for construction and improvements totaled \$53,993,176.77.

Teachers' salaries averaged \$4,655 in the 1955-56 school year.

The state paid \$14,047,705.25 in the 1953-54 school year for the operation of institutions of higher learning and \$3,362,991.02 for construction and major improvements.

Prison farms.....	2	1,339

* Including a neuropsychiatric institute.

Manufacturing.—During 1953, a total of 853,101 workers in manufacturing establishments received \$3,583,419,000 in salaries and wages; value added by manufacture was \$6,451,055,000; and investment in new plant and equipment totaled \$332,939,000. Earnings of production workers in manufacturing averaged \$74.43 for an average work week of 39.8 hours in 1954, and \$78.60 for 40.6 hours in the first six months of 1955.

MAJOR NEW JERSEY MANUFACTURES, 1953

Product or industry	No. of employ-ees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ²

¹ Average per year. ² Value of products less cost of materials, supplies, fuel, electric energy, and contract work. (Source: *Annual Survey of Manufactures*, 1953.)

Labor Force.—Nonagricultural employment in June 1955 numbered 1,791,800, and for the full year 1954 averaged 1,775,900. There were 130,000 unemployed workers in June 1955, and the state paid \$117,662,644 in unemployment compensation during the year ending June 31, 1954.

Mining.—New Jersey produces virtually all of the greensand (glauconite) mined in the United States. In 1953 it was the fourth largest producer of zinc, and ranked 34th in the total value of its mineral output, with 0.36% of the United States total.

NEW JERSEY MINERAL PRODUCTION, 1953 (In short tons, except as noted)

Total.....		\$51,945,147

¹ Values for processed materials are not included in the total. ² Value included with "Other minerals." ³ Excluding that used in making lime. (Source: U.S. Bureau of Mines.)

Fisheries.—Commercial fisheries in 1953 employed 5,878 fishermen whose catch comprised 21,562,000 pounds of shellfish valued at \$7,323,000 and 437,285,000 pounds of fish (\$7,138,000). Totals for leading species were: menhaden, 396,309,000 pounds (\$3,866,000); oysters, 8,484,000 pounds (\$4,119,000); and clams, 10,411,000 pounds (\$2,602,000).

Agriculture.—Cash farm income for the first half of 1955 totaled \$151,462,000, and for the full year 1954 comprised \$217,263,000 from livestock and livestock products, \$120,289,000 from crops, and \$872,000 from government payments. Receipts from principal crops and livestock in 1954 included: eggs, \$113,912,000; dairy products, \$64,120,000; greenhouse and nursery products, \$30,250,000; chickens, \$11,818,000; tomatoes, \$11,360,000; and broilers, \$9,715,000.

The state's 22,686 farms (1,665,241 acres; harvested cropland, 788,398) averaged 73.4 acres and \$27,704 in value of land and buildings per farm in 1954. There were 19,967 farms with telephones and 22,449 with electricity. Livestock on farms (Jan. 1, 1955) included 228,000 cattle and 18,864,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 69,798 family and hired workers were engaged in farming.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$62,297,058.80.

Newly completed construction and reconstruction aggregated 60.765 miles.

Highways and roads on Jan. 1, 1955, totaled 28,243 miles (22,243 surfaced). Registered motor vehicles (1954) numbered 1,953,502, including 1,702,264 passenger cars. There were (1955) 27 railroads operating 2,033,958 line miles and 11 regularly scheduled airlines and 127 airports and airfields (60 commercial and municipal, 3 military, and 56 private, and 8 helicopter and 5 seaplane bases).

Communications media included (1955) 19 AM and 6 FM radio stations and 2 operating television outlets; (1954) 27 daily newspapers (circulation, 1,280,663) and 272 other newspapers (circulation, 1,361,641); and (Jan. 1, 1955) 588,493 business and 1,522,609 residential telephones.

Principal Events, 1955.—Gov. Robert B. Meyner in his annual message to the legislature on January 11 urged revision of the election laws, expansion of the highway system, an increase in unemployment benefits, the issuance of motor vehicle licenses by mail, and the development of additional supplies of potable water. In subsequent messages he called for an enlarged mental health program and the construction of a new group of state office buildings. By the end of the year, among other legislative actions (see above, *Legislature*), jobless benefits had been raised from \$30 to \$35 a week, a new car-licensing system had been approved, and a record \$284,396,747 budget had been adopted.

Major attention in the legislature centered on the water problem. A proposal to utilize Round Valley, in Hunterdon County, as a reservoir site was defeated in the Senate. Following studies by a special commission, the legislature approved the holding of a referendum on a \$100,000,000 project to provide for a reservoir at Chimney Rock, in Somerset County, and additional facilities elsewhere. The referendum was defeated by an overwhelming majority in the November election.

Continuing investigation of the affairs of the former director of the Division of Employment Security, Harold G. Hoffman, resulted in the removal or suspension of five state employees and recommendations that seven others be similarly disciplined. In Cape May County a probe of election irregularities led to the indictment of 111 individuals.

Torrential rains on August 18-19, following in the wake of hurricane Diane, caused property damage in the state estimated at \$30,000,000 and the loss of six lives. The northwestern section of the state was particularly hard hit. Four Delaware River bridges were completely destroyed.

In the November 8 election the Republicans retained their 40 to 20 seat margin over the Democrats in the General Assembly. Democratic victories in the counties of Camden, Salem, and Essex—where Donald C. Fox became the first Democrat to win election to the Senate since 1908—reduced the Republicans' strength in the Senate but left them in control, 14 seats to 7.

Economic conditions in the state showed gains over the previous year, with employment reaching the record figure of 1,800,000. The Garden State Parkway, built at a cost of \$350,000,000 by the New Jersey Highway Authority, was opened on July 1 for its entire 164-mile length from Paramus, in Bergen County, to Cape May.

In the field of higher education, Fairleigh-Dickinson College announced the establishment of the first school of dentistry in the state, to begin classes in September 1956. On November 25 the Board of Trustees of Rutgers University approved a reorganization proposal that would vest

control of the university in the state. (See also BRIDGES; HIGHWAYS.)

Principal Events by: RICHARD P. MCCORMICK, Associate Professor of History, Rutgers University; President, New Jersey Historical Society; Author, "The History of Voting in New Jersey" (1955).

NEW MEXICO. Southwestern state, United States; admitted to the Union, Jan. 6, 1912. The "Sunshine State" ranks 4th in area and 39th in population (1955) among the 48 states.

Area and Population.—Area: 121,666 square miles (land, 121,511; inland water, 155), divided into 32 counties. Population: (1950) 681,187; (est., July 1, 1955) 769,000. Urban places with 1950 populations above 10,000 are: Albuquerque, 96,815; Carlsbad, 17,975; Clovis, 17,318; Hobbs, 13,875; Las Cruces, 12,325; Roswell, 25,738; and Santa Fe, the capital, 27,998.

Executive.—Chief state officers in 1955:

Governor: John F. Simms, Jr. (Democrat)
Lieutenant Governor: Joseph M. Montoya
Secretary of State: Natalie S. Buck
Treasurer: Joseph B. Grant
Attorney General: Richard H. Robinson
Supt. of Public Instruction: Georgia L. Lusk

Constitution and Judiciary.—The present constitution went into effect in 1912. The Supreme Court comprises five justices; chief justice in 1955: J. C. Compton.

Legislature.—The Legislature (Senate, 32 members; House of Representatives, 55) meets in odd-numbered years commencing the second Tuesday in January.

The 1955 regular session of the legislature (January 11–March 12) appropriated \$31 million for the 1955–57 biennium and authorized a \$4,250,000 bond issue to finance construction at state institutions and a \$20 million bond issue for highways. Among other enactments were those which controlled price fixing; tightened the state purchasing law; reconstituted the Economic Development Commission; established an Indian Commission, a Forest Conservation Commission, and an office of state budget director; authorized the governor to merge the health and welfare departments; approved bus transportation for private school pupils; extended the 20% overload allowance to all trucks; adopted a Juvenile Code, a uniform drivers' license code, a wind erosion act, a small loans act, a state minimum wage law, an anti-segregation law for public schools, and a measure ordering racial equality in places of public accommodation; and restored the direct primary. State Supreme Court justices' salaries were increased to \$15,000 and District Court judges' salaries to \$12,500; taxes were increased on cigarettes; a state Parole Board was established; and the gas chamber replaced the electric chair for state executions.

Of the six amendments voted on at the September 20 election, two which would have revised the State Corporation Commission and established absentee balloting were defeated. The four which were passed reapportioned the legislature to include one senator from each county and a total of 66 representatives; changed the types of boards governing state institutions; and altered the official names of the Insane Asylum to State Hospital and of the Reform School to Boys' School.

A special session called by the governor on September 26 appropriated \$1 million in emergency funds for the Department of Public Welfare and authorized \$500,000 in contingency loans from state funds. Other legislation established a property liens' bill against the estate of a recipient of public assistance to permit state recovery of welfare payments; initiated a relatives' responsibility bill; authorized publication of welfare rolls; appropriated \$200,000 for the Board of Finance emergency fund; and created a "fire protection" fund for municipalities.

Finances.—State treasury receipts (1954–55 fiscal year): \$179,161,552.68; expenditures, \$180,297,543.43; treasury balance, \$37,239,437.85; long-term indebtedness, \$15,819,069.31.

Taxation.—State tax revenue (1954–55 fiscal year): \$80,210,000, including \$52,432,000 from a 2% general sales tax and selective sales and gross receipts taxes; \$11,393,000 from licensing; \$5,534,000 from property taxes; and \$3,707,000 from individual and corporate income taxes. The state has no poll tax.

Banking.—On June 30, 1955, the state's 26 national banks had \$375,468,000 in assets, \$286,694,000 in demand deposits, and \$66,679,000 in time deposits; the state's 27 other banks had \$149,303,400.07 in assets, \$82,312,299.18 in demand deposits, and \$25,680,824.58 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 16, inclusive. Estimated expenditures for public elementary and secondary education in the 1954–55 school year

totalled \$44,254,000 (\$280 per pupil), and estimated income comprised \$3,874,000 from local school districts, \$34,522,000 from the state, and \$3,450,000 from the federal government. Outlays for construction and improvements were an estimated \$7,589,000. Teachers' salaries averaged an estimated \$4,340 (elementary school teachers, \$4,280; high school teachers, \$4,420).

During the 1953–54 school year there were 572 public elementary schools with 4,061 teachers and 98,883.04 pupils in average daily attendance; 31 public junior high schools with 16,957.43 pupils; and 117 public high schools with 28,934.74 pupils.

Social Welfare.—Public assistance expenditures from state and federal funds (exclusive of costs of administration) in the 1954–55 fiscal year totalled \$13,320,836.40, including \$5,753,162.50 for old-age assistance, \$5,564,228.50 for dependent children, and \$202,670.50 for the needy blind; an average of 41,418 persons received public assistance. Operating expenditures for health and welfare institutions amounted to \$1,559,278.22; for penal institutions, \$1,092,251.92. A new penitentiary, to cost approximately \$8 million, was under construction in 1955.

NEW MEXICO WELFARE INSTITUTIONS

Labor Force.—The labor force in April 1955 numbered 267,000, including 12,400 agricultural workers. Nonagricultural employment was 183,600 in July 1955, and in 1954 averaged 174,200. There were 17,900 unemployed workers in April 1955, and the state paid \$4,102,138 in unemployment compensation during the year ending June 20, 1955.

Manufacturing.—Establishments in 1954 numbering 598 had an average of 16,400 "covered" employees who received \$72,482,844 in salaries and wages. In 1953, value added by manufacture was \$129,248,000, and investment in new plant and equipment totalled \$3,932,000. Earnings of production workers in manufacturing averaged \$78.91 for an average work week of 41.1 hours in 1954, and \$79.13 for 41 hours in the first six months of 1955. Chief manufactures are chemicals and allied products, lumber and products, and food and kindred products.

Mining.—In 1953, New Mexico ranked first among the states in the production of potash, perlite, and pumice; third in beryl and helium; and fourth in copper and molybdenum. The state ranked 11th in the total value of its 1953 output, with 2.30% of the United States total.

The accompanying table shows the production of leading minerals during 1955, excluding mineral fuels. Output of the latter in 1954 included: natural gas, 486 billion cubic feet (valued at \$22,356,000); natural gasoline, 5,300,000 barrels (\$13,090,000); and petroleum, 74,500,000 barrels (\$195,935,000). In the 1954–55 fiscal year, 4,058 persons were employed in metal mines and 3,588 in nonmetallic mines.

Agriculture.—Cash farm income for the first half of 1955 totaled \$61,495,000, and for the full year 1954 comprised \$93,626,000 from livestock and livestock products, \$94,549,000 from crops, and \$2,823,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$64,494,000; cotton lint, \$65,013,000; dairy products, \$9,608,000; cottonseed, \$7,794,000; and sheep, \$6,414,000.

The state's 21,070 farms (49,603,885 acres; harvested cropland, 1,135,073) had an average of 2,354.2 acres and \$38,660 in value of land and buildings per farm in 1954. There were 5,700 farms with telephones and 17,231 with electricity. Livestock on farms (Jan. 1, 1955) included 1,140,000 cattle, 1,271,000 sheep, and 938,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 65,033 family and hired workers were engaged in farming.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$32,644,628.15, and newly completed construction and reconstruction aggregated 491 miles.

Highways and roads on Dec. 31, 1954, totaled 62,565.1 miles (7,348.5 surfaced). Registered motor vehicles numbered 312,151 on June 30, 1955, including 216,800 passenger cars. There were 9 railroads (1955) operating, in 1954, 2,533 line miles, and there were (1955) 4 regularly scheduled airlines and 73 airports and airfields (23 commercial and municipal, 5 military, 40 private and limited, and 5 others).

Communications media included (1955) 30 AM radio stations and 4 operating television outlets; 13 daily newspapers (circulation, 145,023) and 40 other newspapers; and (Jan. 1, 1955) 68,786 business and 103,226 residential telephones.

Principal Events, 1955.—The year 1955 opened with the inauguration of John F. Simms, Jr., as governor. Among major actions of the state legislature in its regular session (see above, *Legislature*) was the passage of a weight-size truck bill which became the subject of considerable

controversy. Later in the year, owing to financial difficulties in the Department of Public Welfare, a special session met for ten days. Among the several measures passed were those providing \$1,500,000 for public welfare and increasing the number of state police.

Months of drought, forcing cattle sales and requiring federal aid for the feeding of livestock, ended in some sections of the state with late summer rains. Rainfall rendered the eastern ranges in excellent condition, although western ranges remained seriously dry. The rains which helped restore the rangelands resulted in floods to Albuquerque which caused millions of dollars worth of damage and led to federal disaster assistance.

In other actions the federal government appropriated \$11 million to continue Rio Grande flood control and reclamation operations and allocated \$200 million for military installations in New Mexico. At Los Alamos, birthplace of controlled thermonuclear research in the United States, the technical area of the Los Alamos Scientific Laboratory was opened for the first time on an unclassified basis.

Economic progress was steady and economic conditions were excellent in 1955. Labor disputes involving construction in Los Alamos and Carlsbad, and the Kennecott Copper Corporation were, among others, settled during the year. Expansion of mining and oil prospecting activities continued. Bank deposits were higher, federal income tax payments by state residents rose by \$8 million over the previous year, retail sales ran some \$92 million ahead of those of 1954, and employment was at an all-time high.

Executive.—Chief state officers in 1955:

Governor: Averell Harriman (Democrat)
Lieutenant Governor: George B. De Luca
Secretary of State: Carmine G. De Sapio
Comptroller: Arthur Levitt
Attorney General: Jacob K. Javits
Commissioner of Education: James E. Allen, Jr.

WIDE WORLD

Governors Meyner of New Jersey, Ribicoff of Connecticut, and Harriman of New York, and Mayor Wagner of New York City (l. to r.) discuss civil defense problems of the New York metropolitan area in March 1955.

Constitution and Judiciary.—The present constitution went into effect in 1894. The highest tribunal, the Court of Appeals, comprises seven justices; chief justice in 1955 was Albert Conway.

Legislature.—The Legislature (Senate, 58 members; Assembly, 150) meets annually commencing the first Wednesday after the first Monday in January. The principal laws enacted at the 1955 session of the legislature included the following:

New York City.—The city was authorized to levy real estate taxes at $2\frac{1}{2}\%$ of the 5-year average of assessed valuations; to increase the gross business receipts tax to $\frac{1}{4}\%$ and the financial business tax from $\frac{1}{8}\%$ to 1% ; to fund old subway obligations; to reconstitute the Transit Authority as a paid 3-member body; to demolish the Third Avenue elevated line; and to initiate a joint Port of New York Authority and Triborough Bridge Authority construction program of \$600 million.

Housing and Rent.—Cities were authorized to lend up to 90% of the cost of limited profit or nonprofit housing projects for moderate income families and to grant tax reductions for improvements in substandard apartments. Racial discrimination was prohibited in publicly assisted or federally insured housing.

Budget and Taxation.—Appropriations totaling \$1,259 million were approved for the 1955-56 fiscal year, of which \$706 million was allocated for state grants to local governments and \$553 million for state governmental operations.

Crime.—The sale of obscene comic books to minors was barred; and a commission to study juvenile delinquency, a Division of Youth in the state Correction Department, and a legislative committee to investigate wiretapping were created.

Miscellaneous.—Maximum unemployment insurance benefits were increased from \$30 to \$36 weekly; a New York Business Development Corporation was created; a single primary was established; daylight saving time was made mandatory from the last Sunday in April to the last Sunday in October; bingo was legalized for nonprofit organizations; and the rose was established as the official state flower.

Of 10 constitutional amendments presented for the voters' approval at the November 8 elections, the five amendments which passed provided for: (1) an increase from \$25 million to \$34 million in the maximum of annual subsidies for low-rent housing projects; (2) absentee registration and voting by the sick and disabled; (3) transfer of the functions of the state Board of Equalization and Assessments to the state comptroller; (4) permission for municipalities to construct and operate joint sewer systems; and (5) the barring of judges from holding other public office.

Finances.—General Fund receipts (1954-55 fiscal year), \$1,159,155,104; expenditures, \$1,158,127,725; surplus (March 31, 1955), \$1,027,379; long-term net indebtedness, \$682,344,129 (March 31, 1955).

Taxation.—State tax revenue (1954-55 fiscal year): \$1,178,721,062, including \$370,445,720 from excise taxes; \$347,465,507 from individual income taxes; \$312,389,668 from general business taxes; and \$128,420,167 from all other taxes.

Banking.—As of June 30, 1955, the state's 319 national banks had \$10,361,481,000 in assets, \$6,857,351,000 in demand deposits, and \$2,332,810,000 in time deposits; the state's 351 other banks on Dec. 31, 1954, had \$42,489,622,954 in assets, \$18,625,927,867 in demand deposits, and \$19,476,596,610 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$821,271,032.44 (\$362.27 per pupil) for public elementary and secondary education in the 1953-54 school year included \$491,640,030 from local school districts and \$296,182,392 from the state. Expenditures for construction and improvements totaled \$282,342,370.20. Teachers' salaries averaged \$4,697.66.

¹ As of Aug. 31, 1955. ² Sept. 1, 1955. ³ 1954-55 fiscal year. ⁴ Dec. 31, 1954.

Labor Force.—The estimated labor force in May 1955 (including members of the armed forces) was 6,560,000. Nonagricultural employment in July 1955 totaled 5,834,400, and for 1954 averaged 5,856,300. Registered unemployed workers totaled 245,161 in July 1955, and the state paid \$262,494,226 in unemployment insurance claims for the 12 months ending July 1955.

Fisheries.—The commercial fish and shellfish catch in 1954 was valued at \$7,551,722. Pound-ages and values of principal species landed were: hard clams, 2,452,472 (\$1,268,595); oysters, 1,707,030 (\$1,138,020); and menhaden, 98,075,250 (\$979,628).

Manufacturing.—Establishments numbering 54,100 in 1953 employed an average of 2,053,428 persons who received salaries and wages totaling \$8,419,085,000. Value added by manufacture was \$14,410,234,000, and investment in new plant and equipment amounted to \$514,135,000. (This compared with \$550,845,000 in 1952.) Production workers in manufacturing earned \$71.50 for an average work week of 38.8 hours in 1954 and \$74.60 for 39.5 hours in the first six months of 1955.

ery products, \$55,258,000; cattle, \$53,175,000; and potatoes, \$27,040,000.

The state's 105,714 farms (15,070,832 acres; harvested cropland, 5,546,506) averaged 142.6 acres and \$15,179 in value of land and buildings per farm in 1954. There were an estimated 87,640 farms with telephones and 103,490 with electricity. Livestock on farms (Jan. 1, 1955) included 2,356,000 cattle and 14,887,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 244,871 family and hired workers were engaged in farming.

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$235,673,441, and newly completed construction and reconstruction aggregated 493 miles.

Highways and roads on Jan. 1, 1955, totaled 103,837 miles (86,259 surfaced). Registered motor vehicles numbered 4,549,352 in 1954, including 3,705,149 passenger cars. There were (1955) 46 railroads operating 7,373 line miles, 33 regularly scheduled airlines, and 264 airports and airfields (206 commercial and municipal and 9 military fields, 37 seaplane bases, and 12 heliports).

Communications media (1955) included 108 AM and 49 FM radio stations and 21 operating television outlets (18 VHF and 3 UHF); 126 daily newspapers (circulation, 9,721,207) and 533 other newspapers; and (Jan. 1, 1955) 2,271,158 business and 4,493,541 residential telephones.

Principal Events, 1955.—The growth of New York State's urban population continued during 1955, with most of the increase occurring in suburban areas. In February the Temporary Commission on Fiscal Affairs of State Government estimated that by 1960 approximately 85% of the population would be living in cities or suburbs.

Inadequate housing, especially for middle-income families, continued to be a serious problem throughout the state. A proposal (Proposition 1) authorizing \$50 million in state loans for that type of housing was approved in the election of November 8 by the extremely narrow margin of 954,145 to 931,783.

The state's revenue problems and measures received wide publicity in 1955, especially during the early part of the year. In addition to a repetition of the annual controversy between state and New York City officials regarding state aid to the city, much recrimination occurred respecting Gov. Averell Harriman's vetoes of tax reduction bills calling for a continuation of the 10% personal income tax forgiveness and reduction of the levy on income of unincorporated businesses. The fact that by October 17, state revenue was running \$50-\$60 million ahead of executive estimates made earlier in the year added heat to the months-old controversy.

The persistently bad situation along New York City's labor-troubled waterfront aroused statewide interest. For months the International Longshoremen's Association (Independent) resisted efforts of the New York-New Jersey Waterfront Commission to make effective the commission's hiring regulations. By early November, personnel changes made at Albany in New York's representation on the commission were producing widespread charges that the growing effectiveness of the commission's reform efforts were being endangered by politics.

Largely because there were no statewide offices at stake in the general election of November 8, only 5,306,070 persons (6,214,366 in 1954) registered to vote. The limited public interest was mainly confined to local candidacies, particularly mayoralty contests, and to ten pro-

posed constitutional amendments and one state-aid-to-housing proposition. In the state, Democrats made a net gain of one mayor in 45 city contests. Five of 11 referendum items were defeated—a result widely attributed to voter resistance to higher taxes. (See also above, *Legislature*.)

Additional developments of statewide scope and interest during 1955 included the announcement on February 11 of the Consolidated Edison Company's readiness to build a \$30-\$40 million atomic power plant on the Hudson River, near Peekskill; completion of additional sections of the New York State Thruway, leaving only a three-mile final link (from Yonkers to the Bronx line) of the 427-mile expressway from Buffalo to be completed in 1956; continuing large-scale purchases of land by the New York State Power Authority for the St. Lawrence hydroelectric project; the voting by the state legislature of appropriations totaling a record \$1,259 million; statewide participation on June 15 in a mass civil defense test; the setting of new hot weather records during August; and widespread destruction of property by floods in mid-October.

Associate Professor of History, New York University.

NEW YORK CITY. This seaboard metropolis is the most populous city in the United States, and is the nation's financial, business, commercial, and arts center.

Covering 315.1 square miles, the city contained some 8,050,000 inhabitants in January 1955, compared with 7,891,957 in 1950. The Department of City Planning reported that the population increase during the 1950-55 period had been confined to three of the five boroughs: Queens, the Bronx, and Richmond. Queens led with a gain of 170,000; Manhattan and Brooklyn showed slight declines. In February 1955 the Temporary Commission on Fiscal Affairs of State Government forecast from Albany, N.Y., an increase of New York City's population to 8,450,000 by 1960, and a continuation of the current large-scale movement to the suburbs.

The problem of obtaining public funds to meet the city's operational and improvement needs continued in 1955 to be a source of controversy between state and city officials. Assessed valuation of New York City's real estate was (May 31) officially set at an all-time high of

\$21,021,108,321 for the fiscal year beginning July 1, 1955. This rise continued a 10-year upward trend and produced a record real estate tax rate of \$3.85 per \$100 of assessed valuation. The state legislature substantially increased the amount of state aid to the city, and granted most of the additional taxing power which the city had requested (see also New York—*Legislature*). In August, Controller Lawrence E. Gerosa reported that during the 1954-55 fiscal year the city's gross debt had risen by \$97 million to \$3,585 million.

The city school budget was estimated by the Board of Education in mid-February 1955 to approximate \$300 million per year for operation of schools and \$450 million for total annual expenses, including pensions, health services, maintenance costs, and building programs. The board later estimated that by October the city's 36,000 public school teachers would be teaching 922,460 pupils: 66,950 in kindergarten, 506,260 in elementary schools, 308,800 in high schools, and 40,450 (full-time) in vocational schools.

New building construction throughout the city during 1955 far exceeded that of 1954. Much of the construction planned or already in progress was that of apartment houses, especially of the "luxury" type. A major area of building activity was the eastern portion of Manhattan. Announcements made during the year of plans for forthcoming construction of important new buildings included those of a \$25 million skyscraper on Lexington Avenue at 46th Street; a 30-story office building at 40th Street and Avenue of the Americas; a \$40 million Union Carbide and Carbon Corporation office building on Park Avenue; a 27-story Canada House at 5th Avenue and 54th Street; and a downtown "Rockefeller Center" being planned by the Chase Manhattan Bank for two large blocks in a section of the financial district.

Despite extensive slum clearance and much new apartment house construction during 1955, adequate moderate-rent housing for low- and middle-income residents remained a serious problem. In April the Board of Estimate committed itself to a \$225 million three-year program designed to provide approximately 15,000 low-rent apartments. A number of bills passed by the state legislature during 1955 gave promise of helping increase low-rent housing and of lessening health and safety hazards in tenements and rooming houses.

Business conditions in New York City were excellent throughout 1955. Indications of a banner year were apparent in successive quarterly reports showing new records being set in almost every business activity. By midyear, profits of industrial manufacturers were higher than ever before in the city's history.

Labor conditions, too, were generally good in 1955, with the rate of unemployment declining and fewer strikes occurring than in 1954. Most of the city's labor disturbances and difficulties centered about the waterfront, and chiefly about persistent resistance by the independent International Longshoremen's Association to hiring regulations which the Waterfront Commission began enforcing on April 1. The courts sustained the position taken by the commission, which in early September began taking disciplinary action against various longshoremen who had participated in tying up West Side piers for three days in March. By early November the deep involvement of the waterfront situation in politics—particularly in respect to modification of personnel of the Waterfront Commission—was arousing speculation as to possible effects which the controversy might have on the 1956 elections.

The city made great progress during 1955 in its fight against crime. Police Commissioner Francis W. H. Adams (who resigned and was

succeeded by Stephen P. Kennedy on August 2), announced on July 25 that during the first six months of 1955 there had been a 13% drop in figures for major crimes, as compared with the same period of 1954. Major crime-reduction measures included an increase of the uniformed police force from 19,840 to 22,162 men by July 24, and to a record high of 22,555 by November 3; the heavy police reinforcement of crime-ridden precincts; an increasing of the subway police force, and, effective June 1, the publication and posting by the Transit Authority of subway timetables for night trains; passage of state legislation, effective July 1, tightening bail requirements for known criminals; increased appropriations by the Board of Estimate to combat crime; and intensified efforts by public and private agencies to lessen juvenile delinquency. Near the end of August a citywide drive was launched by district attorneys of Manhattan, Brooklyn, and Queens to effect stricter enforcement of legislation against sale of deadly weapons to minors. During the second half of 1955, city police and federal narcotics agents smashed three narcotics rings estimated to have been doing a \$50 million-a-year business.

The general election of November 8 aroused little interest. There were few important offices at stake, and no citywide or statewide contests between candidates. Only 1,690,648 persons (as compared with the 1954 city total of 2,463,056) registered to vote. The Democrats made a clean sweep of all contested offices in the city, winning their biggest victory in Queens, where State Sen. Frank D. O'Connor (Democrat-Liberal) defeated Vincent L. Leibell, Jr. (Republican) for district attorney by a margin of 68,371 votes. (See also TUNNELS.)

RAY W. IRWIN,
*Associate Professor of History,
New York University.*

NEW ZEALAND. Lying some 1,200 miles southeast of Australia in the South Pacific Ocean, the principal areas of this self-governing sovereign state of the British Commonwealth comprise two chief islands: North Island (44,281 square miles) and South Island (58,093) with adjacent Stewart Island (670) and Chatham Islands (372). The main islands together have an approximate length of 1,000 miles. Outlying uninhabited groups include the Auckland Islands (234 square miles), Campbell Island (44), and the Antipodes Islands (24). Within the administrative area (103,939 square miles) are the island territories of Cook (84), Niue (100), Tokelau, or Union (3.5), and the Kermadec Islands (13). New Zealand also administers Western Samoa (q.v.) and the uninhabited Ross Dependency (175,000 square miles) in the Antarctic. With the United Kingdom and Australia, New Zealand is a joint trustee of Nauru (q.v.).

Population.—The population numbered 2,087,740 (including 127,384 Maoris) on March 31, 1954, exclusive of the Cook Islands (15,657), Niue Island (4,708), the Tokelau Islands (1,753), and Western Samoa (94,128). Principal urban centers, and their populations on April 1, 1953, are: Wellington, 137,600 (Wellington City, the capital, 126,500); Auckland, 350,500 (city, 181,400); Christchurch, 182,800 (city, 126,600); Dunedin, 97,900 (city, 71,100); and Hutt, 80,200 (Lower Hutt City, 46,000). The white population is almost exclusively of British stock. The indigenous Maoris, a branch of the Polynesian race, are increasing at the rate of 3.47% annually, compared with 1.27% for the country as a whole. Immigrants intending permanent residence numbered 24,896 in 1953-54, during which year 7,048 residents left New Zealand permanently. The total population (including Maoris) was projected at 2,174,000 for 1957 and 2,216,000 for 1958.

Religion.—Religious denominations numbered 27 in 1951, among which adherents of the Church of England (726,626) predominated. Other principal groups are Presbyterian (446,333), Roman Catholic (264,555), Methodist (156,077), and Baptist (81,518).

Government.—A governor general (Lieut. Gen. Sir Willoughby Norrie, assumed office Dec. 2, 1952), representing the British crown, exercises statutory powers, and is assisted by a 15-member Executive Council of ministers in addition to the prime minister, Sidney G. Holland (assumed office Dec. 13, 1949). The legislature, modeled on that of Great Britain, but having no upper house since 1951, consists of an 80-member House of Representatives (including 4 Maoris: 3 for the North Island, 1 for the South Island), popularly elected for a maximum term of 3 years. Following the general election held Nov. 13, 1954, the National Party held 45 parliamentary seats, the Labor Party, 35.

Finance.—The New Zealand pound (£NZ) is at parity with sterling. Total public expenditure for the year ended March 31, 1955, was £NZ325,700,000, of which £NZ184,400,000 represented Consolidated Fund expenditure, while the balance included capital and social security expenditure. Total public revenue, including capital receipts, amounted to £NZ343,400,000, leaving a surplus of £NZ17,700,000. Consolidated Fund expenditure was estimated at £NZ190,300,000 in 1955-56, including £NZ29 million for defense; revenue was expected to amount to £NZ192,700,000, leaving a surplus of £2,400,000. Capital expenditure for 1955-56 was estimated at £NZ73,900,000.

Defense.—Regular forces of the army numbered 3,905 in 1954; youths receiving compulsory training in the territorial forces, on reaching the age of 18, totaled 27,425. The Royal New Zealand Navy comprises 2 cruisers, 6 frigates, 4 ocean minesweepers, and auxiliary vessels; personnel totaled 2,915 officers and ratings in 1954. The Royal New Zealand Air Force in 1955 supplied a special squadron to serve in Malaya.

Education.—Education is compulsory between the ages of 7 and 15 years. At the end of 1953 there were 1,899 public primary schools (300,327 pupils; 9,028 teachers); 310 private primary schools (42,799 pupils; 1,137 teachers); 49 secondary schools (28,014 pupils; 1,317 full-time teachers); 109 district high schools (8,709 pupils; 466 teachers), including 9 Maori high schools with 444 pupils and 25 teachers; and 94 registered private secondary schools, with 12,137 pupils, including 11 Maori secondary schools, with 786 pupils. Technical schools numbered 33, with 18,136 students and 999 teachers, and 27,775 part-time students were attending technical classes. Maori village schools totaled 164 (13,900 pupils, including 800 Europeans); 10 Maori mission schools had 781 pupils. Government expenditure for education amounted to £NZ24,050,000 in 1953-54.

The University of New Zealand had 10,326 entrants for degree and professional examinations in 1953, and the attached agricultural colleges of Canterbury and Massey had an enrollment of 1,141. There are 5 teacher-training colleges.

Production.—New Zealand's gross national product for the year ending March 31, 1954, was estimated at £NZ827 million, a gain of almost 10% over the preceding year. National income rose from £NZ656 million in 1952-53 to £NZ727 million in 1953-54.

Labor Force.—In the year ended Oct. 31, 1954, New Zealand's labor force increased by 17,000 to a total of 776,000. In spite of this rise, the shortage of labor persisted, with job vacancies increasing from 20,000 to 27,000.

Agriculture.—About 20 million acres were being used for farming in 1954-55. Estimated wheat acreage fell from 107,000 in 1953-54 to 100,000 in 1954-55, with a decline anticipated from the 1953-54 yield of 4,783,000 bushels. Total 1954-55 production of oats, however, was expected to exceed the previous harvest of 1,200,000 bushels from 70,000 acres. The yield (1953-54) of barley totaled 3,335,000 bushels; of tobacco, 4,229,000 pounds.

The 1954 livestock population included 648,900 cattle, 36,190,000 sheep, and 1,999,100 dairy cows. The latter total rose in 1954-55, but production of butterfat was not expected to exceed the 1953-54 yield of 590 million pounds. Estimates of meat production indicated that the previous peak figure of 602,000 tons recorded in 1951-52 would be surpassed. The New Zealand Wool Commission estimated wool production in

1954-55 at 434 million pounds (greasy basis), an advance of some 10 million pounds over 1953-54. As of July 15, 1955, an average price of 49.6 pence per pound had been realized for the wool clip, compared with 50.2 pence per pound in the 1953-54 season. Gross proceeds from 1,002,863 bales were £NZ70,400,000.

Lumbering.—A continued high level of timber production was maintained in 1954, with output measuring 572,200,000 board feet. Principal yields (in board feet) included rimu and miro, 219,200,000; and matai, 36,500,000.

Manufacturing and Construction.—There are some 8,512 factories in New Zealand. Output in 1954 included cement (288,200 tons), bricks (41,600,000 units), and tobacco, textiles, and metals. The food and beverage industry engaged 28,030 persons in 1953 and had output valued at £NZ208,090,000. New dwellings built in 1954 numbered 16,600 and were worth £NZ69,490,000.

Mining.—The aggregate value of minerals produced in 1953 was £NZ10,650,000, including principally coal, limestone, gold, and silver.

External Trade.—Exports valued at £NZ221 million in 1954 (in 1953, £NZ234,880,000) included wool, £NZ89,200,000; meat, £NZ50,900,000; butter, £NZ33,900,000; and cheese, £NZ12,400,000; imports totaled £NZ237,700,000 (government imports, £NZ20,200,000). The value of exports to the sterling area was slightly higher, at £NZ202 million, than in 1953, while trade with the dollar area fell by reason of reduced United States wool purchases. Trade with Japan also declined.

In overseas exchange transactions for the year ending in June 1955 a deficit of £NZ42,300,000 was recorded, compared with a surplus of £NZ25,200,000 in 1953-54. Receipts increased by only £NZ6 million to £NZ287,200,000, while payments increased by £NZ73,400,000 to £NZ329,500,000. Increases were recorded in wool receipts, but butter, cheese, and meat receipts all declined.

Communications.—Some 3,504 miles of railway were profitably operated by the government in 1954, earnings amounting to £NZ23,682,365 and expenses totaling £NZ23,621,403. Tonnage of goods carried was 9,635,061; number of passengers carried, 23,270,000. Government motor services carried 22,620,000 passengers. The total road mileage was 55,463, including 5,299 miles of state highways in 1953. Internal air services carried 397,869 passengers, 777 tons of mail, and 25,804 tons of freight in 1954. Overseas air services are operated by Qantas Empire Airways, Pan American World Airways, and Canadian Pacific Air Lines.

Principal Events, 1955.—Following his participation in the Commonwealth conference held in London Jan. 31-Feb. 8, 1955, New Zealand's prime minister, Sidney G. Holland, announced in Parliament that an understanding had been reached with Britain respecting defense commitments. According to the agreement, New Zealand would be relieved of obligations to aid in the Middle East and European theaters. Future military efforts would be concentrated instead in Southeast Asia, especially Malaya, to which New Zealand sent parachute troops in September 1955 to assist in the suppression of Communist rebels.

The formation was completed of 65 local voluntary committees to raise £NZ100,000 for the New Zealand Expedition to the Antarctic, which was scheduled to embark at Wellington in December 1956, led by Sir Edmund Hillary, con-

queror of Mt. Everest. Dog teams, in training in the New Zealand Southern Alps, were to be taken on board at Dunedin, along with stores sufficient for two years in case the expedition was forced to remain longer in the polar area than the scheduled 15 months. In London, it was reported on Jan. 16, 1955, that arrangements were being coordinated between British participants in the Commonwealth 1956-57 Trans-Antarctic Expedition and the New Zealand party. The object was the establishment of contact at the South Pole and then the joint return of the two groups to Ferrar Glacier and McMurdo Sound, in the Ross Dependency, site of the New Zealand base. (See also ANTARCTICA.)

DONOVAN ROWSE,
Author and Publicist.

NEWFOUNDLAND. Including Labrador, this most easterly of the Canadian provinces, bounded on the east and south by the Atlantic Ocean and on the west by the Gulf of St. Lawrence and the Province of Quebec, has an area of 155,362 square miles and a population (1951 census) of 361,416 (1955 estimate, 412,000). Chief urban centers, with 1951 populations, are: St. John's, the capital, 67,749; Bell Island, 10,291; Corner Brook West, 6,831; Grand Falls, 5,749; Bonavista, 3,718; Gander, 3,956; Curling, 3,559; Corner Brook East, 3,435; Botwood, 3,421; and Carbonear, 3,351.

Government.—Newfoundland entered the Canadian confederation on March 31, 1949, and is represented by 6 senators and 7 members of the House of Commons at Ottawa. The province is administered by a lieutenant-governor and a Legislative Assembly of 28 members (20 Liberals, 4 Progressive Conservatives, one Co-operative Commonwealth Federation, and 3 vacancies in 1955). The lieutenant-governor in 1955 was the Hon. Sir Leonard C. Outerbridge; the premier was the Hon. Joseph R. Smallwood.

Finance.—Revenue on current account in 1954-55 was \$37,979,400, and expenditure, \$36,635,300. Estimated revenue for 1955-56 is \$38,846,300.

Industries.—In addition to agriculture, the three basic industries in 1954 yielded the following returns: forest products, \$97 million; mining, \$44,869,000; and fishery products, \$27 million. These industries contribute approximately 32%, 12%, and 10%, respectively, of the provincial income.

Communications.—The Canadian National Railways has a total mileage of 705 in Newfoundland; its main line extends 547 miles from St. John's on the east coast to Port aux Basques on the west coast, with branches to the ports of Argentia, Carbonear, Bonavista, and Lewisporte. Commercial air services, including the Trans-Canada Air Lines, link Newfoundland with the North American continent and Europe. There are worldwide cable connections, and the Dominion government provides telegraphic service throughout the province. There were 33,000 telephones at the end of 1954.

Principal Events, 1955.—Commemoration of the centenary of the granting of responsible government to Newfoundland was held in July. Patrick J. Little of Dublin, Ireland, son of the late Hon. P. F. Little, who played a prominent part in obtaining responsible government and who was the first prime minister of Newfoundland, was the guest of the government for the occasion.

The Legislative Assembly has voted to underwrite a \$16 million loan for the construction of

a 45-mile railway to connect the newly exploited iron ore beds of the Wabush Lake area with the Quebec North Shore and Labrador Railway which runs between Knob Lake and Seven Islands (Sept-Iles), Quebec. Annual shipments of iron ore are expected to total 2.5 million tons by 1957.

J. W. McNEILY,
*Public Relations Officer, Provincial
Government of Newfoundland.*

NEWSPAPERS. See JOURNALISM.

NICARAGUA. A republic of Central America, bounded by Honduras on the north and Costa Rica on the south. Estimated area, 57,100 square miles; pop. (est. Dec. 31, 1954), 1,224,000, of whom about 70% is mestizo, 17% white, 9% Negro, and 4% Indian. Chief cities and 1950 populations: Managua, the capital (109,352); León (30,544); and Granada (21,035). About three fourths of the population is rural. Spanish is the official language.

Government.—Congress consists of a Chamber of Deputies of 42 members and a Senate of 16 (plus former presidents who are appointed for life). Both houses are popularly elected for a term of 6 years. Gen. Anastasio Somoza, elected in 1950, took office for a 6-year term in 1951. Somoza, head of the Nationalist Liberal Party, is the country's strong man, controlling the army as well as the political machine. The Conservative Party exists as a token opposition.

Education and Religion.—An estimated 60% of the population is illiterate. Secondary education is carried on privately, with some government aid. In 1954-55 there were 112,303 pupils enrolled in 1,994 national public schools. There are also several normal, technical, and private secondary schools, a national university at León and an engineering school at Managua. Roman Catholicism is the predominant religion.

Finance.—The budget for 1955-56, approved by the legislature on June 17, 1955, authorized expenditures of 240.3 million cordobas, with revenues estimated at 238 million. Effective July 1, 1955, the par value of the cordoba was decreased from 5 cordobas to the United States dollar to 7.

Production.—Nicaragua's predominantly agricultural economy has profited recently from high world prices for its export crops. Cotton output rose from an average of 7,000 bales in 1945-49 to 109,000 in 1953-54 and 205,000 in 1954-55. This expansion, however, has entailed a reduction in food cultivation; and while a small class of cotton planters has profited, the prices of foodstuffs have soared. Coffee, still the chief cash crop, totaled 369,000 bags (132.3 pounds each) in 1954-55 (prelim.). Other cash crops are sugar, sesame seed, and cottonseed. Subsistence crops are mainly corn, rice, beans, plantains, yucca, and pineapples.

The chief mineral product is gold, worked under foreign concession; shipments in 1954 totaled \$8.15 million. Other minerals are silver, copper, salt, and precious stones. Nicaragua's forests yield valuable hardwoods and gums. Manufactures are of minor importance, consisting chiefly of sugar and coffee processing, cigarettes, soap, simple cotton goods, furniture, cement, matches, beer, and soft drinks. On July 8, 1955, the International Bank for Reconstruction and Development announced it had granted two loans to Nicaragua totaling \$7.5 million for the development of electric power.

Foreign Trade.—Imports in 1954 totaled \$58.35 million; exports (excluding gold), \$54.62 million. Coffee exports were valued at \$25.1 million; cotton, \$16.75 million. Imports are mainly machinery and equipment, iron and steel goods, vehicles, textiles, and chemicals. Nicaraguan exports to the United States in 1954 totaled \$26 million; imports from the United States, \$36.8 million.

Transportation and Communications.—Paved highways in 1955 aggregated 211 miles; all-weather roads, 560; roads passable only in the dry season, 1,121. Railway trackage totals 235 miles (route length). Lineas Aéreas de Nicaragua provides domestic air service and occasional service abroad. Motor vehicles in 1955 included 4,078 passenger cars and 2,302 trucks; telephones, 3,600; radio receivers (1954), about 20,000. An automatic telephone exchange was inaugurated in Managua on May 27, 1955. A new harbor at Puerto Somoza was officially opened on December 11.

Principal Events, 1955.—On Jan. 11, 1955, a group of Costa Rican rebels invaded Costa Rica from bases in Nicaragua. The Organization of American States, meeting in Washington, requested Nicaragua to halt its flow of arms to the Costa Rican rebels. The OAS then set forth a plan for a buffer zone, which was accepted by the two countries and took effect on January 20. Following the defeat of the Costa Rican insurgents, some 300 recrossed into Nicaragua on January 25 and surrendered for internment. In its report of February 17, the OAS investigating commission did not indict Nicaragua for aggression but declared that "a substantial number of rebel forces," as well as supplies, had crossed the Nicaraguan border. In accordance with the commission's recommendations, the two nations set up a five-man committee in early March to deal with illegal border crossings, activities of political exiles, and other sources of tension. In early July, tension again flared briefly when Nicaragua charged Costa Rica with having sponsored a plot for the assassination of President Somoza. (See also COSTA RICA; INTER-AMERICAN AFFAIRS; ORGANIZATION OF AMERICAN STATES.)

NICKEL. The United States is the world's largest consumer of nickel, but there is no significant domestic output. Supply depends on imports, chiefly from Canada. Imports increased from 118,737 short tons in 1953 to 131,784 tons in 1954 and to 73,442 tons during the first half of 1955. The corresponding consumption figures were, respectively, 105,681, 94,733, and 52,206. Of the 1954 consumption, 38,151 tons were used in steel and cast iron, 28,053 tons in nonferrous alloys, 14,783 tons in electroplating, and 6,597 tons in high-temperature and resistance alloys.

Canada established a new record by producing 161,279 short tons in 1954, as compared with 143,643 tons in 1953. Exports from Canada were 157,233 tons in 1954 (143,818 in 1953). During the first 7 months of 1955, production reached 103,032 tons and exports, 102,969 tons. (See MINERAL PRODUCTION for table showing output of major producing countries; also METALLURGY.)

NIGER. See FRENCH WEST AFRICA.

NIGERIA. See BRITISH WEST AFRICA.

NITROGEN COMPOUNDS. A large part of the fixed nitrogen supply of the United States is derived from plants making nitrogen compounds from the nitrogen of the atmosphere. Second in importance is the recovery of ammonia compounds in the byproduct coking of coal. Natural sodium nitrate was, some years ago, virtually the sole source of fixed nitrogen supply, but it now furnishes a relatively small proportion. In 1954 the synthetic plants produced 2,719,666 short tons of anhydrous ammonia (NH_3). The byproduct coke plants produced 221,809 short tons, of which 16,104 tons was NH_3 content of aqua ammonia and 205,705 tons was the NH_3 content

of ammonium sulfate. Thus the total fixed nitrogen (NH₃) production was 2,941,475 short tons, as compared with 2,549,164 tons in 1953. Imports of natural sodium nitrate, the bulk of which originates in Chile, reached 731,530 short tons in 1954, as compared with 568,873 tons in 1953.

NIXON, Richard Milhous, vice president of the United States: b. Yorba Linda, Calif., Jan. 9, 1913. After four years as a naval officer in World War II (1942-46), he was elected to the U.S. House of Representatives in 1946 and again in 1948, and to the U.S. Senate in 1950. As a senator he played a prominent role in investigations of corruption and communism in government. Elected vice president in 1952, he became the administration's chief goodwill ambassador to foreign countries. His numerous activities and abundance of energy helped give the office of vice president a significance rarely manifested in American political history.

Outspoken in his views, Vice President Nixon soon became a principal target of Democratic Party criticism. During the congressional campaigns of 1954, when Nixon revived the 1952 presidential campaign charge of the Democratic Party's failure to remove Communists from government, Democrats, under the leadership of Adlai Stevenson, scored his tactics as irresponsible demagoguery.

In his capacity as goodwill ambassador, Vice President Nixon has toured the Far East (October-December 1953) and the Caribbean area (February-March 1955). His scheduled trip to the Middle East and Africa was temporarily postponed when President Eisenhower suffered a heart attack in September 1955, and he was faced suddenly with having to assume part of the president's duties in a situation not adequately defined by law.

NOBEL PRIZES. See PRIZES AND AWARDS.

NORFOLK ISLAND. Populated principally by descendants of *Bounty* mutineers from Pitcairn Island (q.v.), this South Pacific territory was formerly a part of New South Wales colony; since 1914 it has been administered as a dependency of the Commonwealth of Australia. Lying 930 miles east-northeast of Sydney, New South Wales, and 630 miles northwest of Auckland, New Zealand, its area is 8,528 acres. The population (1,176 in 1952) had declined to 942 at June 30, 1954. An administrator (Brig. H. B. Norman) is assisted by an 8-member Advisory Council. Citrus and bananas are principal crops. Imports, coming mostly from Australia, were valued at £A211,877 in 1952-53 (the Australian pound equals U.S.\$2.24); exports totaled £A42,130. Free primary school pupils numbered 135 in 1952. Air services are maintained with Sydney and Auckland.

NORTH AMERICA. A continent in the Western Hemisphere. Estimated area (including Central America, q.v.), 9,360,000 square miles; pop. (est. 1954), 233,000,000. (See articles on the countries of North America and the Index entry, *North America*.)

NORTH ATLANTIC TREATY ORGANIZATION. The North Atlantic Treaty was signed in Washington on April 4, 1949, by the United States, United Kingdom, France, Italy, Canada, Norway, Denmark, Portugal, Belgium, the Netherlands, Luxembourg, and Iceland. Greece and Turkey joined the organization in 1952, and the German Federal Republic in 1955.

ORGANIZATIONAL STRUCTURE OF NATO

- I. North Atlantic Council (15 states); headquarters, Paris
- II. Military Committee (13)¹
 - A. Military Representatives Committee (13)¹; headquarters, Washington
 - B. Standing Group (3); headquarters, Washington
 1. NATO supreme commands (see separate outline below)
 2. Canada-United States Regional Planning Group (CUSRPG); headquarters, Washington
 3. Channel Committee (4); headquarters, London
 4. NATO Defense College
 5. Military Agency for Standardization (MAS)
 6. European Military Communications Coordinating Committee (EMCCC), including European Long Line Agency (ELLA) and European Radio Frequencies Agency (ERFA)
 7. Advisory Group on Aeronautical Research and Development (AGARD)
 8. Air Training Advisory Group (ATAG)
- III. International Staff/Secretariat, Paris: Secretary General, 1st Baron Ismay of Wormington

Under the authority of the Military Committee, and receiving guidance and direction from the Standing Group, are the following NATO supreme commands:

- I. European Command:
 - A. Supreme Headquarters, Allied Powers, Europe (SHAPE); Supreme Allied Commander, Europe (SACEUR), Gen. Alfred M. Gruenther (U.S.); headquarters, Rocquencourt, near Paris
 - Deputy SACEUR, Field Marshal Viscount Montgomery (U.K.)
 - Deputy (Air), Gen. Lauris Norstad (U.S.)
 - Deputy (Naval), Admiral André Lemonnier (France)
 1. Commander in Chief, Allied Forces, Central Europe (CINCENT), Marshall Alphonse Pierre Juin (France); headquarters, Fontainebleau
 - (a) Commander, Allied Land Forces, Central Europe
 - (b) Commander, Allied Air Forces, Central Europe
 - (c) Commander, Allied Naval Forces, Central Europe
 2. Commander in Chief, Allied Forces, Northern Europe (CINCNORTH), Lieut. Gen. Sir Cecil Sugden (U.K.); headquarters, Oslo
 - (a) Commander Allied Naval Forces, Northern Europe
 - (b) Commander, Allied Air Forces, Northern Europe
 - (c) Commander, Allied Land Forces, Norway
 - (d) Commander, Allied Land Forces, Denmark
 3. Commander in Chief, Allied Forces, Southern Europe (CINCOSOUTH), Admiral William M. Fechteler (U.S.); headquarters, Bagnoli, near Naples
 - (a) Commander, Allied Land Forces, Southern Europe
 - (b) Commander, Allied Land Forces, Southeastern Europe
 - (c) Commander, Allied Air Forces, Southern Europe
 - (d) Commander, Naval Striking and Support Forces, Southern Europe
 4. Commander in Chief, Allied Forces, Mediterranean (CINCFMED), Admiral Sir Guy Grantham (U.K.); headquarters, Malta
 - (a) Commander, Gibraltar Area
 - (b) Commander, Western Mediterranean Area
 - (c) Commander, Central Mediterranean Area
 - (d) Commander, Eastern Mediterranean Area
 - (e) Commander, Northeastern Mediterranean Area
 - (f) Commander, Southeastern Mediterranean Area
- II. Atlantic Ocean Command:
 - A. Supreme Allied Commander, Atlantic (SACLANT), Admiral Jerauld Wright (U.S.); headquarters, Norfolk, Va.
 - Deputy SACLANT, Vice Admiral J. W. M. Eaton (U.K.)
 1. Commander in Chief, Eastern Atlantic Area
 2. Air Commander in Chief, Eastern Atlantic Area
 3. Commander in Chief, Western Atlantic Area
 4. Commander, Striking Fleet, Atlantic
- III. Channel Command:
 - A. Allied Commander in Chief, Channel and South-

¹ Iceland, which has no military establishment, is not represented on the committee, and Belgium represents Luxembourg.

ern North Sea (CINCCHAN), Admiral Sir George Creasy (U.K.); headquarters, Portsmouth, England

- B. Allied Maritime Air Commander in Chief, Channel and Southern North Sea (CINCMAIRCHAN), Air Chief Marshal Sir John Boothman² (U.K.); headquarters, Northwood, England

NATO IN 1955

During 1955, NATO devoted increasing attention to the problem of defending western Europe against air attack. The smaller member nations made it clear to the members of the Standing Group—the United States, the United Kingdom, and France—that they expected to receive more information on nuclear weapons and a greater voice in defense planning. They also exhibited a growing concern with political and economic questions, rather than limiting their discussions to purely military matters.

In addition to meetings of permanent representatives, the North Atlantic Council held a number of sessions at the ministerial level. On May 9, at the opening of a three-day meeting of foreign ministers, the German Federal Republic was formally inducted into membership.³ In a communiqué issued on May 11, the council "reaffirmed the purely defensive character" of NATO; expressed its appreciation of the close relations existing with the Western European Union; welcomed the proposals of the Western Big Three for negotiations with the Soviet Union; and hoped that "there would be a cessation of hostilities in the Far East." Just before the Geneva Conference (q.v.), on July 16, another ministerial session of the council was held; there was general agreement that the West should insist at the conference on the unification of Germany by free elections and on the freedom of the united country to adhere to NATO.

Greek-Turkish differences were considered at a meeting of the council on September 8, at which the Turkish delegate expressed his regrets for anti-Greek riots in Turkey. Here and elsewhere little was accomplished to ease the situation, however, and on October 11 it was announced that Greek forces would not participate in NATO exercises until the matter was settled.

The principal such exercises of 1955 were Operation Carte Blanche, air-atomic exercises held in June by the United States-commanded Fourth Tactical Air Force and the British-commanded Second Air Force, and atomic war games staged in October by United States and French troops. Among other military developments were the approval by President Dwight D. Eisenhower on April 13 of a draft agreement to share certain information on atomic weapons with NATO members, and the allocation by the U.S. Defense Department on August 2 of \$11.3 million for the development by France, Italy, and the United Kingdom of light fighter planes for ground support.

Military matters were considered by the council at a meeting held on October 10–12, at which 12 defense ministers were present (Greece and Turkey did not attend, and Iceland has no armed forces). Concern was expressed over the dispatch by France to North Africa of about three divisions assigned to NATO and their replacement by less adequate reserves, and over the size of the West German defense budget. Gen. Sir John Whiteley, chairman of the Stand-

² Air Vice Marshal Sir Bryan V. Reynold was scheduled to succeed him in April 1956.

³ It became the 15th member of NATO on May 6, when its instrument of accession to the North Atlantic Treaty was deposited in the U.S. State Department in Washington.

WIDE WORLD

ing Group, and Admiral Jerauld Wright emphasized Soviet military and naval strength, particularly in submarines, while Gen. Alfred M. Gruenther criticized NATO defense efforts, especially the air command system, which he favored reorganizing in four broad general areas.

The regular ministerial session of the council held on December 15–16 reviewed defense accomplishments in 1955 and approved goals for 1956, 1957, and 1958. Defense expenditures by European members of NATO were expected to aggregate \$10,393 million in 1955, as compared with \$10,313 million in 1954. The council approved plans for "the reorganization and closer coordination of the air defense in NATO European countries," and for a pilot project for a radar warning system combined with a new type of radio communications difficult to jam. At the insistence of the smaller members, a special conference will be held in February 1956 at which the Standing Group will give them information on strategy and new weapons. In the political field, the council expressed its regret at the failure of the foreign ministers' conference at Geneva; reviewed "recent provocative moves and declarations by the Soviet Union regarding the Middle East and Asia," which it considered "created new problems and a new challenge to the free world"; and "recognized that recent developments in the international situation made it more necessary than ever to have closer cooperation between the members of the alliance. . . ."

NORTH CAROLINA

ranks 27th in area and 11th in population (1955) among the 48 states.

Area and Population.—Area: 52,712 square miles (land, 49,097; inland water, 3,615), divided into 100 counties. Population: (1950) 4,061,929; (est., July 1, 1955) 4,190,000. Urban places with populations (1950 unless otherwise indicated) above 10,000 are as shown in the table on page 543.

Executive.—Chief state officers in 1955:

Governor: Luther H. Hodges (Democrat)

Secretary of State: Thad Eure

Treasurer: Edwin Gill

Attorney General: William B. Rodman (succeeded Harry McMullan, who died June 24)

Supt. of Public Instruction: Charles F. Carroll

Constitution and Judiciary.—The present constitution, which went into effect in 1877, is based on the constitution of 1868. The Supreme Court comprises seven justices; chief justice in 1955 was M. V. Barnhill.

Legislature.—The General Assembly (Senate, 50 members; House of Representatives, 120) meets in odd-numbered years commencing the first Wednesday after the first Monday in January.

The 1955 legislative session (January 5–May 26) was the longest in the state's history. After adopting appropriations for the 1955–57 fiscal biennium of \$640 million, including \$424 million for general fund expenditures, the General Assembly considered the primary issue of raising additional revenues, particularly for schools, which it partly resolved by the imposition of new or increased taxes designed to yield \$9,768,000 annually. Other major enactments included the complete revision of state corporation laws (effective July 1, 1957) and school laws; establishment of a Board of Higher Education; creation of a Board of Water Commissioners to study water problems; revision of Superior Court districts; and elimination of alleged abuses in accident, health, and hospitalization insurance.

Finances.—State treasury receipts (1954–55 fiscal year), \$868,233,889.19; expenditures, \$897,444,350.45; treasury balance, \$156,979,449.07; net long-term indebtedness, \$231,236,159.15.

Taxation.—State tax receipts (1954–55 fiscal year): \$190,334,140.32, including \$58,354,853 from a 3% general sales tax and selective sales and gross receipts taxes; \$40,053,010 from individual income taxes; and \$34,957,061 from corporate income taxes.

Banking.—As of June 30, 1955, the state's 46 national banks had \$622,072,000 in assets, \$433,003,000 in demand deposits, and \$130,680,000 in time deposits; the state's 176 other banks and 262 branches had \$1,747,838,512.42 in assets, \$795,356,797.99 in demand deposits, and \$321,019,663.37 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 15, inclusive. Operating expenditures of approximately \$151 million (\$173 per pupil) for public elementary and secondary schools in the 1953–54 fiscal year comprised an estimated \$21 million from local school districts, \$121 million from the state, and \$9 million from the federal government. Outlays for construction and improvements ranged between \$35 million and \$40 million. Teachers' salaries averaged \$3,279.

In the 1953–54 school year there were 2,241 public elementary schools with 22,970 teachers and 761,599 pupils; 937 public secondary schools with 8,081 teachers and 206,467 pupils; and 34 colleges and universities with 38,042 students.

An atomic reactor was dedicated at North Carolina State College in Raleigh on May 23, 1955. The University of North Carolina began operations in January of the state's first non-commercial television station.

NORTH CAROLINA WELFARE INSTITUTIONS

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic	2	2,091 ¹
Hospitals for the mentally ill	4	9,967 ¹

Schools for the blind	1	328 ²
Schools for the deaf	2	546 ²
Hospitals for crippled children	1	143 ³
Homes for veterans' widows	1	38 ²
Training schools for delinquent boys	3	618 ³
Training schools for delinquent girls	2	197 ³
Prisons	4	1,177 ³
Prison farms	2	445 ³
Prison camps	86	8,011 ³

¹ As of Sept. 1, 1955. ² Oct. 1, 1955. ³ Aug. 31, 1955.

Social Welfare.—Public assistance expenditures from state and federal funds (excluding institutional costs) for the 1954–55 fiscal year totaled \$43,235,227, including \$19,010,136 for old-age assistance, \$13,683,402 for dependent children, \$2,302,150 for the needy blind, and \$4,485,519 for the disabled; a monthly average of 137,766 persons received public assistance. Operating expenditures for health and welfare institutions totaled \$17,894,193; for correctional and penal institutions, \$9,047,225.

Labor Force.—There were 996,800 "covered" workers in nonagricultural establishments in May 1955, and for the year ending May 1955, non-agricultural employment averaged 997,700. Registered unemployed workers numbered 32,637 on June 30, 1955, and the state paid \$37,573,653 in unemployment compensation during 1954.

Manufacturing.—Establishments numbered 7,500 in 1954. Value added by manufacture in 1953 totaled \$2,274,019,000 and expenditures for new plant and equipment amounted to \$135,411,000. Earnings of production workers in manufacturing averaged \$47.88 for an average work week of 38.3 hours in 1954, and \$51.20 for 40 hours during the first six months of 1955.

During 1954, more than 16,800 new jobs were provided by the opening of 131 new industries, valued at \$69 million, and the expansion of 129 plants at a cost of \$43 million. There were 56 new industrial plants and 89 plant expansions in the first half of 1955 at a total cost of \$78.1 million, creating 8,200 new jobs.

Stone	10,133,728	15,625,331
Talc and pyrophyllite	105,384	1,771,778
Tungsten concentrates (60% WO ₃)	2,538	3
Other minerals	...	9,812,190
Total	...	40,686,000

¹ Preliminary. ² Value included in "Other minerals." (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first half of 1955 totaled \$161,068, 000, and for the full year 1954 comprised \$221,974,000 from livestock and livestock products, \$705,849,000 from crops, and \$6,107,000 from government pay-

ments. Receipts from principal crops and livestock in 1954 included: tobacco, \$497,287,000; cotton lint, \$68,602,000; dairy products, \$55,528,000; hogs, \$52,270,000; eggs, \$41,287,000; broilers, \$37,903,000; and peanuts, \$32,235,000.

The state's 267,906 farms (18,260,346 acres; harvested cropland, 5,504,204) had an average of 68.2 acres and \$8,105 in value of land and buildings per farm in 1954. There were 45,120 farms with telephones and 250,692 with electricity. Livestock on farms (Jan. 1, 1955) included 933,000 cattle, 1,154,000 hogs, and 12,438,000 chickens (not including commercial broilers). During the week of Oct. 24-30, 1954, there were 523,928 family and hired workers engaged in farming.

NORTH CAROLINA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.)	1,220	1,900	40
Corn (1,000 bu.)	62,641	51,816	68,055
Cotton lint (1,000 bales)	492	364	355
Cottonseed (1,000 tons)	202	155	149
Hay (1,000 tons)	1,266	1,076	1,244

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds spent for highways and streets totaled \$112,388,000 in the 1953-54 fiscal year.

Highways, roads, and streets totaled 68,911 miles (34,646 paved) in 1954. Registered *motor vehicles* numbered 1,495,633 on Aug. 31, 1955, including 1,077,915 passenger cars. There were (1954) 30 *railroads* operating 4,511.35 line miles, 6 regularly scheduled *airlines*, and 106 *airports and airfields* (98 commercial and municipal, 3 military, and 5 others).

Communications media included (1954) 107 AM and 35 FM *radio stations* and 12 operating *television outlets* (8 VHF and 4 UHF); 46 daily *newspapers* (circulation, 958,843) and 171 other newspapers; and (Jan. 1, 1955) 220,124 business and 537,922 residential *telephones*.

Principal Events, 1955.—The regular session of the General Assembly (January 5-May 26) was the longest in North Carolina's history. The legislature also set a record by enacting 1,376 new laws and approving 55 resolutions. Some minor changes were made in the state's tax structure, and several new state agencies were created, the most important of which was a nine-member state Board of Higher Education. In accordance with an enabling act of the legislature, followed by a referendum in October, 65,000 members of the state Retirement System "went on Social Security" by voting overwhelmingly to integrate their retirement systems with federal Old Age and Survivor's Insurance.

Faced with the problem of desegregation in the public schools, as a result of federal court decisions, the legislature made the following basic changes in the state school laws: (1) elimination from the law of any reference to race; (2) transfer of authority over enrollment and assignment of pupils from the state Board of Education to county and city boards; (3) transfer of ownership, operation, and control of the state's 7,200 school buses to local units; and (4) substitution of yearly contracts for teachers and principals in lieu of continuing contracts.

By unanimous vote, the General Assembly resolved that:

The mixing of the races in the public schools within the state cannot be accomplished and if attempted would alienate public support of the schools to such an extent that they could not be operated successfully.

On August 8, Gov. Luther Hodges proposed to the state's citizenry to operate the public schools "in accordance with the policies set out by the General Assembly and at the same time avoid defiance or evasion of the opinion of the United States Supreme Court . . ." by having the children of both white and Negro races "voluntarily attend separate public schools." This proposal was praised by some of the state's newspapers, but it was denounced by the National Association for the Advancement of Colored People and by some individuals and groups within the state. On August 22, the Patriots of North Carolina, Inc., an all-white organization aimed at maintaining "the purity of the white race and of Anglo-Saxon institutions" was incorporated. With only a few exceptions the schools opened in September without incident—and without integration.

Meanwhile three Negro graduates of a Durham High School applied for admission to the undergraduate division of the University of North Carolina. On May 23, the university trustees resolved that "applications to undergraduate divisions will be rejected." The NAACP announced that it would take the cases to the federal courts if the applicants were denied admission. The Negro applicants were admitted in the fall, the first in the university's 166-year history, after three federal judges ruled that the university must process their applications without regard to race or color. The judges also declined a stay of judgment while appeal to the U.S. Supreme Court was pending.

On November 10, Gordon Gray resigned as the university's president after having been named U.S. assistant secretary of defense for international security affairs. Provost J. Harris Purks acted as president pending selection of Gray's successor.

Hurricane Ione caused extensive wind and flood damage to eastern North Carolina on September 19. Five persons were killed, and damage amounted to \$85-\$100 million, including destruction to much of the state's peanut crop (valued at \$32.2 million in 1954).

(See also DAMS; NATIONAL PARKS.)

Principal Events by: HUGH T. LEFLER,
Professor of History, University of North Carolina.

NORTH DAKOTA. North Central state, United States; admitted to the Union, Nov. 2, 1889. The "Flickertail State" ranks 16th in area and 41st in population (1955) among the 48 states.

Area and Population.—Area: 70,665 square miles (land, 70,057; inland water, 608), divided into 53 counties. Population: (1950) 619,636; (est., July 1, 1955) 641,000. Urban places with 1950 populations above 7,500 are: Bismarck, the capital, 18,640; Fargo, 38,256; Grand Forks, 26,836; Jamestown, 10,697; and Minot, 22,032.

Executive.—Chief state officers in 1955:

Governor: Norman Brundage (Republican)

Lieutenant Governor: C. P. Dahl

Secretary of State: Ben Meier

Treasurer: Albert Jacobson

Attorney General: Leslie R. Burgum

Supt. of Public Instruction: M. F. Peterson

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises five justices; chief justice in 1955 was Thomas Burke.

Legislature.—The Legislative Assembly (Senate, 49 members; House of Representatives, 113) meets in odd-numbered years commencing the first Tuesday after the first Monday in January.

A chief enactment of the 1955 session of the legisla-

NORTH DAKOTA

ture was the establishment of a 22-county Garrison Conservancy District to utilize diversion waters from the Garrison Dam reservoir. In education, the state's per-pupil payments to elementary school districts were increased, and high school equalization fund payments were raised from \$2 to \$3 per week, per pupil; a new Board of Education was created; and the teachers' insurance and retirement program was liberalized. Motorists faced an increase in the gasoline and special fuels tax from 5 to 6 cents per gallon and higher license fees. Other legislations repealed a law against interracial marriage, and authorized the Legislative Research Committee to start a program of continuous statutory revision.

Amendments to be presented to the voters at the June 1956 elections provided for authorization of a \$54 million bond issue for a 10-year highway program and a \$9 million bond issue for payment of a Korean War veterans bonus.

Finances.—State treasury receipts (1954-55 fiscal year), \$60,162,233.36; expenditures, \$60,108,524.86; treasury balance, \$72,453,499.15; long-term indebtedness, \$20,201,750.

Taxation.—State tax revenue (1954-55 fiscal year): \$45,935,000, including \$28,425,000 from a 2% general sales tax and selective sales and gross receipts taxes; \$9,366,000 from licensing; \$3,500,000 from property taxes; \$2,695,000 from individual income taxes; and \$997,000 from corporate income taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 38 national banks had \$279,364,000 in assets, \$180,111,000 in demand deposits, and \$76,713,000 in time deposits; the state's 116 other banks on Dec. 31, 1954, had \$375,891,295.41 in assets, \$285,754,958.90 in demand deposits, and \$59,711,022.06 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 15, inclusive, but is extended to the age of 17 if the eighth grade has not been completed. Expenditures for public elementary and secondary schools in the 1953-54 school year totaled \$31,820,058.80 (\$263.93 per pupil); receipts amounted to \$31,749,221.44, including \$12,257,456.10 from local school districts, \$6,902,918.56 from the counties, \$8,054,876.96 from the state, and \$371,112.73 from the federal government. Outlays for construction and improvements totaled \$2,599,755.21. Teachers' salaries (including those of city superintendents) averaged \$2,770.63.

NORTH DAKOTA SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary (1-8)	* 5,050	92,880	
Public secondary (9-12)	* 1,765	28,662	
Junior colleges	2 18	350	
State teachers colleges	5 172	1,930	
Colleges and universities	3 326	4,927	
Other higher institutions	2 33	809	

* A total of 3,051, including elementary and secondary schools.

Social Welfare.—Public assistance expenditures from federal, state, and county funds (excluding institutional costs) for the 1954-55 fiscal year totaled \$9,783,065, including \$6,154,145 for old-age assistance, \$2,269,788 for dependent children, \$76,928 for the needy blind, and \$1,282,204 for all other forms of assistance. A monthly average of 17,700 persons received public assistance. Expenditures for health and welfare institutions totaled \$5,073,639.69; for correctional and penal institutions, \$923,963.07.

NORTH DAKOTA WELFARE INSTITUTIONS (As of Sept. 1, 1955)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic	1	1,150
Hospitals for the mentally ill	1	1,960
Sanatoriums for the tubercular	1	107
Schools for the blind	1	31
Schools for the deaf	1	80
Homes for veterans' widows	1	84
Training schools for delinquent boys and girls	1	321
Prisons	1	205
Prison farms	1	6

Labor Force.—The labor force in December 1954 totaled 214,800 persons including 62,600

agricultural workers. Nonagricultural employment was 143,200, and for the full year 1954 averaged 141,600. There were 10,500 unemployed workers in December 1954, and the state paid \$2,622,776 to insured unemployed workers during 1954.

Manufacturing.—In 1953, 7,814 persons received \$24,379,000 in salaries and wages. Value added by manufacture was \$46,765,000, and investment in new plant and equipment amounted to \$13,070,000. Earnings of production workers in manufacturing averaged \$67.55 for an average work week of 44.3 hours in 1954, and \$71.53 for 46.1 hours in the first half of 1955.

Mining.—Because of its production of most of the lignite mined in the United States, and its rapid development of recently discovered oil fields, North Dakota ranked 41st among the states in the value of its mineral output in 1953 (43d in 1952), with 0.13% of the United States total.

NORTH DAKOTA MINERAL PRODUCTION, 1955* (In short tons, except as noted)

Mineral	Quantity	Value
Clay	36,500	\$ 52,000
Coal	2,680,000	6,325,000
Natural gas (million cu. ft.)	1,200	60,000
Petroleum (1,000 bbl.)	8,155	17,452,000
Sand and gravel	7,500,000	2,400,000
Stone	1,500	4,000
Total	...	26,293,000

* Preliminary. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first half of 1955 totaled \$159,885,000, and for the full year 1954 comprised \$155,081,000 from livestock and livestock products, \$310,135,000 from crops, and \$6,017,000 from government payments. Receipts from principal crops and livestock in 1954 included: wheat, \$169,227,000; cattle, \$74,161,000; flaxseed, \$57,863,000; barley, \$43,492,000; dairy products, \$36,672,000; and hogs, \$20,843,000.

The state's 61,939 farms (41,731,493 acres; harvested cropland, 21,235,735) averaged 673.8 acres and \$24,549 in value of land and buildings per farm in 1954. There were 28,358 farms with telephones and 55,815 with electricity. Livestock on farms on Jan. 1, 1955, included 1,937,000 cattle, 549,000 sheep, 401,000 hogs, and 4,130,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 137,614 family and hired workers engaged in farming.

NORTH DAKOTA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Barley (1,000 bu.)	47,264	66,134	82,064
Corn (1,000 bu.)	25,530	26,166	32,806
Flaxseed (1,000 bu.)	13,050	23,254	24,301
Hay (1,000 tons)	3,183	3,844	4,150
Oats (1,000 bu.)	60,603	49,726	55,104
Potatoes (1,000 bu.)	19,058	20,600	13,485
Rye (1,000 bu.)	2,710	4,928	9,360
Soybeans (1,000 bu.)	201	760	1,209
Sugar beets (1,000 short tons)	223	418	399
Wheat (1,000 bu.)	131,707	69,274	113,482

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways, roads and city streets in 1954 totaled \$34,796,262, and newly completed construction and reconstruction on highways and roads aggregated 1,105 miles.

Highways and roads on Jan. 1, 1955, totaled 116,616 miles (34,485 surfaced). Registered motor vehicles numbered 305,000 on Oct. 1, 1955, including 205,000 passenger cars. There were (1955) 6 railroads operating

5,258.84 line miles, 4 regularly scheduled *airlines*, and 444 *airports and airfields* (118 commercial and municipal, 2 military, and 324 others).

Communications media (1955) included 14 AM *radio stations* and 4 UHF operating *television outlets*; 10 daily *newspapers* (circulation, 143,416) and 112 other newspapers (circulation, 220,000); and (Jan. 1, 1955) 36,354 business and 107,617 residential *telephones*.

Principal Events, 1955.—There were 137 new oil wells completed in 1955, bringing the number of producers to a total of 588 wells in 26 pools. Five new pools were discovered during the year. The Beaver Lodge and Tioga oilfields, largest in the state and containing over 400 wells, were being developed in 1955 at a ratio of one well to each 80 acres.

There is one producing natural gas field in the state. Gas from wells in this field, at Tioga, formerly went to waste. In 1955, however, a 120-mile pipeline was completed from Williston to Minot, and through the Tioga field. This improvement will make natural gas available to 12 more cities in North Dakota, as well as making it possible to store surplus gas in underground reservoirs in Montana.

Garrison Dam, the largest earth-fill dam in the world, was practically completed in 1955, and the pool behind the dam reached a depth of more than 100 feet. By the end of 1955 the dam's turbines were expected to be producing hydro-electric power to be distributed over the federal government's Missouri Basin power system. (See also DAMS.) Under a plan of the U.S. Bureau of Reclamation, Devils Lake, the state's largest natural lake, which is now less than half of its one-time 140 square mile size, would be restored by water from the Garrison Dam reservoir. This step would not only provide water for irrigation but would further improve fishing in the area.

Agriculture in 1955 recorded one of its largest outputs in North Dakota history. Livestock and poultry production, as well as grain harvests, was high.

Politics was quiet in the 1955 off-election year. Perhaps the most interesting development was the discussion within the Nonpartisan League, a major state political faction, as to whether it should shift its base of operations from the Republican to the Democratic Party.

Principal Events by: C. W. LEIFUR,
Principal, Bismarck (N. Dak.) High School.

NORTHERN IRELAND. Under the Government of Ireland Act of 1920, this separate integral part of the United Kingdom of Great Britain and Northern Ireland has an area of 5,238 square miles, excluding inland waters. It is composed of the parliamentary counties of Antrim (pop., 231,145 in 1951), Armagh (114,255), Down (241,184), Fermanagh (53,044), Londonderry (105,448), and Tyrone (132,082), and the parliamentary boroughs of Belfast (443,680) and Londonderry (50,095). The population aggregated 1,370,933 at the 1951 census (1,374,400, est., in June 1952, excluding a net migratory loss of 11,064). Protestants compose about two thirds of the population; Roman Catholics constitute the remainder. Belfast is the capital city and chief port.

Government.—Executive power is vested in a governor (Lord Wakehurst, assumed office Dec. 3, 1952), representing the crown. Parliament consists of a 26-member Senate in which 24 members are elected by a 52-member House of Commons. Northern Ireland also elects 12 members to the United Kingdom House of Commons. To the latter body two members of Sinn Féin (Philip Clarke and Thomas J. Mitchell) were candidates at the general election on May 26, 1955, and headed the poll in Northern Ireland constituencies. On the ground

that they were then serving sentences for treason-felony and hence ineligible, their election was subsequently ruled invalid, and the Ulster Unionist candidates were declared elected.

Finance.—Reflecting an expanding economy, revenue was estimated in the 1955-56 budget at £83,820,000; expenditure at £72,769,000, compared with £76,200,000 and £63,620,000, respectively, in 1954-55. After allowing for an imperial contribution of £11 million (in 1954-55, £12 million), a surplus of £51,000 remained. The yield of £67,429,000 anticipated in 1955-56 from reserved taxes showed an increase over 1954-55 of £6 million and was the highest revenue yet estimated for Northern Ireland.

Education.—Expenditure on education was estimated at £7,730,000 for 1954-55. Educational facilities in 1953-54 included 1,619 primary schools (202,241 pupils; 5,972 teachers); 81 grammar schools (30,332 pupils; 1,595 teachers); 13 intermediate schools (8,240 pupils; 320 teachers); and 13 special (including hospital) schools (1,017 pupils; 66 teachers). Queen's University of Belfast had 2,577 students and a faculty of 214.

Production and Trade.—Agriculture, engaging the holders of more than 80,000 small farms, is the largest industry, and yielded a gross output of £89,250,000 in the 1953-54 crop year. The livestock population in mid-1954 included 957,400 cattle, 32,630 horses, 956,000 sheep, 812,700 pigs, and 11,590,000 poultry. Milk sales totaled 97 million gallons, of which 31,500,000 was used for butter. A decline of the flax acreage from 18,042 acres in 1953 to 10,100 acres in 1954 reflected an increasing trend toward textile production from synthetic fibers. United States purchases of linen declined by 12% in 1954. Synthetic fiber output was increased by the opening of a new mill at Coleraine. Launchings at Belfast shipyards in 1954 totaled 145,920 gross tons, comprising two passenger liners and 10 tankers and cargo vessels.

The value of external trade rose by £56,520,000 to a new record of £552,190,000 in 1954, the adverse trade balance being reduced to £14,760,000. Imports increased by about £24 million to £283,480,000, while exports rose by over £30 million to £268,710,000, agricultural exports being valued at £56,900,000.

In spite of the fact that more than 170 firms have started production in Northern Ireland since 1945, there were 27,785 unemployed (or 5.9% of the insured labor force of 470,000) on Sept. 12, 1955. An Advisory Development Council is helping the government to promote new industries.

Communications.—During 1953 the Ulster Transport Authority carried 478,234 tons of merchandise by rail and 1,426,315 tons by road; and 8,950,000 passengers by rail and 97,200,000 by road. The Great Northern Railway Board carried 1,301,833 tons of merchandise, 663,035 head of livestock, and 8,850,000 passengers. British European Airways maintains services with Great Britain and the continent.

NORTHERN RHODESIA. See RHODESIA AND NYASALAND, FEDERATION OF.

NORTHWEST TERRITORIES. The Northwest Territories comprise all that part of Canada north of the 60th parallel of north latitude (except those portions within the Yukon Territory and the provinces of Quebec and Newfoundland) and the islands in Hudson Bay, James Bay, and Ungava Bay (except those within the provinces of Manitoba, Ontario, and Quebec). The area is 1,304,903 square miles; the population (1951 census), 16,004, including 5,344 whites, 3,803 Indians, and 6,857 Eskimos.

Government.—In 1918, the Northwest Territories were divided for administrative purposes into the three districts of Mackenzie, 527,490 square miles; Franklin, 549,253; and Keewatin, 228,160. Provision is made by the Northwest Territories Act (Chapter 195, Revised Stat-

utes of Canada, 1952, as amended) for the government of the territories by a commissioner and a council of nine (one of whom is deputy commissioner). The council performs legislative functions analogous to those of a provincial legislature. Five of the members (senior federal officials) are appointed, and four are elected from electoral districts in the Mackenzie District (most recent election, Sept. 7, 1954). In 1955 the administration was headed by R. G. Robertson, deputy minister of northern affairs and national resources, as commissioner. The seat of government is Ottawa, but the council meets alternately each year at a point within the territories.

Education.—In 1955, the Department of Northern Affairs and National Resources operated federal schools at 19 locations. In addition, teachers were employed to teach patients in Northwest Territories hospitals, and two schools were conducted by private companies. Schools were also operated by missions of the various churches, with financial assistance from territorial and federal governments. The only organized school districts were at Yellowknife, where a 12-room public high school and a four-room separate school were in operation in 1955. The government of the Northwest Territories makes correspondence courses available free of charge to children and adults.

A vocational training program for the natives of the Northwest Territories and a special curriculum for use in Eskimo schools are being developed.

Public Health and Welfare.—During 1955, 11 hospitals were operated in the Northwest Territories: 8 by missions, 1 by a locally elected hospital board at Yellowknife, and 2 by private companies. Seven health centers were in operation. All hospitals and health centers receive grants from the government of Canada.

Under the program of National Health grants, an eyesight survey was under way in 1955 in the Mackenzie District. Chest X-rays are carried out during the summer months in conjunction with the Department of National Health and Welfare. Cancer diagnosis, tuberculosis treatment, dental services for children in Yellowknife, Fort Smith, and Hay River, and treatment of crippled children are provided without charge. Assistance for the aged, allowances for the blind and disabled, and payment of family allowances in kind are also provided.

Production and Industry.—Mining, fur trading, and fishing are the principal industries. Mineral production for the year 1954 was valued at \$26,414,000, of which uranium and pitchblende accounted for \$15,486,156; gold, for \$10,513,000; and silver, for \$47,880. Yellowknife continued to be the center of gold mining activity in the Northwest Territories. The hydroelectric power development on the Snare River, a federal project 94 miles northwest of Yellowknife, which commenced operation in 1948, assisted the development and operation of mining operations in the Yellowknife area. Crude oil production was continued at Norman Wells and amounted to 369,900 barrels.

Fur production for the year ended June 30, 1954, totaled 418,867 pelts valued at \$758,512. Trapping continued to be the chief occupation of the native population, and was strictly controlled by regulations. Reindeer herding in the Mackenzie Delta region was continued for the benefit of the native population. Reindeer round-ups in 1954 showed that there were about 7,800 animals in the five herds. A buffalo herd of about 12,000 animals in Wood Buffalo Park is preserved and protected. A limited slaughter of reindeer and buffalo for produce is made annually. Reindeer and buffalo meat are sold to residents and to mission hospitals and schools, as well as for Indian relief to the Indian Affairs Branch of the Department of Citizenship and Immigration. To assist needy Eskimos in the eastern Arctic, reindeer and buffalo skins are distributed annually by the Eastern Arctic Patrol.

Commercial fishing in Great Slave Lake and other waters in that vicinity during the summer season of 1954 and the winter season of 1954-55 produced a catch of some 6,627,000 pounds with a market value of \$2,000,000. Whitefish, lake trout, and inconnu constituted the principal catch.

The handicrafts of the Eskimos are being en-

couraged by the Canadian government, and a continually expanding market is being created in the populated centers of Canada by the Canadian Handicrafts Guild.

Transportation and Communications.—The Mackenzie District and western Arctic are served by water and air transportation. The all-weather Mackenzie Highway from Grimshaw, Alberta, to Hay River Settlement on Great Slave Lake continued to be used extensively during 1955. Commercial freight and passenger services were provided by public carriers over this highway, and water carriers operated a freight service across Great Slave Lake between Hay River and Yellowknife. The bulk of the heavy freight is still transported to most settlements during the summer months via the water route commencing at Waterways, Alberta, thence down the Athabasca and Slave rivers to Great Slave Lake and down the Mackenzie River to the Arctic Ocean. Regular mail, passenger, and express services were maintained by air throughout the year to all points in the Mackenzie District. Radio communications between important trading posts and settlements in the Northwest Territories and outside points are maintained through government and private radio stations.

The 1955 Eastern Arctic Patrol, carried out by the C.G.S. C.D. Howe, took supplies and personnel to northern settlements and had Northern Affairs administrative officers and federal medical and dental officers on board.

R. G. ROBERTSON,
Commissioner of the Northwest Territories.

NORWAY. A constitutional monarchy in northwestern Europe, Norway's area is 125,064 square miles and its population (end of 1954), 3,408,000, about 27 per square mile. Twenty cities of more than 10,000 population include the capital, Oslo (447,000), Bergen (116,500), Trondheim (60,000), and Stavanger (52,300).

Government.—The Norwegian Constitution of 1814, with amendments, provides for three separate branches of government. Legislative power is vested in the 150-seat Storting, a modified, unicameral Parliament. The Storting elects three fourths of its members to constitute the Odelsting and one fourth as the Lagting. Franchise is granted to all citizens 21 years of age. Executive authority is vested in the king (since 1905, Haakon VII), who exercises his power through a cabinet headed by a premier (Einar Gerhardsen since January 1955). Cabinet members head 13 government departments. Except for World War II, Norway has had all-Labor governments since 1935.* Judiciary power is centered in the Supreme Court, the ultimate court of appeal, which comprises a chief justice and 18 justices.

Religion and Education.—About 96% of the population are members of the Evangelical Lutheran State Church, but other creeds enjoy full freedom of worship. In 1950 a total of 123,314 persons did not belong to the state church, including 30,036 Pentecostals, 11,570 Methodists, 8,964 Baptists, and 4,753 Roman Catholics.

Elementary education is free and compulsory for all children aged 7 to 14. In 1953-54 a total of 479,334 were registered in elementary schools and 43,958 in secondary schools. Most schools, including universities, are free. The 5-year "gymnasium" qualifies for admission to universities and colleges. Institutions of higher learning include the Oslo and Bergen universities, the Agricultural College at Aas, the University of Technology at Trondheim, and the Dental College at Oslo, the total enrollment in 1953 being 5,057.

Social Welfare.—About 90% of Norway's total population is protected by the Health Insurance Plan, which includes medical examination, extensive hospitalization, special services, and cash benefits. Membership is obligatory for all wage earners, regardless of income. Children between 7 and 18 receive free dental care. The social security program includes mother and child care, family subsidies, unemployment insurance, old-age pensions for persons 70 and over, war disability and seamen's pensions, and care of the poor, blind, and disabled.

* The present Storting, elected Oct. 12, 1953, is composed of 77 Laborites, 27 Conservatives, 15 Liberals, 14 Agrarians, 14 Christian Democrats, and 3 Communists.

Defense.—Norway is a charter member of the North Atlantic Treaty Organization (NATO). Military service is compulsory for men 20 years of age. Conscripts serve 18 months in the navy and air force, and 16 months in the army. The defense program calls for establishment of 2 standing and 9 readily mobilizable brigades; an air force of 11 squadrons; expansion of the navy's coastal units; and a national guard of more than 100,000 men.

Labor.—On Jan. 1, 1955, a total of 538,618 workers, about 50% of all wage earners, belonged to unions affiliated with the Federation of Labor. Most large companies are members of the Norwegian Employers Association. Wage contracts are negotiated through collective bargaining.

Finance and Economy.—The monetary unit, the krone, is divided into 100 öre. The official exchange rate is Kr. 7.15 to the U.S. dollar. The 1955-56 budget, balanced at Kr. 4,471 million, allocates Kr. 900 million for defense. The national debt, as of Jan. 1, 1955, totaled Kr. 5,814 million, including Kr. 1,490 million in foreign debts. The balance of payments on goods and services in the first half of 1955 showed a deficit of Kr. 487 million, as against a deficit of Kr. 463 million in the same period of 1954. At the end of June 1955, Norway had used \$214.6 million of its \$254.8 million credit quota in the European Payments Union.

Foreign Trade.—Norway's commodity exports (excluding ships) totaled Kr. 3,958 million in 1954, as compared with Kr. 3,466 million in 1953. Commodity imports totaled Kr. 6,013 million in 1954, as against Kr. 5,629 million in 1953. Exports of goods and ships in the first half of 1955 totaled Kr. 2,240 million, as against Kr. 1,969 million in the same period of 1954; imports totaled Kr. 3,999 and 2,902 million, respectively. The import surplus, including net ship imports of Kr. 634 million, amounted to Kr. 1,759 million, as against Kr. 1,461 million in the 1954 period. Imports from the United States rose from Kr. 276.3 to Kr. 370.2 million, while exports to the United States declined from Kr. 201.6 to Kr. 185.2 million. Leading exports were pulp and paper, ores and metals, fish and fish products, chemicals and fertilizers, and oils and fats. Major imports were machinery and transport equipment, ores and metals, fuels, textiles, and grains.

Shipping.—By Sept. 30, 1955, Norway operated 1,930 ships over 100 gross tons, totaling 7,170,000 gross tons. Tankers represented 58% of the total.

Fisheries and Whaling.—The total fish catch by mid-1955 was 1,139,000 metric tons, including 1,016,327 tons of herring, as against 1,339,000 tons at the same time in 1954. Norway's nine Antarctic whaling expeditions produced 110,000 metric tons of whale oil, as against 154,000 in the 1954 season.

Industry.—Industrial production in the first six months of 1955 was 4% higher than in the same period of 1954. The biggest increase was scored by the export industries, with a rise of 6%. New dwellings totaled 15,259 units.

Hydroelectric production in 1955 was estimated at 23 billion kw.-hr., averaging 6,500 kw.-hr. per capita, the highest average in the world. Plant capacity was scheduled to reach a total of 4,440,000 kw. by the end of the year. Some 300,000 tons of coal were shipped from Norwegian mines in the Arctic archipelago of Spitsbergen.

Agriculture and Forestry.—Only 4% of the total area is arable. Total farm production in 1955 was estimated at 1,680 million feed units (one unit equals 2.205 pounds, or 1 kilogram, of barley) as against 2,124 million in 1954. Major crops were hay (2,385,000 tons); grains, mainly barley and legumes (340,000 tons); and potatoes (1 million tons). Logging produced 241 million

cubic feet of timber during the first half of 1955.

Communications.—In 1955, the Norwegian State Railways operated a total of 2,719 miles of track, of which 764 miles were electrified. Some 29,000 miles of public roads include over 10,000 miles of state highways, of which 11% are surfaced with concrete or asphalt. Most of the domestic air routes are operated by Scandinavian Airlines System, whose extensive network connects Norway with western Europe, the United States, South America, Africa, the Near East, Hong Kong, and Japan.

Principal Events, 1955.—The 50th anniversary of the peaceful dissolution of Norway's 90-year union with Sweden was marked on June 7, 1955 with commemorative ceremonies reaffirming the present friendship between the two nations. High tribute was paid to King Haakon for the loyalty, wisdom, and leadership he has shown since his election as king of Norway in 1905. The 83-year-old monarch suffered a broken thigh bone in June 1955, but was back on his feet in November. Also in June, the British royal couple paid a 3-day state visit to Oslo.

The government put through a series of measures designed to reduce the big deficit on the foreign balance of payments and to curtail the high rate of capital investments. Toward the end of 1955 there were indications that these measures had begun to take effect.

The steel rolling mill at Mo-i-Rana, with a 170,000-ton capacity, began production in 1955. The first project for exporting hydroelectric power to Sweden was expected to be approved by Parliament, and work was started on an atomic reactor to produce steam for industry. The new Flesland airport, linking Bergen with Oslo and the world air network, was opened. The summer drought cut key farm crops below normal.

Laborite Oscar Torp resigned as premier on Jan. 15, 1955, and was succeeded by Laborite Einar Gerhardsen. Labor's position as the leading party was generally consolidated in the nationwide municipal elections of Oct. 3, 1955.

In early November 1955, Premier Einar Gerhardsen went to Moscow on a 12-day goodwill visit, during which a 3-year trade agreement between the two countries was negotiated. In a joint communiqué, signed by Mr. Gerhardsen and Soviet Premier Bulganin, Norway reiterated that she would not be party to any policy having aggressive aims, and would not permit foreign armed forces to be stationed on her territory unless Norway were attacked or threatened with attack.

Explorer Thor Heyerdahl, of *Kon-Tiki* fame, set off on a year-long archaeological expedition to Easter Island in 1955. Two major Norwegian exhibitions, presenting folk tale drawings by Kittelsen and Moe, and pictorial tapestries by Hannah Ryggen, toured the United States. The third annual Bergen Music Festival was a notable success.

Editor, "News of Norway," Norwegian
Embassy in Washington.

NOVA SCOTIA. A province situated on the eastern seaboard of Canada, Nova Scotia is 374 miles long, 60 to 100 miles wide, and has 4,624 miles of coastline and 516 fresh-water lakes within its area of 21,068 square miles. Almost an island, the province is connected with the mainland by the Isthmus of Chignecto, which is 17.5 miles wide. The mid-1955 population was estimated at 683,000, all but 25% of whom

NOVA SCOTIA FILM BUREAU

The new Angus L. Macdonald Bridge, spanning Halifax harbor.

are of British origin. The chief centers are Halifax, the capital (90,000; metropolitan area, 125,000, according to mid-1955 figures); and (with 1951 census figures) Sydney (31,317); Glace Bay (25,586); Dartmouth (15,037); Truro (10,786); New Waterford (10,423); and New Glasgow (9,933).

Government.—The province is administered by a lieutenant governor, appointed by the federal government for a 5-year term. He is advised by a House of Assembly of 37 members, elected usually about every 4 years, the term limit being 5 years. The province has 10 federal senators appointed for life, and 12 members of the House of Commons, elected about every 4 years, for a term limit of 5 years.

Education.—About 21% of the population is enrolled in free, compulsory, and nonsectarian public schools. There are 10 universities and colleges, one state-owned agricultural college, a normal college for teacher training, two vocational schools, and 19 recently organized rural and regional high schools. There are also special schools for the blind, the deaf, and for miners in colliery districts, and engineering and technical schools in industrial centers.

Finances.—Estimated revenue for the fiscal year 1955-56 was \$54,529,036. Estimated ordinary expenditures were \$49,925,360, plus sinking-fund payments of \$4,476,085.

Industry.—The returns from agriculture are about \$60 million a year. There are 23,000 farms, and 500,000 acres of arable or cultivated land. The 1955 apple crop, the result of an excellent season, totaled 4 million bushels. Nova Scotia is specializing in egg, poultry, and hog production, with remarkable results.

Coal mining in Nova Scotia has been hard hit by competition from oil and natural gas. Nevertheless, output in 1955 was running at approximately 5,800,000 tons, in comparison with a normal 6 million. The province produces about 90% of Canada's gypsum, the output of which is increasing steadily, and which is valued at over \$4 million annually. The mining of base metals is also active. Total mineral production in 1955 was expected to exceed \$80 million, of which coal would probably account for over \$50 million.

The gross value of factory products in the province in 1955 was estimated at \$324 million. In 1955, Sydney, one of Canada's largest steel centers, produced an estimated 576,000 tons of ingots, including blooms, billets, slabs, rails, and smaller articles.

Fisheries production in 1955 was estimated at 375 million pounds, valued at \$45 million. Nova Scotia is located near fishing grounds which are considered the most prolific in the

world, and leads the world in lobster production. Lumbering production remained normal in 1955 at an annual rate of 425 million board feet (sawn lumber), mostly softwoods. Total forest products were estimated at \$50 million.

Latest figures (1954) on hydroelectric power show that facilities of the Nova Scotia Power Commission produced 431,371,084 kilowatt-hours. In September 1955 an additional plant on the Mersey River was opened, providing a further supply of 6,240 horsepower.

Communications.—Nova Scotia has 15 large, deep harbors; 1,420 miles of first-class railway trackage; and four major airfields in full operation. A new, modern commercial airfield is about to be constructed near Halifax, to leave the Eastern Passage field entirely free for military and naval operations. The Sydney airfield handles a large volume of international transatlantic traffic.

There were in 1955 over 15,000 miles of roads, 1,837 miles of which were paved and 600 miles of which were gravel-surfaced. The remainder are well-maintained country roads. Motor vehicle registration in 1955 was an estimated 145,000.

In 1955 several major transportation projects were inaugurated. These included the \$22,700,000 Canso Causeway, deepest in the world, joining mainland Nova Scotia with Cape Breton Island and eliminating rail and car ferries across the Strait of Canso; the \$11 million Angus L. Macdonald Bridge, spanning Halifax harbor and joining the capital city with Dartmouth (see also BRIDGES); and the \$8,500,000 car ferry *William Carson*, in service between Cape Breton Island and Newfoundland.

The \$5 million modern car and passenger ferry, *Bluenose*, connecting Yarmouth, N.S., and Bar Harbor, Me., began operations on Jan. 4, 1956. Bids have been called for a \$2 million federal highways ferry, to ply between Cariboo, N.S., and Woods Island, Prince Edward Island.

Chief, Nova Scotia Travel Bureau.

NUCLEAR PHYSICS. See ATOMIC ENERGY; PHYSICS.

NURSING. Although the supply of nurses has increased sharply in recent years, the total volume of available nursing services does not meet the increased demand. This increased demand has come about for many reasons: increased demand for hospital services; widespread hospital construction, with the resulting increase in hospital beds; delegation to nurses of procedures formerly carried on by physicians to release the physicians' time for the new medical techniques that are being developed; the need for more clinical instruction and supervision of student nurses; the decrease in the length of the work week; and the employment of nurses who work part time and of married nurses who have home responsibilities. These demands have resulted in the employment of many auxiliary nursing workers who need instruction and supervision.

Nearly 400,000 nurses are practicing actively in nursing in the 48 states and the District of Columbia, according to figures released by the U.S. Public Health Service early in 1955. The number of hospital nurses, the largest single group, has increased by 15 per cent in the last 10 years to a total of 231,000. Private duty nurses, the next largest group, number 74,000. There are 32,500 nurses working in doctors' offices, 25,300 public health nurses, 14,000 industrial nurses, and 8,200 nurse educators in schools

of nursing, as well as 1,900 nurses practicing in a variety of other fields. The ratio of nursing personnel, including student nurses, in general hospitals has risen from 69 per 100 patients to 74 per 100, the highest in history.

More students entered schools of professional nursing in 1954 than in any year since World War II. Schools of professional nursing in the United States and territories admitted 44,930 new students, a 3.7 per cent increase over the 43,327 students admitted in 1953. These same schools graduated 28,539 students during 1954.

New York has been added to the growing list of states whose legislatures have provided scholarships, by appropriating \$105,000 for 300 scholarships for students entering schools of nursing in the fall of 1955. Minnesota and Connecticut, as in previous years, again appropriated money for scholarship aid to student nurses.

Funds for nursing research and for fellowships for nurses who are receiving special training in research methods were included in the 1956 appropriation for the U.S. Department of Health, Education, and Welfare. This appropriation, amounting to \$625,000, for the U.S. Public Health Service is the first to be earmarked specifically for these purposes. Previously grants for research projects in nursing came from funds that were made available for scientific investigations in many health fields.

The American Nurses' Association established an independent, nonprofit corporation, the American Nurses Foundation, which can receive "tax-free funds for desirable charitable, scientific, literary, or educational projects in line with the aims and purposes of the American Nurses' Association," and allocated \$100,000 to the foundation for its first budget.

The National League for Nursing, whose membership ranks are open to nurses, members of allied professions, and lay persons, held its second biennial convention in St. Louis in May. Aides, practicing as nursing aides in a general, psychiatric, or other specialized institution, are eligible now for membership.

The National Student Nurse Association met at the same time. This body has established a national headquarters with the two nursing organizations, the American Nurses' Association and the National League for Nursing, at 2 Park Avenue, New York.

On Aug. 9, 1955, President Eisenhower signed the bill authorizing commissions for male nurses and medical specialists in the military Reserves. Under this law—the Bolton Amendment (sponsored by Rep. Frances P. Bolton of Ohio) to the Army-Navy Nurses Act of 1947—Pvt. Edward L. T. Lyon was commissioned the first male army nurse on Oct. 6, 1955.

The *Canadian Nurse*, official publication of the Canadian Nurses' Association, and the *Nursing Times*, official publication of the Royal College of Nursing of Great Britain, observed their 50th anniversaries in 1955.

MARIAN G. KENT,
Assoc. Editor, "American Journal of
Nursing."

NUTRITION. Obesity.—During the last few years there has been a major shift in interest and emphasis in the field of nutrition. Previously nutritionists were primarily concerned with the inadequacies in intake of the essential minerals, vitamins, and proteins. Increased consumption of the various protective foods—those which contain the greatest amounts of the essential nutri-

ents—was continually urged. Now we find much attention being paid to obesity. It is desirable to maintain an adequate intake of the essential food elements, but at the same time prevent the consumption of too much food. This has imposed a much more difficult job of nutrition education.

The reasons for this shift in emphasis are several. Improved food habits, better economic status, enrichment of certain foods, etc., have greatly lessened the problem of undernutrition. At the same time, advances in the control of many infectious diseases have made the so-called degenerative diseases, associated with older age groups, the primary causes of death in the United States. These include diseases of the cardiovascular system and cancer. Statistics gathered by life insurance companies have demonstrated that individuals who are overweight have a life expectancy that is considerably less than those who maintain a normal weight. The implications in nutrition are obvious.

Other studies demonstrate that in certain areas of health, particularly with relation to heart disease, the situation in the United States is unfavorable when compared with other parts of the world. It has been stated that America's health, as measured by the mortality of white males in the productive period between 45 and 64 years of age, is lagging significantly behind that of many countries. Whether this represents primarily a nutrition problem or is due to the greater incidence of obesity in the United States is not clear, but it is significant that countries such as Japan, Italy, and Spain, whose diets are generally considered rather inadequate in several respects, show more favorable mortality statistics in this age group. While many causes must be considered, such as racial differences, previous removal of susceptible persons by other diseases, the presumed excessive tempo of American life, etc., there are strong indications that nutrition plays an important part.

Obesity is caused by the eating of too much food. Prevention or treatment obviously must consist of reducing the food intake. The simplicity of these statements does not imply that treatment is easy. In spite of a multitude of diets and methods which have been recommended, there appears to be no satisfactory method of treatment at present. A substantial number of patients reduce their weight with nearly any method, but most of them regain their previous weight in a matter of months or years. It seems apparent that until more is known of the basic causes of obesity, it is unlikely that substantial progress will be made. Numerous factors, such as the hereditary background, customary food habits, amount of exercise, psychological problems, and metabolic differences, are involved, and to varying degrees in different individuals. Substantial experimental evidence may be cited to support each as the cause of obesity. One might therefore expect that no one method would be uniformly successful in its treatment or prevention.

Obesity places an extra strain on the heart and is undesirable in other respects, but it cannot be considered as proved that it is a cause of arteriosclerosis or other degenerative diseases. The factors, dietary or otherwise, which promote obesity may favor the development of other diseases; or individuals with a tendency to develop obesity may also have a tendency to develop arteriosclerosis, for example. The most suggestive data indicating the value of reducing diets comes from life insurance companies. People refused in-

surance because of obesity at one time, but later insured after they have successfully reduced, show an improved life expectancy, compared with obese people in general. The data may be unreliable, however, since there is no assurance that the observed group is characteristic of the entire obese population.

The psychological aspects of obesity probably deserve greater consideration, particularly in view of the widespread public disapproval of the condition. Some investigators believe that by psychiatric examination it may be possible to determine the likelihood of success of reducing regimens. Also some individuals suffer psychological damage when subjected to reducing diets. A certain degree of self-control is necessary for all people, and particularly for those with a tendency for obesity, but medical supervision is probably desirable when weight control is difficult.

Arteriosclerosis.—Arteriosclerosis (hardening of the arteries) is one of the common causes of death apparently associated with obesity. There is considerable evidence that abnormalities in cholesterol metabolism are also involved. The principal findings are as follows:

(1) Arteriosclerosis similar to that found in man can be produced in a variety of animals by feeding diets containing cholesterol which produces high blood cholesterol levels.

(2) Arteriosclerosis in man is generally associated with high blood cholesterol levels.

(3) The cholesterol levels in the blood of the United States population gradually rise with age and are much higher than in similar populations which do not have a high incidence of arteriosclerosis.

(4) Blood cholesterol levels are higher in men between ages 40 and 65 than in women, and the incidence of arteriosclerosis is also higher in men.

(5) Cholesterol is only found in food products of animal origin. Hence the dietary intake of cholesterol in the United States is higher than in those parts of the world where meat, milk, and eggs are not common components of the diet.

The following evidence suggests that cholesterol intake is not a primary factor in arteriosclerosis:

(1) Most experimental studies have used rather high levels of cholesterol feeding, and the findings may not be germane to the problem in human beings.

(2) Those areas of the world where arteriosclerosis is relatively uncommon have diets that are characterized by a low intake of fat, protein, and generally lower calorie intakes (less obesity). Thus any of these factors may be of as much importance as the cholesterol intake. One group of investigators is particularly impressed with the general correlation over the world between the amount of fat eaten and the incidence of arteriosclerosis. In the United States, 40 to 50 per cent of the calories is commonly consumed as fat, compared with 10 to 20 per cent in Italy, Japan, and Spain.

(3) The cholesterol level in the blood has been shown in various studies to be influenced by weight gain and weight loss, sex hormones, thyroid hormone, and the kind and amount of fat eaten.

(4) Cholesterol is known to be synthesized in the body from other materials. There is considerable evidence that when cholesterol is eaten, the amount synthesized is decreased, and vice versa. If this control over body cholesterol is sufficiently precise, moderate intakes of cholesterol should have no influence on the amount in the blood.

(5) A considerable degree of individual variation is found in the way experimental animals under careful dietary control respond to cholesterol feeding.

The conclusion appears inescapable at this time that the level of blood cholesterol is importantly related to the development of arteriosclerosis, and that high cholesterol levels probably cause the disease. Furthermore, it would appear that practically the entire adult popula-

tion in the United States has levels of blood cholesterol which are high, compared with other parts of the world. It is obviously of importance to delineate the factors involved, but readily apparent that these are not known at the present time.

Vegetable Diets.—Several groups of children in German orphanages have been studied when they were receiving diets almost entirely of vegetable origin. The diets contained large amounts of bread, since the study was designed to determine the value of white bread, enriched white bread, and whole wheat bread. The primary purpose of the study was a partial failure since most of the vitamins added by enrichment were found to be already present in adequate amounts.

In any event it is of considerable interest that these diets allowed very rapid growth in children, although practically no meat, milk, eggs, or cheese was supplied. No difference in value among the kinds of bread could be found, whether it was white, enriched with vitamins, or whole wheat. The children were somewhat underweight and undernourished at the beginning, and all groups improved markedly. Furthermore, after a group of the children had received this diet for a year, a pint of milk was supplied. No improvement could be detected during a six-month period. All of the groups received supplements of vitamins A, D, and C, as well as calcium, since these nutrients are not supplied by bread. The amounts of these materials in the diets did not influence the results. It is apparent that the proteins of vegetable diets are not as inferior as generally believed, and that apparently adequate diets can be formed without many of the high-quality foods usually considered essential. (See also BIOCHEMISTRY; CHEMISTRY.)

FREDRICK J. STARE,

Department of Nutrition, School of Public Health, Harvard University.

NUTS. In 1955, peanut production in the United States, as estimated by the Department of Agriculture (December 1955 est.) was 1,610 million pounds, as compared with 1,025 million pounds in 1954. The average yield per acre was 956 pounds. Major peanut-producing states, with estimated 1955 production, were as follows: Georgia, 546,000,000 pounds; Texas, 239,235,000 pounds; Alabama, 220,375,000 pounds; North Carolina, 216,200,000 pounds; and Virginia, 177,975,000 pounds.

The 1955 pecan crop was estimated at 96,900,000 pounds, as compared with 92,502,000 pounds in 1954. Chief producing states, with estimated 1955 production, were as follows: Oklahoma, 33,000,000 pounds; Texas, 22,000,000 pounds; and Louisiana, 17,000,000 pounds.

The 1955 almond crop in California was estimated at 35,600 tons, as compared with 43,200 tons in 1954. The English walnut crop in California and Oregon was estimated at 75,400 tons in 1955, the same as for the preceding year. The 1955 filbert crop in Oregon and Washington totaled 7,400 tons, as compared with 8,670 tons in 1954.

OCEANIA. A term commonly applied collectively to the Polynesian, Melanesian, and Micronesian island groups of the South and Southwest Pacific, although it is also sometimes taken to include the islands of Australasia and the Malay Archipelago. (See **PACIFIC ISLANDS**.)

OCEANOGRAPHY. *Variations in Sea Level.*—It would be indeed fortunate if there existed on this earth some point whose elevation would not change from time to time and which could be used as a basic reference level for surveying and mapping the earth's surface and the bottom of the seas. Mean sea level has been used for many years as a reference level, but we now know that sea level, even after correcting for tides, varies from month to month, from year to year, and from place to place. For example, at Galveston, Texas, sea level is now about one foot higher than it was in 1910; and Cedar Keys, Fla., in the Gulf of Mexico is about 8 inches higher than St. Augustine, Fla., on the Atlantic coast.

A purely theoretical study on the "Deformation of Ocean Surface Induced by Winds" by Dr. Koji Hidaka,¹ a prominent Japanese oceanographer, is certain to stimulate a renewed and vigorous attack on the problem of sea level variations. Hidaka showed that with certain simplifying assumptions, necessary for solving his equations, and with other assumptions regarding the turbulence of the oceans (which seem not unreasonable today), our present wind systems over the earth may produce a surface elevation as high as 115 feet at 35° north latitude and a depression as low as 130 feet at 60° south latitude. Although he is careful to state that his result is only for a hypothetical case, the magnitude of these effects is so great as to command our attention. It is almost certain that in the near future this problem will be solved in detail with high-speed electronic computers. It is equally certain that in the future no studies on the variation in sea level can be undertaken without a thorough study of the effect of the variation of winds over the surface of the earth.

Stagnant Sea Water.—It is a common occurrence in deep basins of fresh water lakes to find water so stagnant that it contains large amounts of dissolved hydrogen sulfide formed by the decaying organic matter on the bottom. Since hydrogen sulfide is easily detected by its foul odor, its presence is a very convenient indicator of stagnant conditions. In a paper presented before the 18th Annual Meeting of the American Society of Limnology and Oceanography at East Lansing, Mich., in September 1955, F. A. Richards and R. F. Vaccaro of the Woods Hole Oceanographic Institution reported the first instance of hydrogen sulfide in the open ocean. Water samples taken from the Cariaco Trench off the coast of Venezuela showed unmistakable evidence of stagnation.

Stagnant water has been found in the deep parts of the Caspian Sea, which is saline, and from a few almost land-locked fjords and bays; but until now, the open ocean has never shown signs of stagnation in any of its basins. Aside

FRENCH EMBASSY PRESS AND INFORMATION DIVISION

The bathyscaphe, developed in France, is used extensively in underwater exploration and oceanographic research.

from its obvious newsworthy interest to oceanographers, this discovery will be of definite value in studying the circulation of water in, and in the neighborhood of, a fair-sized basin.

Lake Currents.—For the past 50 years, oceanographers have used the so-called dynamic height method of computing ocean currents. This method has been highly successful on the high seas where the water is at least a half-mile deep. In shallower waters some misgivings have been entertained regarding its validity. A paper by J. C. Ayers of Cornell University, presented at the meeting mentioned above, described a successful application of the dynamic height method to the currents of Lake Huron. The calculated results are in good agreement with direct current measurements. The importance of this work is not so much that one may now use the dynamic height method on the larger lakes (although that in itself is a major contribution), but that oceanographers will have an opportunity to study the conditions under which this method is valid in shallower waters, and thus make an extensive region of coastal waters the subject of study by conventional means.

Underwater Exploration.—The National Geographic Society (q.v.) has long been active in sponsoring various types of underwater exploration. In 1955 three distinct types of exploration were reported in the society's magazine.

The bathyscaphe, a type of submarine developed in France, has made so many descents to deep waters that its operation is almost routine. One descent described by Capt. Jacques-Yves Cousteau turned out to be thrilling, spectacular, and highly informative. When exploring a submarine canyon at a 5,300-foot depth near Toulon in the Mediterranean Sea, the bathy-

WOODS HOLE OCEANOGRAPHIC INSTITUTION

Precision recorders, used here by the Woods Hole Oceanographic Institution, measure ocean depths up to 20,000 feet and accurately indicate contour of ocean floor.

scaphe bumped into one of the precipitous walls of the canyon and started an undersea avalanche which took the form of a "mudslide." The existence of mudslides has been established on good but largely indirect evidence. Although their effects on the shape of the ocean bottom have been disputed for many years, this is the first time one has been observed in action.²

The need for direct observation of the ocean floor is not restricted to great depths alone. Many important processes occur where rivers empty into the ocean, but in these situations, the water is usually so murky as to make observation difficult. The Aquascope, a two-man diving chamber operated from a pontoon barge, was specifically designed for shallow, turbid water. In 1953-54 it was used in the lower reaches of Chesapeake Bay for interesting biological observations and for first-hand study of the effect of intense "tidal scour" and the interesting "two-way undersea river," where there is a layer of fairly fresh water flowing seaward over a layer of ocean water flowing upstream.

Although there are many advantages to direct observation of the ocean bottom, equipment for this work is expensive and observations are usually restricted to a comparatively small area. To explore larger areas, an underwater "sled camera" was devised by Harold E. Edgerton.³ This camera was capable of taking 800 pictures during a one-hour tow over the ocean bottom. However, it can be used only over smooth bottoms. (See also GEOGRAPHY AND EXPLORATION; GEOLOGY.)

F. C. W. OLSON,

*Associate Professor of Oceanography,
Florida State University.*

OFFICE OF DEFENSE MOBILIZATION. The Office of Defense Mobilization was established in the Executive Office of the President by Reorganization Plan No. 3, which became effective on June 12, 1953. Transferred to the new ODM were all of the mobilization planning functions of the National Security Resources Board; the stockpiling functions formerly exercised by the Munitions Board of the Department of Defense; and the responsibilities assigned to the former ODM, including those carried out by the Defense Production Administration under the Defense Production Act of 1950, as amended. As a result, there was established for the first time a single staff

² Cousteau, Capt. Jacques-Yves, "Diving through an Undersea Avalanche," *The National Geographic Magazine*, Vol. CVII, No. 4, April 1955, pp. 538-542.

³ Edgerton, Harold E., "Photographing the Sea's Dark Underworld," *The National Geographic Magazine*, Vol. CVII, No. 4, April 1955, pp. 523-537.

arm responsible for assisting the president in carrying out central leadership, direction, and coordination of the defense readiness and mobilization programs.

The Office of Defense Mobilization is divided into six major areas: production, materials, stabilization, manpower, telecommunications, and plans and readiness. A Science Advisory Committee and a Health Resources Advisory Committee also exist to advise the director.

At the end of fighting in Korea, ODM directed its attention to the long-range problems of rounding out the mobilization base and perfecting a balanced system of plans designed to meet any future emergency. Primary emphasis was placed on identifying and closing those gaps in the nation's mobilization structure which could become serious bottlenecks in the event of stepped-up or full mobilization.

The government has acquired a broad backlog of experience in meeting the problems of limited mobilization, such as was required by the Korean War, and of general mobilization within a secure homeland, such as was effected in World War II. Today, however, a new situation exists because of the capacity of an enemy to inflict a large-scale attack on the United States. So long as the danger of attack exists, priority attention must be devoted to defensive measures which will lessen the country's vulnerability and, as a result, help to lessen the possibility of enemy attack.

Parallel to the Federal Civil Defense Administration's job of protecting people, ODM has the job of protecting the government so that it could provide continued leadership after an attack. This job involves: first, determination of essential wartime functions; second, emergency or permanent relocation of those essential functions outside major target areas; and third, staffing those functions. To help accomplish the latter, the Defense Production Act amendments of 1955 provided for the establishment of an Executive Reserve in the mobilization agencies. Leaders from industry, labor, education, and other private enterprises, who are asked to join the reserve, will be trained to fill important mobilization posts and will be immediately available in case of emergency. Concurrently, an emergency organizational structure is being developed which could be put into effect in the event of attack, to enable the government to cope more effectively with the many unprecedented problems which would face the nation.

ODM and the other government agencies having mobilization responsibilities are also concentrating on the development of measures designed to lessen the vulnerability of the nation's mobilization base through such means as dispersion, protective construction, and stockpiling. Many such operations can be and are being performed by private enterprise and local groups under federal guidance. The financial incentives of the Defense Production Act, the Stockpiling Act, Section 168 of the Internal Revenue Act of 1954, and related legislation assist in meeting these objectives.

ODM has begun a series of "dry run" tests of the adequacy of national mobilization plans, to determine the government's ability to mobilize the economy to meet the needs of a war of survival, and its ability to continue its own essential functions under attack. During June 15-17, 1955, ODM cooperated with the Federal Civil Defense Administration (q.v.) in conducting Operation Alert. Thousands of key officials,

headed by the president, left Washington and practiced performing their essential wartime functions from relocation sites. The test revealed many weaknesses in plans and administrative procedures, which are being corrected. Another large-scale test was scheduled to be held in 1956.

ARTHUR S. FLEMING,
Director.

OFFICE OF EDUCATION, U.S. A major unit of the U.S. Department of Health, Education, and Welfare, the Office of Education was established in 1867 and is now organized for the following principal functions: (1) research in the many phases of education, including studies on status and trends, and of educational programs, procedures, and results; (2) educational services—consultative and advisory; and (3) administration of federal grants to aid education.

Highlights of the work of the Office of Education for the fiscal year 1955 included:

(1) Completion of a 2-year detailed analysis of state programs of financing schools. Information was obtained on sources of tax revenue, amounts collected from each source, amounts devoted to school purposes, and plans for apportioning these funds to local units.

(2) Initiation of studies of the responsibilities of state departments of education in the areas of school housing, curriculum, and public transportation.

(3) Completion of a report on projected building plans, as part of the School Facilities Survey, authorized by P.L. 815, and begun in 1951, for the purpose of determining school plant needs.

(4) Preparation of a detailed history and study of the characteristics of the program of school district reorganization in each state.

(5) Development of a study to determine why some 30,000 college graduates prepared for teaching each year do not teach, and to determine the factors which contribute to the retention or loss of young teachers in communities where rates of turnover vary significantly.

(6) Consideration of teaching of foods and nutrition in terms of current needs of home-making teachers, of other professional home economists, and of homemakers.

(7) Discussion of the strengths, weaknesses, and problems of the junior high school at a national conference called by the Office of Education and held in Washington, D.C., Feb. 24–26, 1955.

(8) Completion of a study made of the range and average salary for beginning rural teachers.

Among other accomplishments, provision was made for a detailed enrollment forecast, by grade, for 1953–54 through 1959–60. Increases in enrollment in public elementary and secondary schools have been so great that there has arisen a strong demand for such a forecast.

Recognition of the increasing importance of suburban development caused the office to curtail slightly the recurring study of "Statistics of City School Systems" in order to develop the kinds of data which might be most useful in comparing suburban schools with each other and with other types of schools.

During the fiscal year the Office of Education cooperated with a number of government agencies; for example, with the Public Health Service in the preparation of a study to stimulate the training of more practical nurses; with the Department of Agriculture and the Labor De-

partment on the development of a uniform transfer card to facilitate the transfer from school to school of children of migrant agricultural workers; with the White House Conference Committee staff in the preparation of a workbook designed to assist the states in planning for their state conferences; with the Federal Civil Defense Administration in providing educators with basic civil defense data and suggestions useful in developing civil defense programs in schools; with the Children's Bureau in preparing its proposal for a program in the field of juvenile delinquency; and with the Department of State in the international field through the International Teacher Exchange Programs, the Technical Training Programs, and active participation with the International Cooperation Administration by supplying professional support for its programs.

Major activities of the office involving non-government organizations included: cooperation with the National Education Association in the planning and managing of the National Conference on Rural Education held in Washington, D.C., Oct. 4–6, 1954; assistance to the American Association for the Advancement of Science on a plan to send traveling science libraries to small high schools; and cooperation with the University of Michigan and the National School Service Institute on a research project on "Children's Body Measurements for Planning and Equipping Schools."

In addition to the foregoing activities, the office issued a number of bulletins, pamphlets, and miscellaneous publications reporting the findings of surveys and studies conducted by staff members. Two monthly periodicals—*School Life* (October–June) and *Higher Education* (September–May) were issued on a subscription basis. (See also EDUCATION.)

SAMUEL MILLER BROWNELL,
U.S. Commissioner of Education.

OFFSHORE PROCUREMENT PROGRAM. See FOREIGN AID PROGRAMS, U.S.

OHIO. North Central state, United States; admitted to the Union, March 1, 1803. The "Buckeye State" ranks 34th in area and 5th in population (1955) among the 48 states.

Area and Population.—Area: 41,222 square miles (land, 41,000; inland water, 222), divided into 88 counties. Population: (1950) 7,946,627; (est., July 1, 1955) 8,946,000. Urban places with 1950 populations above 15,000 are as follows:

Executive.—Chief state officers in 1955:
Governor: Frank J. Lausche (Democrat)
Lieutenant Governor: John W. Brown
Secretary of State: Ted W. Brown
Treasurer: Roger W. Tracy
Attorney General: C. William O'Neill
Supt. of Public Instruction: R. M. Eyman

An interchange near Youngstown on the Ohio Turnpike, which was opened for its entire length on Sept. 30, 1955.

Constitution and Judiciary.—The present constitution went into effect in 1851. The Supreme Court comprises seven justices; chief justice in 1955 was Carl V. Weygandt.

Legislature.—The General Assembly (Senate, 33 members; House of Representatives, 136) meets in odd-numbered years commencing the first Monday in January.

The 1955 session of the Ohio General Assembly (January 4 to July 13) appropriated \$981,655,643 for all purposes of state government. Principal legislation included establishment of a \$10 million program in research and training for state mental institution personnel; creation of a Bureau of Workmen's Compensation, a Division of Capital Planning, and a state Board of Education; adoption of a new state school-aid program based on the teacher unit; and abolishment of the fee system of compensating justices of the peace. Legislators' salaries were increased from \$3,200 to \$5,000 (beginning in 1957), and an extra \$2,500 allowance was authorized for the speaker of the House and president pro tempore of the Senate. A new electric roll-call system, used in 1955 for the first time, cut roll-call time from 8 minutes to 1 minute. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$1,287,494,456; expenditures, \$1,209,576,675; treasury balance, \$262,915,764; long-term indebtedness, \$151,870,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$693,962,330, including \$288,955,950 from a 3% general sales tax and excise taxes on cigarettes and alcoholic beverages; \$31,098,818 from licensing exclusive of motor vehicle licensing; and \$46,404,886 from property taxes. The state has no individual income, corporate income, or poll taxes.

Banking.—As of June 30, 1955, the state's 233 national banks had \$4,917,472,000 in assets, \$3,205,875,000 in demand deposits, and \$1,331,348,000 in time deposits; the state's 400 other banks had \$5,608,307,372 in assets, \$2,778,719,519 in demand deposits, and \$2,328,676,308 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 18, inclusive. Operating expenditures for public elementary

and secondary education in the 1953-54 fiscal year totaled \$336,482,569.51 (\$252.58 per pupil). Income for operating expenditures comprised \$233,323,969.11 from local school districts, \$94,505,836.20 from the state, and \$7,354,878.02 from the federal government. Expenditures for construction and improvements amounted to \$123,447,202.91. Teachers' salaries averaged \$3,857.84 (elementary school teachers, \$3,760.29; high school teachers, \$4,051.09).

Social Welfare.—Public assistance expenditures from federal and state funds (excluding operating costs) in 1954 totaled \$130,564,405, including \$75,571,294 for old-age assistance, \$16,810,837 for dependent children, \$2,735,670 for the needy blind, \$4,863,161 for the permanently and totally disabled, and \$30,583,443 for general relief; a monthly average of 253,933 persons received public assistance. Expenditures for mental institutions amounted to \$42,055,219; for correctional and penal institutions, \$14,035,257.

Labor Force.—The "covered" labor force in 1954 averaged 2,396,374. Nonagricultural employment in June 1955 numbered 3,035,400. There were 37,400 insured unemployed workers in June 1954, and the state paid \$87,152,791 in unemployment compensation for the year ending June 1954.

Manufacturing.—In 1953, 11,956 establishments employed a yearly average of 1,420,095 persons who received \$6,352,819,000 in salaries and wages. Value added by manufacture was \$11,192,103,000, and investment in new plant and equipment amounted to \$735,425,000. Earnings of production workers in manufacturing averaged \$78.88 for an average work week of 39.6 hours in 1954, and \$84.86 for 40.7 hours in the first half of 1955.

Mining.—Ohio normally ranks first among the states in production of clays, lime, and building

sandstone, second in crushed stone, and third in sand and gravel. In 1953 it stood fourth as a salt producer. Ohio ranked 12th in that year in the total value of mineral output, with 2.11% of the United States total.

¹ Preliminary 1954 production data: 31,472,066 short tons (\$115,908,361). ² Value for processed materials is not included in the total. ³ 1954 figures: 22,831,747 short tons (\$22,288,647). ⁴ Excluding that used in making cement and lime. 1954 limestone production: 29,997,438 short tons (\$46,983,362).

Fisheries.—The commercial fish catch from Lake Erie in 1954 totaled 23,434,842 pounds. Ohio is normally the leading producing state for blue pike (4,575,956 pounds in 1954), yellow pickerel (4,971,155 pounds in 1954), and yellow perch (3,991,080 pounds in 1954).

Agriculture.—Cash farm income in the first half of 1955 totaled \$476,020,000, and for the full year 1954 comprised \$703,339,000 from livestock and livestock products, \$388,001,000 from crops, and \$6,504,000 from government payments. Receipts from principal crops and livestock in 1954 included: hogs, \$228,502,000; dairy products, \$204,764,000; cattle, \$126,285,000; corn, \$95,478,000; wheat, \$90,629,000; eggs, \$84,557,000; and soybeans, \$68,750,000.

The state's 177,074 farms (19,991,586 acres; harvested cropland, 10,339,955) averaged 112.9 acres and \$21,057 in value of land and buildings per farm in 1954. There were 126,868 farms with telephones and 171,739 with electricity. Livestock on farms (Jan. 1, 1955) included 2,438,000 cattle, 1,359,000 sheep, 2,812,000 hogs, and 19,262,000 chickens (excluding commercial broilers). During the week of Oct. 24-30, 1954, 294,718 family and hired workers were engaged in farming.

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1953-54 fiscal year totaled \$115,000,000, and newly completed construction and reconstruction aggregated 400 miles.

Highways and roads in July 1955 totaled 88,895 miles (77,495 surfaced). Registered motor vehicles numbered 3,556,380 on Sept. 8, 1955, including 2,897,481 passenger cars. There were 35 railroads in 1955 operating 8,416 line miles, 13 regularly scheduled airlines, and 398 airports and airfields (174 commercial and municipal, 4 military, and 220 private).

Communications media (1955) included 84 AM and 51 FM radio stations and 12 operating television outlets (10 VHF and 2 UHF); 99 daily newspapers (circulation, 3,310,077) and 265 other newspapers; and (Jan. 1, 1955) 802,966 business and 2,340,723 residential telephones.

Principal Events, 1955.—The 241-mile east-west Ohio Turnpike was opened throughout its entire length at midnight on September 30. The \$326 million superhighway connects the northwestern corner of the state, at the Indiana line, with the Pennsylvania Turnpike near Youngstown. A second toll road, 400 miles long, to run from Cincinnati northeast to Conneaut, with a Toledo spur, had legislative approval, with the governor to fix the exact route. Consulting engineers estimated the cost at \$516,000,000, and toll revenue for 1961 at \$29,123,000. Certain segments, particularly the Toledo spur, were considered doubtful financial risks. A re-examination of construction costs was undertaken at the governor's urging.

Revenues from the controversial axle-mile tax on trucks were endangered by a state Supreme Court decision in July that Michigan trucks were exempted from paying the tax by a 1937 reciprocity agreement, and that levies collected from Michigan truckers should be refunded. Gov. Frank J. Lausche then sent letters to 20 state governors asking that reciprocity agreements be amended to permit the tax; otherwise, he indicated, cancellations of the pacts might be necessary. Renegotiations encountered difficulties, and further litigation was in prospect.

The state General Assembly enacted a stringent law aimed at obscene comic books and films, but turned down Governor Lausche's proposal to restore movie censorship, destroyed by court decisions in 1954. A school foundation subsidy law, effective Oct. 1, 1956, changed the state aid formula from pupil numbers to a teacher-classroom yardstick. The governor criticized the measure for failing to provide additional sources of revenue but let it become law without his signature. During the session the Republican legislature overrode 17 of the Democratic governor's 32 vetoes. (See also above, *Legislature*.)

Four statewide issues drew a large off-year vote to the polls. An initiated bill, backed by organized labor, proposed to increase unemployment compensation benefits and exempt them from being affected by guaranteed annual wage payments. It was defeated by a large margin. The voters also rejected two proposed constitutional amendments to permit the legislature to change the salaries of judges and certain other public officials during their terms of office, but approved a bond issue of \$150,000,000 for a building program for state welfare and educational institutions, to be financed by a 1-cent-per-package tax on cigarettes.

Municipal elections in November indicated a Democratic trend in the larger cities. Lieut. Gov. John W. Brown and Attorney General C. William O'Neill, after the election, announced their candidacies for the Republican nomination for governor. On December 14, Governor Lausche declared his candidacy as a favorite son for the 1956 Democratic nomination. A week later he also announced his candidacy for the U.S. Senate seat held by Republican George H. Bender.

An explosion, apparently of accumulated gas, in a restaurant in Andover, Ashtabula County, killed 21 persons and injured many others in the year's worst disaster in Ohio.

Executive.—Chief state officers in 1955:

Governor: Raymond Gary (Democrat)
Lieutenant Governor: Cowboy Pink Williams
Secretary of State: Andy Anderson
Treasurer: John D. Conner
Attorney General: Mac Q. Williamson
Supt. of Public Instruction: Oliver Hodge

Constitution and Judiciary.—The present constitution went into effect in 1907. The highest civil court, the Supreme Court, comprises nine justices; chief justice in 1955 was N. B. Johnson. The highest criminal court, the Criminal Court of Appeals, comprises three justices; chief justice in 1955 was Dick Jones.

Legislature.—The Legislature (Senate, 44 members; House of Representatives, 121) meets in odd-numbered years commencing the first Tuesday after the first Monday in January.

Among other actions in its 1955 session, the legislature created a Department of Industry and Commerce and a Supreme Court Commission; authorized the Department of Health to administer the program of immunization against polio; and permitted school districts to provide special education or training for mentally retarded children. Other legislation amended the school code; adopted various water resources measures; established an agricultural code; increased drivers' license fees; authorized voting machines for certain counties and limited the amount of money which political candidates may spend on their campaigns and which individuals may contribute to political campaigns; facilitated the rehabilitation and redevelopment of slum areas; permitted the formation of multicounty libraries; and created city-county Planning and Zoning Commissions. An amendment to the constitution to revise the sections dealing with school support was adopted on April 5.

Finances.—State treasury receipts (1954-55 fiscal year), \$313,951,414.77; expenditures, \$309,878,954.88; treasury balance, \$75,860,077.19; long-term indebtedness, \$29,454,000.

Taxation.—State tax revenues (1954-55 fiscal year): \$178,203,922.05, including \$71,779,754.15 from a 2% general sales tax and selective sales and gross receipts taxes; \$31,631,856.95 from licensing; and \$18,957,608.44 from individual income taxes. The state has no corporate income or poll tax.

Banking.—As of June 30, 1955, the state's 197 national banks had \$1,891,556,000 in assets, \$1,535,856,000 in demand deposits, and \$202,462,000 in time deposits; the state's 186 other banks had \$409,596,144.02 in assets, \$241,788,500.70 in demand deposits, and \$77,362,052.14 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 17, inclusive. Operating expenditures of \$97,416,867 (\$223 per pupil) for public elementary and secondary schools in the 1953-54 fiscal year comprised \$48,123,932 from local school districts, \$45,493,677 from the state, and \$3,799,258 from the federal government. Expenditures for construction and

improvements totaled \$12,202,062. Teachers' salaries averaged \$3,502 (elementary school teachers, \$3,248; high school teachers, \$3,596).

* Monthly average.

Labor Force.—Nonagricultural employment on Aug. 1, 1955, numbered 548,300, and for the full year 1954 averaged 535,400. There were 8,600 "covered" unemployed workers in August 1955, and the state paid \$12,474,594.92 in unemployment compensation benefits to insured workers in 1954.

Manufacturing.—All "covered" establishments, numbering 1,050 in 1954, employed an average of 78,129 persons who received \$314,391,441 in salaries and wages. Value added by manufacture in 1953 totaled \$553,816,000, and investment in new plant and equipment amounted to \$62,894,000. Earnings of production workers in manufacturing averaged \$72.04 for an average work week of 41.4 hours in 1954, and \$73.34 for 41.2 hours in the first half of 1955.

Agriculture.—Cash farm receipts for the first half of 1955 totaled \$183,692,000 and for the full year 1954 comprised \$307,458,000 from livestock and livestock products, \$244,816,000 from crops, and \$6,211,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$193,011,000; wheat, \$142,909,000; dairy products, \$53,178,000; cotton lint, \$48,591,000; and hogs, \$24,762,000.

The state's 118,979 farms (35,630,045 acres; harvested cropland, 10,249,134) averaged 299.5 acres and \$18,840 in value of land and buildings per farm in 1954. There were 53,299 farms with telephones and 108,450 with electricity. Livestock on farms (Jan. 1, 1955) included 3,182,000 cattle, 432,000 hogs, and 7,248,000 chickens (not including commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 227,224 family and hired workers were engaged in farming.

OKLAHOMA CROP STATISTICS

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$42,046,189.78, and newly completed construction and reconstruction aggregated 349.5 miles.

Highways and roads on Jan. 1, 1955, totaled 10,432.8 miles (8,691.8 surfaced). Registered motor vehicles numbered 986,565 in 1954, including 707,412 passenger cars. There were 19 railroads (1955) operating, in 1954, 6,240.34 line miles and (1955) 5 regularly scheduled airlines and (1954) 149 airports and airfields (64 public and 85 limited).

Communications media included (1955) 51 AM and 2 FM radio stations and 10 operating television outlets; 52 daily newspapers (circulation, 699,538) and 244 other newspapers; and (Jan. 1, 1955) 199,545 business and 473,045 residential telephones.

Principal Events, 1955.—The 25th Legislature, in session from January to May, adjourned without passing any measure to increase taxes. To provide for proper financing of an integrated public school system, however, the legislature submitted to the people a referendum measure

for a proposed constitutional amendment. This action was necessary because the state constitution provided for separate public schools for Negro and white students, with separate tax levies for school support and maintenance. The measure to revise the tax structure in support of public schools was approved in a special election held April 5, by a vote of 231,097 to 73,021. In the field of higher education the state Board of Education on June 6 voted to open all state colleges and universities to Negroes. Formerly undergraduate students had attended Langston University, a segregated institution, although Negro graduate students had for several years been admitted to other state colleges.

Recent decisions by the U.S. Supreme Court relative to integration have likewise furnished other guidance to Oklahoma. A. B. McDonald, an Oklahoma City Negro, on November 14 won his fight against an Oklahoma statute which required identification of his race on an election ballot. Another decision, on the use of public parks and playgrounds by all races, caused Oklahoma to abandon plans for a half-million dollar lodge and recreational area for Negroes in the Sequoyah State Park.

A tornado smashed through Blackwell (1950 pop., 9,199) on May 22, killing 20 persons, injuring 250 others, and crushing some 400 homes and other structures.

Indian City, two miles southeast of Anadarko, was officially opened in August as a permanent tourist attraction. Here may be seen re-created habitations of Indians of the Plains Tribes before contact with the whites: the thatched roof and sidings of a Caddo tribal home, Wichita grass houses, Apache wickiups, Pawnee earth lodges, and tepees of the Kiowa, Comanche, Cheyenne, and Arapaho tribes. Visitors are invited to watch Indians at work and play and to attend ceremonial dances.

The site of the National Cowboy Hall of Fame, at the northeastern fringe of Oklahoma City and near two national highways, was dedicated on November 11. The cowboy shrine and museum, a cooperative enterprise of organizations in 17 western states, will be a tribute to the principal legend of the West and to the cattle-men who made the legend possible.

ONTARIO. Ontario, Canada's second largest province, has an area of 412,582 square miles (including 49,300 square miles of water), 10.7% of the total area of Canada. It is the most populous of the provinces, its population being estimated by the Dominion Bureau of Statistics at 5,183,000 as of June 1, 1955. Of its 29 cities, the principal ones (with populations as of Dec. 31, 1954) are: Toronto, the provincial capital (metropolitan area, 1,250,773; city of Toronto, 682,415); Hamilton, 220,705; Ottawa, the federal capital, 208,915; Windsor, 126,034; and London, 98,666.

Government.—The province is administered by a lieutenant-governor (the Hon. Louis O. Breithaupt), who

NATIONAL FILM BOARD OF CANADA

Boy Scouts trade items of interest at their 8th World Jamboree, at Niagara-on-the-Lake, Ont., in August 1955.

is appointed by the federal government; an Executive Council, or cabinet; and the Legislative Assembly, composed of 98 members. As of Jan. 13, 1956, the standing of the political parties in the Legislative Assembly was as follows: Progressive Conservatives, 84; Liberals, 10; Cooperative Commonwealth Federation, 3; and Liberal-Labour, 1. The prime minister is the Hon. Leslie M. Frost.

Education.—There is a complete system of elementary and secondary schools in Ontario. During the school year 1954-55, there were 1,056,902 pupils enrolled, and 33,093 full-time certificated teachers. The province has 7 universities. The University of Toronto had an enrollment of 10,464 in October 1954.

Finance.—For the year ended March 31, 1954, net ordinary revenue totaled \$372,973,316; and net ordinary expenditure, \$372,040,302, including interest, exchange, etc., on the public debt of \$52,456,200. The gross capital debt as of March 31, 1954, was \$884,231,206.

Agriculture.—A little less than 13 million acres are in improved, occupied farm land. Cash income from the sale of farm products in 1954 was estimated at \$704,544,000, of which grain, seeds, and hay accounted for 4%; vegetables and other field crops, 15%; and livestock and poultry, 46%.

Forestry.—Forestry occupies an important place in Ontario's economy, the net value of production in 1952 being \$108,744,000.

Minerals.—Mineral production in 1954 amounted to \$503,757,000. Ontario is not only Canada's foremost producer of gold (2,361,000 ounces in 1954, valued at \$80,460,000), but is the world's foremost producer of nickel (316,019,000 pounds in 1954, valued at \$176,556,000). Copper, platinum, silver, and iron are also produced.

Manufacturing.—Ontario is the chief manufacturing province in Canada. In 1953 there were 13,114 manufacturing establishments employing 634,554 persons, to whom \$2,017,982,000 was paid in salaries and wages. The gross value of factory shipments was \$8,876,505,000. The five leading industries included in the latter figure are: motor vehicles and parts, \$1,122,347,000; nonferrous metal smelting and refining, \$376,501,000; pulp and paper, \$352,414,000; primary iron and steel, \$352,408,000; and slaughtering

and meatpacking, \$327,326,000. Other important industries are rubber goods, heavy machinery, agricultural implements, and petroleum products.

Hydroelectric Power.—Most hydroelectric power is made available throughout Ontario by the publicly owned Hydro-Electric Power Commission of Ontario. The chief sources of developed power within the province are the Niagara, Ottawa, Abitibi, Nipigon, and Mississagi rivers. The dependable peak load, both generated and purchased, as of Dec. 31, 1953, was 3,565,350 kw., and the total energy, both generated and purchased, was 20,912,445,364 kw.-hr.

Transportation.—There were approximately 80,892 miles of public highways, roads, and urban streets in 1953. Motor vehicle registrations in 1954 numbered 1,487,210. In 1953 there were 10,385.6 single-track miles of railways operated in Ontario, the principal operating companies being the Canadian National Railways, the Canadian Pacific Railway, and the Ontario Northland Transportation Commission. In 1954 there were 167 licensed airports, of which 82 were land ports and 85 were water ports.

Principal Events, 1955.—The Canadian National Exhibition held its annual show at Toronto in late August and early September; it was attended by approximately 3 million people during its two-weeks' duration. This is the world's largest annual exhibition, and is held in its own permanent buildings. The Canadian International Trade Fair, which is held annually in Toronto in the early summer, is the continent's largest annual business fair, and is centered at the Canadian National Exhibition grounds.

Ontario continued in 1955 to attract large numbers of tourists. The total number of traveler's vehicle permits issued for United States automobiles entering the province in 1954 was 1,492,378.

The eighth world jamboree of the Boy Scouts was held August 20-27 at Niagara-on-the-Lake, attended by 10,800 Scouts from 64 countries.

In the election of June 9, the Progressive Conservatives won an overwhelming victory, returning 83 members to the Legislative Assembly. (See also OTTAWA; TORONTO.)

OPERA. See MUSIC.

OPHTHALMOLOGY. Glaucoma.—A drug called diamox acetazolamide is now being used in the treatment of glaucoma. Taken by mouth, this drug reduces pressure within the eyeball, thereby alleviating for many patients the main symptoms of glaucoma. Diamox acts through the suppression of the enzyme carbonic anhydrase, thus lessening the secretion of aqueous fluid in the anterior chamber of the eye. This in turn causes the eye to be softer. Diamox may also favorably affect any condition in which there is an excess of fluid, whether in the eye, the meningeal spaces, or elsewhere in the body. Improvement in the symptoms of edema, when they take the form of excessive intraocular pressure, may also be expected by the administration of diamox.

Toxoplasmosis.—Another condition affecting the eye is toxoplasmosis. Toxoplasmic involvement in the eye is the result of an infection with an animal parasite, *Toxoplasma gondii*. Multiple lesions are produced in the choroid and retina. The clinical diagnosis is based on accompanying symptoms consisting of X-ray evidence of cerebral calcification, and serological findings. Cur-

rent treatment consists of using sulfonamides, antibiotics, the adrenocorticotrophic drugs, and antiparasitic drugs.

Uveitis.—The main single destroyer of sight is chronic uveal tract inflammation. Uveitis may be due to infection from without or within the body. The chief clinical features of this condition are impaired vision, mild pain, ocular fatigue, photophobia, ciliary injection, a deeper anterior chamber, sometimes filled with exudates and containing scars binding the iris to the lens of the eye. Pressure within the eyeball may also be increased. Complications are retinal detachment, cataract, and atrophy of the retina or entire eyeball. This condition has stubbornly resisted all treatment. Lately, however, treatment results have been somewhat improved by the use of the sulfonamides, antibiotics, and adrenocorticotrophic drugs.

Retinal Detachment.—Improvements have been devised in the diagnosis and treatment of retinal detachment, which is still a serious eye condition. It is believed that almost every retinal detachment has a hole, but the latter cannot always be located. Instruments called transilluminators are used to help find these holes, and more delicate and accurate transilluminators have been devised. Improvements have also been made on diathermization needles and equipment.

In addition to diathermization, scleral resection has been used as a treatment. This operation consists of excising a small strip of the sclera (the white coat of the eye) and resewing the scleral envelope. This enables the retina to reattach in a smaller scleral envelope.

Toxic Damage.—Improved types of goggles, helmets, face masks, hoods, gas masks, supplied-air respirators, air line respirators, and cartridge type respirators have been devised to protect industrial workers from toxic eye hazards. Antibiotics, cortisone, and hydrocortisone are the main drugs used after initial first aid is required. Later, scarring may be lessened by application of the beta ray. If scarring is very severe, a corneal transplant frequently results in the restoration of vision.

Fungus Infection.—Improved treatment has been utilized for both fungus infections of the eye and lids, and the effects of fungicides. Fungus diseases usually involved are actinomycosis, blastomycosis, and histoplasmosis. Fungicides frequently responsible for ocular irritation include chlorophenol, cycloheximide, formaldehyde, pentachlorophenol, paradichlorobenzene, and tetrachlorophenol.

Genetic Effects of Radioactivity.—Considerable thought has been given to eye conditions which might result from the genetic effects of radioactive fall-out. It is possible that individuals exposed to excessive radioactivity will develop recessive characteristics through a series of generations so that a recessive tapeto-retinal disease will emerge. Radioactive fall-out might develop individuals with recessive mutant characteristics of the cornea, lens, iris, choroid, or optic nerve. It might be able to produce recessive carcinogenic characteristics.

In the past, ophthalmologists have been concerned with curing defects that were acquired by the patient. Defects of a hereditary character were considered incurable unless they were cataracts which could be removed, or corneas which lent themselves to keratoplasty. Improvement in diagnosis, in the knowledge of prophylaxis, and in the means of treatment will change prognosis from unfavorable to favorable.

The genes act in certain ways in the development of characteristics. These can be reduced to biochemical terms. They are similar to protein changes stimulated by enzymes. The genes control the production of enzyme proteins, which in turn have an effect on the characteristics that are developed. Ophthalmologists hope to be able to utilize nuclear fission and nuclear fusion to change the effects of enzymes wherever they are deleterious.

OREGON. Northwestern coastal state, United States; admitted to the Union, Feb. 14, 1859. The "Beaver State" ranks 9th in area and 32d in population (1955) among the 48 states.

Area and Population.—Area: 96,981 square miles (land, 96,315; inland water, 666), divided into 36 counties. Population: (1950) 1,521,341; (est., July 1, 1955) 1,664,000. Urban places with populations above 10,000 (1950, unless otherwise indicated) are as follows:

Albany.....	10,115	Medford.....	19,050*
Astoria.....	12,331	Pendleton.....	11,774
Bend.....	11,409	Portland.....	373,628
Corvallis.....	16,207	Salem (capital).....	44,947*
Eugene.....	35,879	Springfield.....	12,436*
Klamath Falls.....	15,875		* Special census, 1954.

Executive.—Chief state officers in 1955:

Governor: Paul Patterson, Republican (died Jan.

31, 1956; succeeded by Elmo Smith)

Secretary of State: Earl T. Newbry

Treasurer: Sigfrid B. Unander

Attorney General: Robert Y. Thornton

Supt. of Public Instruction: Rex Putnam

Constitution and Judiciary.—The present constitution went into effect in 1859. The Supreme Court comprises 7 justices; chief justice in 1955: Harold J. Warner.

Legislature.—The Legislative Assembly (Senate 30 members; House of Representatives, 60) meets in odd-numbered years commencing the second Monday in January.

The 1955 meeting of the legislature appropriated a budget of about \$217.8 million for the fiscal year 1955-56. It also broadened the base of corporation excise taxes and increased prices in state liquor stores. Other enactments included: creation of an administration procedures code and a Water Resources Coordinating Board; establishment of a Marketing Development Division of the Department of Agriculture; and provision for a \$15 million building program to include a new state mental hospital in the Portland area, a reformatory near Salem, and a classroom building at Portland State College. In addition, wire tapping was banned, except by court order; a life sentence was set for sex offenders against children; equal pay guaranteed to women for equal work; workmen's compensation rates and unemployment compensation were increased; penalties were stiffened for peddling narcotics to juveniles; and provision was made for 5 subdistricts in Multnomah County for the election of state representatives. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$389,996,177.41; expenditures, \$417,486,920.10; treasury balance, \$115,771,765.52; long-term indebtedness, \$177,657,100.

Taxation.—State tax revenue (1954-55 fiscal year): \$117,711,781.56, including \$56,000,000 from income and excise taxes; \$35,050,658.52 from motor vehicle fuel taxes; \$21,023,907.60 from licensing; and \$3,419,012.19 from inheritance taxes.

Banking.—As of June 30, 1955, the state's 13 national banks had \$1,713,093,000 in assets, \$972,133,000 in demand deposits, and \$596,951,000 in time deposits; the state's 38 other banks had \$194,108,778.66 in assets and \$159,687,402.82 in total deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 17, inclusive. Operating expenditures of \$90,291,372 (\$334.13 per pupil) comprised an estimated 61% from

OREGON

local school districts, 36% from the state, and 3% from the federal government. Expenditures for construction and improvements amounted to \$33,883,883. Teachers' salaries averaged \$3,988 (elementary school teachers, \$3,842; high school teachers, \$4,292).

OREGON SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary (k-8).....	1,065	8,627	236,745

Training schools for delinquent girls.....	1	74
Prisons.....	1	1,474
Prison farms.....	1	130*
Prison camps.....	1	60*

* Included in prison population figure.

Labor Force.—"Covered" nonagricultural employment in July 1955 numbered 485,100, and for 1954 averaged 315,941. There were 8,573 unemployed persons in August 1955, and the state paid \$23,460,573 in unemployment compensation to insured workers during 1954.

Manufacturing.—During 1953, 132,385 persons in nonagricultural establishments received \$556,923,000 in salaries and wages. Value added by manufacture was \$985,834,000, and investment in new plant and equipment amounted to \$63,377,000. Earnings of production workers in manufacturing averaged \$83.81 for an average work week of 38.8 hours in 1954, and \$91.91 for 40.1 hours in the first six months of 1955.

Mining.—Oregon ranked third among the states in 1953 in production of chromite, diatomite, and gem stones, and fourth in mercury and pumice. It stood 39th in order of the value of

mineral output, with 0.17% of the United States total. An average of 1,182 persons were employed in the state's mineral industries during 1954.

Fisheries.—The commercial fish and shellfish catch for the 12 months ending March 31, 1954, was valued at \$6.7 million. Oregon is a leading producer of salmon, Pacific Ocean perch, and crabs. Poundages of principal species landed in the year ending March 31, 1955 were: salmon, 9,742,860; bottom fish, 20,940,590; crabs, 7,449,375; shad, 643,028; smelt, 522,988; and albacore tuna, 469,440. Some 4,401 persons were engaged in the state's commercial fisheries in June 1954.

Agriculture.—Cash farm income for the first half of 1955 totaled \$137,249,000, and for the full year 1954 comprised \$164,287,000 from livestock and livestock products, \$218,374,000 from crops, and \$5,108,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$57,397,000; wheat, \$53,973,000; dairy products, \$50,886,000; eggs, \$17,272,000; and barley, \$15,192,000.

The state's 54,442 farms (21,062,340 acres; harvested cropland, 3,265,753 (averaged 386.9 acres and \$27,785 in value of land and buildings per farm in 1954. There were 38,615 farms with telephones and 52,666 with electricity. Livestock on farms on Jan. 1, 1955, included 1,458,000 cattle, 689,000 sheep, and 3,626,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, there were 109,988 family and hired workers engaged in farming.

OREGON CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.).....	2,734	2,710	2,900

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in 1954 totaled \$64,300,000, and newly completed construction and reconstruction aggregated 400 miles.

Highways and roads on Dec. 31, 1954, totaled 55,039 miles (32,455 surfaced). Registered *motor vehicles* numbered 780,685 on Dec. 31, 1954, including 688,911 passenger cars. There were (1955) 24 *railroads* operating 5,149.69 track miles, 8 regularly scheduled *airlines*, and 165 *airports and airfields* (74 commercial and municipal, 1 military, 23 private, and 67 others).

Communications media (1955) included 53 AM and 8 FM radio stations and 5 operating television outlets (4 VHF and 1 UHF); 22 daily newspapers (circulation, 613,969) and 100 other newspapers (circulation, 168,457); and (Jan. 1, 1955) 154,915 business and 381,640 residential telephones.

Principal Events, 1955.—The state legislature enacted 774 laws, among which were those requiring meat inspection, regulating and licensing billboards visible from highways, and legalizing the use of radar in traffic control. The Motor Vehicle Department was transferred from the office of secretary of state to that of the governor. There was an increase in the state income tax, and a 3-cent cigarette tax was passed. A constitutional amendment authorizing the legislature to attach emergency clauses to tax bills was referred to the people at the general election in 1956. Portland State College (formerly the Portland Extension Center) was established with degree-granting privileges. Minimum salaries for teachers in the public schools were increased. The controversial partnership policy with respect to hydroelectric power facilities was endorsed. (See also above, *Legislature*.)

Early in 1955 a number of lumber mills were forced to close because of a temporary shortage of box cars for the shipment of lumber. The largest number of forest fires since 1952 caused the destruction of much valuable timber. A "tree planting festival" at Oakridge in October resulted in the planting of 3,000 seedlings which will ultimately produce merchantable timber. Several large fires in commercial and industrial buildings in Portland were believed to have been set by arsonists. A bomb was exploded in Portland's largest department store following an extortion threat to the owners.

The sesquicentennial of the arrival of the Lewis and Clark Expedition near the mouth of the Columbia was celebrated at Astoria and other points in the state early in November, at which time a replica of Fort Clatsop, the explorers' winter quarters, was erected, and there were parades in which great-grandsons of the two explorers participated. The annual Shakespearian Festival at Ashland throughout August attracted large numbers of people from far and near.

There was considerable highway construction in 1955, including a 4-lane freeway from Portland to Salem which was opened to traffic in October, as was also another freeway running northeastward from Portland to a point on the Columbia River. (See also ALUMINUM; DAMS.)

ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION (OEEC). See Index entry.

ORGANIZATION OF AMERICAN STATES. The Organization of American States, an association of the 21 republics of the Western Hemisphere, functions in accordance with a charter signed at Bogotá, Colombia, in 1948. The organization carries on its activities through six agencies: (1) the Inter-American Conference; (2) the Meeting of Consultation of Ministers of Foreign Affairs; (3) the Council of the OAS; (4) the Pan American Union; (5) the specialized conferences; and (6) the specialized organizations.

The outstanding event of 1955 was the tension that developed between Costa Rica and Nicaragua (q.v.). On January 8 the government of Costa Rica, in a note addressed to the Council of the Organization, invoked the Inter-American Treaty of Reciprocal Assistance signed

at Rio de Janeiro in 1947, alleging that its territory, sovereignty, and independence were threatened by acts that had their origin in Nicaragua. The council convoked the Meeting of Consultation of Ministers of Foreign Affairs and constituted itself the provisional organ of consultation in accordance with the terms of the treaty. A committee of investigation, composed of the representatives of Mexico, the United States, Brazil, Ecuador, and Paraguay, was appointed on January 11 to proceed to Costa Rica and Nicaragua to determine the facts and to submit a report. On the following day the council requested governments in a position to do so to place planes at the disposal of the committee for the purpose of undertaking peaceful flights of observation.

On January 16 the council took a further step when it requested member governments to expedite arrangements for the purchase by Costa Rica of military aircraft which it may have ordered from them. On the same day the United States announced that it had sold four F-51 fighter planes to Costa Rica.

Following the presentation of the report of the investigating committee on February 18, the council appointed a special committee to cooperate with Costa Rica and Nicaragua in the preparation of a bilateral agreement and the establishment of a commission of investigation and conciliation to deal with problems that might arise between the two countries. On September 8, negotiations between the two governments had reached a stage at which it was possible for the council to cancel the Meeting of Consultation of Ministers of Foreign Affairs and to terminate its status as provisional organ of consultation.

On the same day the government of Ecuador requested a Meeting of Consultation of Ministers of Foreign Affairs to deal with a frontier problem with Peru. The council first decided to communicate with the four guarantor states (Brazil, Argentina, Chile, the United States) named in 1942 to assist Ecuador and Peru in implementing the agreement fixing the boundary between them. As a result of the action of these four states, the representative of Ecuador informed the council on September 26 that a meeting of the organ of consultation was no longer necessary.

The Inter-American Economic and Social Council continued during 1955 to carry out a broad program of inter-American economic and social cooperation. The council also continued to sponsor a program of technical assistance with the cooperation of inter-American specialized organizations and the Pan American Union. This program, which is carried out with financial contributions received from member states, consists of training centers established in different countries.

Three inter-American specialized conferences were held in 1955: the Tenth Pan American Child Congress at Panama City, on February 6-15; the Third Inter-American Statistical Conference at Rio de Janeiro, on June 9-22; and the Sixth General Assembly of the Pan American Institute of Geography and History at Mexico City, on July 25-August 6.

On Oct. 19, 1955, Dr. Carlos Dávila (q.v.), secretary general of the OAS since June 1954, died in Washington. On November 16, Dr. Cesar Tulio Delgado of Colombia was elected chairman of the Council of the OAS, succeeding Dr. José A. Mora of Uruguay.

ORKNEY ISLANDS. Separated from the coast of Caithness by the Pentland Firth, this archipelago (land area, 375 square miles), comprises 90 islands (34 inhabited), and constitutes politically a Highland county of Scotland. Kirkwall (pop., 3,673), on Pomona (or Mainland), is the county seat. The population, estimated at 20,700 in December 1954, is steadily declining, censuses showing successively the following totals: 24,111 (1921); 22,077 (1931); and 21,258 (1951). Fishing is the principal industry at the chief islands of Hoy, South and North Ronaldshay, Westray, Sanday, Eday, Stronsay, and Rousay. Oats is the chief food crop, and livestock is raised on about 16,000 acres of pasture. A seawall joining Pomona to South Ronaldshay protects the British naval base of Scapa Flow.

ORNITHOLOGY. See Index entry, *Birds*.

ORTEGA Y GASSET, José, Spanish man of letters and philosopher: b. Madrid, Spain, May 9, 1883, d. Madrid, Oct. 18, 1955. Long the symbol of liberal intellectualism and the leading advocate of the "Europeanization" of Spain, Ortega had been in exile and retirement since the outbreak of the Spanish Civil War in 1936. Previous to that date he had labored successfully as writer, editor, publisher, lecturer, professor, and politician for the overthrow of the monarchy. Like his old friend and master, Miguel de Unamuno, he was always a "philosopher of the marketplace," never hesitating to popularize and disseminate his ideas.

Son of the famous Madrid journalist, Don José Ortega y Munilla, he soon showed his precocity by remarkable feats of memory and by rebelling against his Jesuit teachers. He completed his doctorate in philosophy and literature at the University of Madrid at the age of 21. Crossing Spain's "Chinese wall, the Pyrenees," he went to study philosophy in Germany, notably with the neo-Kantian Hermann Cohen at Marburg, imbibing the aristocratic spirit of the old German universities. On his return, he finished a brilliant first in the competition for the coveted chair of metaphysics at Madrid; founded the magazine *Faro* (*The Beacon*) in 1908; and later the periodicals *Europa, España*, and the daily *El Sol*. As early as March 1914, he emerged as a national antimonarchist leader in a speech called *Old and New Politics*. In 1923 he began *La Revista de Occidente* in order to make foreign thought available in Spain. When King Alfonso XIII was finally overthrown, Ortega was elected to the Cortes as deputy from the province of Leon, and helped to write the Constitution of the Spanish Republic, only to find it "sad and sour" in comparison with his expectations. When the Spanish Civil War began, he spent nine years of exile in France, Argentina, Peru, and Portugal, returning to Spain "merely to exist" in a kind of armed truce with Franco after 1945.

Three years before Hitler came to power, Ortega published his best-known and prophetic work, *The Revolt of the Masses* (1930; Eng. tr., 1932), misunderstood by many as justifying a fascist elite, although its author actually de-

manded intellectual aristocrats who were superior to the masses "because they demanded more of themselves." Always a doubter, Ortega fought the church in many battles, nevertheless receiving its rites in his last hours before dying of cancer. A master of extraordinary and beautiful metaphor, Ortega shunned the usual abstractions of the philosopher in a style that had much of the vigor and honesty of the man.

Other works by Ortega available in English (and dates of their English translation) include: *The Modern Theme* (1933), *Toward a Philosophy of History* (1941), *Mission of the University* (1944), *Concord and Liberty* (1946), and *Dehumanization of Art* (1948).

HAROLD A. LARRABEE,
Ichabod Spencer Professor of Philosophy,
Union College; American Editor of
"Bibliography of Philosophy."

OSTEOPATHY. Osteopathic medicine is a system of medicine and major operative surgery, emerging from American medical practice during the latter part of the 19th century. In the intervening half century the profession has grown in the United States to include more than 12,000 osteopathic physicians.

To become an osteopathic physician a student must successfully complete four years of high school; three years of preprofessional training in an accredited college or university, and four years of professional education in one of the six approved osteopathic colleges. Practically all osteopathic students add to this 11-year period of education a year of internship in an approved osteopathic hospital.

Graduate education in osteopathic medicine, if it involves specialization, follows a distinct program carried out under the continuing supervision of the profession's approving and accrediting agencies. Certification in any given specialty requires a five-year program above the internship level.

Osteopathy emphasizes the fundamental importance of the musculoskeletal system in interacting with the cardiovascular system, the nervous system, the respiratory system, etc. Disturbances in the musculoskeletal system are held by osteopathic physicians to be factors in the establishment and maintenance of the disease process by lessening the natural ability of man's body to stand up under stress. Detection of these disturbances is basic to the distinctive approach of osteopathic physicians, and the treatment of these aberrations is widely known as an "osteopathic manipulative treatment."

Osteopathy claims and administers as a part of the continuum of medicine, all the medical, surgical, immunological, pharmacological, psychological, and hygienic procedures that are of proven value in securing abundant health, in preventing an establishment of the disease process, or in treating the various syndromes or diseases that arise therefrom.

The American Osteopathic Association, national organization of the profession, has its headquarters at 212 East Ohio Street, Chicago 11, Ill. Dr. Hobert C. Moore of Bay City, Mich., was president for 1955-56; Dr. R. C. McCaughan is executive secretary. The association publishes *Journal of the American Osteopathic Association*, *Forum of Osteopathy*; and *Health*.

RAYMOND P. KEESECKER,
Editor, The American Osteopathic Association.

OTTAWA. The capital city of Canada (Dec. 1955 est. pop., 224,000; area, about 42 square

miles) is located in eastern Ontario at the junction of the Ottawa and Rideau rivers. The mayor is Dr. Charlotte Whitton.

Throughout 1955 Ottawa had reasons to be sharply conscious of the growing conflict between its ambition to develop as an important metropolitan center and its desire to adhere to a long-cherished plan for national capital beautification. As one of Canada's rapidly growing communities, Ottawa is coping with all the problems of greatly enlarged industrial and administrative activity: sites, services, accommodations, schooling, housing, etc. At the same time the city is obliged to cooperate with the national and provincial governments, with the Federal District Commission, and with neighboring municipalities in efforts to protect "green belt" areas and to harmonize private exploitation of local resources with overall community planning. Much disagreement and disputation among the parties concerned was seen in 1955; and several important matters, such as the site for a much-needed city hall, were in a state of acrimonious stalemate at the year-end.

Closely related to all the other growth problems of 1955 was the matter of traffic control, Ottawa's situation being considered one of the most difficult in North America. The appointment

of Woodrow Rankin, of Wichita, Kans., as Ottawa's traffic control engineer was announced in October. Work was speeded on the new cross-town expressway, a \$15 million project designed to ease the traffic worry. Two substantial exits from the city's downtown were provided in 1955 with the completion of the Dunbar Bridge and the Hurdman Bridge, both crossing the Rideau River. Also under active development in 1955 was a plan to build a new \$10 million high-level bridge across the Ottawa River, to supplement the long out-moded Alexandra Bridge between Ottawa and Hull.

Material prosperity was very evident in Ottawa in 1955. The erection of huge supermarkets in outlying areas, the completion of midtown office buildings and apartment blocks, schools, and hospitals, and enormous new residential developments gave the construction industry its greatest year in Ottawa's history. The Red Feather Campaign went over its \$575,000 objective with ease. The Ottawa Exhibition broke all records with a total 7-day attendance of 431,797.

WALTER B. HERBERT,

Director, The Canada Foundation, Ottawa.

OUTER MONGOLIA. See MONGOLIAN PEOPLE'S REPUBLIC.

PACIFIC CHARTER. See SOUTHEAST ASIA TREATY ORGANIZATION.

PACIFIC (ANZUS) COUNCIL. In San Francisco on Sept. 1, 1951, Australia, New Zealand, and the United States (whose initials form the word "ANZUS") signed the Tripartite Security Treaty, which represents primarily a collective attempt—within the framework of the United Nations—on the part of the three countries to establish a program for the mutual defense of their territories, armed forces, ships, and aircraft against aggression in the Pacific area. A council of the foreign ministers (or their deputies) of the three nations was established "to consider matters concerning the implementation of this Treaty." The secretariat of the council is made up of U.S. State Department officials and members of the Australian and New Zealand embassies in Washington, D.C.

Following Australia's request on Aug. 11, 1955, for an early meeting to discuss the problems of the Pacific area—especially those related to Australia's garrisoning troops in Malaya, the Pacific Council met in secret session in Washington on September 24. The principal ANZUS representatives were U.S. Secretary of State John Foster Dulles and ministers of external affairs Richard G. Casey of Australia and Thomas L. Macdonald of New Zealand. A communiqué issued after the meeting hailed the establishment of the Southeast Asia Treaty Organization (q.v.) as a "highly significant development toward sustaining and strengthening peace and security" in the Pacific. The foreign ministers also declared that the free nations of the Pacific must continue their defense measures so long as the threat of Communist aggression continued.

PACIFIC ISLANDS. The term Pacific Islands commonly signifies the innumerable islands and

island groups, chiefly of volcanic or coral origin, generally referred to as Oceania. Oceania is divided into three main classifications (although authorities sometimes differ in which of these classifications they place certain fringe island groups):

(1) *Polynesia*, in the central and southeastern Pacific, includes principally Hawaii, Samoa, Tonga, and Pitcairn Island (qq.v.); the Tuamotu Archipelago and the Society and Marquesas groups (see FRENCH OCEANIA); and the Ellice and Phoenix groups (see WESTERN PACIFIC ISLANDS, BRITISH).

(2) *Melanesia*, in the western Pacific, includes mainly Fiji and New Caledonia (qq.v.); the Bismarck Archipelago, and the New Hebrides, Louisiade, Admiralty, Solomon, Loyalty, and Santa Cruz groups (see PAPUA AND NEW GUINEA, TERRITORY OF AND WESTERN PACIFIC ISLANDS, BRITISH); sometimes Australia, New Zealand, and the Malay Archipelago are also included.

(3) *Micronesia*, in the central Pacific, includes chiefly Nauru and Guam (qq.v.); and the Caroline, Marshall, Mariana, Gilbert, and Bonin groups.

The natives of Oceania comprise a mixture of Negroid, Mongoloid, and Caucasian strains, with the Negroid peoples predominating in Melanesia and the lighter-skinned peoples in Polynesia and Micronesia. Language and culture also vary considerably.

Excluding Australia, New Zealand, and the Malay Archipelago, types of government include crown colony, protectorate, condominium, territory, and United Nations trusteeship; governing authorities are the United States, Great Britain, France, Australia, and New Zealand.

U.S. PACIFIC ISLANDS

Most of the Pacific islands administered by the United States are important chiefly as strategic bases and landing points for air and water traffic.

Trust Territory of the Pacific Islands.—This territory, which includes the Mariana (except

Guam), Marshall, and Caroline island groups, is scattered over some 3 million square miles in the western Pacific north of the equator. It comprises over 2,100 separate islands (97 inhabited) with a total land area of 687 square miles. Formerly a League of Nations mandate of Japan, it became a United Nations trust territory, with the

^a An Anglo-American condominium in the Phoenix group of the Gilbert and Ellice Islands, used as air and communications bases; Enderbury Island was uninhabited in 1950.

^b Including nearby Sand Island; total area, less than 0.5 sq. mi. ^c About 150 feet long and 120 wide at high tide; area about 40 sq. mi., including submerged shoals. ^d Dry land.

United States as trustee, on July 18, 1947. The indigenous population of 61,102 (June 30, 1954), broadly classified as Micronesian, includes 9 main linguistic groups. English is displacing Japanese as the lingua franca. Bikini Atoll in the Marshalls was the site of two United States atomic bomb tests in 1946. Eniwetok Atoll, also in the Marshalls, was subsequently converted into an atomic proving ground, where test explosions took place in 1948, 1951, 1952, and 1954.

Government.—The territory is administered by the U.S. Department of the Interior, with the exception of Saipan, Tinian, and other islands of the northern Mariana group (not including Rota), which are administered by the Navy Department. Headquarters of the high commissioner were removed from Honolulu, Hawaii, to Guam, on Sept. 29, 1954. Acting High Commissioner Delmas H. Nucker assumed the duties of office on Sept. 1, 1954, succeeding Frank E. Midkiff, who resigned. Native self-government is encouraged on a local level. Elected native congresses and councils on district and regional levels have advisory functions. The 1953–54 budget totaled \$5,929,967, of which \$1,570,266 was derived from local revenues.

Education and Religion.—In 1954 there were 149 public elementary and 6 public secondary schools with a total of 7,386 pupils, and 16 mission elementary and 7 mission secondary schools with 1,833 pupils. The Pacific Islands Central School on Truk provided education on the high school level to 121 pupils. In 1954 there were 115 missionaries in the territory, including 26 indigenes. The greater part of the population has been converted to Christianity, although many native beliefs persist.

Economy.—Subsistence agriculture, coconut cultivation, and fishing are the chief activities. Cacao and coffee cultivation has been introduced experimentally. Copra, trochus shell, boats, and handicraft items are produced. The phosphate deposits on Angaur (in the Palau group of the Carolines) were worked by a Japanese company

until 1955, when mining operations ceased. In the 1953–54 fiscal year, imports totaled \$2,258,326; exports, \$3,342,790. Chief exports were copra, trochus shell, and phosphate (105,702 long tons). Almost all external trade is with the United States and Japan. Majuro, in the Marshall Islands, was established as a world port for the trust territory in October 1954.

Other Former Japanese Islands.—The Japanese Peace Treaty of 1951 stated that Japan "will concur in any proposal of the United States to the United Nations to place under its trusteeship system with the United States as the sole administering authority," the Ryukyu Islands and the Daito Islands; the Bonin Islands, Marcus Island, Rosario Island, and the Volcano Islands; and the island of Parece Vela. The United States, meanwhile, is to exercise full power and jurisdiction over the islands. On Dec. 24, 1953, the United States returned to Japan the Amami Oshima group (area, 471 square miles; pop. 1953, 201,753) of the Ryukyus.

Ryukyu Islands.—The Ryukyu Archipelago extends some 500 miles southwest of Japan. The islands under United States control total 848 square miles in area, with a population (est. 1954) of 777,000. The natives, known as Luchuan, resemble the Japanese physically and came under Japanese rule in the 1870's. A native government, including a 29-member legislature, exists under the American civil administration. In 1952 the Ryukyus had 291 primary schools (127,546 pupils), 202 secondary schools (75,680), 13 technical schools (4,547), and 5 higher institutions (1,133). The population is predominantly agricultural. Chief crops are sweet potatoes, rice, vegetables, sugar, and tea. Industries include fishing, lumber, ceramics, textiles, silk, dyes, cement, and brick-making. Agricultural and industrial output is below pre-World War II levels, and the population is dependent on United States aid. Exports in 1953 totaled \$8.2 million; imports, \$34.7 million. Largest of the Ryukyu Islands is Okinawa (579 square miles; pop. 665,315), which contains important United States fighter and bomber bases.

The Daito Islands (area, 18 square miles; pop. 1950, 2,691) form the easternmost group of the Ryukyus, about 200 miles east of Okinawa. Sugar and phosphate are produced.

Bonin Islands and Volcano Islands.—These groups lie about 800 miles east of the Ryukyus. The Bonins comprise 27 islands; total area, 30 square miles; pop. (1953) 151. Marcus Island (1 square mile), east of the main group, is usually classified as one of the Bonins. The Volcano group, south of the Bonins, comprises 3 islands (total area, 11 square miles), including Iwo Jima, which has an excellent airstrip and is now used mainly as a refueling point for U.S. Air Force planes.

Rosario Island lies to the west of the Beechey group of the Bonins. **Parece Vela** lies some 400 miles southwest of Iwo Jima.

M. J. G.

PAINTING, SCULPTURE, AND PRINTS. The year 1955 was notable, not for aesthetic issues and controversies, but for expansion of plant. Throughout the United States, museums completed or announced plans for additions to existing buildings, costing many millions of dollars. The era of prosperity, heralded in political circles, had leaked over into cultural areas. Conflicts on aesthetic and social matters were not lacking, however.

Issues and Controversies.—Tides of aesthetic opinion were evidenced by an increasing number of critical letters to art magazines, attacking abstractionism. The question of subjects in art was raised even in the magazines under fire, and newspaper critics also became critical of the academy of the abstract. *Reality: The Journal of Artists' Opinion* joined in the attack, describing the "revolt of the critics" as a long overdue reaction against non-subject matter propaganda.

On the other hand, academic styles in sculpture received severe criticism. The low aesthetic quality of sculpture commissioned and paid for by the government was charged to a sculptors' lobby in Washington. Thirteen war monuments in Europe, North Africa, the Philippines, and the United States were challenged on creative-expressive grounds. The sum spent for these was reported to be almost \$300,000. In a spirit of plain speaking, the critics held the National Sculpture Society responsible.

Too great emphasis on abstract manners in art was charged against the Corcoran Gallery of Art (Washington, D.C.) in connection with its 24th biennial exhibition of contemporary American painting, selected by an outside jury of three museum directors. From 2,101 entries, a total of 64 works was chosen, in contrast with 226 in 1953 and 271 in 1951. The gallery had expected to show about 200, but the jury could not satisfy itself with more than a third of that number. Showing a cross section of current styles also came in for criticism.

Social, rather than aesthetic, was the controversy which rocked Los Angeles in the spring of 1955. Christian Nationalists picketed the new Police Facilities Building, demanding the removal from its façade of Bernard Rosenthal's 14-foot semiabstract bronze sculpture.* Liberally minded elements in the community formed the Los Angeles Art Committee and, with the help of public opinion throughout the nation, blocked the attempt to have the \$10,000 work removed and melted down. Members of the American section of the International Association of Art Critics went on record as opposing the right-wing attack as contrary to the democratic process.

The reception given by the French press to the "American Art of the Twentieth Century" exhibition, shown in Paris in the spring of 1955, was not friendly. This was the opening feature of the "Salute to France" program of cultural events held in Paris under the auspices of the American embassy and at the request of the French government. More than 500 paintings, sculptures, prints, architectural models, still photographs, examples of industrial design, and motion pictures from the Museum of Modern Art were on display. The press' reaction did not prevent the French public from crowding into the Musée d'Art Moderne, but this critical cold shoulder did not promote cordial Franco-American relations, and many Americans wrote letters of protest to the art press at home and abroad.

Contemporary Exhibitions.—Displays of art now being produced showed qualities like those under criticism in the Corcoran biennial. In an effort to represent a cross section of all styles, museum directors and juries made selections which were uneven in quality. The tendency to be excessively selective in a quantitative way also resulted in

smaller exhibitions, with decreased exhibition opportunities for the submitting artists. For example, the Los Angeles County Museum annual exhibit received 1,422 entries from 875 artists; but the jury chose only 186 works by 174 artists. At the Brooklyn Museum, the ninth annual print exhibition had 1,200 entries, but only 87 were shown. In 1954 the number was 150.

The Carnegie International exhibition, with 328 paintings, also evoked protest. First prize of \$2,000 went to Alfred Manessier of France, and other prizes went to artists from Mexico, Italy, Chile, and Japan. Critics and laymen commented on the lack of recognition for Americans. The exhibition, a critic noted, reflected "the deepening crisis of contemporary painting."

Praiseworthy in purpose was the competition held by the National Council for U.S. Art, Inc., a private nonprofit organization, for mural sketches and sculpture models for the decoration of the United Nations headquarters in New York. Artist juries invited five painters and five sculptors to submit designs for two sites in the U.N. Secretariat Building, selected by the secretary general. These designs were shown in the fall of 1955 at the Whitney Museum of American Art; those already chosen were by Nathaniel Kaz (for sculpture) and by Stuart Davis and Jacob Lawrence (for painting).

The Whitney Museum held several exhibitions during 1955 which reflected current unrest in art. One of these was "The New Decade," showing the work of 35 relatively unknown American painters and sculptors who emphasized human subjects. Early in the year the museum held a two-man show of the work of Jack Levine and Hyman Bloom.

The Whitney's 1955 annual exhibition of contemporary American painting in the fall was apparently selected to represent all schools of aesthetic practice. Though stylistic eclecticism is not unique with the 20th century, it seems to be more marked now than in other periods. The Whitney annual ranged from academic naturalist work to the manner termed "abstract expressionism," in which the painter expresses his inner life without recognizable images. This is unlike the German expressionists of forty years ago, who used objects from nature as symbols for their emotions.

The state of American art was also shown by the Whitney Museum's large exhibition of paintings, drawings, prints, and other works by Reginald Marsh, who died in 1954 at the age of 56. The exhibition was booked to travel to museums all over the country until the end of 1956.

Among other contemporary art exhibitions was the Art Institute of Chicago's 58th annual, which displayed 225 works produced within a 100-mile radius of the city; \$7,850 was awarded in 22 prizes. Top prize of \$1,500 went to Joseph Goto's 14-foot stainless steel sculpture, *Struggle*, and the second prize of \$1,000 to Gerald McLaughlin's painting, *The Orator and the Ladies*. Honoring the painter, Charles Sheeler, who was 72 in July, an exhibition was circulated from San Diego, Calif., to Utica, N.Y. Reports stated that his work had never been shown to better advantage. To encourage local talent, the San Francisco Museum of Art showed an exhibition entitled "Bay Region Painting and Sculpture," by 43 artists.

Encouragement of contemporary art in 1955 was not confined to Americans. In the early fall the Museum of Modern Art held a two-man show of the work of the late Yves Tanguy and the

* This group attacked as "subversive" the North Atlantic Treaty Organization, the United Nations Educational, Scientific, and Cultural Organization, the National Association for the Advancement of Colored People, Rhodes scholars, and the Carnegie, Ford, and Rockefeller foundations, along with others.

WILLIAM H. LANE FOUNDATION, LEOMINSTER, MASS.

New England Irrelevancies (1953) by Charles Sheeler, honored in 1955 by an exhibit celebrating his 72d birthday.

Italian artist, Giorgio de Chirico. Tanguy used the surrealist style to express vistas of vanishing space. Chirico (who in the second decade of the 20th century fathered a style called *pittura metafisica*—that is, metaphysical painting) painted his perspectives with psychological overtones.

The Solomon R. Guggenheim Museum in New York City held a comprehensive exhibition of the sculpture of Swiss-born Alberto Giacometti, whose abstract *Female Figure* the museum recently acquired. Later in the year the Guggenheim Museum showed a major retrospective exhibit of the work of Rumanian-born Constantin Brancusi. Included was the abstract *Bird in Space*, which United States Customs a quarter of a century ago sought to tax for its weight in brass because it was not judged to be a work of art.

Special Exhibitions.—Art made headlines in the theft from the Brooklyn Museum of eight small silver sculptures of antiquity, stolen from an exhibition entitled "Sculpture in Silver," organized by the American Federation of Arts. Two teen-age boys had taken them out of a showcase. Fortunately these items of irreplaceable cultural and historic value were recovered. Shown with them were examples of early American silversmithery and works commissioned from eight contemporary sculptors by the Towle Silver-smiths of Newburyport, Mass.

In January the Pennsylvania Academy of the Fine Arts opened its 150th anniversary exhibition in Philadelphia. The academy chose to exhibit, not Americans who had shown in its annuals, but those who had studied in its school. The result was that a number of important figures were not included. Ironically, the place of honor was held by Thomas Eakins, who had been forced to resign his teaching post there almost three-quarters of a century ago. Twenty-six of his magnificent canvases filled the central hall and flanking bays, among them the *Gross Clinic* and the *Agnew Clinic*. Except for Eakins and Charles Willson Peale, Philadelphia's most interesting contribution to American art was the work of

Robert Henri and his students, "The Eight," and others.

One of these was the late John Sloan, whose biography by the literary critic Van Wyck Brooks was published early in the year, and at that time the Kraushaar Galleries in New York showed his graphic art. The late John Marin, who represented an opposite aesthetic tendency, was exhibited at the Museum of Fine Arts in Boston, with 68 water colors, 34 oils, and a number of etchings. In October the Cincinnati Art Museum displayed 80 works by 12 recently rediscovered artists, covering the period from 1750 to 1900. Included were Feke, Earl, Bingham, Mount, Blythe, Quidor, Harnett, and Peto. The New-York Historical Society showed English mezzotint prototypes of colonial portraiture, comparing 19 paintings and the engravings from which they derive. The exhibition was based on the research of the late Waldron Phoenix Belknap, Jr.

Of interest was the first showing at the Pasadena Art Museum of its Galka E. Scheyer collection, built around the "Blue Four." It contains 60 Klees, 46 Feiningers, 20 Kandinskys, and 120 Jawlenskys, as well as works by Picasso, Nolde, Rivera, Archipenko, Moholy-Nagy, and other moderns, collected by Mme. Scheyer for a number of years. The collection provides the west coast with valuable study material.

News of Art.—Early in the year the establishment of a museum of indigenous art, to be opened in New York in 1956, was announced. Art objects created in the Americas, Africa, Oceania, Asia, and Europe, from the collection of Nelson A. Rockefeller, constitute the initial nucleus of the museum; however, gifts from other collectors of primitive art are welcome. The foundation of such an institution exemplifies the increasing aesthetic interest of the past half-century in the artifacts of so-called primitive peoples.

At the opposite pole stands the proposed Arts Center at Columbia University. Plans call for a \$6 million 10-story building to house classrooms, work rooms, libraries, studios, and theaters for students in the fields of architecture, painting and sculpture, the history of art, music, dramatic arts, and communication arts.

West of the Alleghenies, the Cleveland Museum of Art began to construct a \$5 million 3-story addition. Thirty galleries will give needed exhibition space, and a research library will be housed in the new wing. This expansion of plant is noteworthy because over \$2 million was raised by public subscription.

Also noteworthy is the \$2.2 million 3-story wing of the Virginia Museum of Fine Arts in Richmond. More than half the cost was paid by the state from public funds. This is another growing museum, with collections valued at \$3.5 million. In Atlanta the local museum opened a \$1 million 2-story air-conditioned wing for gallery space and an auditorium. Early in 1955 the architect, Mies van der Rohe, began to design a new wing for the Houston Museum of Fine Arts.

Appropriate was the establishment of the Donald Bear Endowment Fund for the Santa Barbara Museum. A leading west coast director, who died in 1953, Bear played a major role in developing the region's art activities. Community appreciation was shown when a sale of work by 30 well-known Los Angeles artists was held in May 1955 to swell the fund.

During the summer the Sterling and Francine Clark Art Institute opened in Williamstown,

(Above) Sir Jacob Epstein's *Social Consciousness*, in Fairmount Park, Philadelphia. (Below) *Struggle* (1954), by Joseph Goto, top prize winner at Art Institute of Chicago's 58th Annual. (Right) Sculpture by Bernard Rosenthal on the façade of Los Angeles Police Facilities Building.

Mass. The inaugural exhibition included 35 paintings and seven bronzes. Goya, Turner, Degas, Mary Cassatt, and Winslow Homer were included, as well as academic masters. This collection has been a mystery though the first purchase was made in 1911. It is said to contain fine examples of Goya, Piero della Francesca, and Renoir, with many others.

Honors and awards included those from the National Institute of Arts and Letters to Edward Hopper and to Henry Allen Moe, secretary general of the John Simon Guggenheim Memorial Foundation. To Hopper went the gold medal for painting. (The last such medal was awarded to the late John Sloan in 1950.) To Moe went the award for distinguished service to the arts, created in 1940 and awarded only five times.

Guggenheim fellowships were awarded to painters Ben Kamihira, Seong Moy, Hobson Pittman, and Donald Stuart Thrall, and to sculptor Sahl Swarz. History of art grants were made to Dr. Kenneth John Conant of Harvard, Bartlett H. Hayes, Jr., of the Addison Gallery of American Art, and Dr. Horst Woldemar Janson of New York University.

Appointments.—In August 1955 the appointment of James J. Rorimer as director of the Metropolitan Museum of Art, succeeding Francis Henry Taylor, was announced. This set at rest rumors that an English or other European person would be appointed to the most important museum position in the Western Hemisphere. Rorimer has been with the Metropolitan since his graduation from Harvard in 1927, and has had a major role in the construction and development of the Cloisters, of which he has been director since 1949.

Another major appointment was that of Henri Marceau to succeed the late Fiske Kimball as director of the Philadelphia Museum of Art. Kimball retired early in 1955, after thirty years service, and died soon afterward. Marceau, who had been on the staff since 1929, was associate director since 1945.

Other appointments included: Edgar Craig Schenk, from director of the Albright Art Gallery in Buffalo to director of the Brooklyn Museum; Charles Nagel, from director of the Brooklyn Museum to director of the City Art Museum of St. Louis; Charles Edward Buckley, from general curator of the Wadsworth Athenaeum to director of the Currier Gallery of Art in Manchester, N.H.; D. Gordon Smith, from director of the Currier Gallery to director of the Albright Art Gallery; and Robert O. Parkes, from curator of the John Herron Art Institute in Indianapolis to director of the Smith College Museum of Art.

In 1955 the Museum of Modern Art, New York City, established a permanently endowed lectureship in honor of Alfred H. Barr, Jr., who has been associated with the museum since it was founded in 1929 and who was its first director. Following the death of Samuel H. Kress, the National Gallery of Art in Washington, D.C., announced the election of Chester Dale as its president. At the same time the resignation was announced of Director David Finley, who had held this post since the founding of the gallery in 1938.

Acquisitions.—The death of the late Samuel H. Kress pointed up the Kress Foundation's gift to the M. H. de Young Memorial Museum in San Francisco. The foundation has presented works valued at \$75 million to museums in Seattle,

Denver, Kansas City, Honolulu, Houston, and elsewhere, as well as to the National Gallery, which received further gifts in the Kress will. The gift to San Francisco, comprising 39 paintings by 35 artists from the 14th through the 18th century and requiring three new galleries for installation, is among the most munificent made by the Kress Foundation.

In memory of the late Curt Valentin, art patron and art dealer, friends gave New York's Museum of Modern Art a cast of Rodin's monumental statue to the great French novelist Honoré de Balzac. The 10-foot standing figure is one of the most controversial works created by the French sculptor, who fought academicism, went into a critical decline, and recently has been rediscovered as a precursor of 20th century aesthetic movements. Commissioned as a memorial to that stormy figure of French letters, Rodin's Balzac was rejected by the French government in 1898. Not until 1939 was it erected as a public monument in Paris, at the intersection of the boulevards Raspail and Montparnasse. The museum's cast is one of four made from the original study.

The important monumental group sculpture entitled *Social Consciousness*, by Sir Jacob Epstein, was installed in 1955 as part of the Ellen Phillips Samuel Memorial in Fairmount Park, Philadelphia. Another addition to the nation's art treasury is the stained glass façade designed by painter Adolf Gottlieb for the chapter house adjoining the Park Avenue synagogue in New York City. The front of the building, 1,300 square feet, is divided into 91 alternate stained and clear glass panels.

In 1955, 212 prints by 207 contemporary American graphic artists were given to the Metropolitan Museum of Art in honor of the late John Taylor Arms and his wife, the late Dorothy Noyes Arms. President of the Society of Graphic Arts for more than 20 years, Arms was not only an excellent craftsman, but also a loyal friend of artists of all schools of expression.

The Baltimore Museum of Art, celebrating its 25th anniversary, acquired a unique collection of Gandhara sculpture of the second and third centuries from Afghanistan, northwestern India, and the Punjab, expressing Buddhist symbolism. The Currier Gallery of Art in Manchester, N.H., acquired a 13th century Italian panel painting, *Madonna and Child*, in the Italo-Byzantine style. The Smith College Museum of Art acquired Degas' *Ballet Girl on Stage*.

Auction Sales.—Totals of sales for 1954-55, as for 1953-54, showed increases. Parke-Bernet, leading American auction house, reported a gross of \$5,447,634 for 77 sales, a gain of \$1,198,664 over the 81 sales of 1953-54. The highest single price paid was \$34,000 for Pieter de Hooch's *Woman Nursing Her Child*, as compared with the \$17,000 paid in the previous season for a Pissarro. The Plaza Art Galleries, in its 40th year, reported sales of \$2,054,739, a gain of \$143,404 over 1953-54.

Necrology, 1955.—Yves Tanguy (55), French-born surrealist painter; in Waterbury, Conn., January 15.

William R. Leigh (88), American artist known for Western scenes; at New York City, March 11.

Bror J. O. Nordfeldt (77), Swedish-born painter and printmaker; in Henderson, Texas, April 21.

Karl Hofer (76), German modernist; in West Berlin, April 3.

Langdon Warner (73), a leading American orientalist, former curator of oriental art at the Fogg Museum of Art, and pioneer in presenting Japanese art to the United States; in Cambridge, Mass., June 9.

Fiske Kimball (66), former director of the Philadel-

phia Museum of Art; in Munich, Germany, August 14.

Fernand Léger (q.v.), (74) French painter and proponent of the "interieur mécanique" concept; near Paris, August 17.

Charles Rufus Morey (77), chairman of the Princeton University Department of Art and Archaeology from 1925 to 1943; in Princeton, N.J., August 28.

Carl Milles (80), Swedish-born sculptor, many of whose monumental sculptures were made in the United States; in Lidö, near Stockholm, September 19.

Samuel H. Kress (q.v.) (92), founder of the Kress Foundation, whose \$75 million collection has been given to museums throughout the United States; in New York City, September 22.

Hans Knoll (41), well-known industrial and interior designer; in Cuba, October 8.

Maurice Utrillo (q.v.) (71), French painter of Paris and its suburbs; in Dax, France, November 5.

ELIZABETH MCCAUSLAND,

Art Historian and Critic.

PAINTS, VARNISHES, AND LACQUERS. Sales of paint, varnish, and lacquer continued to expand throughout 1955 to make it the best year in the industry's history.

By July 1955, practically all producers were marketing a latex paint for interior use, and many were also making a latex paint for exterior masonry. Providing strong competition for latex, however, were the alkyd resin—flat odorless paints for interior walls. Speckled or multicolor paints and fire-retardant coatings were introduced by a number of producers. Modern formulations provided high-quality products. New epoxy resins, or their modifications, and catalytic-cured coatings were improved and their use on quality furniture expanded. Paints and enamels came in many new colors, as did the coatings for automobiles and household appliances.

The highly active "do-it-yourself" market continued throughout the year. An estimated 48% of the exterior painting of homes was done by a family member. Although men applied most of the exterior paints, women assisted 8% of the time. Interior painting in homes was done by a family member in 71% of the cases, the wife playing an important role in such projects. She selected the color 72% of the time, chose the brand 44% of the time, actually purchased the paint 36% of the time, and in 33% of the cases applied the paint herself.

During the year, employment in the industry averaged about 72,000, of whom approximately 45,000 were production workers.

JOSEPH F. BATTLEY,

President, National Paint, Varnish and Lacquer Association, Inc.

PAKISTAN. A sovereign independent dominion, continuing full membership in the British Commonwealth of Nations, Pakistan is the world's largest Moslem state, and lies in two parts about 1,000 miles distant from each other. East Pakistan (54,501 square miles) is northeast of the Republic of India, and West Pakistan (311,486 square miles) lies to India's northwest. The aggregate area is 365,987 square miles, and the population is 75,842,165 (1951 census). Some 85.9% of the population is Moslem; 12.9%, Hindu; and 0.7%, Christian. The capital of Pakistan is Karachi, with a population of 1,270,000 (1954 est.); and of East Pakistan, Dacca, with a population of 411,000 (1951 census). Areas and populations of Pakistan's states and provinces (with their capitals) are shown in the table on page 571.

Excluded from the table are Jammu and Kashmir, claimed by both Pakistan and India (see KASHMIR). Also excluded are Junagadh and Manavadar (3,438 square miles) on the Indian Kathiawar Peninsula, which are occupied by India but claimed by Pakistan. Lahore is the cultural and academic capital of Pakistan. Other

¹ East Bengal. ² For the inauguration of the Province of West Pakistan on Oct. 14, 1955, see the section, *Principal Events, 1955*. ³ Excluding Gilgit and Baltistan. ⁴ Comprising Khairpur (pop., 54,000), Kalat (283,000), Makran (143,000), and Las Bela (76,000).

principal centers, with their populations in 1951, are: Rawalpindi, 237,219; Multan, 190,122; Lyallpur, 179,144; Sialkot, 167,543; and Gujranwala, 120,860. Chittagong (294,000) is the port of East Pakistan.

Government.—Following the proclamation dissolving the Constituent Assembly on Oct. 24, 1954, an emergency ordinance was promulgated on March 27, 1955, by the then governor general (who represents the British crown), Ghulam Mohammad. He also validated 35 of the 44 acts of the late assembly and conferred virtually complete authority upon his office. The Federal Court declared, however, on April 12 that the governor general had exceeded his legal authority. In order to break the constitutional deadlock, Ghulam Mohammad proposed the formation of a new 80-member legislature, elected through the provincial assemblies. While the new National Assembly was engaged in framing another constitution, ill health forced the resignation of the governor general on Sept. 19, 1955. He was succeeded by Maj. Gen. Iskander Mirza, who had served as acting governor general since August 7. Syed Amjad Ali, then Pakistan ambassador to the United States, joined the cabinet on October 17 as minister of finance, and was succeeded in Washington by Mohammad Ali, who had resigned as prime minister on August 7 after losing his leadership in the Moslem League Party in the National Assembly. Mohammad Ali was succeeded as prime minister by Chaudhry Mohammad Ali on Aug. 11, 1955.

Finance.—With the approval of the International Monetary Fund, the Pakistan rupee was devalued on July 31, 1955, the new parity being 4.7619 rupees per U.S. dollar (3.30852 before devaluation). Revenues, estimated at Rs.1,114.7 million in the 1954-55 budget, improved in revised estimates to Rs.1,154.4 million; for 1955-56 estimated revenues showed a further increase of Rs.35.8 million. Estimated expenditures for 1955-56 were Rs.1,203.9 million, as against the revised estimates of Rs.1,179.5 million for 1954-55. The 1955-56 capital budget called for a total expenditure of Rs.1,148.4 million (an increase of Rs.443.7 million over 1954-55), including an investment of Rs.151.1 million in the Industrial Development Corporation and Rs.34 million for the Warsak and other hydroelectric projects. Development loans aggregating Rs.1,109.7 million to provinces and states were provided in the 1955-56 budget. During the three years ending March 1954, Pakistan had been given an aggregate of Rs.549.1 million in foreign economic aid and technical assistance, including \$110.2 million in various forms of aid from the United States in the fiscal year 1954-55.

Education.—The 1951 census showed the literate population to be 13,958,013, or 18.9% of the whole. Progressively larger expenditures are being made to enlarge Pakistan's educational facilities, which in 1954-55 included 42,474 primary, and 5,118 secondary schools; 169 colleges; 6 universities; 134 teacher-training institutions; 220 technical and industrial institutions; 22 commercial schools; and 10 institutes for the handicapped. In the Federal Capital Area there are 122 government primary and secondary schools, and 4 teacher training schools. To meet the acute shortage of trained graduate teachers, a teacher-training college was established in 1954-55. Grants-in-aid to higher education included Rs.3.5 million to the University of Karachi; Rs.500,000 for the equipment and maintenance of private colleges;

and Rs.250,000 toward a new arts and science college for men in Karachi in 1955-56.

Agriculture.—Pakistan is predominantly an agricultural country, and nearly 80% of her people are engaged in the cultivation of the land. The area under wheat was 10,640,000 acres in 1954-55, and the crop was estimated at 3,680,000 tons in 1953-54. Rice production amounted to 9,150,000 tons in 1953-54, and exported rice surpluses aggregated 309,225 tons. The area under jute (Pakistan's major economic resource) was officially estimated at 1,150,215 acres in 1954-55 (760,000 acres in 1953-54); and jute production, at 2,708,230 bales of 400 pounds each. (Unofficial estimates placed the figure as high as 4.5 million bales.) In 1954-55 cotton production was expected to amount to about 1.6 million bales of 392 pounds from 2,824,000 acres, as compared with 1,370,000 bales from 3,094,000 acres in 1953-54. The production of sugar, in which Pakistan is deficient, had been increased to 85,000 tons in 1954-55. Development plans call for the installation of 12 more sugar factories, and 2 new factories went into production in 1955.

Industrial Production.—The installed capacity of the cotton industry at the end of January 1955 stood at 1,380,000 spindles and 19,040 looms, with Pakistan having neared self-sufficiency in the production of coarse and medium varieties of cotton textiles. In the jute industry, the target of 6,000 looms (with a production capacity of 200,000 tons, worth Rs.220 million) to be installed within 6 years under the Six-Year Development Plan (1951-57), had been achieved ahead of schedule by June 30, 1955. The woolen industry had 11,700 woolen spindles and 10,184 worsted spindles in production in 1955. Jute production was expected to reach 140,000 tons, which would provide an exportable surplus in 1955 of 100,000 tons. Some Rs.165 million was being invested in the further development of the jute industry under the government Industrial Development Corporation, with private enterprise furnishing about Rs.100 million of total capital outlay. In 1955 the corporation was responsible for 30 major projects, most of which were nearing completion, at a total expenditure of Rs.560 million.

Development Projects.—The direct capital outlay by the central government on development projects was Rs.335.4 million for 1954-55, and totaled Rs.519.4 million in the 1955-56 estimates. Expenditures from development funds for social improvement projects (Rs.90.9 million in 1954-55) were estimated at Rs.495 million for 1955-56, the total estimated development expenditure being Rs.1,148.4 million.

Civil works were nearing completion in 1955 at the Warsak multipurpose project, toward which Canada had thus far provided \$8.9 million.

Foreign Trade.—A favorable trade balance was maintained in 1954-55. The estimated value of transactions on private account from July 1954 to March 1955, inclusive, were as follows: imports, Rs.740 million; and exports, Rs.830 million. These may be compared with imports of Rs.745 million and exports of Rs.1,275 million for the full trading year 1953-54. Principal imports (July 1954 to March 1955, inclusive) included millwork and machinery, Rs.262.7 million; mineral oils, Rs.89 million; chemicals, Rs.40 million; and vehicles, Rs.38 million. Exports in the same period were, principally, jute, Rs.460 million; cotton, Rs.180 million; tea, Rs.52 mil-

lion; and hides and skins, Rs.21 million. Wool exports during the period July 1954 to February 1955 amounted to 14.9 million pounds (valued at Rs.29.6 million), as against 14.6 million pounds (valued at Rs.30.8 million) during the corresponding period of the preceding year.

Communications.—Pakistan's government-owned railways comprise the North Western Railway (5,200 miles) in West Pakistan, and the East Bengal Railway (1,844 miles) in East Pakistan. The passengers carried numbered 129,300,000 in 1954-55, as compared with 121,670,000 in 1953-54. Since partition, 4,350 miles have been added to the highway system, which aggregated nearly 60,000 miles in 1954-55. Motor vehicles totaled 60,943 in 1954. The port of Karachi handled an aggregate tonnage of 2,890,000 in 1954-55, while 488,314 tons were handled at the Chalna anchorage in East Bengal. The Pakistan International Airlines increased its Karachi-Dacca service to four flights weekly on Jan. 1, 1955.

Principal Events, 1955.—Pakistan registered a notable advance toward administrative unity when the new Constituent Assembly, which convened July 7, 1955, adopted a bill on September 30 for the merger of the various provinces and states of West Pakistan into a single unit. This unit came into existence on October 14 under a governor and an interim 310-member Legislative Assembly, to be elected at an early date. Principal areas, with legislative representation, are: the Punjab, 124 seats; North-West Frontier Province, 41; Sind, 57; and Karachi, 14.* Also on October 14, East Bengal was officially renamed East Pakistan.

With respect to the inclusion in West Pakistan of the Pathan tribal areas of the North-West Frontier, the unification plan brought threats of "grave consequences" by the government of neighboring Afghanistan (q.v.). On April 1 the raiding and looting of the Pakistan embassy in Kabul took place. A protest by Pakistan to the Afghanistan government was supported by the governments of Turkey, Great Britain, and the United States. On September 13, tension was relaxed when the Afghanistan foreign minister again raised the Pakistan flag in Kabul with ceremonial honors. It was also announced that the Grand Assembly of Chieftains would convene on November 15 to discuss the question of a local plebiscite in the Pathan areas.

Pakistan's enduring dispute with India (q.v.) over Kashmir was discussed during a visit to New Delhi in January by Governor General Ghulam Mohammad. In May the then prime minister, Mohammad Ali, held extended negotiations with India's Prime Minister Jawaharlal Nehru. No apparent advance toward a settlement was made, however.

During a state visit to Pakistan in February by Celâl Bayar, president of Turkey (with which Pakistan signed a military agreement in April 1954), it was announced that negotiations had been completed with Iran, Lebanon, and Syria for them to join Turkey and Pakistan in a defensive alliance of Moslem states in the Middle East. It was also announced that Jordan and Yemen would soon become members. Pakistan's accession to the mutual cooperation pact between Iraq and Turkey (the Baghdad Pact of

Feb. 24, 1955) was formally accepted at Baghdad on September 23. (See also above, *Government*.)

Author and Publicist.

PALEONTOLOGY. See Index entry.

PALESTINE. A former League of Nations mandate in the Middle East relinquished by Great Britain on May 14, 1948. The greater part of Palestine is now divided between Israel and the Hashemite Kingdom of the Jordan (qq.v.). A narrow southern coastal strip in the vicinity of Gaza is held by Egypt. The demilitarized El 'Auja zone along the southern border serves as a headquarters of the United Nations Truce Supervision Organization in Palestine.

PALMYRA. An atoll of some 52 islets, included within the Line Islands of the central Pacific, located about 960 miles south of Honolulu. Its area is about 250 acres. Palmyra is within the Territory of Hawaii and under the jurisdiction of the city and county of Honolulu.

PAN-AMERICAN GAMES. See SPORTS, GAMES, AND SHOWS.

PAN AMERICAN UNION. See Index entry.

PANAMA. Occupying the isthmus joining North and South America, this Latin American republic is divided by the 10-mile-wide Canal Zone (see PANAMA CANAL) leased to the United States. With a population (est. mid-1954) of 886,000, the 28,575 square miles of Panama are thinly populated, the more so because a considerable proportion of the population is concentrated in and near the central cities. Panama City, at the Pacific end of the canal, had 127,407 inhabitants in 1950; Colón, the second city, at the Atlantic end of the canal, had 52,035. The bulk of the population is of mixed Spanish-Indian stock, but there is a considerable Negroid element. Spanish is the official language.

Government.—The constitution of 1946 provides for a president and a unicameral National Assembly of 53 deputies, elected for 4-year terms by direct popular vote. The president (currently Ricardo Arias, who took office on Jan. 15, 1955) is not eligible for re-election, even if he has served only part of the current term. The 9 provinces have governors appointed by the president. The 5 judges of the Supreme Court are nominated by the president with the consent of the cabinet and the approval of the National Assembly.

Religion and Education.—Roman Catholicism is the predominant religious faith. Considerable educational progress has been made in recent decades. In 1925 approximately 75% of the population was illiterate; by 1954 the figure had been reduced to 35%. In 1952-53 there were 125,398 children enrolled in 939 public and 74 private primary schools and 21 public and 72 private post-primary schools. Higher education is provided primarily by the National University of Panama, which had an enrollment of 1,575 students in 1953.

Finance.—The balboa, the monetary unit, is at parity with the U.S. dollar. Total government revenue in 1954 was \$43,280,000, as compared with \$42,140,000 for 1953; expenditures were \$43,860,000. The budget for the first half of 1955 was estimated at \$22 million, while revenues totaled approximately \$24 million (\$2.5 million above revenues in the corresponding period of 1954).

Production.—The national economy is poorly developed and integrated. Per capita income is not much over the \$343 average of 1952 when total national income was \$288.1 million. Capital is concentrated in the central cities, and especially in commercial enterprise, rather than in agriculture and industry. Production is primarily agricultural, but Panama is not self-sufficient in foodstuffs, despite considerable progress in recent years.

In 1954 the banana industry remained the most profitable agricultural activity, accounting

* The other territories comprising West Pakistan are Baluchistan Province, Bahawalpur, Khairpur, the Baluchistan States Union, and the states of Amb, Chitral, Dir, and Swat, in addition to the tribal areas of Baluchistan, the Punjab, and North-West Frontier Province.

for approximately 10% of the government's ordinary revenue. Banana cultivation increased sharply in 1954, as measured by an increase of about 20% in exports over 1953; 5,699,809 stems with a value of approximately \$9.9 million were exported, as compared with 4,689,360 stems worth some \$8 million in 1953. Rice production, after increasing during the past several years, declined during the 1954-55 crop year to 1,957,557 quintals, as compared with 2,207,894 for 1953-54. Refined sugar production totaled 398,798 quintals in 1954, a 5-year high.

Faced with a declining export market, the cement industry, with the aid of a high rate of domestic construction, managed to maintain a relatively high rate of activity. However, total cement production for 1954 fell to 1,646,664 bags (94 pounds each) from 1,928,006 bags in 1953. Electric power production at Panama City rose in 1954 to nearly 82 million kw.-hr., as compared with less than 78 million in 1953.

Foreign Trade.—The value of Panama's visible exports remained low in 1954, although they increased to approximately \$17 million (excluding trade with the Canal Zone) from \$15.5 million in 1953. The large banana crop accounted for over 57% of the total value. The second most important export item was shrimp, valued at \$2,044,429, as compared with \$1,915,585 in 1953. Imports in 1954 were valued at approximately \$72.6 million, an increase of \$1 million over 1953. The large gap between visible exports and imports was partly closed, as usual, by the export of labor to the Canal Zone, income from ship registrations, and expenditures in Panama by tourists and by residents of the Canal Zone. Panama's foreign trade is conducted primarily with the United States.

Transportation and Communications.—In 1953, Panama had 1,430 miles of roads, approximately 584 miles of which were dirt. The canal in central Panama is paralleled by the paved Boyd-Roosevelt Highway and the Panama Railroad. On July 14, 1955, the International Bank for Reconstruction and Development extended Panama a \$5.9 million loan to help finance a 4-year, \$9.56 million highway rehabilitation program.

The very large and mostly foreign-owned Panamanian merchant fleet, the fourth largest among maritime nations, changed little in 1954; it included 843 vessels, with a total gross tonnage of 4,867,746 at the end of the year. Two airlines provide domestic air service. Panama City is an important air terminus for 9 international airlines.

Principal Events, 1955.—The assassination of President José Remón on Jan. 2, 1955, and the legal and political repercussions flowing therefrom, overshadowed all other events. Remón's office devolved upon First Vice President José Guizado on January 3. Shortly afterward, Rubén Miró, a Panamanian lawyer, confessed the slaying of Remón, and implicated Guizado and some of the latter's business associates. On January 15, the National Assembly voted the impeachment of Guizado and ordered his arrest. The second vice president, Ricardo Arias, assumed the presidency the same day. On January 18, the Panama Supreme Court upheld the action of the Assembly, which subsequently tried Guizado, and, on March 29, found him guilty as an accessory to Remón's murder and sentenced him to 10 years imprisonment (the term was later reduced to 6 years and 8 months). Thirteen other men, including Rubén Miró, were to be tried in ordinary court for complicity in the crime. By August

1955, Guizado's lawyer was planning an appeal on the following grounds: that Miró had recanted his confession; that accomplices should not be tried before principals; and that the National Assembly lacked jurisdiction over common crimes.

While these events were occurring, parties were registering with the Ministry of the Interior, and nominating their candidates, in preparation for the presidential election scheduled for May 1956. There was considerable speculation as to the role the national guard—the only armed force in the country—might play in the campaign and election.

On January 25 the new treaty with the United States covering use of the Panama Canal was signed; by August 1955 the instrument was in force. Under this agreement, the United States increased its annual annuity to Panama from \$430,000 to \$1,930,000; turned over some real estate no longer needed for operation of the canal; promised equality of opportunity for Panamanians working in the Canal Zone; and barred non-United States nationals from commissaries in the zone. In return, Panama granted the United States several concessions, including rights to a military maneuver area at Rio Hato for 15 years. (See also PANAMA CANAL AND CANAL ZONE.)

In June, President Arias and President José Figueres of Costa Rica met to discuss possible Panamanian participation in the Organization of Central American States. Apparently President Arias decided that it was not to the advantage of Panama to join the organization.

Associate Professor of History,
Syracuse University.

PANAMA CANAL and CANAL ZONE. The Panama Canal, extending across the Isthmus of Panama, connects the Atlantic and Pacific oceans. Owned by the United States, the waterway was opened to traffic in 1914. It extends 51.6 miles from deep water to deep water, or 40.27 miles from shoreline to shoreline. The Canal Zone is the area under United States jurisdiction extending generally 5 miles on either side of the center line of the Panama Canal and 3 marine miles beyond low-water mark in the Atlantic and Pacific oceans, for a total of 648.01 square miles, including tidal waters. It is, in effect, a United States government reservation, with nearly all residents being United States government personnel, and with private business being restricted to categories directly related to canal operations.

Under the terms of a treaty between Panama and the United States, signed at Panama on Jan. 25, 1955, the United States increased Panama's annuity for rights in the Canal Zone from \$430,000 to \$1,930,000, and extended various commercial and other privileges to Panama. (See also PANAMA.)

Population.—The federal census of 1950 showed a total population of 52,822. A local census of November 1954 placed the civilian population at 38,953, a decrease of 3,096 from the previous count of June 1953.

Civilian populations of the larger towns, as of November 1954, were: Rainbow City, 4,845; Paraiso, 3,008; Balboa, 2,709; Santa Cruz, 2,059; Margarita, 1,446; Ancon, 1,290; New Cristobal, 1,130; Diablo Heights, 1,124; and Gamboa, 1,018.

Administration and Government.—The Panama Canal Company, reorganized July 1, 1951, by act of Congress, operates the Panama Canal and its adjuncts in the Canal Zone. The company, which is a wholly-owned United States government corporation, is self-supporting and operates on its current revenues (net income, 1954-55, \$581,134).

The Canal Zone government, also established by act of

Congress, maintains such functions as police and fire protection, schools, postal service, customs, immigration, magistrates' courts, hospitals, and public health and sanitation facilities. Its net operating expenses are reimbursed to the U.S. Treasury by the Panama Canal Company.

The joint functions of governor of the Canal Zone and president of the Panama Canal Company are held by Brig. Gen. John S. Seybold, USA, who took office on May 27, 1952. Other officials include: George H. Roderrick, chairman of the board; Col. H. W. Schull, Jr., USA, lieutenant governor and vice president; W. M. Whitman, secretary; Philip L. Steers, Jr., comptroller; E. C. Lombard, executive secretary; and Capt. Frank A. Munroe, Jr., USN, marine director. Sigurd E. Esser is superintendent of schools; Guthrie F. Crowe is federal district judge; and William G. Arey, Jr., is public information officer.

Education.—School attendance is not compulsory for children living in the Canal Zone. Expenditures for public education in the fiscal year ended June 30, 1955, totaled \$2,986,000, and teachers' average salaries ranged from \$1,749 to \$5,407 for the 1953-54 school year.

The Canal Zone program of public education provides two types of schools—United States schools and Latin American schools. The former, attended primarily by United States citizens, affords a program of education in the English language comparable with that of schools in the United States. The curriculum includes the teaching of Spanish in every grade, 1 through 12. The Latin American schools are attended by noncitizens. In these schools, beginning with the school year 1954-55, classes from kindergarten through grade 6 were conducted in Spanish. This program was expanded to include grades 7 through 12, beginning with the school year 1955-56. The curriculum will follow that of the schools of the Republic of Panama.

The accompanying table shows statistics for the 1954-55 school year. (Columns headed by "US" refer to United States schools; by "LA," Latin American schools.)

Public Schools	Number		Teachers ¹		Students ⁵	
	US	LA	US	LA	US	LA
Elementary (K-6).....	11	5	140.25	71.5 ³	4,600	2,566
Junior high.....	2	4	26.0	31.7	729	888
Senior high.....	2	2	42.0	30.1	1,155	581
Totals.....	15	11	208.2	133.3	6,484	4,035
Junior colleges ⁴	1	1	8	1	145	9

¹ Includes part-time expressed as equivalent of full-time. ² Does not include 9 special teachers of Spanish. ³ Does not include 2 special teachers of Spanish. ⁴ Excludes extension division classes for adults. ⁵ As of Oct. 15, 1954.

Social Welfare.—During the 1955 fiscal year, operating costs were \$154,233 for the Canal Zone Penitentiary and \$559,220 for both the Corozal Hospital for the insane and indigent (277 patients) and the Palo Seco Leprosarium (113 patients).

Industry.—No private industry is maintained in the Canal Zone, although there are a few private business enterprises related to the canal operation. A few agricultural licenses are issued for small vegetable gardens operated by Chinese gardeners. An experimental garden of 320 acres, devoted chiefly to the development and propagation of tropical plants, is operated by the canal organization.

Canal Traffic.—A record high of 7,997 transits of the Panama Canal were made by toll-paying, ocean-going commercial ships of more than 300 tons net during the 1955 fiscal year. Ocean-going United States government vessels made 296 transits, as compared with 800 in the previous year. Tolls in the fiscal year totaled \$35,136,529, of which \$1,217,536 was in toll credit for United States government vessels. The net amount of cargo shipped through the canal in the fiscal year 1955 aggregated 40,646,300 long tons, the highest in the history of the canal. (See also CANALS.)

Communications and Transportation.—Exclusive of those thoroughfares in armed forces reservations, there were in 1955 a total of 132.4 miles of improved streets and highways on which, including sidewalk repairs, \$217,652 was disbursed in the 1955 fiscal year. Registered motor vehicles in 1955 numbered 13,253. Railway transportation is furnished across the isthmus by the 48-

mile Panama Railroad. Public transportation to various areas within the Canal Zone is provided by a consolidated bus company, and numerous small commercial bus companies furnish service to various Zone areas from the cities of Panama and Colón in the Republic of Panama.

There are 7,371 telephones in service. Although there are no commercial radio stations in the Canal Zone, an armed forces radio station functions at Fort Clayton.

WILLIAM G. AREY, JR.,
Panama Canal Public Information Officer.

PAPAGOS, Alexander, premier of Greece: b. Athens, Greece, Dec. 9, 1883; d. Athens, Oct. 4, 1955. Leader of the Greek forces which defeated the Italian Army in World War II and the Greek Communist rebels in 1949, he was premier of Greece from 1952 until his death.

Alexander Papagos was educated for a military career at the Brussels Military Academy, the Cavalry School at Ypres, Belgium, and the Greek War Academy. Commissioned a 2d lieutenant in 1906, he participated with distinction in the Balkan Wars of 1912-13, World War I, and the Greco-Turkish War of 1920-22. In 1932, Papagos, then a major general, was named deputy chief of staff of the Greek Army, and in 1934, inspector general of the cavalry. With the establishment of a dictatorship by Ioannes Metaxas in 1936, he was appointed chief of the Greek General Staff, and devoted the next four years to modernizing the obsolete military establishment.

General Papagos became a national hero in 1940-41 when his troops, in one of the outstanding victories of World War II, repulsed Mussolini's invading legions and forced their withdrawal deep into Albania. His small and poorly equipped army, however, was no match for the German military machine that rolled through northern Greece into Athens in April 1941. Following defeat, Papagos was interned in a German concentration camp until his liberation by American troops in 1945. He retired from active duty in 1947 to become grand chamberlain and military adviser to King George II.

In January 1949, when a loyalist defeat at the hands of Greek Communist insurgents was imminent, General Papagos was named supreme commander of the Greek armed forces and given full power to conduct the campaign against the rebels. By September 1949, the Communists had been decisively defeated, and peace was restored. In October he was named field marshal by King Paul I.

Following a rift with the king over the latter's interference in military matters, General Papagos resigned as commander of the Greek Army on May 30, 1951. Subsequently he became leader of the new, conservative Greek Rally Party, which in the general election of 1951 gained more votes than any other party, but failed to obtain an absolute majority. Called to form a coalition government, the marshal refused the offer. In the election of Nov. 16, 1952, however, after the proportional-representation system had been replaced by a simple-majority system, Papagos' party won an overwhelming victory, and on Nov. 19, he became premier. (See also GREECE.)

PAPER INDUSTRY. The pulp and paper industry of the United States registered an 11% gain in production in 1955 as compared with its record high in 1954. Output exceeded all forecasts made by even the most optimistic paper manufacturers early in the year. Despite the industry's most strenuous efforts to produce enough paper

to meet an unprecedented demand, unfilled orders were higher at the end of the year than at its beginning.

As can be seen from the accompanying table, all classifications of paper and paperboards showed increases in 1955 over 1954. As a matter of fact, the 1955 volumes of every grade except newsprint exceeded all previous records.

U.S. PAPER AND BOARD PRODUCTION
(Tons of 2,000 pounds)

	1953 census	1954 census	1955 estimate
Newsprint.....	1,068,661	1,191,760	1,500,000
Groundwood.....	771,228	807,980	900,000
Machine-coated printing and converting.....	1,182,150	1,215,243	1,300,000
Book, uncoated.....	1,622,960	1,559,577	1,700,000
Fine.....	1,297,569	1,323,944	1,500,000
Coarse.....	2,697,401	2,631,921	2,900,000
Shipping sack.....	701,381	796,687	825,000
Special industrial and absorbent.....	554,396	526,209	640,000
Sanitary.....	1,277,694	1,320,353	1,385,000
Tissue.....	232,066	240,981	256,000
Building paper.....	1,316,672	1,355,941	1,550,000
Container board.....	6,613,206	6,432,250	7,046,000
Bending boxboard.....	3,566,528	3,671,184	4,000,000
Nonbending boxboard.....	945,081	920,064	1,000,000
Cardboard.....	75,215	79,227	89,000
Other board.....	1,226,383	1,076,312	1,260,000
Building board.....	1,379,290	1,506,998	1,675,000
Total.....	26,527,881	26,656,631	29,526,000

(Source: 1953 and 1954 figures from the U.S. Bureau of the Census; 1955 estimates by the American Paper & Pulp Association.)

Prices for paper and most paper products were strong throughout 1955. Increases averaged approximately 4%, but were made to appear much higher by the newspapers in their all-out protest against the newsprint increase from \$126 to \$131 per ton effective Nov. 1, 1955. Congressional committees were asked to investigate the situation, despite the fact that this was the first newsprint price increase since 1952, during which time many newspapers had increased their own newsstand prices considerably.

During 1955, only four walkouts, each of short duration, marred the usually good labor-management relations in the industry. Labor rates increased approximately 4% in 1955.

The industry had no significant problems with respect to raw-material supplies, but many mills, particularly in New England and the South Atlantic region, were harassed by the floods and high winds which struck those areas in August and October.

During 1955, the industry increased its capacity by more than one million tons to nearly 31 million tons of paper and paperboard annually. Three fourths of the increase resulted from the addition of 22 new paper machines, the balance being due to improvements in older machines. New capacities were directed particularly to tissue, newsprint, kraft, liner board, and the bleached food boards.

DERNELL EVERY,
Secretary Kraft Paper Association, Inc.

PAPUA AND NEW GUINEA, Territory of. A dependency of the Commonwealth of Australia, Papua was united on July 1, 1949, for administrative purposes, with the adjoining Territory of New Guinea, of which the Commonwealth government is trustee under agreement (Dec. 13, 1946) with the United Nations. These areas comprise the eastern half of the island of New Guinea, lying to the north of Australia (total area, 183,540 square miles; pop., June 30, 1954, 1,701,458). Port Moresby, Papua's chief seaport, is the territorial capital.

The government is directed by an administrator (Brig. Donald M. Cleland), appointed by the Commonwealth government, assisted by an Executive Council and a 29-member Legislative Council (17 officials and 12 nonofficials).

The annual Australian grant rose to £A7,600,000 in 1954-55 (in 1953-54, £A5,500,000). Estimated expenditure of £A10,460,000 in 1954-55 included £A670,000 for education and £A840,000 for native welfare and advancement.

Rubber and copra are the chief crops cultivated on about 239,672 acres. Major exports, sold principally to the United Kingdom, are copra, coconut oil, rubber, cacao beans, and coffee beans. Gold (valued at £A1,414,265 in 1953-54) is mined chiefly in the Territory of New Guinea, which also has an important timber industry. Regular shipping service is maintained between Port Moresby and Sydney, New South Wales. Air transport companies operate internal and external services, using 175 airfields and seadromes.

Papua, Territory of.—This former British protectorate has been administered by the Commonwealth government since 1906. Its area of 90,540 square miles comprises the southeastern portion of the island of New Guinea (87,786 square miles), and the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups of islands (2,754 square miles). The population in mid-1954 was 494,709 (indigenous, 488,396; nonindigenous, 6,313). Revenue in 1953-54 totaled £A3,296,593; expenditure, £A3,240,309. Schools numbered 850 (administration, 33; mission, 817), with 45,136 pupils on June 30, 1954. Total exports in 1953-54 were valued at £A1,921,162, and imports at £A5,722,166. There are 950 miles of highways.

New Guinea, Territory of.—This trust territory of the United Nations is also within the scope of the South Pacific Commission (q.v.). Its area (93,000 square miles) comprises North Eastern New Guinea (69,700 square miles), Bismarck Archipelago (New Britain, New Ireland, Lavongai, and the Admiralty Islands, 19,200 square miles), and the northernmost Solomon Islands (Bougainville and Buka, 4,100 square miles), the rest of the Solomons constituting the Solomon Islands Protectorate (see WESTERN PACIFIC ISLANDS, BRITISH). The population in mid-1954 was 1,206,799 (indigenous, 1,195,357; non-indigenous, 11,442).

Revenue in 1953-54 totaled £A4,094,789 (direct grant from the Commonwealth government, £A3,103,076; internal revenue, £A1,991,713); expenditure, £A5,094,789. Schools numbered 2,852 in 1954 (administration, 79; mission, 2,773), with 92,987 pupils (administration, 4,495; mission, 88,492). Total exports, valued in 1953-54 at £A9,192,110, included copra, 71,780 tons, £A5,031,676; coconut oil, 10,215 tons, £A1,397,999; cacao beans, 713 tons, £A245,950; and gold, 90,857 fine ounces, £A1,409,480. Imports in 1953-54 totaled £A9,444,628. There are 2,904 miles of vehicular roads.

PARAGUAY. Occupying an area of 157,047 square miles in central South America and embracing a largely mestizo population of 1,565,000 (1955 U.N. est.), Paraguay is a landlocked republic situated in both the tropic and temperate zones. Bounded by Brazil on the northeast, Bolivia on the northwest, and Argentina on the south, Paraguay's single access to the sea is the vital Paraguay River, which divides the country into the sparsely populated Chaco region and the populous eastern sector. Asunción, the capital, has a population (1955 est.) of 250,000. Other principal cities (with 1950 populations) are Encarnación (40,906), Coronel Oviedo (34,442), Concepción (32,556), and Villarrica (27,794).

Government.—The 1940 constitution established a highly centralized form of government, headed by a president (Gen. Alfredo Stroessner), popularly elected for a 5-year term. He is assisted by a 10-man cabinet; a 40-man unicameral Chamber of Representatives, elected by direct proportional representation; a presidentially appointed Council of State possessing executive, legislative, and judicial powers; and a judicial system headed by a Supreme Court of three judges. Paraguay is divided into 16 departments, each of which is governed by a presidential appointee.

Finance.—Total appropriations in the national budget

for the calendar year 1955 amounted to 978.9 million guaraníes (at the official rate, 21 guaraníes equal U.S.\$1), an increase of 15% over the 1954 figure. Defense was allotted 298.3 million guaraníes; interior, 149.5 million; public health and welfare, 49.8 million; public works, 53 million; and public debt retirement, 123.3 million. Major sources of revenue are internal taxes, import duties, and income taxes.

Education and Religion.—The illiteracy rate continues high in spite of constitutional provisions specifying free and compulsory education on the primary level. Many areas are completely lacking in school facilities. Education and religion received 146.5 million guaraníes, or about 14% of the 1955 budget. Staffed by 5,984 teachers, the 1,447 primary schools in 1950 had about 195,607 students. Also enrolled were 4,174 students in the 14 secondary schools, 1,721 in 116 technical schools, and 1,651 in the National University. Financial aid from the United States has been extended to the university to help it develop its medical school.

The official state religion is Roman Catholicism, but other groups, including colonies of Mennonites and Hutterites, are tolerated.

Agriculture and Industry.—While only 3% of its land is arable, Paraguay's economy is based on agriculture and livestock, from which half of the national income is derived. The chief crops are: cotton (12,357 metric tons in 1953), tobacco (11 million pounds in 1954), manioc, oilseed, corn, sugarcane, and yerba maté. Quebracho logs are the most important timber product. Prolonged drought and heat early in 1955 caused the failure of the corn crop and seriously affected the cotton crop, making a second planting necessary. A bumper crop of tobacco was harvested, however. A severe frost in August ruined the banana, manioc, and pineapple crops in the northwest.

The combined effects of 1954 floods and the drought of this year drastically reduced the number of cattle on the Chaco ranges. Stern government measures were taken to curb black market activities when shortages in various staples developed.

The few industries produce largely for local consumption, with the exception of the sawmills and the plants which make quebracho extract. The principal manufacturing is textiles. In an effort to attract foreign capital, Paraguay adopted a new investment code in 1955 which granted tax and duty exemptions to imported capital goods and to exports produced by the newly established foreign industries.

Foreign Trade.—In 1954 Paraguay's exports were valued at 812,985 guaraníes and its imports at 992,399 guaraníes. In 1953 the following products, with their value in millions of guaraníes, were the more important exports: cotton (199.0), timber (103.9), quebracho extract (82.6), tobacco (40.7), and hides (32.3).
